grammatical error regarding this name, which the LXX. treats as that of a town in Mt. Ephraim. The first word is not in the construct case, and the two terms are therefore in apposition. Ramathaim probably means Ramathites, and Zophim descendants of Zuph, or Zophai, the ancestor of Samuel (1Chr.6:26)—a name recurring in the genealogy of the family of Kohath, whence, as we are told, Samuel was descended (ver. 35). Samuel's father was the son of "Zuph an Ephrathite"—a term which means an Ephraimite (Judg.12:5 in Heb.), but is also specified to mean a native of Bethelhem (1Sam.19:1). Wherever this family may have sojourned (like other Levites; see Judg.19:1 in Mt. Ephraim; or 17:7 in Bethelhem), they were not of Ephraimite descent, though the "Ramathites-Zuphites" abode in Mt. Ephraim (1Sam.5.1). [Ephraim.] Elkana's home was at Ramah (1:19), probably Ramah (Judg.15:8), perhaps in the home of the Gibeath. [RAMAH.] The site of that home was variously placed by later traditions, though Rama and Gabaa are called "cities of Saul" (Onomasticon), and were evidently known at er Ram and Jeb'a, Rama being near Gibeon (Onomasticon, s.v.; Gabaan), and Michmash (1Sam.6:14). Rameses (Tell Ramessé) is thought to be "Ararmath Sophim" at Arimathaea, and near Lydda, which is impossible for Samuel's home. In the Middle Ages his tomb was shown on the mountain a mile S. of Gibeon, which still is called Nebi Samwil, with a mediaeval church converted into a mosque, the walls scribbled with the Heb. graffiti of early tourists. The Jewish pilgrim journeys generally refer to Tell Tadula (1163 A.D.) seems to place Ramah at Ramleh; but Isaac Khelo (1333 A.D.) knew that Ramleh did not exist till 5th cent. A.D. Biladhuri states that Ramleh was built by Suleiman son of 'Abd el Meleik (after 705 A.D.). The Samaritans, who founded a town in the northern part of it c. 900 A.D. See William of Tyre, x. 17. [C.R.C.]

Ramathem, mentioned with Apirherema and Lydda (Mac.11.34) as a seat of government [Judea], is probably Ramah, 7. [C.R.C.]

Ramathite (1Chr.27:27), an inhabitant of Ramath; probably of Ramah; 1. [C.R.C.]

Ramath-mizpeh (1K.16:16), a town on the borders of the hill-country, from which Danauscious (Dan) was precipitated by Samson on the scene of his slaughter of the 1,000 Philistines with the jaw-bone (Judg.15:17). "He cast away the jaw-bone out of his hand, and called that place Ramathleh" (hill of the jaw). The site is unknown, but Lehi (the jaw) seems to have been near Ramath-mispeh (2Chr.22:3), on the borders of the hill-country of Sorek, N.W. of Beit 'Afulah. [C.R.C.]

Ramath-mizpeh (Jos.13.26 only), in the territory of Gad, apparently one of its N. landmarks; near Betonim. It may be Mizpeh of Gilead. [C.R.C.]

Rameses, or Raamases. In Gen.47.11 the settlement of Jacob and his sons by Joseph is reported to have taken place "in the land of Raamases." This locality may be taken as practically equivalent to the land of Goshen. It is, however, at a later date that the name acquires greater importance. During the Israelites' sojourn in Egypt they were employed to build for Pharaoh (Ex.1:11) two "treasure cities, Pithom and Raamasses." The ruins of the former of these cities was discovered in 1883 by Dr. Naville, at Tell el-Maskhuta, about 12 miles distant from the modern Ismailia, and there is good evidence for the view that the builder of Pithom—and, inferentially, of Raamasses also—was Raamesses II., who thus becomes identified with the Pharaoh of the Oppression. Raamesses was the starting-place of the Israelites in their flight from Egypt (12.37), and their next halting-place was Succoth. The two cities could not have been far distant from each other. Lepsius identified the city of Raamesses with Tell el-Maskhuta, but this conjecture was afterwards abandoned owing to Naville's excavations, referred to above. It is known that Raamesses was built by the Pharaoh of that name, of the 19th dynasty; that it was adjacent to Pithom; and that it was in the land of Goshen. Some Egyptian texts refer to it, but it is not specifically named in the Bible. The probable date of its destruction is 1200 B.C., at the time of the Exodus from the East; Budge, History of Egypt; Brugsch, Dictionnaire, etc. [A.H.P.]

Rames'se (Jth.1.9) = the town Raamesses.

Ramah', a layman of Israel, of the sons of Parosh, who had taken a foreign wife (Ezr.10.25).

Ramath (R.V. Jeremoth), an Israelite layman, of the sons of Bani, who had taken a foreign wife (Ezr.10.29).

Ramath', one of the four Levitical cities of Issachar (1Chr.6.73), otherwise Remeth (Jos.19.21). Now the village Ramleh, 10 miles S.W. of Jenin, at the S.W. angle of the territory of Issachar.

Ramath-gilead (heights of Gilead), or Ramath in Gilead, called also Ramoth (2K.8.29; 2Chr.22.6). A city of refuge (Deut.4.43; Jos.20.8; 1Chr.6.70) given to the Levites (Jos.21.35). It was the capital of Solomon's sixth district (1K.4.13), and seems to have been the frontier town of the territory of Issachar (22.23). Here Ahab was slain fighting the Syrians (2 Chr.20.36), while his son Josiah was wounded (2K.22.24), and Jehoshaphat of Judah, disguised in Ahab's robes (according to LXX. of 1K.22.30), escaped (2Chr.18.2-34,22.3). Here also Jehu was proclaimed king, at the "strong place of the ascents" (A.V. top of the cliffs, RV. top of the rock), Reimán, a village about 7 miles W. of Gerasa, in N. Gilead, built on a remarkable "height," or rocky hill. [C.R.C.]

Ram's horn. [Cornet; Jubilee.]

Rams'skins dyed red formed part of the materials that the Israelites were ordered to present as offerings for the making of the Tabernacle (Ex.25.5): of which they served as one of the inner coverings. There is no doubt that A.V., following the LXX., Vulg., and the Jewish interpreters, is correct, although the original words admit of being rendered "skins of red rams," which has suggested the idea that the N. African sheep is referred to. See however, Chamois;
that he might not fall "into the hands of the wicked" (2Mac.14.37-46). In dying, he is reported to have expressed his faith in a resurrection (ver. 46). The act of suicide, wholly alien to the spirit of the Jewish law and people, has aroused considerable discussion.

Razor. Besides other usages, the practice of shaving the head after the completion of a vow must have created among the Israelites a necessity for the special trade of a barber (Num. 6.9, 18, 8.7; Lev. 14.8; Judg. 13.5; 15.7, 20; Ezek. 5.1; Ne. 13.18). His instruments were probably, as now, the razor, the basin, the mirror, and perhaps also the scissors (see 2Sam. 14.26). Like the Levites, the Egyptian priests were accustomed to shave their whole bodies.

Reaia' (K.V. Reiaiah), a Reubenite, son of Micah (1Chr.5.5).

Reaiah.—1. A descendant of Shobal, son of Judah (1Chr.4.2).—2. The children of R were a family of Nethinim who returned from Babylon with Zerubbabel (Ezr.2.47; Ne.7.59).

Rechabites. Le.x.7.23.15, and by mention of five Midianite kings (Num. 21.8), or "dukes of Silon" (1Jos.13.21), slain with Baalam.

Rebelca, the Gk. form of Rebekah (Ro.9.10 only).

Rebekah, daughter of Bethuel (Gen.22.20-23) and sister of Laban, married to Isaac, and her father, was driven from Phiny as one of the cities of the Decapolis. Probably er Rikeh, a ruin in the Hauran, 8 miles N.E. of Ashtaroth. [C.R.C.]

Rapha, father of Palti (Num.13.9).

Rasses, Children of, one of the nations whose country was ravaged by Holofernes in his approach to Judaea (Jth.2.23 only). The old Lat. version reads Thiras et Rasis. Woff restores the supposed original Aram. text of the passage as Thars and Rosos, and compares the latter with Khosas, a place on the gulf of Issus.

Rathumus. "Rathumus the story writer" is named in Jer.2.16, 17, 23, 30 as the same as "Rhem the chancellor" of Ezek.8.8ff.

Raven (Heb. 'orbbh) must be taken in a wide sense, so as to include not only the bird (Corvus corax) properly so called, but likewise the crow (C. corone) and the jackdaw (C. monedula). All are forbidden as food by the Mosaic law (Deut.14.15; 27.17; Lev.11.13, 19; etc.). They differ from the Heb. and A.V. in Gen.8.7, for in the Heb. we read "that the raven went forth to and fro [from the ark] until the waters were dried up," but in the LXX. and Vulg., together with the Syriac, the raven is represented as "not returning until the water was dried from off the earth." Eliphaz's sustenance at Chethir by means of ravens has given occasion for much unnecessary speculation. Some have attempted to show that the 'orbbim (ravens) were the people of Orho, others the Arabs, and yet others have found in the ravens, merchants; while Michaelis suggests that Eliphaz plundered ravens' nests of hares and other game. To the fact of their being common in Palestine, and their habit of flying about in search of food, may perhaps be traced the reason for ravens (including crows) being selected as illustrations of God's care. [R.H.]

Razis, an elder of Jerusalem, who killed himself under peculiarly terrible circumstances,

Rechabites. In Jr.35 the prophet is commanded to go to the house of the Rechabites to invite them to one of the chambers of the temple to drink wine. Their chief was Jaazainiah, the son of Hazaianiah. With one accord they refused, because their "father" Jehonadab the son of Rechab had commanded them not to drink wine or build houses or sow the land, but to dwell in tents. This they had
always done; and their presence in Jerusalem at the time was due to fear of the invading army of Nebuchadnezzar. For their obedience the Rechabites are highly commended, and the people of Judah are contrasted with them unfavourably. 2Chr.34.8). Jehovah promises that "Jehonadab, the son of Rechab shall not want a man to stand before Me for ever" (Je.35.19). In 2K.10.15-17 Jehu meets with "Jehonadab the son of Rechab," and invites him to see his zeal for Jehovah. Evidently the person mentioned was a religious leader opposed to the Baal-worship of the age and a supporter of Elijah and Elisha against the house of Ahab. Whether he was the founder of the Rechabite sect must remain uncertain. Probably their mode of life could have been traced back to a much more remote period. It has been supposed that the Rechabites were Kenites, since in 1Chr.2.55 it is read, "These are the Kenites that came of the Hemath the father of the house of Rechab." Now, the Kenite mode of life seems to have been nomadic, for we find this tribe with the Canaanites in the N. in the time of Deborah and Barak, and among the Amalekites in the S. in the days of Saul (Judg.4.11; 1Sam.15.6). The wandering Kenite, of the Exodus period, would be a standing protest against the Israelites conforming to the settled habits of the agricultural Canaanites, whose religious practices they had too often assimilated. Elijah, it will be remembered, appeared clad in the garb of an inhabitant of the wilderness (2K.1.8), which in later times became the recognized dress of a prophet (Zech.13.4). The promise that the Rechabites should "stand before Jehovah" has a reference to priestly duties (see Deut.10.8); and from 1Chr.2.55 we see that they were recognized as scribes dwelling in Jabez. According to Hesegippos (apud Euseb. H.E. xi. 23), a priest of the house of Rechab protested "against the murder of St. James the Just." Dr. Wolff (1829) met with an Arab tribe who declared themselves to be sons of Rechab and observers of the laws of Jehonadab, an incident which Lord Beaconsfield alludes in Tancred. In the LXX. the heading to Ps.70 (A.V. Ps.71) is, "To David of the sons of Jehonadab, etc." Rechab." In 1Chr.4.12, Beth-rapha, Pa-seah, and Tehinnah the father, or founder, of i-nahash, are said to have been "the men of Rechab." Reconciliation. [ATONEMENT; MEDIATOR.] Recorder, an officer of high rank in the Jewish state, exercising the functions probably of king's representative, whether as chancellor, or president of the priory council. In David's court he appears among the high officers of the household (2Sam.8.16,20; 1Ch.18.15); in Solomon's, he is coupled with the three secretaries, and is mentioned last, probably as being the chief (1K.4.3; cf. 1K.18.18,22; 2Chr.31.8). The Heb. title, רַבֹּעַ (the remembrancer), probably shows that, whilst he may or may not have been the annalist, his duty was to remind the king of important matters by preparing them for his consideration. [S.N.S.] Red heifer (Num.19.1-10). [PURIFICATION.] Red Sea. The sea known to us as the Red Sea was called by the Israelites "the sea" (yām; Ex.14.2,9,16,21,28, etc.), or the sea of Suhp, yām sāph. yām may mean any sea, and is several times used for the Mediterranean; while yām sāph always means the Red Sea, and is always translated ἡ ἑραδόν θάλασσα, except once (Judg.11.16), where several manuscripts read θάλασσα Σέφ. The word sāph (reed) is the same as the Egyptian thuf (reed water-plant). The name yām sāph does not apply only to the gulf of Suez (or, as it was called in old times, the Arabian Gulf), but to the whole sea, or at least to the northern part, which Tancred, the founder of the Kingdom of Jerusalem, found to be a level sand beach, i.e. the two gulfs between which lies the Sinaitic peninsula. Beginning with the gulf of Suez, the latest excavations have proved that which had been stated by geologists, but which had been considered as pre-historic viz., that the sea extended a long way further into the land, that the gulf included what is now sea again, since the Suez Canal has been dug, the so-called Bitter Lakes and lake Timsah. Near the head of the gulf stood the city of Pithom, the Gk. Herōopolis. Strabo says that Herōopolis was built at the end of the Arabian Gulf, and that Artemidoros states it was founded by King Nebuchadnezzar. The Nile flowed into the Red Sea at Heroopolis; there the river formed marshes which were good pasture-land. As there were cities along the gulf, it was necessary to have also a fresh-water canal. It appears that the movement in the soil originated by one of the Pharaohs. We have several accounts of the digging of a canal for ships from the Nile to the Red Sea. There was a tradition that Ramses II. had started it; which seems very probable, as in his time there were flourishing cities in the Wady Tumilat. Herodotus says that Necho began it, but that Darius carried it on as far as Patumos (Pithom), near the present lake Timsah. Several trilingual tablets of Darius (of which scanty remains have been preserved) speak of his having dug a canal from Piraee (the Nile) unto the sea which comes from Persia." Evidently the siting of the canal must have been felt chiefly when there was a large width, and where the water was shallow. The communication between the two lakes and between the Bitter Lakes and the gulf of Suez must have been interrupted before these large basins were dried up, so that it is quite possible that Darius had to re-establish those communications; for it is in such places that tablets have been found. Pliny speaks of Ptolemy Philadelphus having carried it as far as the Bitter Lakes. Afterwards Trajan or Hadrian again cleared the canal, which was called Trajan's River. From the time of the Roman emperors we do not hear of any work being done until 640 A.D., when
the conqueror *Amr ibn el-’As* had it reopened in order to transport corn to Arabia; but 100 years afterwards a khaliif ordered it to be filled up, because he wished to starve the city of Medina. This was the end of the old canal; the upheaval of the soil continued, and the large basins of the Bitter Lakes and lake Timsah dried up completely, until the work of the Suez Canal filled them in. Thus when the author of Exodus speaks of *yam sīph*, the Reed Sea, it means a sea which extended as far as Pithom (Hercopolis), about half the length of the present isthmus. Ships could reach it from the Nile through a canal originating at Bubastis; but there is no record of any kind of a canal nearer the isthmus joining the Red Sea to the Mediterranean. The gulf on the E side of the Sinai Peninsula is now called the gulf of ‘Aqaba. It is possible that this also extended farther inland; it is even supposed that in prehistoric times there was a communication with the valley of the Dead Sea. Its ancient name is the Elanitic Gulf, from Aelana, a city at the mouth, which is near the modern city of Elath or Elot (I K.9.26). Near it was Ezion-geber (Num.33.35), the last station mentioned for the encampment of the Israelites before they reached “the wilderness of Zin (the same is Kadesh).” It is chiefly known as the harbour from which Solomon and Hiram of Tyre sent their ships to Ophir. Of the Pharaoh Elaheshphat, allied to Ahaziah, wished to do the same, but their fleet was destroyed, probably by one of the terrible storms which often rage in that gulf (I K.22.48; 2 Chr.20.37). The Egyptians were not fond of the sea, which they considered as typhonic; their commerce with the inner part of Africa followed the Nile. However, on several occasions we hear of naval expeditions which they sent on the Red Sea, for commercial purposes. The country to which they went was the land of Punt, which was on both sides of the sea, but the African side of which seems to have attracted the Egyptian interest more than the Arabian. The trade of Punt was the coast from Sukam, or Massowah, towards Somaliland; it was the region called by the geographer Ptolemy, *Aromatifer regio*, and it even now produces incense. There was one kind of frankincense which the Egyptians valued very highly for its fragrance as well as for its curative virtues, and of which they made a great use in religious ceremonies and in medicine. This incense was the chief object of their expeditions to Punt; but they brought from the country other products, gold in rings and in powder, ivory, ebony, pantherskins, and also, besides cattle, giraffes, apes, and others for hunting. When they made expeditions they built ships on purpose, for they do not seem to have had a permanent fleet before the time of the Gk. kings. Their primitive and elementary crafts were not deferred by the strong winds of the Red Sea, any more than are the Arab dhows of the present day. Commerce on the Red Sea increased under the Gk. kings of Egypt. We hear of the second Macedonian sovereign, Ptolemy Philadelphus, having sent one of his generals to the coast of the Trogodytis to found a cityPtolemais *ptolemais*. “Ptolemais of the chase”—specially destined for the pursuit of elephants and as a landing-place for the travellers who went into the inner part of the country. The hieroglyphic inscriptions confirm Strabo’s statement about the foundation of that city. We hear also of other harbours, Myos-Hormos and Berenice, on the Egyptian coast. The commerce of the Red Sea seems to have been flourishing under the Ptolemies and the Romans, but until quite lately the Egyptian coast of the Red Sea has been entirely abandoned.

[f. n.]

Red Sea, Passage of. The passage of the Red Sea is the crowning episode of the Exodus. Most divergent explanations have been put forward; the old view, however, that the passage had taken place near Suez, is now almost unanimously rejected. The considerable distances over which the Israelites had to travel, the mountains which they had to pass, if they had followed that route, were difficulties which made the narrative of Scripture nearly impossible to understand. We shall now describe the route which seems indicated by the text, which is much farther to the south than the Isthmus of Suez. There are the land of Goshen, called also the land of Rameses, where they had built two storecities, Raamases and Pithom (Ex.1.11). The site of Raamases has not yet been identified with the same certainty as Pithom. Pro. Petrie has quite lately stated that it was Tel Retabeh, a mound about 9 miles W. of Pithom; but in the words “The children of Israel journeyed from Rameses to Succoth” (12.37), the word Rameses is to be taken rather in the sense of “land of Rameses,” the centre of which must have been farther W., nearer Babastis, for instance, the city of Tell Habib. However, the first station was Succoth, the Thuket or Thukot of the Egyptians, a borderland, the territory round Pithom where Egypt ended. In that first journey they had plenty of water, as they followed the canal going from Babastis to the Red Sea. Leaving Succoth and marching towards Egypt, they had to skirt the northern coast of the Red Sea; from there they could go straight across the desert to Canaan, through a caravan route which was used as late as the 17th cent., and the entrance of which is seen near Ismailia. It appears from the LXX. of Gen 46.29 that Jacob, coming to Egypt, had taken at Goshen, since Joseph had met him at Pithom (Hercopolis). The narrative says (Ex.13.17) that “God led them not by the way of the land of the Philistines, although that was near; for God said, lest peradventure the people repent when they see war.” The way by the land of the Philistines was certainly shorter. It followed the coast of the Mediterranean, but it passed at first through cultivated and well-irrigated land, and the Israelites would have had to march in the lee of important fortresses like Tanis and Zer, with large garrisons; they would probably have “seen war” long before reaching Canaan. Their second station was
on the edge of the wilderness of Etham. They had only to go straight through that wilderness to reach the promised land; but suddenly they received a command of a nature to shake their confidence in their leader (14:1): "And the Lord spake unto Moses, saying, Speak unto the children of Israel, that they turn back and encamp before Pi-hahiroth, between Migdol and the sea, before Baal-zephon, over against it shall ye encamp by the sea. And Pharaoh will say of the children of Israel, They are entangled in the land, the wilderness hath shut them in." Certainly this command seemed very strange. They had reached the desert, they had nothing in front of them, and instead of hastening across the wilderness so as to be as soon as possible out of the reach of their oppressors, they were told to change entirely their route, to retrace their steps so as to remain on Egyptian soil, and even to put the sea between themselves and the desert. Surely it would encourage Pharaoh in his pursuit. To the king, the reason of this sudden change and of this extraordinary move would seem
obvious. The Israelites were afraid of crossing the desert. "The wilderness hath shut them in," can only mean that they were entangled and wandering in the land of Egypt, because the desert was for them an insurmountable barrier. It is to be noticed that whereas in other parts of Scripture, and especially in the description of the route in the wilderness, the geographical data are sometimes vague and always very concise, here they are given with a remarkable precision. It is not said to the Israelites merely that they are to stop near the sea in the most favourable camping-ground. They are to reach a definite spot, the landmarks of which are given: on the N. Pi-hahiroth, on the S. Migdol, in front the sea, and on the opposite side Baal-zephon. We have the Egyptian name of Pi-hahiroth. A great tablet found in the excavation at Pithom mentions in the neighbourhood of that locality another sanctuary called Pi-Qereht (House of the serpent). It was a sanctuary of Osiris, or what the Greeks called a Serapeum. The Antonine Itinerary mentions Serapion as being 18 miles from Hero. It seems impossible not to connect Pi-hahiroth with Pi-Qereht. Undoubtedly the Heb. letters do not correspond exactly to the Egyptian, and the name passing into another language always takes a form which has, if not a sense, at least a sound familiar to those who pronounce it, and hahiroth sounds much more Semitic than Qereht. Standing on the pier at Ismailia and looking over Lake Timsah, the horizon is limited by a flat upland to the kind of hill, the mountain now called Jebel Marium. Just at the foot of that mountain on the S. and near the bank of the Suez Canal is an important Roman settlement, partly covered by the lagoons, but the ruins of which above the water cover an area of 500 yds. square. This seems to be Serapion (Pi-Qereht). Its distance from Hero agrees nearly with the Itinerary—14 miles instead of 18. This would be the landmark on the N. On the S. we have Migdol. This name in Heb. means "a tower." We have information about it in the papyri of the Brit. Mus. In one of them a scribe who is going already to more famous places than Migdol, says that he arrived at the enclosure of Sercocth, evidently a tomb, which protected the region against the invasions of nomads. There he was informed that the fugitives had crossed the wall N. of the tower Migdol (the Heb. word is employed there in an Egyptian form) of king Seti I. Another papyrus speaks of the stronghold in the southern part of Sercocth. Migdol was the watch-tower, which from the aspect of the country we should place on the height called by the French the Serapeum, and where, until a few years ago, there was a trilingual tablet, Egyptian and cuneiform, dedicated by Parnus, but destroyed when the canal was dug. This watch-tower was necessary, since, as we shall see, owing to a phenomenon which took place occasionally, the nomads found the sea open, and could easily wade through in order to pillage the royal domains on the Egyptian side. "Over against Baal-zephon": most commentators agree that this was not a city nor even a village, but a place of worship of a Semitic divinity in the form of a Baal. It was, as the Targum explains it, the sanctuary of an idol, the form of which is unknown, but which may have been a mere stone. The name Baal-zephon, in its Semitic form Baalzapum, is mentioned in a papyrus, which also shows that it was outside Egypt, on the other side of the sea. We may consider that it was a holy place, like the tombs of sheikhs generally, placed on hills around which people congregate on certain days. Even now there is a place of that kind in that region. Going out of Lake Timsah there is a hill called Tussium, on which a sheikh, called sheikh Emmedek, was buried at the beginning of the 19th cent. Every year about July 14, thousands of people assemble on that hill and celebrate near this tomb a religious festival. There is evidently (perhaps not on the spot of the tomb, but in that neighbourhood) a religious tradition, which has persisted, in spite of the numerous political and historical disturbances, that seems to be the reason why the sheikh wished to be buried there. Having determined the landmarks of the encampment of the Israelites it is natural to ask why this spot was chosen and pointed out to Moses with such precision. The reason seems to be that at that spot a phenomenon occurred which was a probable cause of the escape of the Israelites: the sea receded under the influence of the wind. "The Lord caused the sea to go back by a strong east wind all the night, and made the sea dry land, and the waters were divided" (Ex. 14:21). It has often been noticed by travellers in Egypt that at times of great wind the wind changes suddenly, and there is a fall of rain. The sudden falling of rain gives rise to the escape of the Israelites: the sea receded sometimes for a great distance, and comes back again to its former bed when the wind ceases or changes its direction. This phenomenon is not rare in lake Menzalah (see J. of Victoria Institute, vol. xxviii. p. 207), which communicates with the sea, in lake Bourles, and in other parts of Egypt. There is nothing extraordinary in its taking place in old times in the part of the sea between lake Timsah and the Bitter Lakes; moreover, the slow rising of the ground which in later times cut off Lake Timsah from the Bitter Lakes was already being felt, the sea being receding from west to east very wide. One may even suppose that it had been known before that this phenomenon occurred at that particular spot, and for this reason the place was pointed out so exactly to Moses; and it may also have been this which led the Pharaohs to build a stronghold there. The result of the action of the wind in causing the sea to recede was to create a temporary ford which people could easily wade through, as was seen N. of Suez, at the end of the present Red Sea, before the canal was dug. This occasional passage was watched from the tower Migdol. To the action of the wind we must add that of the tide. Striking instances of the power of the wind compelling even a strong current to stop for a time have occurred in other countries—in the Rhone at Geneva; and in South American rivers. We have here an instance of a miracle consisting, not in something quite new and marvellous, but in a natural phenomenon beginning and ending at the right moment for a definite purpose. As was said at the beginning, this route shortens con-
REED

siderably the distances of the journey, and also avoids an objection made to the place advocated by Sir William Dawson—the southern part of the Bitter Lakes. The Israelites would have had to pass over the ridge of Jebel Geneffe, a considerable height, difficult of access. In travelling by rail from Ismailia to Suez, before reaching the Bitter Lakes the way seems entirely closed by the Jebel Geneffe and its highest summit. The Israelites in their flight would have had either to climb over the mountains or to follow a narrow track, if such existed, between the sea and the mountains. Josephus twice alludes to the fact that the Israelites had before them steep mountains projecting into the sea, and that they were shut up between the sea and the mountains. Their way seemed entirely barred, and this explains their despair, as described in Scripture and by Josephus. After passing through the sea, they had nothing more to fear from the Egyptians; the water had covered the chariots (Ex. 14.27, 28), a light and quick vanguard very suitable for a pursuit, and which, as was often the case, may have been under the command of a son of the king, and “all the host ... that came into the sea after them” was destroyed.

[PHARAOH; EXODUS, THE.]

Reed. Under this name we shall notice four Heb. words: (1) ’aghmon occurs Job 40. 26 (A.V. 41.2, hook), 40.12 (A.V. 41.20, caldron); Is. 9.14 (A.V. rush). The ’aghmon is mentioned also as an Egyptian plant, in a sentence similar to the last, in Is. 19.13, while from 58.5 we learn that it had a pendulous panicle. It doubtless denotes some aquatic, reed-like plant, whether of the nat. order Cyperaceae or that of Gramineae. Celsus’ opinion that it is the Arundo phragmites is probably right. The drooping panicle of this plant answers well to the “bowing down the head” of which Isaiah speaks. (2) gōēm, translated “rush” and “bulrush” by A.V., undoubtedly denotes the celebrated paper-reed of the ancients (Papyrus antiquorum), a plant of the sedge family, Cyperaceae, commonly used in many parts of Egypt. The Heb. word is not mentioned in the LXX. between 28.2 and 35.7; Job 8.11. Modern Abyssinians use boats made of the papyrus reed (Bruce), which is found in Syria, but not now in Egypt. Dr. Hooker saw it on the banks of Lake Tiberias, a few miles N. of the town. It is abundant in the Huleh marshes, and the P. syriacus in the Kishon and in Sharon (Tristram, Nat. Hist. Bible, p. 434). The papyrus plant (Papyrus antiquorum) has an angular stem from 3 to 6 ft. high, though occasionally reaching 14 ft. R.V. renders gōēm “papyrus” in Is. 18.2 and in the marg, of Job 8.11—an introduction of much judgment and taste, as Groser remarks. Specimens of a cyperus gathered by the present writer in the Ghor in an imperfect condition (December, 1883) were doubtfully referred by Prof. Oliver to the papyrus, an interesting extension of the range, if correct, as is probable. Another cyperus (C. eleusinoides) of tropical distribution was discovered there, also for the first time in Palestine, on the borders of the Wady el Bâyat. Phragmites communis is abundant and well deserves the variant name P. gigantaea of J.

Gay. In Wâdy el ‘Ain in Sinai this form reaches a height of 15 ft. (3) ’drōth is translated “paper-reeds” in Is. 19.7, the only passage where the plur. noun occurs; there is no reason for rendering of A.V. “drōth,” says Kisch, “is the name to designate pot-herbs and green plants.” It probably denotes the open grassy land on the banks of the Nile (R.V. meadow). (4) qânēd, the generic name of a reed of any kind; it occurs often in O.T., and sometimes denotes the “stalk” of wheat (Gen. 41.5,522), or the “branches” of the candlestick (Ex. 25.32,37.18); in Job 31.22 it denotes the bone of the upper arm or humerus. Elsewhere A.V. renders it “calamus” or “reed.” The Arundo donax, the A. aegyptiaca(? ) of Bové, is common on the banks of the Nile, and may perhaps be “the staff of the bruised reed” to which Sennacherib compared the power of Egypt (2 K. 18.21; Ezk. 29.6,7). The dry culms of this huge grass are in much demand for fishing-rods, walking-sticks, etc., and may be the “measuring reed” of Ezk. 40.5. Some kind of fragrant reed is denoted by the word qânēd (Is. 43.24; Ezk. 27.10; Can. 4.14), or more fully by qâné bosem (see Ex. 30.33), or by qâné kattōb (Je.6.20); which A.V. renders “sweet cane” and “calamus.” It was of foreign importation (Je.6.20). Some writers have sought to identify the qânéq bosom with the Acorus calamus, the “sweet sedge.” Dr. Royle refers the καλαμος ἀρωματικὸς of Dioscorides to a species of Andropogon, which he calls A. calamus aromaticus, a
plan of remarkable fragrance, and a native of Central India. The *gyn. boswellia*. or *hathbaah*, may be this *calamus aromatikos* of Dioscorides; or it may be the *Andropogon schoenanthus*, the lemon-grass of India and Arabia. Pliny speaks of the *sweet calamus*, and also squinahnth or *ficus odoratus*, the sweet-rush." The former, he says, grows within Arabia and is "common to the Indians and Syrians likewise," while both occur in the Lebanon. The latter is the more valuable. Neither was observed by Tristram. [i.c.n.]

Reelalaih; one of the children of the province who went up with Zerubbabel (Ezr. 2:2); in Ne.7.7 called Kaamiah, and in 1 Esd. 5.5 Reelatia.

Reelius. This name occupies the place in 1 Esd.5.8 of Bigval (Ezr. 2:2; Ne.7.7).

Reelatia (1 Esd.5.8) = Reelalaih (Ezr.2.2) or Kaamiah (Ne.7.7).

Refiner. [Handicrafts, (2).]

Refuge, Cities of. [Cities of Refuge.]

Regem, son of Jeerah (1 Chr.2.17).

Regem-me-leeh, one of a deputation sent on behalf of some of the Captivity to inquire of the priests whether the fast in the fifth month in memory of the destruction of the temple should continue to be observed (Zech.7.2). The meaning of the passage is doubtful. [i.c.n.]

Region-round-about, The (γεωργικον τοχου). Used in O.T. by the LXX. as the equivalent of the Heb. hakkikkar (lit. the round Plain), or Jordan Valley. In Mt.3.5 and Lu.3.3 it denotes the region which contained Jericho and its dependencies, in the Jordan Valley. [Cities of the Plains.] The Gk. term is also applied to the district of Gennesaret (Mt.14.35; Mk.6.55; Lk.7.17). [C.r.c.]

Reheliah, the only son of Elihezer, son of Moses (1 Chr.23.17, 24.21, 26.25).

Rehoab.—1. Father of Hadadezer king of Zobah (2 Sam.8.3,12).—2. A Levite who sealed the covenant (Ne.10.11).

Rehoab (broad place).—1. A place near the "entering in to Hamath" (Nu.13.21), visited by the spies of Moses. It is difficult to understand how they could have reached this place, so far N., and returned to Kadesh-barnea in 40 days (ver. 25). The description is perhaps an ancient gloss, and the original description may have referred to explorations from Zin on the E. to Rehoboth on the W., in the wilderness, before approaching Hebron from the neghebb (ver. 22). There was a Beth-rehoab near Dan (Judg.18.28; 2 Sam.10.6) called also Rehoab (ver. 8); but this lay in quite another direction, near Hermon.—2. A town of Asher given to the Levites (Jos.19.28,21.31), the site of which is unknown.—3. Apparently another town of Asher (19.30). One of these remained Canaanite (Judg.1.31). [C.r.c.]

Rehoboam (or the people is enlarged), son of Solomon by the Ammonite princess Naamah (1 K.14.21,31), and his successor (1 K.11.43). From the earliest period of Jewish history there are signs that the confederacy of the tribes was imperfectly cemented. The powerful Ephraim could never brook a position of inferiority; while, as early as the time of the Judges, when the northern tribes made common cause against their oppressors, Judah stood apart. The spirit was shown by the two rebellions in David's reign (2Sam.15-20), in spite of his transference of the capital from Hebron northwards to Jerusalem (2Sam.5.4). The forced labour imposed by Solomon intensified political dissatisfaction, and, his strong rule ended, the crisis at once came. At Shechem in Ephraim, the chief religious centre of the northern tribes, Rehoboam's demand for a remission of exacting burdens. His hearers' reply was the song of insurrection heard once before (2Sam.20.1), when the tribes quarrelled after the return from the war with Absalom. Adoram (Adoniram), sent by Rehoboam to quash the rebellion, was slain, and the kingdom dashed to Jerusalem. Jeroboam assumed the government of the northern kingdom. Rehoboam assembled an army of 180,000 men from the two faithful tribes of Judah and Benjamin, in the hope of reconquering Israel. The expedition, however, was forbidden by the prophet Shemariah (1 K.12.24); still, during Rehoboam's lifetime peaceful relations between Israel and Judah were never restored (2 Chr.12.15; 1 K.14.30). The pure worship of God was maintained in Judah; but Rehoboam did not check the introduction of foreign abominations into his capital. The lascivious worship of Ashtoreth was allowed to exist by the side of the true religion, images were set up, and the worst immoralities were tolerated (1 K.14.22ff.). These evils were punished and put down by the terrible calamity of an Egyptian invasion. In the fifth year of Rehoboam's reign the country was entered (1 K.14.25) by Shishak (Sesonchis), the first king of the 20th dynasty, invited very possibly by Jeroboam, as
having been the latter's Egyptian patron. Of the fifty fortresses built by Rehoboam (2Chr. 11.6-10), all but one lie S. of Jerusalem. This protecting line, however, was forced, Jerusalem itself was taken, and Rehoboam had to purchase an ignominious peace by delivering up all the treasures with which Solomon had adorned the temple and palace, including his golden shields, 200 of the larger and 300 of the smaller size (1K.10.16ff.). Shishak's success is commemorated by sculptures discovered by Champollion on the S. wall of the temple of Amon at Karnak, where in the long list of places subjugated are found the names of towns even in the N. of Palestine, e.g. Megiddo. This suggests that Jeroboam, at the price of Shishak's assistance against the king of Judah, became vassal to the former. After this great humiliation the moral condition of Judah sank. Rehoboam, his namesake, son, S.W. of Jerusalem, named himself Rehoboam (2Chr. 11.1, p. 197; Palmer, in Suru. W. Pal. volume of Special Papers, p. 31). This site is probably also the Rahebu of the list of Thothmes III. (No. 87) in 16th cent. n.c., and the Rehoboath noticed a cent. later, by the Mohar traveller, in connection with Gaza (same vol. pp. 174, 193).—3. "Rehoboath by the river" (Gen.36.37) is generally supposed to lie in Assyria, near Nineveh, and for this view see next art.; but perhaps the wording of the passage would allow of its being one of the sites next noticed, for Nimrod, ruling first in Chaldea, "went forth out of that land to Assur, and builded Nineveh and the city Rehoboath".—4. "Rehoboath by the river" (Gen.36.37) is supposed to mean "by the Euphrates" [RIVER], and in this case is either Rahabah on the W., 3 miles from the Euphrates, below the junction of the Khabûr, or Rahabat-âlêk, some 4 miles S. of the preceding, on E. bank. It would seem, if this view is correct, that Esdou was ruled by a Babylonian king who named Saul about a century before the accession of Saul in Israel. [C.R.C.]

Rehoboth', The city, one of the four cities built by Asshur (R.V. by Ninroda) in Assyria or Assyry (Gen.10.11). Fried. Delitzsch makes this city to be the Rēbi 'Nūma of the Assyrians, the city of Asshur and the seat of Assur, being built on land given to Sargon, lay N.E. of Nineveh, stretching towards Khorsabad. Possibly it was an immense suburb consisting of many open spaces, hence the Assyrian name, which means "broad spaces of Nineveh," whilst the Heb., Rehoboth-ar, signifies "broad spaces of the city." Excavations on the site will probably determine the correctness of this theory. For another suggestion, see preceding art. [T.R.P.]

Rehum'.—1. One of the "children of the province" who returned with Zerubbabel (Ezr. 2).—2. "The chancellor," who, with others, wrote a letter to Artaxerxes against the rebuilding of Jerusalem (4.8.9,17,23).—3. A Levite who helped to repair the walls (Ne.3.17).—4. One of those who signed the covenant (10.23).—5. A priestly family, who returned with Zerubbabel (12.3).

Rei', a man of influence (probably an officer of the royal guard) who remained loyal to David when Adonijah rebelled (1K.1.5). The reading is uncertain. Ewald suggests that Rei is identical with Raddal. [H.C.B.]

Reins, i.e. kidneys, from Lat. renis. In the ancient system of physiology the kidneys were believed to be the seat of desire and longing, hence they are often coupled with the heart (Ps.7.9,28; Je.11.20,17.10, etc. [SOUL].

Re'kem'.—1. One of five kings or chiefstains of Midian slain by the Israelites (Num.31.8; Jos.13.21).—2. Son of Hebron, and father of Shammui (1Chr.2.43,44).—3. The name of a town of Benjamin (Jos.18.27). The site is unknown, unless we should read Dekem, which would be Beit Duquv, near lrepol and Mozah, with which it is noticed. [C.R.C.]

Remallah; father of Pekah (2K.15.25ff., 16.1, 5; 2Chr.28.6; Is.7.1-9,8,6).—Remeth (Jos.19.21) = Ramoth.

Remmon'-'methoar' (R.V. Rimmon), a place which formed one of the landmarks of the E. boundary of Zebulun (Jos.19.13 only). mēthôâr does not form a part of the name; but should be translated (as in A.V. marg.), "Remnon which reaches to Nahah." Now the ruin Rūmmâneh, 6 miles N. of Nazareth and on the E. border of the tribe of [C.R.C.]

Remphan' (Ac.7.42; A.V., but R.V. Rēphan'; sp Coptic [Memphitic] here and in Am.5.26, Itala Rēphan and Raiphan following the LXX. spelling, Nestlé Könphan, Westcott and Hart and Weiss Rompha. Vulg. Remphan) is read in the LXX. of Am.5.26 for the Heb. Chun (kiyyûn), and hence quoted in Acts. The LXX. evidently used the name Rēphan (the correct Coptic form) instead of the Heb. name of the same god (1) in order that readers in Egypt might know who was meant, and (2) to avoid using a word which would sound obscene in Egypt (as Koun in Coptic = gutundam virile, while Ken = bosom, Aeg. kōn, cf. Arab. kaṭan, also an indecent word), through kiyyûn (or better klēwûn) has not this latter sense in Heb. Rēphan is the Coptic name of the planet Saturn, according to Kircher, though he spells it Rēphan, and this suits the passage well, as kiyyûn (klēwan) is the Heb. form of the name of that planet. It is thought to give the etymology of Rēphan or Rēphan, but it seems to be for Řé or rē: both Mem-
REMPHAN

phitic forms) + pha + en, Aeg. Ra-phaa'un, "Ra the bearer." If so, Saturn must have been identified in later times with Ra, who, as sun-god, carried the justified dead through the sky in his bark Setklet (Book of the Dead, cap. xiv.). Otherwise the word might = Aeg. repi, prince. The m in such forms as Remphan or Romphan might easily creep in; cf. Aeg. repi, repent, "vegetables." vrep, whence Aeg. repit, "year," in Coptic rompi. Another alternative: Wilkinson (Manners and Customs of Anc. Egyptians, vol. ii. plate 69; cf. Bunsen, Egypt's Place, vol. i. pp. 141, 412) mentions an Asyrtic god Renpa, apparently a derivative of W. and appeared on a tablet of the 18th dynasty; perhaps from Aeg. *sandu, in conj. iv., "to hasten." If this is so, the LXX. blunders in using the name here as = Kaiwun. The Heb. text of Am.5.26 (with the transposition of one word, for which we have the support of the LXX.) runs thus: "And the king of the Sikkuth (=Mars) and the king of the Sikkuth (=Mars) and the king and the king of the king and the king = your king and the king of your king), the star of your god = your star-god), your idols which we have made unto you." keew (Chim) is the Syriac (Psiibb) form of the name of the planet Saturn, in Arab. Kaivun, from Asyr. Kuyanim,j a title of Nirgal, god of the wind, who was god of that planet, as was his "doppelganger" Nindar (otherwise Ninip or Adar) of Mars. The latter was also known to the Akkadians as Sakkut (whence the sikkuth of the Heb. Massoretic text, wrongly rendered smpy by the LXX.), "the chief of destiny. Like his classical parallel, he was a war-god. In Rawlinson's Cuneiform Dictionary (vol. 1, p. 37, eds. 3 and 4. 1. 40) Sakkut is given = Ninip, so the meaning of the word, which puzzled all ancient translators, is now clear, and we see that Omih (Kimchi) was right in rendering the beginning of Am.5.26 thus: "Ye did not accept, but ye shall accept and become the servants of the Sikkuth (=Mars) and the king and the king = your king), the star of your god = your star-god), your idols which we have made unto you." Kashi also saw that Sikkuth must be a name of a deity. The passage does not refer to any idolatrous worship offered by the Israelites in the wilderness, but to their yel future (in Amos's time) to idolatry during the Babylonian Captivity, as is clear from the use of the term. The reference to the king of the Sakkut (or Kevan) (either from Assy. Kau, "to be," or from Assy. Kau, "to stand," cf. Arab. Nana and qama, "the firm") from his apparently slow motion, just as in Sanskrit the same reason caused him to be known as Sani (the slow) and Manda (the tardy). The old derivation of the name from the Avestic Karv, Kavvan, Kaviana (imperial, royal), is impossible, not only because this word in Pahlavi becomes Kavan, not Kaivun, but because the word Kavvan (Arah, in Mod. Pers. Kaivun), if of Persian origin, could not have denoted Saturn (as it does), but must have meant Venus, as does Kavvan (a patronymic of Saka, the usual name of the latter planet) in the cognate Sanskrit. Of Assyrian origin, the title Kauimun or Kauiaun (for in Asyr. m and w are practically interchangeable, owing to Akkadian influence) became the name of the god in Palestine (cf. Sukkut, originally a title and then a name), and the word was received among the Arabs as the name of the planet and thus introduced into Persia, instead of having originated in the latter country. Jerome rendered kiyvin by "imaginem," and has misled, some later translators. Hommel, Die Allir. Uberlieferung: Kircher, Lingua Aeg. Rest. p. 49; Schrader, Die Keilschrijven u. d. A. T.; Budge, Book of the Dead, Aeg. Text and Voc.; Miguel's Geschichte, Warsaw ed.; Sayce, Higher Crit. and Monuments; Tattam's ed. of Coptic XII. Prophetae Miinores. [w.st.c.t.]

REPHAIH

Repentance. The divine part in salvation has been treated in Salvation, Saviour. The new attitude of God to man is connected with a new attitude of man to God. The first stage towards occupying this new attitude is repentance. The goodness of God leads to repentance. What is repentance? Not merely a sorrow for having done amiss, though this is its first beginning, if it be "the godly sorrow that worketh repentance." 2 Cor.7.10; still less mere contrition, or a change of mind, as the Gk. imports, a change of mien and afterwards imply a change of conduct, "works meet for repentance." Ac.26.20. Repentance is a necessary conditional situation, for to be saved from sin we must desire to depart from sin, and repentance is, in fact, this desire. Hence in N.T. repentance is constantly preached as essential to salvation (Mt.9.13; Lk.24.47; Ac.20.21, and passim). This insistence is not arbitrary, for the morality of forgiveness is grounded in repentance. Forgiveness prior to repentance is actually the condonation of sin, but as the recognition of repentance— "if he repent, forgive him—it is not now supposed that your iniquity is blotted out. St. John tells us that "if we confess our sins He is faithful and just to forgive us our sins," implying that, if God did not forgive, He would be unjust, as not regarding the vital difference that must ever exist between a sin that is heartily abandoned and a sin that is retained. As Butler says, "Christ not merely in part creates the conduct, repentance disassociates a sinner from his past and puts him "on the side of the angels," and while it cannot undo what is done, in all or most cases, yet, if combined with restitution and amendment, it is the best that under the circumstances is possible; and, as Butler says, "a man, by repentance, is made part of justice, but rendered it of the efficacy which it is by what He did and suffered, and obtained for us the benefit of having our repentance acepted unto eternal life." (Analog, ii. v. 16). [FAITH.] [MS.]

Rephael, a gate-keeper of the tabernacle; son of Shemah; 9(1 Chr.26.7).

Rephaim, a son of Ephraim (1 Chr.7.25).

Rephaiah. 1. Son of Ephraiah appear among the descendants of Zerubbabel in 1 Chr. 3.21.—2. A Simeonite chieftain, one of those who smote the Amalekites in mount Seir in the reign of Hezekiah (4.12).—3. Son of Tola the son of Issachar (7.2).—4. Son of Beine, and descendant of Saul (9.15).—5. Son of Hur, and
Ruler of a portion of Jerusalem. He assisted in the repair of the walls (Ne.3.9).

Rephaim, Valley of, a deep valley (‘omeq), having its head at the hill to its N., which lay W. of the valley of Hinnom (Jos.15.8, 18.16), but running W. so as to be near Adullam also (2Sam.5.18-22, 25.13 ; 1Chr.11.15, 14.9). This applies to Wady el Werd, rising near Jerusalem on S.W., and joining the valley of Sorek, 7 miles N. of Adullam. The LXX. and A.V. render the name “Valley of Giants”—referring perhaps to the Philistine giants or Rephaim (1Chr.20.4). Isaiah speaks of this valley as producing corn, wine, and oil (17.5, 6), which applies to its lower course. [C.R.C.]

Rephidim (refreshments), the place where Moses struck the rock in Horeb” (Ex.17.1, 6, 8), and consequently in the region of Sinai, which was the next stage in the journey of Israel (19.2; Num.33.14, 15). It is consequently supposed to be the present Wady Feiran [Paran], which has now a good stream, with open space for camps (Robinson, Biblical Researches, iv. p.145). It lay some 15 miles, or about a broad plain where Israel next camped “before the mount” (Ex.19.2). [C.R.C.]

Re'sen (Gen.10.12) was one of the four cities built by Asshur (R.V. by Nimrod), and lay “between Nineveh and Calah” (Koyunjik and Nimrud). It is probably that of “Ro’sal-hirm-him,” mentioned by Sennacherib as the place from which he made conduits to the cities of the district, as that seems to be Ro’sal-hirn-Ain, a little N. of Nineveh. It has been suggested that the Biblical Resen is the rather extensive ruins near the modern Salmiyah, which really lie between the two points named, on the E. bank of the Tigris. The explanation “the same is the great city” probably does not refer to Resen alone, but also to Rehoboth the city and Calah, which, with it, might possibly be regarded as having been suburbs of Nineveh. [T.G.P.]

Re'sheph, apparently a son of Ephrah and a brother of Joseph (Gen.37.25).

Resurrection [Future Life; Pharisees.]

Resurrection of our Lord. The earliest personal testimony is St. Paul's (1Cor.15.4-8), recorded within 50 years, experienced possibly within one year, of the Ascension. His summary of the appearances is the most ancient and most official of the records we possess, being evidently derived from the older apostles (ver. 3). St. Mark (if we exclude the last 12 verses) mentions the vacant grave, but no appearance of the risen Lord. St. Matthew and St. Luke add independent features; so also St. John. The fact of the Resurrection formed the basis of the earliest apostolic preaching. The earliest gospel presupposes the Resurrection. There would be no Gospel conceivable without it. If the details are difficult to harmonize, “the uncertainties which attend the Synoptic accounts are not greater than we might have expected, and cast no shadow of suspicion on the general truth of the narrative” (Swete, The Appearances of our Lord, p. 12). Two series of appearances are recorded, divided by locality. The original Mark implies, but does not record, a meeting in Galilee. Luke contains exclusively a series in Judaea. Modern criticism sometimes excludes the former on the latter, but with no real justification. There was time in the 40 days for both. If the prediction seems to require a first appearance in Galilee, perhaps the disciples' incredulity necessitated an earlier appearance in Jerusalem. If tradition generally tends to unite various versions of the same event, it cannot follow that Christ did not appear in two localities. Moreover, St. Mark implies that the apostles were still in Jerusalem on Easter morning (16.7). Again, “The third day is hardly less firmly rooted in the tradition of the Church than the Resurrection itself” (Sanday, Outlines). But by the Third Day the disciples could not have been housed in Galilee. Also Jerusalem, not Galilee, becomes the place where the Church is founded. The evidence shows that belief in the emptiness of the grave was not an inference from a theory of Resurrection, but ascertained from actual inspection prior to belief.—The nature of Christ's Resurrection-body is the subject of much controversy. St. Paul and the evidence of the evangelists. There is no reason to suppose that the former held a theory differing from the latter; or that St. Paul, in his theory of the spiritual body, was consciously deviating from the generally accepted view. The evangelists describe the Resurrection-body in terms of its earthly and terrestrial conditions; St. Paul, the nature of the same body in itself apart from temporary conditions. It is uncritical to argue that if the spiritual body of Christians does not require the resumption of the material elements of the buried body, neither does Christ's resurrection require the emptiness of His grave. There were altogether unique evidential reasons for the latter. Resurrection is not equivalent to the immortality of the soul. Any contemporary Jew, except a Sadducee, would have believed in Christ's Resurrection in that sense. What he would deny, and what the apostles affirmed, was the Resurrection-body as the earthly body of Christ into the instrument of His perpetuated life.—Christ's Resurrection certifies (1) His Messiahship (Ac.2.25, 36, 5.31); (2) that His Death was redemptive (Ro.6.4-10); (3) His divinity (1.3.4 ; cf. Liddon's Analysis; Gifford on Romans). It is the means (4) of His human exaltation (Lu.24:26; Ac.13.33; Ro.6.9); (5) of our justification (Ro.4.25; see Newman's sermon, Christ's Resurrection the Source of Justification); (6) of our physical resurrection (1Th.4.14; Ac.4.2; Ro.6.5, 8, 11; Cor.15). Consequently, it is the foundation of apostolic Christianity. Sherlock, Trial of the Witnesses; Horsley, Sermons on the Nature of the Evidence of the Resurrection; Mooney, Sayings of the Great Forty Days; Goulburn, The Resurrection of the Body (1850); Westcott, Gospel of the Resurrection (1879) and Revelation of the Risen Lord; Milligan, Resurrection of our Lord (1881); Liddon, Easter in St. Paul's (1885); Bruce, Apologetics; Knowing, Witness of the Epistles; Latham, The Risen Master (1901); Du Bose, Gospel in the Gospels; Oxford Library of Pract. Theol., Our Lord's Resurrection (1905); Lacey, The Historic Christ; Swete, Appearances. [W.J.S.S.]
Reuel', son of Peleg and ancestor of Abraham (Gen.11.26ff. ; 1 Chr.1:25).

Reuben' (behold a son), the eldest son of Jacob and of Leah, named from his mother's blessing at his birth (Gen.29.32). He is said later to have "hated his brother Benjamin" (Gen.37.2), and, as an apple-tree "prized as a charm (30.14-16), and his later crime caused him to be cursed by his father (35.22, 23, 49.3) in the song of Jacob, where he seems to be compared to the rivers of Syria, which leapt out as great fountains, and finally dry up in the deserts—leaping up as the waters, thou shalt not abound." So also in the blessing of Moses (Deut.33.6) it is predicted that, though not to become extinct, yet the men of the tribe shall be few (see R.V. and marg.). As the eldest son, Reuben counselled the brothers not to kill Joseph (who was sold in his absence), and he reminded them of this advice later (Gen.37.21, 22, 29, 42.22). On the descent to Egypt he had four sons (46.8, 9 ; Ex.6.14), whereas sprang four clans who, in the desert, marched on the right flank under Eleazar (Num.1.5, 2.10, 16, 7.30, 10.18). The tribe furnished Shammua as a spy (13.4). Its numbers [Palestine] decreased (1.21, 26.9) by 2,770 men left of the conquest of Palestine, and some of the Reubenites perished when joining the conspiracy of the Levite Korah against Moses (Num.16.1 ; Deut.11.6). The tribe chose the misbaur plateau in N. Moab as their lot, on account of their cattle (Num.32.1-58), but crossed Jordan to aid Joshua, returning after the conquest of the W. (Num.27.9-10 ; Josh.4.12, 22.19), and stood on the side of the Ten to respond to the curses (Deut.27.13). They remained by their distant brooks (R.V. Judg.5.15, 16), while Barak strove against the Canaanites, but were renowned for fighting prowess and for swiftness in their contest with Hagarites to the E. of their lot (1 Chr.5.18) till taken captive by Tiglath-pileser in 734 B.C. (ver. 26), after they had been already smitten by Hazael of Damascus (2 K.10.33). The tribe is last named in Ezk.46.6, 7, 31, Rev.7.5. The ethnic name Reubenite occurs in 18 passages of O.T. Among these was Adina (1 Chr.11.12), a Reubenite captain under David, and others (12.7-22) connected with his ancestor (cf. 27.16). The Tribal Lot of Reuben coincided with the kingdom of Sihon the Amorite, including the plateau of Moab from Jazer to the Arnon, and the Jordan valley E. of the river and immediately N. of the Dead Sea. They rebuilt, and in some cases renamed, six cities (Num.32.37), and within their border Gad re-built Dibon, Atrakoth, and Aroer (ver. 34). Besides these and other cities in the plateau (Jos.13.15-21), Reuben held Beth-jeshimoth in the Jordan valley (ver. 20.23), but Beth-aram (ver. 27) belonged to Gad. (c.r.t.-)

Reuel' and Raguel' (friend of God ; Heb. r'gûl'l for both renderings).—1. A son of Esan, and father of four "dukes" (callâph = "leader") of Edom (Gen.36.10, 13, 17 ; 1 Chr.1.35, 37).—2. The father-in-law of Moses, and a priest of Midian (Ex.2.16, 18). In Num.10.29 A.V. gives Raguel (like Gaza for Heb. 'azza), but the Heb. is the same as his Hobab in this passage, and (as noted under Hobam) there is no sound reason to suppose that Reuel is also called Hobab in O.T., though the names "friend of God" and "friend" (hôbâbbîh) are alike.—3. A man of the tribe of Gad in the time of Moses (Num.2.14).—4. A Benjamite, the son of Hinnah, whose name was found. In the book of the kings of Israel and Judah "Reuel" (R.V. Raguel) is a benite, or book of kings, indicating independent information possessed by the author of Chr. see Raguel' (Râgôwîl), a pious Hebrew of Ecbatana in Media (Tob.3.7, 17 ; see ver. 16), father of Sara. For the difficulty of the double name Jethro = Reuel, see Jethro'.

Reuel'ha, the son of Jemni of Reuben. [c.r.g.]

Revelation. (1) We commonly use the term "revelation" of any knowledge which appears to come to us otherwise than by our own mental processes, sometimes, therefore, (a) of ideas about a thing which either suggest themselves (as an "inspiration," or happy thought) or are suggested by a book or teacher ; more strictly (b) of some manifestation of the thing itself. While the former gives us only a limited number of ideas, the second provides an opportunity of learning an indefinite number, and also of verifying them. The first leads to opinion or belief ; the second is the ground of what we call real knowledge. Psychologically, faith—i.e. the confidence to act upon beliefs—comes of the latter only. (2) The same holds equally of objects. We call gravitation an abstraction, for its whole meaning is confined to the one limited idea; but a man is real, for in him are indefinite potentialities, and a "real" knowledge is only "real" to us, even if our knowledge is slight. (3) Natural or heathen religion is based on abstract inference. To the primitive or uncivilized man, considering only the affairs of his own tribe (monolatry), the god seemed real enough. With a wider intercourse and outlook, polytheism, or a more general concept of the universe, plainly differ, and equally plainly are nothing but notions. Idols and myths represent two pathetic attempts to create something real, an object of worship or a narrated incident as a basis of knowledge ; but the mind is quite conscious that they are only its own notions restated. Neither are taken seriously. Heathenism has no controversies, because it has no creeds. It can exert no moral power upon ideas of which it is only a reflection. (4) Judaism, Christianity, and Mohammedanism alone have claimed real knowledge. All have shown the consequent characteristics, being intolerant, to some extent pre-sensitizing, and morally effective. All based their claims on a miraculous revelation. The universe is the sphere of God's normal operation; but if the Name means anything more than the abstract totality of the universe, it implies that which transcends it. No finite mind can comprehend a manifestation of that which transcends nature can only be given within the natural sphere by transcending the natural law. The miracles
do not guarantee, but constitute, the revelation. (Psychologically, phenomena are always "eruptive"—i.e. they break into the evolution of thought after the fashion of a miracle.) The difference between these religions follows on the difference of the revelation claimed. (5) The Jews believed that God had revealed Himself to them in certain real events or acts of His own, which thus constituted a basis of real knowledge and of faith as in a reality. Early Judaism has much of the naïve reality common to all monolithic, but in a higher degree, and this stage is prolonged, partly by political, partly by deliberate, religious isolation. With increased intercourse, it was impossible to ignore other religions; but the Jehovah Who had been known could not be made one factor in a system of notions, and no religion has ever grown out of a confusion of myth. It was only possible, therefore, either by apostasy to adopt an alien religion, or to accept the inference of the prophets that the true God was also One, the God of the whole earth. The acts, however, by which He was known to them, being of a purely national character, did not provide the revelation of a personality, and to which the Jews adhered. There was something yet to come. (6) The Christians asserted that God had made Himself known in a life by assuming humanity, not in the limitation, and therefore imperfection, of a single human personality, but, as God only could do, in the wholeness of the nature. Since humanity can know a personal personality, it is of the utmost capacity to understand a revelation in the fulness of humanity was a revelation to the utmost of human capacity. The ideas of the early Christians, as of the early Jews, about God were often defective, and in this respect both had much to learn (cf. rise of Alexandrian theology) from the philosophers; but while to the latter He was an abstraction and a theory, to the Christians He was a reality. Philosophers and Roman politicians recognized that there was a difference of kind and not of degree. (7) The sense of reality found in Mohammedanism was derivative, and not original. It represents an attempt to make a religion out of a social ethic, without a basis in individual revelation. It does not argue against the possibility of a revelation, such as Christianity, to the Jews, but makes a serious misquotation. Melito of Sardis (c. 165) wrote a treatise On the Apocalypse of John. The Muratorian Fragment (c. 170) refers to "the Apocalypse of John" as canonical. The epistles of the churches of Lyons and Vienne (c. 177) quote it as Scripture. Dionysius of Alexandria (c. 200) cites it as Scripture and attributes it to the apostle. On the other hand, the book was rejected along with the Fourth Gospel by Marcion (according to Tertullian) and by the Gnostic Apelles (Menologion of Gaius in Rome (c. 210) rejected with scorn both the contents of the book and the attribution of it to an apostle; he was answered by Hippolytus, who maintained that it was by the apostle John, and henceforward we hear of little further opposition in the West. It is received by the Catholic church. It ascribes it to "John the son of Zebedee who lay on the breast of the Lord." Dionysius of Alexandria (c. 255) marks a new epoch. He held that Rev. was inspired, but written by a non-apostolic "John" (the apostle being the author of the Fourth Gospel). He bases his view on the marked difference in thought, style, and general character between in the Fourth Gospel, and the gospel of St. John, and mentions in support of it the interesting fact that there were two reputed tombs of John in Asia Minor. Dionysius' criticism appears to have stimulated opposition to Rev. in the East, though Alexandria itself did not generally reject the book. (3) A final criticism of the third century is directed to the canonicity of Rev., and again we have the suggestion of a non-apostolic John as the author, who may, he says, be a certain "John the Elder" mentioned by Papias. Cyril of Jerusalem wished the book excluded from use. Arian canons of this period ignore it. Apologists of Iconium states that "they say it is spurious." In Eastern Syria the Peshîtta version omits it, and sets a precedent followed even down to the 15th century. In Western Syria, where the authority of the book had in the 2nd cent. been fully recognized, we now find a growing dislike to it, sufficient to keep it among the Antilegomena until the 9th cent. [CANON OF N.T.—Date. The traditional date is c. 93–96. "It was seen," says Irenaeus, "at the close of Domitian's reign." (Dr. Chase, quoted by Dr. Swete, suggests that the meaning is that St. John was seen at that time.) But the traditional date is well supported apart from Irenaeus' statement. On St. John's banishment to the reign of Nero, Epiphanius to that of Claudius, and other writers to that of...
Trajan. The last seems excluded by, e.g., 13. 13-17, which is unlike what we know of the personal style of the apostle. But it is not improbable that the whole, the internal evidence corresponds with the traditional date. The "seven churches" do not seem to be infant communities, and in particular an earlier persecution is referred to (2:13). Moreover, Domitian seems to be introduced (13. 3.12. 17-8.16). The interpretation of these passages seems to be that Nero (the fifth emperor) and Domitian (the eighth, not reckoning the three ephemeral reigns of 68, 69) are to be regarded as both heads and embodiments of the "beast from the sea" (= the world-power of the Roman empire). Domitian, moreover, is thought of as a second Nero (cf. Juv., Sat. iv. 38, "calvus Nero"), and so, though "in eight," he is one "of the seven:" and there appears to be an allusion to the rumour that Nero was not really dead at all. So far there seems a clear case for dating Rev. in the reign of Domitian. On the other hand, 17.10 professes to be written in the reign of周围的(2)._But this verse is an enigmatic fragment inserted in the passage, but more probably it is simply a case of ante-dated prediction in the well-known apocalyptic manner. 13.18. appears to refer to Nero. 11.1-13 also seems to be earlier than 70 A.D. in origin, but the figurative use made of it suggests a later date. —Fifth. The General plan of Rev. is of a very remarkable character. Prima facie it appears full of elementary mistakes in grammar, besides its many unusual phrases and constructions. On closer examination we are struck by the fact that many of these peculiarities are evidently deliberate, and, moreover, that they do not detract from the lucidity and literary power of the book. We may conceive that they are consciously or unconsciously intended to reproduce the effect of the Heb. prophetic style, or to give the vivid effect of a series of interjections. With Zahn we may suppose that the seer actually wrote his visions under the influence of the prophetic salutation; or with Benson we may look for parenthetical comments of the writer himself, or attempt to set obscure passages right by altering the punctuation. But when all has been said and done, we are still without a completely satisfactory account of the linguistic peculiarities of the book. Authorities. (1) For external evidence, ride supra. This evidence is even stronger than it seems, for the objections felt in the East to an apostolic origin rest on doctrinal considerations. (2) Internal evidence, (i) Relation to the Fourth Gospel. We can hardly deal with the question of the authorship of Rev. until we have given some provisional account of that of the Fourth Gospel. (ii) If we believe that the gospel comes straight from the pen of the apostle, there are serious difficulties in supposing that Rev. does the same. In spite of quite distinct affinities in vocabulary, grammar, and style, the contrast in each respect is very remarkable, and no explanation of the peculiarities of Rev. hitherto suggested seems sufficient to overcome it. Nor can it be accounted for simply by the difference between the traditional style of the book. The cleavage is far deeper, e.g., as Dr. Swete points out, than that between the apocalyptic portions of Thess. and 2 Cor., and the rest of those epistles. Nor can the passages under the title, "the third Man of the Apocalypse," appear in both books held to outweigh all their differences (Zahn). Westcott, it may be noticed, urges the earlier date for the Rev., on the ground that it could not have been written after the Fourth Gospel by the same author. (5) If we believe, with the author of the Muratorian Fragment, that the Fourth Gospel was dictated by the apostle and revised by others, it becomes much easier to accept the apostolic authorship of Rev. (c) If the apostle's authorship is rejected in the case of the gospel, the linguistic difficulty in ascribing Rev. to him of course disappears. But in that case some weight will probably have been allowed to Papias' statement that the apostle was killed "by the Jews" (i.e. before 70). This would all but exclude the earliest possible date for Rev. (ii) Other internal evidence leads us to believe that the book is at any rate by some "John" who knew the Asian church and its history. If the anonymous author had claims apostolic rank more decidedly. It does not, of course, follow that this person is the apostle. We must keep open the possibility that when "John the disciple" is mentioned as residing in Asia and being exiled to Patmos and living till the end. The Gospel of John is a very remarkable character. Prima facie it appears full of elementary mistakes in grammar, besides its many unusual phrases and constructions. On closer examination we are struck by the fact that many of these peculiarities are evidently deliberate, and, moreover, that they do not detract from the lucidity and literary power of the book. We may conceive that they are consciously or unconsciously intended to reproduce the effect of the Heb. prophetic style, or to give the vivid effect of a series of interjections. With Zahn we may suppose that the seer actually wrote his visions under the influence of the prophetic salutation; or with Benson we may look for parenthetical comments of the writer himself, or attempt to set obscure passages right by altering the punctuation. But when all has been said and done, we are still without a completely satisfactory account of the linguistic peculiarities of the book. Authorities. (1) For external evidence, ride supra. This evidence is even stronger than it seems, for the objections felt in the East to an apostolic origin rest on doctrinal considerations. (2) Internal evidence, (i) Relation to the Fourth Gospel. We can hardly deal with the question of the authorship of Rev. until we have given some provisional account of that of the Fourth Gospel. (ii) If we believe that the gospel comes straight from the pen of the apostle, there are serious difficulties in supposing that Rev. does the same. Nor can it be accounted for simply by the difference between the traditional style of the book. The cleavage is far deeper, e.g., as Dr. Swete points out, than
thought or language of his source. —Inter-
pretation. For more than 200 years a literal and “futurist” interpretation prevailed, ex-
cept at Alexandria, where all Scripture bore a mystical sense. The 1000 years of
triumph were looked forward to as equivalent
to the Second Coming; hence came the term
“Chiliasm” to express the tendency of the
time. With the triumph of the Church came
new methods. Tyconius (end of 4th cent.)
suggested that “the genus is hidden in the
species,” i.e. that the contexts and struggles of
the Bible, so far as the Church is interested,
are continuous good and evil. This view was
developed by Augustine, who saw in the 1,000 years simply the reign of Christ in the
city of God in his own day. In the 9th cent. Berengaud
made the first effort after a “continuous
historical” interpretation, which was carried
much further by Joachim (c. 1200), and was
developed to move the staple method of the Re-
formation controversies. The Jesuit Alcasar
(17th cent.) was the first to adopt a frankly
“preterist” view, seeing in the last chapters the
present triumph of the Church, and in the
greater part of the book simply an account of the
age of persecution. Most modern interpre-
tation may be considered “preterist,” for the
most part, or “contemporary historical,”
seeking a meaning in every case suitable to the
historical circumstances of the writer’s
times. It is generally felt that the schemes of
the “continuous historical” school are
little more than a reductio ad absurdum of its
method, so that the latest efforts are
returning to the true spirit of prophecy. But we are
not on that account barred from reading into
the seer’s words, with Tyconius and
Augustine, a meaning which no age and no
partial fulness can exhaust. Swete, Apoc.
of St. John; Scott, “Revelation” in Century
Bible; Milligan, Lect. on Apoc. (c.); Benson, Apoc.
1904). [K.D.M.]
Revised Version. [Version, Revised.]
Re’zech, one of the places which
Sennacherib mentions, in his taunting message
to Hezekiah, as having been destroyed by his
predecessor. It is marked by Tolemery (v. 15)
under the name of ‘Parapha.’ Now Resafa, S. of Tiphsah, which is
on the Euphrates N.E. of Hamath. Rezech
is noticed in the list of Thothmes III. (No. 348)
in 16th cent. n.c., and a century later it
probably appears as Arzapi in one of the
Amarna letters (Berlin 10). [c.c.r.]
Rezxil’ah, king of Ulla (1 Chr. 7:35).
Rezin’.—1. A king of Damascus, who, in
alliance with Pekah, king of Israel, attacked
Jotham (2 K. 15:37); but his chief war was with
Ahaz (c. 741 B.C.). The combined army un-
successfully besieged Jerusalem, where Ahaz
was (1 S. 7:1; 2 K. 16:5); but Rezin “recovered
En-Gedi” (2 K. 15:29). After this he was
attacked, defeated, and slain by Tiglath-pileser
II., king of Assyria (2 K. 18:20; cf. Tigrath-pile-
sor’s own inscriptions, where the defeat of Rezin
and destruction of Damascus are distinctly
mentioned).—2. One of the families of the
Nethinim (Ezr. 2:48; Ne. 7:50).
Rih’alah, a vassal of Hadadezer king of Zobah. When the latter
was defeated by David (2 Sam. 8:3-12), Rezon
fled from his master and put himself at the
head of a band of freebooters, and eventually,
at Solomon’s accession, established himself as
king in Damascus. During his own lifetime
he was “an adversary to Israel all the days of
Solomon,” and the subsequent kings who
claimed descent from him were amongst the
most troublesome of Israel’s enemies (1 K. 11:
23-25). [Hezios.]
Rhégium. This Italian town which was
situated on the Bruttian coast, just at the
entrance to the Gulf of Taranto, is mentioned
incidentally (Acts 28:13) in the account of St. Paul’s voyage from Syracuse
to Puteoli, after the shipwreck at Malta.
By a curious coincidence the figures on its
coins are the “twin brothers” which gave
the name to St. Paul’s ship. It was originally
Greek colonized by Phocaenians, and later,
by Dionysius of Syracuse; from Augustus
it received advantages which combined with its
geographical position in making it important
throughout the duration of the Roman empire.
The modern Reggio is a town of 10,000 inhab-
itants. It is about 6 miles across the straits from
Rhésa, son of Zorobabel (L. u. 3:27).
Rho’dai, a maidservant who announced Peter’s
arrival at the door of Mary’s house after his
miraculous release from prison (Acts 12:13).
Rhodes. St. Paul touched at this island,
so illustrious in ancient history, on his return
voyage from the third missionary journey (Acts 21:1). Rhodes was the chief town of
the high Carian and Lycian headlands at the
S.W. extremity of the peninsula of Asia Minor.
Its real eminence began (about 400 B.C.) with
the founding, at its N.E. extremity, of the city
which is still the capital. After Alexander’s
death it entered on a glorious period, its
material prosperity being largely developed
by Dionysius of Syracuse; and its institutions deservedly obtaining
general esteem. As we approach the time of the consolidation of the Roman power in
the Levant, we have a notice of Jewish residents in Rhodes (1 Mac. 15:23). The
Romans, after the defeat of Antiochus, was assigned, defeated, and by the Romans certain
districts on the mainland. Its Byzantine
history was also eminent. Under Constantine
it was the metropolis of the “Province of the
Islands.” It was the last place where the Christians of the East held out against the
advancing Turks; and was famous as the
home of the Knights of St. John.
Rhódoc’us, a Jew who betrayed his country-
men’s plans to Antiochus V. (2 Mac. 13:21).
Rhó’dus (1 Mac. 15:23) = Rhodes.
Rib’ai, father of Ittai the Benjamite of
Gibeah (2 Sam. 23:29; 1 Chr. 11:31).
Ribband of blue (πτθηλίνθα εξ ἔρισθα),
properly speaking, a cord of blue entwined with
the fringes of the garment. Originally a gift to
Num. 15:38, is still observed by all orthodox
Jews. [Hem of Garment.]
Rībblah (fraility), a town on the border of the
land of Israel (Shepham) and of Ha-
math (Num. 34:11; 2 K. 23:33), where Nebu-
chadnezzar made his headquarters in 588 B.C.
(2 K. 25:6, 26, 27; 2 Chr. 36:6, 20, 21). It was
now a mud village on W. bank of the Orontes,
about 35 miles N. of Bal'ath. N. of Riblah the great battle at Arian was fought (Syrac. in 833 n.c.; and one of the Syrian princes then defeated was “Ahab of Riblai” (probably not Sir-lai, as some read it) assisting Hadad-er. 11. He has been taken for Arian of Israel, who reigned nearly half a cent. earlier, in the time of Bezechad I. [DAMASCUS], causing much dispute in O.T. [C.R.C.–]

Riddle (Heb. hidqah; cf. Arab. hidhā = to twist or knot; 1 Cor. 13:12, αἰσχύνα). On account of its derivation, the Heb. word has several senses, and is translated by different Eng. words, according to the nature of that obscurity which is the fundamental idea in all. It is used in Dan. 8:24 of double dealing; of obscure utterance (Num. 12:5), of allegory and figurative language (Ezk. 17:2; Pr. 1:6; Ps. 78:2—“parables”), perplexing questions used by the queen of Sheba for testing Solomon (1 K. 10:1; 2 Chr. 9:1), and of a riddle in the modern sense, something of which the answer has to be guessed (Judg. 14:12). The interpretation of riddles mentioned in the Prologue to the Proverbs is perhaps ability to understand allegory and metaphor. The primitive mind loves allegory: it is its substitute for abstract thought. Hence ability to interpret it is regarded as a sign of wisdom, and this probably accounts for Solomon's reputation, which neither his rhymes nor his policy justified. Some may think that the form of the riddle was originally similar to that of our modern riddle: e.g. “What is better than the man that honoureth himself and lacketh bread? He that is not esteemed, but hath a servant” (see Pr. 12:9). The transition from these “dark sayings” to the parables of N.T., which were intended both to conceal and reveal, is obvious. [PARABLE.] The visions of Daniel and all apocalyptic literature are parabolic in this sense. The word “enigma” (αἰσχύνα), which occurs only in 1 Cor. 13:12, has also this connotation of dark saying. It is the parable, under the outward form of which the spiritual reality is hidden. Every parable may perhaps be regarded as a means to some sense a “riddle,” the interpretation of which has either to be guessed or supplied. The “number of the beast” in the Apocalypse has been called “the unsolved enigma of the N.T.” [NUMBER.] The one definite instance of riddle in the modern sense is the famous parallelism of Judges, propounded by Samson to his wedding guests, Hebrew humour was apparently of a somewhat grim type, and the interpretation of “the strong” and “the sweet” was obviously impossible to anyone who had no knowledge of the special circumstances which gave rise to the association. The Arabs are fond of propounding similar riddles and ingenious devices, books of which are still extant.

Rie (Heb. κωσμέθα) occurs in Ex. 9:32, and R. 23:26 (marg. σφελ). It is probable that κωσμέθα “spelt” (as R.V.) is intended. ἱερομον σφελθ is a hard, coarse, bearded wheat, much cultivated formerly for fodder; the χόν of the Greeks, the κόρ or κόρο of the Romans. It is a winter wheat. [BREAD; CORN.]

Right hand. Frequent in O.T. of God, symbolically representing His (1) creative might, (2) protecting or avenging power, (3) overruling providence, (4) presence, (5) fatherly care; hence (6) “eye of the soul” or “eye of the heart.” The right hand of God, this phrase originally belonged to the language of anthropomorphism, but had early passed into conscious metaphor. Found commonly in the Psalms, not seldom in the prophets, e.g. Is. 41:10; Zech. 3:1 in senses (1), (2), (4). In N.T. it is far less common, but St. Peter (Ac. 2:22) states that this was done “by the right hand” of God: St. Paul, Acts, Hebrews, of Christ as sitting or standing at God’s right hand. [C.C.T.]

Righteousness (καθορισμόν, Heb. c’dhqdī), a quality and attitude of heart—that is, of the whole individual man with reference to his fellow-men. The term, as used in Holy Scripture, denotes no specific virtue, but stands in contrast with sin (Rom. 6:20; 1 Pet. 2:24; Jn. 16:8; 1 Jn. 3:7f.), and implies a general obedience, or fidelity, to the voice and will of God (Rom. 10:5; Ac. 10:35). The primary constituent of righteousness is, accordingly, faith (including trustfulness and faithfulness), which in the first place of the law may be, in the second of the law, a sign of faith, passing for the deed, by a God Himself infinitely righteous (Jn. 17:25; Rev. 16:5, as cause for deeming righteous—“justifying”—men who are yet sinners. As in E.V. “just” and “righteous” are alternative renderings of the same original word, so theologically “righteousness” and “justice” are one and the same thing, the “justice” being, outside the Bible, used to denote the less comprehensive, though cardinal, virtue recognized in Gk. and Roman literature and philosophy, is apt in Christian usage also to be of narrower extension than “righteousness,” which, however, in turn is misinterpreted and made void, if, like the Pharisaics (Mt. 20:20), we omit from it distributive justice—the constant will to render to every man his due. For the godly “righteousness” is an object of longing (Mt. 5:6) and foremost seeking (6:33), though entailing persecution (5:10). In Christ all righteousness is completely united (2 Cor. 5:21). Likened (Is. 59:17; Eph. 6:14) to a “breast-plate,” righteousness has elsewhere its own “armour” (2 Cor. 6:7) and final “crown” (Ti. 4:8). [J.M.S.]

Rimmon, a deity worshiped by the Syrians of Damascus, where there was a temple or house of Rimmon (1 K. 15:18). The word is usually understood to mean “exalted”; but the Babylonian Rimmuru apparently means “storm,” and this god (called Hadad or Addu in Syria) was the Babylonian Jupiter Pluvius, the god of rain and of the air or wind. Geographically the word appears to mean “high” [C.E.C.—]

Rimmon, a Benjamite of Beeroth; father of Rechab and Baanah, the murderers of Ishbosheth (2 Sam. 4:2; 5,9).

Rimmon.—1. A city of Zobah belonging to the Merarite Levites (1 Chr. 6:77). Dan[6.

Rimmon (Jos. 21:35) appears to be a clerical error for Rimmon, the name of a town in Judah (Jos. 15:32), allotted to Simeon (Jos. 19:7, R.V.; 1 Chr. 4:32). In each of the above lists the name follows that of Atri. In the catalogue of the places reoccupied by the Jews after the return from Babylon (Ne. 11:29)
the two are joined, as En-Rimmon. The probable site is the ruin Um el Kurnamin, 10 miles N.N.E. of Beer-sheba.—3. The Rock Rimmon was a cliff where the 600 Benjamites who escaped the slaughter of Gibeon took refuge (Judg.20.4,5,47,21.13). It is described in the "wilderness." Now the village Rimmon, 3 1/2 miles E. of Bethel, on a conical hill commanding a fine view, with rugged valleys to E. and S. in the desert W. of the Jordan Valley. There are many caves in the rocky hill side. [c.r.c.]

Rimmon-pa‘rez, a place in the wilderness (Num.33.19,20) probably "height of the cleft." It lay some 20 miles N.E. of Hazeroth, but the site is unknown. [c.r.c.]

Rimmon, the ring: (1) the ring symbol of authority, and as such was presented by Pharaoh to Joseph (Gen.41.42), by Ahasuerus to Haman (Esth.3.10), by Antiochus to Philip (I Mac.6.15). (2) As an ornament it was worn not only by men, but by women (Is.5.21). The signet-ring or ring of office (Joseph 24). We may conclude, from Ex.28.11, that the rings contained a stone engraved with a device or with the owner's name. In N.T. a ring is mentioned in Jas.2.2. [ORNAMENTS, PERSONAL.] Many Heb. signet-rings have been found by Warren, Bliss, and others, in excavations; many of them appear apparently (judging from the characters) as old as c. 700 B.C. They present familiar Heb. names, such as Shebnniah and Azariah (at Jerusalem; Porret and Chipiez, Hist. de l'art, iv. p. 439), Jeremiah (at Taanach), and (somewhat later at Jerusalem) Haggai (Warren, Ishmaeleria, etc. (Bliss).

Rinnah, a son of Shimon in the genealogy of the descendants of Judah (1 Chr.4.20).

Riphath, second son of Gomer, and brother of Ashkenaz and Togarmah (Gen.10.3). The Heb. of 1 Chr.1.6 gives the form Diphat, but many MSS. read Riphath. The name itself has been derived from an adjective meaning a kind of the Rhipaean mountains, the river Rhbas in Bithynia, the Ribbi, a people living eastward of the Caspian Sea, and the Riphans, the ancient name of the Paphlogonians.

Rissah, a station in the wilderness (Num.35.21,22). It was apparently some 20 miles S.W. of Suphah (Tell en Asfar) but the site is unknown. [c.r.c.]

Rithmah, a march-station in the wilderness (Num.33.18,19), probably about 10 miles N.E. of Hazeroth. The name means "broomy," from the white broom which grows in the desert. [c.r.c.]

Riven, a verb in various passages so renders six different Heb. words. (1) nahr, a term applied to large rivers, though the Arab. nahr is used for smaller streams. The four rivers of Eden, including the Euphrates and Tigris (Gen.2.10-14), are so called, and the Nile (Ex.7.19), and rivers of Cush (Zeph.3.10; E.V. Ethiopia). Gozan (2 K.17.6), Chebar (Ezk.3.14), and Abon (Ezk.5.12), as well as the Jordan (R.V. Ps.66.6). In 70 chapters of O.T. the A.V. renders the word as "river," but also as "flood" (24.2, etc.). "The River," however, appears always to mean the Euphrates (Gen.31.21; Ex.23.31; Num.24.6; 2 Sam.10.16). (2) nahal (torrent) is rendered "river" by A.V. in 23 chapters. [VALE.] (3) y'or is usually a term for the Nile, but also for the Tigris (Dan.12.5), and even for channels cut among rocks (Job 38.10). Rendered "river" by A.V. in 48 cases, but also "flood" (Jer. 7.8; Am.5.8,9,5), and "brook" (in plur.) referring to the Nile branches (Is.19.6,7,8). The word was used in the Egyptian language, and is especially frequent in relation to Egypt (Gen.41; Ex.1-17 in 29 instances); but it may be a Semitic word borrowed in Egyptian, like many others in and after the Hyksos period. It does not refer to rivers in Egypt as used by the Assyrians in 703 B.C. (2 K.19.24), for they had as yet not conquered the Nile valley, and the word is also Assyrian. [JORDAN; SEMITIC LANGUAGES.] (4) yiybbal (Je.17.8), or 'abhal (Dan.8.2,3,6), is rendered "river" in A.V., and means a "stream." (5) peleg signifies an "irrigation channel," but is rendered "river" by A.V. in Job 29.6. Ps.1.3 ("stream") in 46.4—proceeding from a nahr at Jerusalem, 65.6,11,56.26 (of stream of David). (6) Am 2.14, 36.22; Lan.3.48. (7) 'aphiq [cf. APHEK] occurs in 18 chapters of O.T., rendered "channel," "stream," and "brook" in A.V. It applies to the source of the Adonis River at Aqwa, and to the spring of the same name at Tadmor, to the present day. It is rendered "river" in Lk.5.36, 12.23, 34.13,35.8,36.4.; l.1.20,,3.18. Possibly the Aphik at which the Philistines camped near Shunem (2 Sam.21.19) should be read Aphek, as there is a good stream at Shunem (Suleim). Palestine is not merely a land of winter torrents, but also of rivers and streams with perennial supply.

River of Egypt. Two Heb. terms are thus rendered in A.V. (1) whwr miryam (Gen.15.18), "the river of Egypt," that is the Nile, and here the Pelusiac or easternmost branch. (2) nahal miryam (Num.34.5; Jos.15.4,47; 1 K.8.65; 2 K.24.7; and Is.27.1, "the stream of Egypt"). This name is held that this designates a desert stream on the border of Egypt, still flowing after rains in the valley called Wady el ‘Arish. The stream is first mentioned as the point where the S. border of the Promised Land touched the Mediterranean, which formed its W. border (Num.33.3-6). Later, we find Solomon’s kingdom extending from the "entering in of Hamath unto the river of Egypt" (1 K.8.65), and Egypt limited in the same manner where the loss of the E. provinces is mentioned (2 K.24.7). In certain parallel passages the Nile is distinctly specified instead of "the nahal of Egypt" (Gen.15.18; cf. Gen.13.12,23).

Rizpah, concubine to king Saul, and mother of his two sons Arnom and Mephhibosheth. She is called (2 Sam.3.7,21,8) the daughter of Iah, perhaps = Ahab, which may imply that she was a Hivite, a descendant of Zibeon the grandfather of one of Esau’s wives (Gen.36.24). Her name is first mentioned in connexion with an accusation levelled at Abner by Ishboseth (2 Sam.3.6-11). When, at a later period, seven of Saul’s sons were hanged, or rather, "exposed" after death on the top of the sacred hill of Gibeah, as an act of atonement for Saul’s persecution of the Gibonites whose Israel had sworn to protect (Josh.9.27),
Robbers of Churches

Rizpah, the mother of two of them, watched over the bodies day and night, and “suffered neither the birds of the air to rest on them by day, nor the beasts of the field by night.” When at length David heard of her devotion, he gave her honourable burial, along with the bones of Saul and Jonathan. The victims were sacrificed at the beginning of barley harvest, and Rizpah remained at her post until “water dropped upon them out of heaven,” i.e., probably, until the drought was over, an evidence to all that the sacrifice was effectual (2Sam.21.1-14).

Robbers of churches (i.e., robbers of temples, sacrilegious). The word occurs in Ac 19.37, in the description of the famous scene at Ephesus. The charge of sacrilege was a serious one, but there were degrees in the offense. Of a lighter kind was the crime of embezzling the sacred property, but the method consisted in an act of desecration. The punishment for this was death. On the authority of the town-clerk, St. Paul and St. Barnabas had done and said nothing directly that could be twisted into a charge of sacrilege, though Demetrius had played upon his fellow-craftsmen’s fears lest, as the consequence, Paul’s preaching, “the temple of the great Artemis be made of no account.” [A.R.]

Roboam’ (Eccles.47.23; Mt.1.17) = Reho-boaM. Rock, the translation of several Heb. words, with different ideas, whether solid (Neh.2.20) or the underlying idea is that of inaccessible height or, hǎlládām (Is.51.1), where the idea is that of hardness or firmness. The general Heb. word is qār, and whilst the others are only rarely used figuratively of God (e.g., 2Sam.22.2), qār is often so employed (e.g., Dt.32.15,18, etc.) that it has been suggested that the word has the sense of a proper name. In N.T. the word “rock” always represents the Gk. πέτρα (e.g., Mt.16.18). [PR.512] [S.S.S.]

Rod. The rod or staff was the symbol of travel in the East. Typical instances of this idea are found in Ex 12.11; 2K.4.29. The staff also has other meanings of support. The Support of the Bible carries both rod and staff (cf. Ps.23.3). Here the rod (shibbet) is a club or mace, with a rounded head, a weapon of defence against robbers or wild beasts (in other places a symbol of authority, Judg.5.14; see R.V.); 6.21, etc., the staff (mish’chenah) is a pole, like an alpenstock, for climbing, clearing a way through undergrowth, or for dealing with refractory animals. The rod of Jesse (Is.11.1; R.V. a shoot out of the stock of Jesse) expresses the figure of a tree-stump out of which springs a single living shoot. In Lev.27.32 and Exk.20.27 the expression “the staff (Gazelle dorcas)” still found in the plains. It has always in the E. been a type of beauty (Can.2.9,17,8.14); famed for its swiftness (2Sam.2.18; 1Ch.12.8) when hunted for food (Deut.12.15,22; Is.13.14; Pr.6.5). The three species of game for Solomon’s table (1K.4.23) were the fallow deer (uyyal; A.V. Hart) or Dama valgaris, still found in the woods of mount Tabor; the gazelle (A.V. roebuck); and the roebuck proper (yamhar; A.V. Fallow deer). In 1872 the present writer found that the roebuck is still hunted on mount Carmel, and still called yamhar. In 1882 he found it known in the woods of Gilead as the hamir, and it also has been found in Lebanon. The two species of A.V. (fallow deer and roe), though misapplied to the Heb., thus exist; but the hart or red deer does not occur in Syria. [c.r.c.]

Gazelles (G. dorcas and G. arabica) are for the most part relatively small and delicately built antelopes, easily recognized by their ridged lyrate horns, and the parallel fawn and white face markings. The usual colour of the upper parts is sandy, the darker flank-band and a white rump-patch. [R.E.]

Rogelim’, the residence of Barzillai the Gileadite (2Sam.17.27,19.31) in the highlands E. of Jordan. Nothing is said to indicate its situation.

Rohgah’, an Asherite; son of Shamer (1Chr.7.46).

Ro’imus (1Esd.5.8) = Rehum, 1.

Roll (Heb. p’chilla, from gilal, “to roll,” strictly answering to the Lat. volumen, whence our volume). The roll was usually written on one side only, and hence the particular notice of one that was written within and without (Ezk.8.1). The writing was staggered in columns. The term in Is.8.1, rendered in A.V. “roll,” means tabrif. [Writing.]

Rolls, House of. [Treasure-house.]

Romam’tl-ezer, son of Hennam and head of the 21st course of singers (1Chr.25.1,31).

Roman Empire. A. Rome and the East before and after Christ. The notices of Roman history in the Bible are confined to the last cent. and a half of the commonwealth and the first cent. of the imperial monarchy. The chief prophetic notices of the Roman empire are found in the book of Daniel. According to some interpreters, the Romans are intended in 2K.12.14, 2Sam.10.17, 17. The first historic mention of Rome in the Bible is in Mt.1.10. About 161 n.c. Judas Maccabeus heard of the Romans as the conquerors of Philip, Ptolemaus, and Antiochus (8.1.5,6). To strengthen himself against Demetrius, king of Syria, he sent ambassadors to Rome (8.17), and concluded a defensive alliance with the senate (8.22-12). This was renewed by Jonathan (12.1) and by Simon (15.17). In 65 n.c., when Syria was made a Roman province by Pompey, the Jews were still governed by a Hasmonaeum prince. Aristobulus had lately driven his brother Hyrcanus from the chief priesthood, and was attacked by Aretas, king of Arabia Petraea, the ally of Hyrcanus. Pompey’s lieutenant, M. Aemilius Scaurus, intervened (64 n.c.), and in 65 n.c. Pompey marched into Judaea and took Jerusalem. From this time the Jews were practically under the government of Rome. Hyrcanus retained the high-priesthood and a titular sovereignty, subject to the control of his master Antipater, a partisan of the Romans. In 40 n.c. Antipater’s son,

Herod the Great, was made king by Antony's interest, and confirmed by Augustus, 30 B.C. They communities of transplanted Roman citizens. Augustus divided the provinces into two classes: (1) imperial, (2) senatorial; retaining in his own hands those provinces where the presence of a large military force was necessary, and committing the peaceful and armed provinces to the senate. The provinces—Gaul, Lusitania, Syria, Phoenicia, Cilicia, Cyprus, and Egypt; the senatorial—Africa, Numidia, Asia, Achaia and Epirus, Dalmatia, Macedonia, Sicily, Crete and Cyrene, Bithynia and Pontus, Sardinia, Baetica. Cyprus and Gallia Narbonensis were subsequently given up by Augustus, who in turn received Dalmatia from the senate. Many other changes were made afterwards. The N.T. writers invariably designate the governors of senatorial provinces by the correct title of \( \text{imperator}, \text{pro-consuls} (\text{Ac.13:7,18:12, 19:38, R.V.}) \). For the governor of an imperial province, properly styled \( \text{Legatus Caesars}, \) the word \( \text{Gk.} \text{Praefectus} \) (governor) was used. Under the empire, the governors received a fixed pay, and their term of command was prolonged. The condition of the Roman empire at the time when Christianity appeared affords obvious illustrations of St. Paul's expression that the

\[ \text{Nero's fulness of time had come} \] (Gal.4.4).

The general peace, the formation of military roads, the suppression of piracy, the march of the legions, the voyages of corn fleets, the general increase of traffic, the spread of the Latin language in the W. as Greek had already spread in the East, the external unity of the empire, offered facilities hitherto unknown for the spread of a world-wide religion. The tendency, too, of an orderly administration of the Roman empire to reduce all its subjects to an equitable level was a powerful instrument in breaking down the pride of privileged races and national religions, and familiarizing men with the truth that

\[ \text{"God hath made of one blood all nations on the face of the earth" (Ac.17:23-26).} \]

The assumption of the direct control of India by Queen Victoria (1857) forms an almost perfect analogy to the policy of Augustus and his successors. Hitherto, both empires had suffered from fiscal oppression and private avarice. The provincials were exploited by merchant-princes; and the law gave no remedy. It is obvious from the later history of the republic that the senate (or oligarchy of \( \text{Venetian} \) nobles) neither desired nor exercised any control over bad governors. Malversation was connived at; and redress was impossible, in spite of excellent enactments which remained unexecuted.

In the case of Actium the fortune of the world was decided. The question lay between the frank selfishness and cupiditv of Antony (supported by the Oriental traditions of a Macedonian military monarchy), and a far more serious conception of responsible sovereignty. The empire might indeed be termed as castrum of the provinces against a careless and unprincipled governing caste. Augustus stood for honest and untiring work and for the general welfare. The provinces benefited enormously by the
change. The East has neither before nor since known such good government. The characters of Roman soldiers, and for the most part of Roman governors and administrators, form a model imperial order in N.T. The West—with its features are only rived, and not often surpassed, by the British officials of our own day. But the Romans under the empire far surpassed ourselves in the art of exciting the affection as well as the respect of the provincials. The permanent camps of the legions were popular with the inhabitants; and soon became centres of sober domestic life and a hereditary defensive caste. Gradually the distinction between Roman and provincial faded; and the empire found its stoutest champions among the newest additions to the great family. The worship of the emperor, or rather his image, provided an outlet for devotion for the complex and hostile local cults. The various revolts which disfigure later history were due largely to provincial protests against those who abused or perverted the traditions of the Roman heritage. Rebellion was always directed against the person, never against the system. The representative system may be said to be overshadowed in the provincial assemblies for the imperial worship; and the usurpers or pretenders never failed to pose as the true "Roman emperors," as the restorers of the ancient paths. The democratic source of power was never forgotten; and a despot control was set aside by a popular election. Under such a system the provinces exerted ever more and more influence. Soon Spaniards, Asiatics, and Africans sat on the throne, and represented or gave effect to certain phases of public opinion. For something like three centuries the hardy and aggressive Roman provinces preserved a series of emperors who could, whether as generals or administrators, be surpassed in any annals. The ruling class had no privilege of monopoly; and though the basis of society was plutocratic, merit and good service had far fewer barriers to recognition than exist today. The emperor chose his executive without "respect of persons." Taxation (according to the most recent research) was moderate; and local liberties and municipal rights well respected. Only when dishonest officials had introduced confusion into city finance did the Roman government interfere; and the later centralizing, with its unhappy results, was due far more to the incompetence of the provincial and his insatiable for self-government than to any deliberate encroachment by the centre. During the epoch of the N.T. a hierarchy of Roman governors and officials spread a slender but effective network of order over the countries of the Mediterranean--the most costly but numerous. It was thus free from the chief objections which are urged to-day against popular government and the bureaucracy which invariably accompanies it. The "Roman Peace" restrained and finally extinguished the unmeaning feuds of neighbours, which had been the common lot of the East during the dominance of the city-state, or the Macedonian military occupation. It revealed clearly the indications of popular influence in the N.T. As a rule the people made their wishes felt and their voice heard far better than in the so-called democratic systems of recent days. The later persecutions of Christians were mainly sporadic outbursts of local resentment, directed mainly by local doctrine, horrid rites, and unpatriotic abstention from civil interests. It will be noted that the order to persecute comes but rarely from above; the governors are far more humane than the governed. St. Paul, proud of his position as Roman citizen, shows a touching confidence in the final equity of the imperial tribunals, stretching up to the ultimate court of appeal, the emperor himself. It may be urged that the counsels of loyalty and obedience in Romans were uttered during the famous "quinquennium Nerons," before the fatal seeds of family madness had transmuted the splendid imperial form (with all its dangers and limitations) into an unrecognizable monster; while Seneca and Burrus were administering the empire, and Nero had not yet entered into his full inheritance. But it may be doubted whether the scandals, corruption, or lavish waste of the court had made such a difference on the one hand, or interfered with that tranquil and equitable rule of the provinces for which Rome was famous and justly respected. We who know the Caesarian records mainly through the idle gossip of professional scandal-mongers and the irresponsible innuendo of overt republicans, must not transfer our own knowledge or feelings or prejudices into the minds of those who, after a long winter, basked in the imperial sunshine. The Roman government under Nero and Domitian showed the same broad features of honesty, sagacity, and self-restraint upon which Augustus and Tiberius had insisted and improved. The appeal to the occupation of provincial magistrates. It may safely be said that never since have Europe and Western Asia enjoyed order and justice over so large an area; and it may be suspected that, in spite of the obvious demerits of the socialist legislations and pauperism of imperial Rome, even the most favoured countries once under its sway have not attained in subsequent times so fair a distribution of comfort, so satisfactory a compromise between competition and stagnation. As to the moral and religious condition of the people, the widest divergence of opinions will prevail. It has been assumed that the inductive of St. Paul may be taken as merited by the whole pagan civilization. Yet it must not be forgotten that his strivings would find an object in any large and congested metropolis of our own times; and that the type of callous, meretricious, and hyper-aesthetic fashion is much the same in all over-refined society. The philosophy of emotions neither of the nation. The N.T. introduces us, no doubt, to a dissolve or an unprincipled governor; but the heart of the people is still sound, their morality much on a level with the middle class
of to-day or of any other age. To judge Roman society by Tacitus, Suetonius, and Juvenal is to estimate modern standards by the onslaughts of the pulpit or the press upon the acknowledged evils of wealthy and irresponsible idleness. The careful hearing given to the emissaries of the Gospel bears witness, indeed, to the decay of religious beliefs (which had been long obsolete), but not to the decay of religious instinct or interest. Nor must it be supposed that the Gospel provided an entirely new code of morals. Rather, it reinforced, with the sanction of a new revelation of man's nature and destiny, the old instinctive morality of custom, the weaknesses of the simple life, the lowly and abiding occupations, which, in the moribund civilization of classic paganism, had lost cogency, charm, and vitality. So far from introducing ascetic despair and proud repression (already present in one form or other in Stoic and Epicurean), Christians gave new meaning to life when St. Paul organized the primitive church from his haughty disdain, and made the slave contented with the "day of small things," seen in the light of eternity. Indeed, asceticism formed an integral part of every substitute proposed for the Gospel, either by thought or feeling; and the Gospel came just in time to combat a dangerous intellectualism, to confer a spiritualistic truth to the inner circle, and left the ignorant without guide or solace. The weakness of the Roman empire did not lie in its political system, but in the decay of its social enthusiasm. The upper classes became extinct, in rigorous or voluptuous celibacy; and the Gospel trained and upheld the provincials in the simplicity, the lowly, and abiding value of each soul.

**Romans, Epistle to the.** I. **The Christian Church at Rome** had been in existence a considerable time when St. Paul wrote to it (1:8-13, 13:11, 15), and probably organized like other churches (12:ff., and perhaps 16:5). In the course of the apostolic council in 52. St. Peter was supposed as something well known (Ac.28:15), and the author had no reason to narrate its origin. There was movement, however, to Rome from all parts of the empire; and amongst other immigrants were Jewish and Greek Christians. Who was the organizer of the church or the founder of its congregational life is quite unknown. Roman tradition says St. Peter, and fixes his arrival in the second year (or about the beginning) of the reign of Claudius, c. 41 A.D., saying that he stayed there twenty-five years till his death, and was the first bishop. But in the year 44, and at the date of the apostolic council in 52, St. Peter was still living in Jerusalem (12:4, 15:7; Gal. 2:1). Later, when St. Paul was living at Ephesus, St. Peter had not been labouring at Rome, because (Ro.15:20; 2Cor.10:16) St. Paul made a rule of not interfering with another's field of labour; and had St. Peter been in Rome when St. Paul wrote to the Romans, he would have been saluted before all others, for the numerous salutations in Ro.16 presuppose an accurate acquaintance with the teachers then in Rome. St. Peter cannot have been in Rome at all before St. Paul was brought there, otherwise, as apostle to the Jews, he would have brought Christianity into closer contact with the Jewish population than can be allowed from Ac.28:22. It is also most improbable that St. Peter could have been in Rome before the writing of the epistle to the Philippians—the only one certainly written by St. Paul in Rome, or at the time; for it is quite inconceivable that St. Paul should not have mentioned a fellow-apostle, especially when complaining so deeply of being forsaken (Ph.2:20). Therefore St. Peter's arrival in Rome (certain from Dionys., of Corinth, in Euseb. ii. 25; Caius, in Euseb. ii. 25; Origen, in Euseb. iii. 1; Irenaeus, Tertullian, etc.) could only be at the end of St. Paul's captivity, after the epistle to the Philippians. It is highly probable that a Christian church was founded in Rome after St. Paul had come to Europe; if it had been before, there would surely have been something like it in the nearer cities of Macedonia and Achaia, but of that there is no trace. The special inspiration to St. Paul of his Roman correspondence is, however, it was a new step, not yet taken by other apostles. But when St. Paul was working successfully in Greece, it was very likely that men of his school should carry the Gospel farther westward, to Rome itself. The expulsion of the Jews from Rome under Claudius (Sat. Claud. iii. 12, Suet. Claud. ii. 10: Ac.18:2) served the end. Of these Aquila and Priscilla are an example; they emigrated as Jews to Corinth, lived there with St. Paul more than a year and a half, and at the date of Romans had settled again in Rome, where, as in Ephesus (1Cor.16:19), they are teachers and possessors of a house where the Roman church met (Ro.16:23). They receive St. Paul's first salutation, more laudatory than any others. Christianity, having taken root first among the Jews, made all the more way among the Gentiles because paganism had fallen into contempt, inducing despair both among cultivated and uncultivated classes. Hence inclination to monothelism was general, and the number of Jewish proselytes was great (Juvenal, Sat. xiv. 96; Tac. Ann. xv. 44, Hist. v. 5; Seneca, in Augustine De Civ. Dei vii. 11; Josephus, Ant. iii. 5). These were fertile soil for the liberal Pauline theology of Aquila and others. Rom. 12:1-2. In the main the name of Romans in ch. 16, from the approval given to the doctrin of the Romans had received (16:17, 6:17), and from the fact of the letter itself (no extant letter of Paul's is directed to a non-Pauline church), it is certain that Pauline Christianity preponderated in Rome; and second certain inference is that every important part of the Roman church consisted of Gentiles—Gentiles—indeed, this must have been the preponderating and chief constituent element, since St. Paul repeatedly designates the Romans as belonging to the ἔβικον, Gentiles (1:5, 6, 13, 11, 13), and insists on his calling as Apostle of the Gentiles (15:1, 5, 16, 4, 26). In accordance with the apostolic agreement in ch. 2, St. Paul would not have written a doctrinal epistle to the Romans, especially containing his whole Gospel, if they had been in the main a church of the Circumcision. Even 7:1, where he says, "I speak to them that know the law," and the numerous references to O.T.,
and proofs from it, do not mean Jewish predominance, but are explained by the fact that in the apostolic phase of Christian knowledge it was conveyed through the O.T., that this acquaintance grew through the O.T. being read in the assemblies (cf. Gal. 4.21), and that the mingling of Jews and Gentiles in the churches led to a still closer use and understanding. This preponderance of Gentiles is further illustrated by the fact that when St. Paul arrives in Rome, and wishes to make himself acquainted with the Jewish leaders, they do not allude to the existence of an organized Christian congregation, however small, as they must have done had Jews preponderated, but merely say that the sect is everywhere spoken against (Ac. 28.22). They do not say anything about it for the present till St. Paul has explained himself; but clearly their relation to it is far from close.—II. OCCASION. Long before writing ['these many years,' Ro. 15.23], St. Paul had a longing desire (Ac. 19.21) to preach the Gospel in Rome (Ro. 1.11), where the theological teachers of his school, and where he had many friends and fellow-labourers (16). His other official labours had prevented this hitherto (1.13, 15.22). Now he hoped to come, but must first take the collections to Jerusalem (15.23-25); and as Spain rather than Rome was to be his ultimate goal (15.24-28), he could not be content with a long stay at the capital. So he wished no longer to delay a written communication of his full message, and also so to prepare the way for his arrival that a prolonged stay would be unnecessary. Such was the occasion; and the journey of the Corinthian deaconess Phebe to Rome (16.1) was the opportunity. He knew the circumstances of the church through his relation to the teachers (ch. 16), and the active intercourse between Corinth and Rome (cf. the indications in 12, 14.15). Of all his letters this sprang least out of special casual circumstances. Baun's suggestion that it was occasioned by a Jewish-Christian polemic against St. Paul for working amongst Gentiles rather than Jews receives no probability from the epistle. We see his polemical treatment in Galatians and 1 and 2 Cor.; here the method is not polemical, but theological.—III. ORIGIN. Obvious to Paul is not a polemical system, but an exposition of the doctrine of redemption. St. Paul wished to lay before the Romans in writing, for their Christian edification (1.11, 16.25), his evangelic doctrine—the doctrine of the sole way of salvation given in Christ—viewed in its full specific character of the superseding of Judaism, in such a way as the necessities and circumstances of the church demanded, and as he would have preached it amongst them, had he been present in person (1.11). The importance of the Roman church made it desirable to set forth, in the entire connexion of its constituent fundamental principles, if there was a polemical purpose, it was against all legal righteousness whatsoever; but the dangers of the church were more moral than dogmatic, and are touched upon in 13.1ff., 14.18f., 16.1ff. It was a very partial view of Augustine, Theodoret, Melanchthon, and others to see in the epistle mainly the refutation of Jewish arrogance; or a chief purpose of contention between Gentile and Jewish Christians (Hug); or a personal apology from St. Paul himself (Sabatier).—IV. CONTENTS. (1) Introduction (1.1-15). (a) Salutation (1-7). (b) St. Paul and the Roman church (8-15). (2) Theoretic or Doctrinal (1.16-11.36), main thesis. Problem: How is righteousness to be attained? Answer: Not by man's work, but by God's gifts, through faith, or loyal attachment to Christ (1.16, 17). (a) The necessity of this plan of salvation: required by the whole human race, Gentiles and Jews alike. The Jews, even according to their own law, are guilty before God, and cannot attain to righteousness (1.17-3.20). (b) The nature of this plan of salvation: righteousness really, and only, comes by faith; specially obvious from the justification of Abraham (3.21-4.25). (c) The blessed results of this plan of salvation: partly, the blissful inward condition of the justified before God (5.1-11); partly, that salvation is manifest in outward holiness (5.14-21); universally effective as Adam's fall was once universally destructive (5.12-21); and partly that true morality is not only not endangered by the manifestation of grace in Christ, but is infinitely promoted and quickened by it (ch. 6), and made free from the letters of the law (7.1-10). (d) This last assertion developed (8.1-13) into the doctrine of justification (12.15-13). The essentials of the Pauline ethical system: partly general exhortations (12.1-1.21, 13.8-14); partly in some special discussions deemed necessary in the circumstances of the Romans (13.1-7, 14.1-15.13). (1) Conclusion. (a) Corresponding to the introduction (1.8-15), personal explanations with regard to Paul's intended journey by way of Rome to Spain (15.1-13). (b) Recommendation of Phebe (16.1-2). (c) Salutations (16.3-16). (d) Warning, with a closing wish (16.17-20). (e) Some supplementary salutations, with a second closing wish (16.21-24). (f) Concluding doxology (16.25-27).—V. TIME AND PLACE OF COMPOSITION. St. Paul, when composing this letter, was about to convey to Jerusalem the proceeds of collections made in Macedonia and Achaia (15.15-27), intending to journey thence by way of Rome to Spain (15.28; Ac. 19.21); therefore
we arrive at his last sojourn (three months) in Achaia (20.3). He intended to go direct from Achaia to Syria for Jerusalem, but, owing to Jewish plots, turned aside and rejoined the road back through Macedonia (20.3). This change had not been made when he wrote, or he would have mentioned it in Ro.15, in connexion with vv. 25 and 31. Therefore it must have been written before he left Achaia. St. Luke mentions no particular city for that stay, but probably the greater part was at Corinth, also the principal mother-church, and dear to St. Paul from his former labours. Also from 2Cor.16. 1-7, 2Cor.9.4, 12.20-13.3, it is clear that travelling from Macedonia to Achaia St. Paul chose that city for his stay, with a view to completing the collection and starting for Jerusalem. The proof is completed by the choice of Phebe of Cenchreae (the seaport of Corinth) as messenger (Ro.16.1,2), and the salutation of his host Gaius (16.23; 1Cor.1.14).

The time is 59 A.D., when St. Paul regarded his ministry as closed, and (Ro.15. 19, 23) saw a new and vast scene of action opened up to him in the West, of which Rome share a part of the saw, from the second to the sixth century.

Genuineness. Decisively attested by the witness of the orthodox Church (first express quotations, Irenaeus, Haer. iii. xvi. 3. 9; echoes of language and traces of use, Clem. Cor. i. 35; Polycarp, Ad Phil. 6; Theoph. Ad Autol. i. 20, iii. 14; Letter of Churches of Viminacium, also the Gnostics Basilides, Valentinus, Heracleon, Epiphanes, Theodotus. Against such testimony, the strongest internal arguments are required; and they have never seriously been made. The epistle bears throughout the lively original impress of the apostle's mind, and his characteristic qualities, in matter and form; and is the chief record of his Gospel in its entire connexion and antagonism. The originality extends also to the language, Greek, which suited alike St. Paul's Hellenic culture and the circumstances of the Church of Rome. Meyer, "Romans," Comm. on N.T.; Sanday and Headlam, "Romans," Introd. and Comm. [W.M.S.]

Rome, the famous capital of the ancient world, is situated on the Tiber about 15 miles from its mouth. The "seven hills" (Rev. 17:9) which formed the nucleus of the ancient city stand on the left bank. Here it will be considered only in its relation to the Bible history. Rome is mentioned in the Bible only in the books of Maccabees and in three books of N.T., viz. Acts, Romans, and 2 Timothy. The conquests of Pompey seem to have given rise to the first settlement of Jews at Rome. The Jewish king Aristobulus and his son formed part of Pompey's triumph, and many Jewish captives and emigrants were brought to Rome at that time. Many of these Jews were made freedmen. Julius Caesar showed them kindness, and they were favoured by Augustus. Claudius "commanded all Jews to depart from Rome" (Ac.18.2), on account of tumults connected, possibly, with the preaching of Paul. These Jews, as also by force of circumstances, could not have been of long duration, for Jews were residing at Rome, apparently in considerable numbers, at the time of St. Paul's visit (28.17). It is in connexion with St. Paul that Rome comes before us in N.T. Hence it is necessary to give some account of Rome in the time of Paul. The city is described when St. Paul appealed, and in whose reign he suffered martyrdom.—I. The city at that time was a large and irregular mass of buildings unprotected by an outer wall. The visit of St. Paul lies between two famous epochs in the history of the city, viz. its restoration by Augustus and its restoration by Nero. Augustus made, "that he had found the city of brick and left it of marble." The streets were generally narrow and winding, flanked by densely crowded lodging-houses (insulae) of enormous height. St. Paul's first visit to Rome took place before the Neronian conflagration, but even after the subsequent restoration of the city many of the old evils continued. The population of the city has been variously estimated: at 500,000, at 2,000,000 and upwards, and even at 8,000,000. Probably Gibbon's estimate of 1,200,000 is nearest the truth, and perhaps one-half of the population consisted of slaves. The larger part of the Jewish population was supported in idleness by a miserable system of public gratuities. There appears to have been no middle class and no free industrial population. Side by side with the wretched classes just mentioned was the comparatively small body of the wealthy nobility of the rich, whose luxury and opulence was so great that they were not much from the heathen writers of the time. Such was the population which St. Paul would find at Rome at the time of his visit.

II. The localities in and about Rome especially connected with the life of St. Paul, are—(1) The Appian Way, by which he approached Rome (Ac.28.15); (2) "The palace," or "Caesar's court" (Ph.1.13). This may mean either the great camp of the Praetorian guards which Tiberius established outside the walls on the N.E. of the city, or, more probably, a barrack attached to the imperial residence on the Palatine.—(3) The connexion of the SS. Peter and Paul only, viz. "a place", or "a house for SS. Peter and Paul" (Ro.16.1).—(4) This place is a church on the Ostian road which marks the spot where the two apostles are said to have separated on their way to martyrdom. (5) The supposed scene of St. Peter's martyrdom, viz. the church of S. Pietro in Montorio, on the Janiculum. (6) The supposed scene of St. Peter's martyrdom, viz. the church of S. Pietro in Montorio, on the Janiculum. (7) The chapel "Domine quo Vadis," on the Appian road, the scene of the beautiful tradition of our Lord's appearance to St. Peter as he was escaping to Rome through the places where the bodies of the two apostles, after having been deposited first in the catacombs, are supposed to have been finally
buried — that of St. Paul by the Ostian road; that of St. Peter beneath the dome of the famous basilica which bears his name. — We must add, as sites unquestionably connected with the Roman Christians of the apostolic age — (1) The gardens of Nero in the Vatican, not far from the spot where St. Peter's now stands. (2) The catacombs. These subterranean galleries are from 8 to 10 ft. in height, and from 4 to 6 in width, and extending for miles, especially in the neighbourhood of the old Appian and Nomentan ways, were unquestionably used as places of refuge, of worship, and of burial by the early Christians.

Roof. [House.] Room, employed in A.V. of N.T. as the equivalent of no less than eight distinct Gk. terms. The only one, however, which needs notice is πρωκόστατιον (Mt. 23.6; Mk.12.39; Lk.14.7,8, 20, 46), which signifies the highest place on the highest couch round the dinner or supper-table; the "uppermost seat," as it is more accurately rendered in Lnt.11.43.

Rose (Heb. ḫabbâḥ selēh; Can.2.11; Isa.57.1). There is much difference of opinion as to what particular flower is here denoted. Tremellius and Diodati, with some of the Rabbins, believe the rose is intended, but there seems to be no foundation for such a translation. Several wild roses occur, but none are conspicuous by their odour to the point of this translation, is, however, the chief stumbling-block, since the Heb. word may contain the root ḫēl, i.e. bulb. Hence the argument of Gesenius and others in favour of the autumn crocus (Colchicum), the asphodel, or the narcissus. The Targum on Can.2.1 has nargis ("narcissus") for "rose." In II.2 it renders "ilies" by war din (Arab. word) "roses." Narcissus tazetta is a most attractive feature in the early floral display of Judea. The narcissus and lily (Lilium candidum) would be in blossom together in the early spring, while the Colchicum is an autumn plant, having sweetness and beauty. The narcissus abounds in the region about Jericho. Though the rose is apparently not mentioned in the Heb. Bible, it is referred to in Ecclus.24.14 (cf. also 39.13,50.8; Wis.2.8). [n.c.h.]

Rosh, a son (LXX. grandson) of Benjamin (Gen.46.21). It is extremely probable that "Eli and Rosh" is a corruption of "Miriam." [Th. Num.26.38.]

Rosh (Ezk.38.23,39.). The first passage, rendered by A.V. "Gog, the land of Magog, the chief prince of Meshech and Tubal," is (in R.V.) "Gog of the land of Magog the prince of Meshech, and Tubal." Gesenius says of Rosh: "Undoubtedly the Russians, who are mentioned by Byzantine writers of the north of Europe under the name of Rus." They are noticed also by Ibn Foslan as Rus, living on the Volga in the same age. [g.e.c.]

Rosin, properly "naphtha," as it is both in the LXX. and Vulg., as well as the Pesh.-Syr. In the Song of the Three Children (23), the servants of the king of Babylon are said to have "... ceased not to make the oven hot with rosin, pitch, tow, and small wood." Maim mentions naphtha as a product of Babylon, and to this reference is here made. It is a liquid hydrocarbon, now more commonly called petroleum, and as a natural product is obtained largely, among other places, at Baku, on the Caspian Sea. [Naphth.]

Rubes (Heb. ṭěniyyim, ṭēnînim). It is highly improbable that "rubes" is the correct rendering of this word, for the Hebrews could hardly have been acquainted with this gem (the carbuncle, or carbunculus, or cornelian, or carnelian, or carmine), since it is chiefly found in Ceylon and Burma. In Job 28.18, Pr.3.15,8.11,20.15,31, to something of high value is evidently denoted, and in Pr.20.15 is coupled with gold. In Lam.4.7 it is said, "The Nazarites were purer than snow, they were whiter than milk, they were more ruddy in body than ṭēnînim." Here so highly coloured a stone as the ruby can hardly be intended. Coral has been suggested, but another Heb. word is supposed to denote this. Bochart takes it to mean pearls, which is open to the same objection, and his explanation of the above-named rubness — that the original word means or "colour of a reddish tinge" — though the latter can be shown by pearl, is not very satisfactory. Carneelian and a rather pale garnet are possible, but nothing is certain except that the plur. word suggests something usually seen more than one at a time. [r.e.b.]

Rue (枹ｙａｙｕｓ, Lnt.11.42 only). The Ruta graveolens (k. chalaphene Linn.) is a shrubby plant about 2 ft. high, of strong medicinal virtues. It is a native of the Mediterranean coasts, and has been found by Hasselquist on mount Tabor. It may still be seen near Jericho and Jaffa. The Talmud enumerates rue amongst kitchen-herbs, and regards it as free of tithe, as not being cultivated in gardens. In our Lord's time, however, rue was doubtless a garden plant and therefore titheable.

Ru'fus, one of the two sons of Simon of Cyrene (Mk.15.21). In Ro.16.13 St. Paul salutes "Rufus the chosen in the Lord, and his mother and mine." St. Mark would scarcely have described Simon as "the father of Alexander and Rufus" (as in LXX.) if these two had been familiar in Christian circles. So it is quite possible that Rufus the son of Simon is identical with the Rufus greeted by St. Paul, though the name was so common that it cannot be taken as certain. "Chosen in the Lord" seems to imply some special distinction; while the following phrase means that the mother of Rufus on some occasion had shown motherly kindness to St. Paul. [Simx, 11.] [a.c.d.]

Ruhamah, i.e. "having obtained mercy" (Ho.1.6, A.V. marg.). This figurative name, applied to Israel, contrasts with Lo-ruhamah (Ho.1.6), the name given to the daughter of the prophet, to denote that "bright in colour" which was turned away from Israel (cf. Amm. 5.11).

Ruler of synagogue. [Synagogue.]

Ruler of thousands. [Judge.]

Rulers of the city (παρακόμη, Ac.17.6-8), the special local title of the 5 or 6 magistrates of the "free city" of Thessalonica. Of 17 inscriptions containing it, 13 belong to Macedonia, 5 to Thessalonica itself. [n.s.]

Rumah, mentioned once only (2K.23.36). It has been conjectured to be the same place
RUSH

as Arumah (Judg.9.41). Probably Rimeh, a ruin in Galilee 6 miles N. of Nazareth, noticed by early Jewish travellers. There is another Rimeh, a ruin 13 miles N.E. of Accho. [C.R.C.]

Rush. [Reed; Meadow.]

Ruth is one of the 5 women reckoned by St. Matthew in the genealogy of Christ. The other 4 are: Thamar, Rahab, Bathsheba, and the Virgin Mary. The story is told in the Kanon of 12 verses; the Book relates how a famine in the land of Judah compelled Elimelech, a native of Bethlehem-ephratah, to go into the land of Moab, with his wife Naomi and his two sons Mahlon and Chilion. Mahlon married there Ruth and Chilion married Orpah, both women of Moab. Mahlon and Chilion died childless in the country of Moab. After ten years, Elimelech being dead, Naomi, having heard that there was plenty again in Judah, resolved to return to Bethlehem, and Ruth returned with her, while Orpah was induced to remain in Moab. Naomi and Ruth arrived at Bethlehem just at the beginning of barley harvest, and Ruth went out to glean in the field of Boaz, a wealthy landowner, in whose field Ruth was gleaned. Upon learning who Ruth was and of her kindness to her mother-in-law, Boaz treated her with the utmost consideration, and sent her home laden with corn which she had gleaned. Encouraged by the favour which Boaz had shown, Naomi instructed Ruth to remain with her husband's nearest relative, and purchased the inheritance of Elimelech and taking her to be his wife. This she did. Their son Obed was father of Jesse the father of David. [C.H.H.W.]

Ruth, Book of. This book, which gives an account of the ancestry of David, is in the Heb. canon one of the five Megilloth, or "rolls," which formed part of the third and last portion of the Heb. sacred writings, termed in the Heb. The Writings or in the Gk. trans. the Hagiographa or Holy Writings. That division commences with Psalms, Proverbs, Job, Song of Songs, and then Ruth. In the Talmud, however, Ruth precedes Jonah and Daniel. The LXX. and Josephus place Ruth immediately after Judges, which, historically regarded, is its correct position. The events recorded took place a century before David, with whom the genealogy at the end of the book ends. The book records intermarriages of Hebrews with women of Moab, upon which intermarriages no slight whatever is thrown. Such facts would not have been looked upon with favour after the days of the Exile. This helps to confirm the historical character of the book, and the connection is agreeable to the close intercourse between David and the king of Moab recorded in 1Sam.22.3, 4. The law of the Levirate (Deut. 25.7-10) is of the 5th day of Bethl. and Reuss has fallen into a great mistake by supposing that through the working of the levirate law David came into possession of property in Ephraim. This is a confusion of the names Ephraham and Ephrathah. The most important literature on this book includes Schmidt (1864), Pinches' E'phraim and E'phrathah. [C.H.H.W.]

Rye. [Rie.]

SABBATH

Saba. [Hosts, Lord of.]

Saba.-I. Sons of Sabat were among the sons of Solomon's servants who returned with Zerubbabel (1Esdr.5.34 only).—II. (1Mac.16.14)=Sebat. [Month.]

Sabateans (1Esdr.9.48)=Shabbethai.

Sabathius (1Esdr.5.34)=Zerubbabel.

Sabbah (1Esdr.8.63)=Binnui, I.

Sabbath (shabbath). There is no question that the meaning of the word is "to cease," and that is the primary idea of the institution. The sabbath was to be a day on which the business of life ceased. Why this was to be on the seventh day is a matter of considerable dispute. What suggested the number seven which is so prominent in religion? It has been thought that the "seven planets" of the Babylonians, or the seven stars of the Great Bear (Arcturus), or the Pleiades, may have done so. It is more probable that the lunar revolution of 28 days (roughly), which was naturally divisible into seven days, had something to do with the origin. [Seven.] Nearly all nations, civilized or uncivilized, have made distinctions of days, dies fasti and nefasti, or lucky and unlucky, etc. Our own days still bear the names of Teutonic deities. In Egypt this was carried to extremes (cf. Maspero, Dawn of Civilization, pp. 20 ff.), and had nothing resembling the sabbath; in fact, the institution of the latter may be a reaction against the tedious and superstitious Egyptian system. Many scholars, however, believe that the sabbath has a Babylonian origin. The arguments are put as strongly as possible by Sayce (Higher Crit. and Monuments, pp. 74-77; Early Hist. of Hebrews, p. 193; Religion of Ancient Babylonians, pp. 70-77). The matter, as yet, depends upon a fragment of a Babylonian tablet (photographed in Pinches' O.T. and Hist. Records of Assy. and Bab. p. 49, in which the words im nih libbi, "day of rest of the heart," are explained as equivalent to sabbath (from the Semitic sa-bat, "heart-rest"), which is often taken as the origin of the Semitic word sabbath. The difficulty, as pointed out by Dr. Pinches, op. cit., is that the sapattum was the 15th day of the month. The 7th, 14th, 21st, 28th, and 19th were, among the Babylonians, days of ill-omen, and there is no evidence yet of the 7th being considered as the end of a week or a definite period of time. We are led to the conclusion that the Babylonian origin of the sabbath is not proved, though it is likely that astronomical knowledge had suggested to the Babylonians divisions of 28. It is also to be noticed that the observance of the sabbath dates from a time which was east influenced by Babylon. The question when the sabbath was instituted is rather a subject of bygone controversy, which practically terminated in Hessey's Bampton Lectures, 1860, Sunday, in which he strongly advocates the Mosaic origin. The sabbath is not mentioned in Genesis, etc., until the first account of the creation (2:3), and in the present attitude of scholars towards that chapter evidential use of it would scarcely be considered. The strongest evidence of an earlier institution is the first word of the fourth commandment, the past
application of which has not been explained away. — The objects of the institution of the sabbath are very important matters, raising it at once out of the sphere of all other "sacred" days of other peoples, for it is evident that the institution was of divine origin. The general object, which it shared with many other peculiar ordinances, was to keep the Hebrew people separate from the rest of the world. Within this general object were many others of a particular character. (1) The sabbath was a day of worship; it was to be kept holy. Time is a matter over which man has no control at all; the Almighty took the mysterious seventh day as a constant reminder that time belongs to Him, which was emphasized by His claim that labour on the other days was also a service to Him, a truth the people failed to understand. (2) It was a day of rest; rest was a command, for that purpose. The morning and evening sacrifices were doubled (Num. 28.9,10). The showbread was set in order before the Lord (Lev. 24.8). The priests' courses changed in later times on this day (2K.11.6), and there is evidence of special musical observance of the sabbath (cf. Cant. 1.12,13, Prov. 15.29, 8.3). As well as the religious influence of the sabbath, it was also used as an instrument of instruction by the prophets (2K. 4.23). One is struck by the comparative absence of reference to the sabbath in purely historical portions of the Bible till after the Captivity, and by the tone of reproof which characterizes the prophetic utterances on the subject — facts which suggest that the observance was not popular, but liturgical and hierarchical; in fact, the attitude of the people towards the sabbath seems to be summed up in the words of Amos (8.5), "When will the sabbath cease, that we may set forth what is good?"

Jeremiah, too, expressly states that the sabbath had not been observed (17.21), and in his timidity only insists upon the most crude observances of the holy day (vv. 21,22), which is significant from a priest speaking ad popularum. Isaiah (1.13) speaks of their observance of the holy day as something that the Almighty rejected; and Hosea (2.11) says that sabbaths were observed at all, in what, to use modern phraseology, we should call the continental fashion. There is nothing in O.T. to show that the Israelites ever rose to the high significance of the day as first instituted; indeed, it is plainly stated by Ezekiel (20.13,16,21.24,22.8, 26.33, 38) that the sabbath was profaned, polluted, and despised. After the Captivity the observance of the sabbath began to be more strictly insisted upon. It was an important "point" in the covenant of Nehemiah (10.31), and when the people did not keep the covenant, but bought wine, fish, etc., from the Tyrians in Jerusalem, he closed and guarded the gates at the sabbath (13.15,22). In 1Mac. 2.32-41 we read how certain people were massacred rather than defend themselves on the sabbath — conduct that was not approved by Mattathias and his friends, who decreed that the people should defend themselves on the holy day. Still, the Jews observed the sabbath often to their loss in warfare, as they did at the siege of Jerusalem. The rigid formalism which our Lord condemned has continued into the 3rd cent. n.C. and increased after 220 n.C., when the harassing and ridiculous distinctions began to crystallize in the Mishna, the repository of traditional teaching. It is unnecessary to dwell on the casuistic trivialities into which tradition developed (such as it being lawful to write in the sabbath, with but one exception); but it is strange that the Jews had almost forgotten the sabbatical year, and the Jubilee entirely. This subject produced the most prominent attack of our Lord on the religion of the time — not only did He condemn its abuse by word, but also by act. Thus the sabbath was made a matter of plucking corn, immediately followed by His first miracle on a sabbath. His five miracles of healing on that day were, with the possible exception of the man with the dropsy, cases where haste was not necessary. His first attack was provoked by the question, Is it lawful to heal on the sabbath days? (Mt. 12.10), and as St. Mark tells us (3.5) it produced an unmistakable exhibition of anger (παρ' ἐμοί ἀνελεύθερος ὁ χρόνος). This and the healing of the infirm woman (Lk. 13.10-17) and the dropsy (14.1-6) were wrought in Galilee. The other two, the impotent man and the man born blind, were at Jerusalem (Jn. 5.9). In them our Lord reproduces the full saving work of the ancient sabbath. He begins the attack Himself. The miracles, moreover, were worked in the most public way, in the most crowded part of Jerusalem. First He sends a man carrying his bed through the streets. Then He sends another well-known man, with lumps of clay on his eyes to attract notice, from the very gates of the temple, who also would attract more notice when he returned seen. These miracles broke the traditions against carrying burdens and preparing food. In the matter of plucking corn (Mt. 12.1-8) the disciples broke two traditions by reaping and preparing food. Our Lord's teaching insisted that two statements of His: (1) The sabbath was made for man, etc. (2) The Son of Man is Lord also of the sabbath (Mk. 2.27,28). The first was a condemnation of the Jews' method of keeping the fourth commandment in the literal sense, by setting as a test that the sabbaths were not observed it at all, in what, to use modern phraseology, we should call the continental fashion. There is nothing in O.T. to show that
the Lord's day. The Jews fully recognized the significance of our Lord's claim to authority over the day, and that it means a portion of divinity: therefore, they tried to stone Him. After the gospels the sabbath fades out of sight, the apostles were never charged with breaking it, nor did they ever suggest that it should be observed by Christians; in fact, St. Paul directly states the opposite (Col.2:16). The word in Heb.4:9 has a different meaning. See further Lord's Day. [B.E.R.]

Sabbath day's journey (Ac.1:12), the distance of walking permitted on Sabbath day. The Mosaic injunction with reference to the manna: "Let no man go out of his place on the sabbath day" (Ex.16:29), was interpreted by the Rabbis as prohibiting to go beyond the limit of the city or place of residence. Taking his place as a centre, any one may walk on the sabbath within a circumference of the radius of which is 2,000 cubits. This measurement is based on the distance of the Temple and the cities given to the Levites (Num.35:5). During the Talmudic authority, the distance permitted was 12 miles, being the area of the Israelitish camp in the wilderness; while some Rabbis regard Mosaic law as a mere enactment *pro re nata* in relation to the gathering of the manna at that time, and having no bearing on the sabbath day's rest or on the state of affairs subsequent to the journey through the wilderness (Bab. Talmud, Erubin 51a). [J.E.D.]

**Sabbatheus** (1 Esd.9.14) = Shabbethal.

Sabbatical year, the seventh year, or sabbetan, during which the land was to be fallow, field and vineyard resting from all tillage or cultivation. The natural products and spontaneous yield of the sabbetan were not to be gathered by the owners into storerooms, but to be shared as food by all members of the community—the owners, his slaves, and strangers, men and beasts alike. To meet the needs of the people, God would cause the land to produce abundance sufficient to suffice until the harvest of the eighth year could be reaped (Ex.23.10,11; Lev.25.1-7, 20-22). A most important clause in this law is the release of all monetary obligations or quit-claim (Heb. *šāmātāh*), the creditor being legally barred from collecting a debt contracted by a brother Israelite. Yet this exemption must be held in consideration when extending a loan to help the needy (Deut.15.1-9). This sabbetan provision acted as a statute of limitation or law of bankruptcy for the discharge of all prior debts. At the end of the sabbatical cycle, during the celebration of the feast of Tabernacles by all Israel at God's chosen place, the whole law of Moses was read before the assembly, men, women, and children (Deut.31.10-12). Apparently the sabbetan began and ended on the seventh month (Tishri), when the feast of Tabernacles occurred. After seven sabbetanes, the jubilee year was observed. The intention of the law is: (1) to symbolize the "Sabbath of the Lord" (as each seventh day for men, so each seventh year was to be a rest for the land); (2) to check and limit private ownership; (3) to confer a physical benefit to cultivation by a periodical rest. The law became obligatory 414 years after the entrance into Palestine, allowing these years for the conquest and settlement of the tribes. The observance of the sabbetan was at times lax. The Rabbis calculated that the Israelites neglected the law of the sabbetan and also of the jubilee in the aggregate 70 years, for which they paid the penalty of exile 70 years. "until the land had enjoyed her sabbaths" (2 Chr.36.21), referring to Lev.25.24. Evidently the Israelites disobeyed this law for 400 years. These are made up of 390 years of the iniquity of Israel and 40 years of Judah (Ezek.4.5,6), and the balance during the rule of the judges. According to rabbinical calculation [Jubilee, Year 69], the first sabbetan was observed in the year 2510 of Creation (1500 B.C.). The exile of Judah and destruction of the first temple occurred in the year 3338 (422 B.C.), or 835 years after the settlement. During that time were 117 sabbetanes and 16 jubilees; deducting 70 (i.e. 62 sabbetanes and 8 jubilees) would leave 55 sabbetanes and 8 jubilees actually observed. After the return from captivity to Jerusalem, the sabbetan was discontinued, but the sabbetan appears to have been observed (1 Mac.6.53). Alexander the Great is said to have exempted the Jews from the sabbatical year. The Mishna says that witnesses in criminal cases were asked to give the exact date, specifying in which sabbetan (shabbate") year the act occurred. For the murder took place (Sanhedrin v. 1). The law of the sabbetan remained in force even after the destruction of the second temple (69 A.D.). The quit-claim clause, however, was so modified by legal means that it became obsolete. The land rest on the sabbetan is still observed in Palestine among the Jewish colonists of to-day, the current sabbetan being held in the year 5663 of Creation = 1902-1903 A.D. [J.E.D.]

**Sabbeus** (1 Esd.9.32) = Shemaijah, 14.

**Sabeans** (Is.45.14); see Seba. In Job 1. 15 the Heb. is Sherebiah. [G.C.G.]

**Sabi**. "Son of Phareachet, sons of Phereah," stands in 1 Esd.5.34 for "children of Pochereh of Zebaim" in Ezra 2.57.

**Sabthah** (Gen.10.7), or **Sabta** (1 Chr.1.9), the third in order of the sons of Cush. The statements of Pliny (vi. 32, § 155, xii. 32), Ptolemy (iv. 10), and Anon. Peripl. (27), respecting Sabbatha, Sabota, or Sobatol, metropolis of the Atrimaites (probably the Chatramotiae), seem to point to a trace of the city which descended from Sabthah, always supposing that this city Sabbatha was not a corruption or dialectic variation of Saba, Seba, or Sheba. Ptolemy places Sabbatha in 72° long. 16°30' lat.1 that is, in S.E. Arabia. It was an important city, containing no less than 60 temples. Gesenius has no doubt that Sabthah should be compared with Sabdār, Sa'dā, Sa'dai, an Aethiopic city (Strabo xvi.) on the shore of the Arabian Gulf, situated just where Arkiko is now. Josephus (Ant. vi. 2) understands the people called Asabareans by the great Sabteca or Sabtechah (Gen.10.7; 1 Chr.1.9), the fifth in order of the sons of Cush, whose settlements would probably be near the Persian Gulf. According to Gesenius, the Targum on the passage reads Zingai,
Sacar

NACAR

referring to the Zangatani on E. borders of Ethiopia.

—1. A Hararite, father of Ababu (1Chr.11.35), called Sharar in 2Sam.23.33—

2. Fourth son of Obed-edom (26.4).

Sacbut (Dan.3.5,7,10,15), the rendering in E.V. of the Aram. sabbirkhâ. If this instrument

be the same as the Gk. σάββυκον and Lat. sambuca, the English translation is entirely

wrong. The sacbut was a wind-instrument; the sambuca was played with strings. Mr.

Chappell says (Pop. Mus. i. 35), "The sacbut was a bass trumpet with a slide, like

the modern trombone." The sambuca was a triangular instrument with four strings

played with the fingers. [SEMITE LANGUAGES.]

Sackcloth, the dress of the very poor, of a coarse texture and dark colour, made of goats'

hair (Is.3.24,50.3; Rev.6.12), and resembling the calicium of the Romans. It was used (1)

for making sacks (Gen.42.25; Lev.11.32; Josh.9.4), and (2) for the rough garments used by

monks, worn in extreme cases next the skin (1K. 21.27; 2K.6.30; Job16.15; Is.32.11), and this

expression is still used in the altars of the Persians (Is.3.19), but at other times over the coat (Jon.3.6).

Sacrament. [BAPTISM; EUCHARIST; MYSTERY.]

Sacriifce. A. In O.T. (1) Introductory. The sacrificial system of O.T. in its fully developed

form has behind it a long and complicated history. This is due not only to the needs of

Scripture itself, where sacrifice can hardly be said to be exhibited as the outcome of special revelation.

In its earlier phases it is presupposed as something already existing, and as such is regulated

and ordered, invests with higher sanctions, and gradually purified and made the vehicle

for the expression of higher religious ideas. The essential ideas implied in the various

systems of sacrifice may be grouped as follows. The sacrifice is regarded (a) as a means of

communion; (b) as an oblation (gift or tribute); and (c) as a means of propitiation

or atonement. Of these (a) is undoubtedly the most primitive conception. In its simplest

and most undeveloped forms pagan sacrifice is a means of instituting fellowship between

man and spirits. The underlying idea is that the worshippers and their god are united as

kinsmen, are members, in fact, of one organic community. It was only later that the con-

ception of sacrifice as a gift or tribute seems to have been evolved. This notion springs from

the idea of property—an idea that obviously belongs to a comparatively late stage of social

evolution. When men look upon their gods as

king or lord (barUL of the land, they approach

him with a tribute (or present). This may

be regarded as the prevailing conception of

sacrifice in O.T. Within the period sub-

sequent to the settlement of the Israelitish

tribes in Palestine, the revolution effected by

Josiah's enforcement of the Deuteronomic

law of the one central sanctuary, and the con-

sequent suppression of local "high places"

and centralization of the cultus in Jerusalem,

had momentous consequences. For one thing,

it divorced the slaughtering of animals for

food from the sacrificial accompaniments that

had been customary in the earlier period (cf.

1Sam.16.21, and W. R. Smith, Semites, p. 219;

but see art. BUTCHER). In the later (esp.

the post-Exilic) period, also, the regulation of the

rites of the sacrifice was more fixed and elaborate; greater emphasis

was laid on expiatory sacrifices, and the

minuitâe of the ritual as well as the organiza-

tion of the priesthood were more carefully

observed in practice. The most important

terms employed in connexion with the sub-

ject under discussion may be distinguished

as follows: The term sacrifice may be used in a general sense of all offerings to God.

More specifically it denotes such offerings as involve the slaying of a victim, and is equivalent
to the Heb. zebâh (lit. slaughter). The wider and more general meaning of the Heb. term

of every animal represented by offering is applied to offerings of grain, bread, meal, oil,
etc. Another comprehensive term is qôbân,

which may be rendered oblation. Burnt-

offering = Heb. 'ôlâ (holocaust); peace-offering = selem; sin-offering = hayâth; and tres-

pass-offering = 'ãshâm. (2) Early History of Sacrifice in O.T. The institution of sacrifice

is regarded by many as a concession to the existing from the earliest times. In Gen.4.

Cain and Abel are represented as offering sacrifices, the one a vegetable and the other

an animal offering. Here the term applied to both is minîhâ, which originally possessed

the general meaning of "present" or "gift." The same word, e.g., is used elsewhere of a gift to

a friend (Gen.32.13), of something given as an act of homage (1Sam.10.27), of tribute (1K.

215.1), etc. In the technical language of the fully developed ritual minîhâ specifically means

the meat offering (see below). After the Flood Noah's sacrifice, "of every clean beast and

fowl" is offered at an altar (Gen.8.20). In this passage occurs the first

mention in O.T. of an Altar. The building of

such by the patriarchs is frequently referred to (cf. Gen.12.7,8,13.18,26.23,33.20,35.7).

Ancient altars were of earth or of unhewn stones, and were free-standing (2K.15.16) or

on an elevation (high place; Heb. bâmâ). Specimens of such ancient altars have been recovered

recently in the excavations at Gezer (cf. Pal. Expl. Fund Statement, 1903 and following years).

One of the most ancient kinds of sacrifice which have survived in the O.T. systems is the offering of the firstlings (abîtû) and

lings of animals (beîkîrûthâ, all that "opens

the womb" (cf. Ex 13.2,12,15,34.19). This in all

probability goes back to the nomadic stage,

when wealth consisted in flocks of small cattle.

Abel— who is represented as a shepherd—

offers "of the firstlings of his flock, and of the

fat thereof." (Gen.4.1). In the legal codes all

firstlings are with great emphasis claimed as

belonging to God (cf. Ex 13.2,12-15,22,29,34.

ref. ; Lev.22.27,27.26; Deut.15.19-23, etc.; cf.

No.10.30). The ancient rule was to sacrifice

the animal shortly after birth (in Ex 22.30, on

the 5th day after birth). According to Num.

18.16 the date fixed for the redemption of such firstlings (including the firstborn of man) were not to be sacri-

ficed. The narrative of the sacrifice of Isaac in

Gen 22 may possibly stand in some relation to the custom of sacrificing the firstborn son to a deity (cf. Driver, Genesis, pp. 224ff). The
point of the narrative is to show that Jehovah does not require an actual sacrifice of such a kind. This custom was practised among the Phoenicians and other neighbours of Israel (cf. 2K.3.27; 17.31), and is attested in the case of other nations of antiquity (e.g. the Carthaginians). That it prevailed at various times in Israel appears from the references to it as rite in the reigns of Ahaz and Manasseh (cf. 2K.16.3, 12.31). Also Is.57.5; Je.7.31; 19.5; Ezk.16.20; 21.23, 37). (Cf. also the story of Jephthah's daughter, Judg.11.30-40.) It is emphatically forbidden in the law (Lev.18.20, 21.20-25; Deut.12.31, 18.10) and by the prophets (cf. Mi.6.7f.). Of public festivals the Passover has retained in O.T. the most markedly primitive features. In the account given in Exodus this festival (Heb. hag'kh; the term is used of the great pilgrimage-feasts which annually brought multitudes together) is represented as a public and collective institution (cf. Ex.5.1-10.9). The season for its observance was the spring (Nisan = Abib = March-April). It is noticeable that the victim was to be eaten roasted (not raw, nor boiled like other sacrifices: Ex.12.9). The modern Samaritans roast the Passover lambs in trenches. The lamb was eaten with unleavened bread and bitter herbs, all having staves in their hands. The people dip their hands into the blood of the victims and besmear with it the foreheads and arms of their children. The feast was held at night at full moon; the participants were in every-day garb, and ate with haste while the blood of the slain remained over, it was to be consumed by fire before morning. But the most remarkable feature of all is the direction as to the use of the blood. The elders are bidden to take sheep or goats, and, after slaughtering them, "to take a bunch of hyssop and dip it in the blood and strike the lintel and the two side posts with the blood." For when [the Lord] sees the blood upon the lintel and the two side posts, . . . he will not suffer the destroyer to come in unto your houses to smite you" (Ex.12.22f.). According to primitive notions, the "destroyer" would mean the plague which was widespread in Egypt against such evils as these that the sprinkled blood gives protection. In the developed ritual legislation this primitive usage is modified. The sprinkling of the blood is there essentially a priestly function, and the slaughtering has to take place in the sanctuary. The rites of the "Egyptian Passover" are not fully maintained, and the whole feast becomes an agricultural one, essentially bound up with the offering of the first-fruits. It marks the beginning of the barley harvest. [PASSOVER.] Other kinds of sacrifice offered in the early period may have been of wild animals taken in the chase, and of the spoils of war. In forming a mental picture of popular sacrificial worship as it existed in the earlier period that followed the settlement in Palestine, it is necessary to remember its prevalently joyous character. There was little (if any) developed sense of sin. Doubtless in times of misfortune effects of this state of mind would be felt in such worship. But such occasions were few and far between (cf. for an instance 2Sam.24.18f.). It was only later (after the Exile), apparently, that public rites of this kind became a fixed and regular institution in practice. The Deuteronomic phrase "to eat and rejoice before the Lord your God" (Deut.12.7, etc.) sufficiently well describes the character of ancient Israelitic worship down to the end of the kingdom. The family, village community, or clan were the regular participants. Each village had its altar (Heb. mish'ba'y; lit. place of slaughter). At places of special sanctity like Bethel the clan or tribe (or tribes) would assemble for particular feasts. During the monarchy special temples or shrines were built at these spots by the (Israelitish) kings, and attached to them, of course, was a local priesthood (cf. Am.7.9f.). Large numbers resorted to these famous shrines, especially at the autumn festival. Of fixed public feasts there were the three great agricultural festivals at the beginning and end of the grain harvest and at the close of the vintage (the feast of Unleavened Bread, Weeks, and Tabernacles). With the first of these the ancient Passover celebration was intimately associated. On these three occasions all males were required to appear before the Lord (Ex.23.17), with, of course, an obvious national meaning. Other times for local celebrations were the sheep-shearing feast (1Sam.25.11), and especially the New Moon. On the festival of the new moon Saul expects his dependents at court to be present at the feast (cf. 1Sam.20.5, "Behold, to-morrow is the new moon, and I should not fail to sit with the king at the meat. Otherwise is it looked upon as a Sabbath also as a festival-day (cf. 2K.4.23). The occasion for sacrifice was many and various. Events in family life would afford such, as the circumcision and weaning of a son, marriage, occasions such as the completion of a compact or covenant, the consultation of an oracle, the coming of a traveller, the inauguration or close of a campaign, the accession of a king, the dedication of a temple, the staying of a plague—these would all be marked by the offering of sacrifices. Of private sacrifices a large number were offered in fulfilment of vows. This form of sacrifice has been popular and widespread in all periods. Other kinds below under Peace-offering). The participants in the sacrifice were required to prepare themselves for the due celebration of the rites in various ways. This preparation is described as "hallowing" or "sanctifying" (cf. 1Sam.16.5, "Sanctify yourselves, and come with me to the sacrifice"; Num.11.18, etc.), and an important part of it consisted in abstaining from marital intercourse and various ablutions and washing of the garments (cf. Ex.19.15) and in various ablutions and washing of the garments (cf. Ex.19.11f.). Festal garb was put on, esp. the white robe (so the Samaritans of to-day; cf. Ezk.16.12f.). Numerous instances occur in the earlier historical books of laymen officiating at sacrifices, especially at those offered for the household (cf. 1Sam.20.6, e.g.). In such and similar cases the father would offer for the household, the "elders" for the village community, the commander for his soldiers, the king for his people (cf. the case of Saul at Gilgal, cited above under Pursuit of the Philistines. 14.32-35; also Solomon in the temple, 1K.9.25). It was at the holy
SACRIFICE places that the priests (a resident body) customarily officiated, or at least participated, in the sacrifices (cf. 1Sam.2.1 ff.). It appears, however, that the most important functions of the priest (offering and officiating) were merely that of giving of oral advice and instruction (tôrá = originally the oral instruction of the priests, later the written law), esp. concerning such subjects as purifications, expiatory rites, and such like. The kinds of sacrifice in vogue during the period under review were the burnt-offering (offering of sacrifice) and the peace-offerings (Heb. shełāmim). In several passages these are coupled with whole burnt-offerings, esp. in connexion with great occasions; cf. Ex. 20.24, 32.6; 2Sam.6.17 f., 24.25; 1K.3.15, 19.25, etc. In exactly the same way sacrifices and whole burnt-offerings are often used as parallel passages; but, except the peace-offerings (šelāmim) were by far the commonest kind of sacrifices (zabhāhīm). Probably “sacrifices” without further qualification must be understood to refer to peace-offerings. In this connexion it should be noted that the expression “sacrifices of peace-offerings” sometimes occurs (Heb. zābhē shełāmīm; e.g. 1Sam.10.8). The exact significance of the term shešlāmim is uncertain. Not improbably it = dues (cf. šēlīm “to require,” “pay”), and would denote sacrifices paid to God as an obligation or for benefits received. This would accord with the idea of sacrifice as it appeared among the Phoenicians and Syrians (cf. Curtiss, Primitive Semitic Religion To-day, ch. xvii). The whole burnt-offering — Heb. 'ōhāi = that which [all] comes up [upon the altar]; another [rare] term for this sacrifice is kā'āl, a technical sacrificial term in Phoenician also, = whole; (cf. Deut.33.10; 1Sam.7.9; Ps.51.20); this is not so prominent in the ancient period. It appears to have been exceptional—an extraordinary offering made on special occasions by great personages—and is mentioned, as a rule, in conjunction with other sacrifices (zabhāhīm or šelāmim). It is only rarely mentioned alone (cf. Gen.8.20; 12.13; Num.23.13; Judg.6.26; 2Sam.8.13; 1K.8.5, 18, 51); in the temple at Jerusalem the daily burnt-offering (2K.16.15) was the king’s daily sacrifice. It was followed by ordinary sacrifices (zabhāhīm) for other persons. In all the sacrifices enumerated above the blood of the victim was poured or smeared on the sacrificial stone; in the case of the sacrifices and peace-offerings certain parts, esp. the “fat” (cf. 1Sam.2.15 f.) were then burnt upon the altar (of stone or earth). This burning (Heb. qāṯār, hiḏīr) was regarded as a method of conveying the sacrifice to God (in the form of the “sweet smoke”). The flesh was boiled (1Sam.2.15 f.; 1K.19.21), and served to provide a feast for the offerer and his friends (cf. 1Sam.8.12 f.). Rather of the proper (zābhāhīm) the offerings of agriculture —bread, wine, and oil—had a place in the feast (cf. 1Sam.1.24). Agricultural offerings were, of course, often made independently. Such offerings were partly obligatory—first-fruits, tithes, etc.—partly voluntary. From Am.4.5 it may be the case that part of the bread so offered was burnt on the altar (i.e. given to God). Similarly a libation of wine would be “poured out” to God (cf. Ho.9.4). The bread offered, though sometimes unleavened (Feast of Unleavened Bread), would usually be leavened. It is probable that in the case of the burnt-offering also, in the earlier period, the blood was treated in the same way as in the “sacrifices.” The carcass was first of all cut up into pieces, and these were then burnt (cf. 1K.18.23). No part fell to the offerers, and apparently the hide only was reserved for the priest. Possibly the oldest connexion in the practice of burnt-offerings is that of the so-called peace-offerings (Heb. šēlāmīm). 

The Developed Jewish System. The cultus in its full development is largely the outcome of regulations embodied in the Pentateuch. The priestly legislation of the latter—mainly set forth in Leviticus, but supplemented by the traditions preserved in N.T., Josephus, Philo, and the earliest cultures of the Jewish schools—undoubtedly contains a considerable amount of ancient and traditional material. But whatever be the age of the compilation in its present form, the system was certainly not reduced to practice, as a whole, until after the return from Babylon. It was at its height during the century that preceded the destruction of Jerusalem in 70 A.D. by Titus. As compared with the earlier period, the most striking new feature of the developed system in practice was, perhaps, the number and arrangement of the public sacrifices. These were no longer the concern of the monarch, as of old, but of the entire Jewish race, both within and outside of Palestine. Every Israelite, however remote from Jerusalem, had a personal share in the maintenance of the cultus through the contributio to the temple—levied all over the world—out of which were borne the expenses of the public sacrifices, e.g. the daily holocausts, and those specially offered (also the sin-offerings) on sabbaths, new moons, and the feasts. It is thus easy to see how the
interruption of the daily burnt-offering in the sanctuary at Jerusalem would appear to be an unspeakable calamity to the whole Jewish people (cf. Dan.11.31;12.11). During the later period, also, expiatory rites were much more prominent than in the earlier. (i) The nature of sacrifice. Besides those already specified, the following terms call for notice here. (a) qorbân, an offering or oblation (LXX. always ὑποσκολα), lit. something brought near. (The corresponding verb [Hif. ḫiqriḥ] is also used in the technical sense of presenting, dedicating, or offering to God.) qorbân is a general term, and is applied to all kinds of offerings (animal, vegetable, and material). In O.T. it only occurs in Ezk., Lev., and Num. (b) The minḥah-offering, which in the earlier period possessed a general connotation, now acquires a restricted meaning = the offering of flour and oil (or of cakes made of these ingredients) to the meal-offering. (c) Another general term is the peace-offering (Heb. ḥasher); this is used chiefly of offerings of animals, but also of the minḥah (Lev.2.11), and of the sacred bread and frankincense (Lev.24.7,9). The word occurs very rarely outside the priestly legislation of the Pentateuch. (ii) The three great classes of sacrifice, as enumerated, e.g., in Lev. 1–8, are the sin-offering, the burnt-offering, and the peace-offering. (a) The sin-offering (Heb. ḥaṭṭath, LXX. πεπαυράως. Vulg. pro peccato). Perhaps here should also be reckoned the trespass-offering (Heb. qorbân ṭshbâm); there is apparently some confusion between the two classes in the ritual legislation. The sin-offering assumes great prominence in the post-exilic period, though its existence in some form is attested in the earlier period by such a passage as Ho.4.8. (b) The burnt-offering (Heb. ḥolah, LXX. δόξασιον. Vulg. holocaustum: a poetical synonym in Heb. is ḥallí). With the burnt-offering were always offered the meal-offering (Heb. minḥah) and the peace-offering (Heb. ḥasher, LXX. έν ουσίαν). (c) The peace-offering (Heb. ṣlāmīm or zebāḥa ṣlānīm, i.e. slain victim of the peace-offering, LXX. τὸ τῷ ὑπαιείον, Vulg. pacificum). As has already been pointed out, the Heb. word ṣlāmīm may really = duex (των). Under this head must be included some special varieties of sacrifice—viz. the praise-offering (Heb. zebāḥa ḫattādīh, LXX. θυσία τῆς ἀπευθείας: cf. Lev.7.12), the votive-offering (Heb. nekheš, LXX. εἰγών), and the freecall-offering (Heb. ṣdāḥāhī, LXX. ὑπεράσπισις, Vulg. oblatio sponte: cf. Lev.7.16). [A fourth class (d) may be grouped under the general heading of oblations.] (iii) The main divisions of sacrifice. The sacrifices fall into two main divisions—viz. (a) public and (b) private sacrifices. (a) The public sacrifices are either fixed or occasional: they consist, as a rule, of burnt-offerings or sin-offerings. The trespass-offering was always a private sacrifice. The only public peace-offerings were the two lambs at Pentecost (Lev.23.19). The fixed public sacrifices are: (a) The regular daily sacrifice of burnt-offerings, morning and evening (Ex.29.38-12; Num.28.3-8); (b) The additional sacrifices (burnt-offerings) on sabbaths, new moons, and yearly festivals (cf. Num.28.9ff. and 29.rrf., the festivals being Passover, Pentecost, New Year, Day of Atonement, and Tabernacles). (b) The sin-offerings at new moons and feasts (Num.28.29 passim). (d) The goat of the Day of Atonement (Lev.16.15). The occasional public sacrifices are the sin-offerings of the congregation and of the appointed “priest (whose public office puts his sin out of court); the latter is referred to in Passim). Here also belong sacrifices of consecration (for the temple and altar: cf. Lev.8.14ff.), and at the installation of priests, esp. the high-priest (Ex.29; Lev.8). (b) Private sacrifices might consist of any one or more (in combination) of the kinds enumerated above. They are divided into prescribed and voluntary. Prescribed sacrifices of this kind are: (a) Sin-offerings, trespass-offerings, and purifications of various kinds. (3) Sacrifices prescribed for all who appeared at the temple during a festival season. Voluntary sacrifices might consist of votive, freewill, or praise offerings. (iv) Characteristic features of public sacrifices. Of these, the features enumerated, as will easily be seen, apply only to the private sacrifices. (a) Presentation by the offerer at the door of the court. (This may be taken to imply willing intention.) The victim would usually be without defect ("blameless"). (b) Imposition of hands by the priest. The Hebrew, ṣdāḥāh ydhāl= ‘to lean or press the hand heavily upon.’ Both hands were pressed heavily upon the victim’s head. This action would seem to suggest a very intimate connexion between the offerer and the victim—a dedication of the victim to a representative function; it was accompanied by confession and prayer. (c) Slaying by the offerer as a private sacrifice or (sometimes) as representative of the nation (cf. Lev.16.11). The priests did not usually perform this office (public sacrifices, however, were slain by priests, and also always that of the leper), which apparently was regarded as an ignoble one. It was carried out at the N. side of the temple, and in the presence of the Priests, the N. being constantly connected with O.T. with the idea of punishment. According to the Mishna (Zeb. v. 1 ff.), peace-offerings might be slain in any part of the court. (d) The use of the blood. The blood was the appointed means of atonement, and was applied by the priest. The blood, being regarded as containing the essential life of the animal (Gen.9.4), was treated with the utmost care. It was possessed of a mysterious potency either (if used aright) for blessing (sacrificial atonement), or (if misused) for a curse (cf. Lev.7.26;17.11-13). The sacrificial blood was caught up by the priest in a bowl and incessantly stirred so as to prevent putrefaction. In the case of birds it was squeezed out at once by the priest on to the altar. It could only be presented by the mediation of a priest. The mode of treatment varied. (a) In the burnt-offering the blood was thrown on or dashed against (Heb. zārāt) the sides of the great altar. (b) In the case of the ordinary sin-offering (for a private person) it was sprinkled on the horns of the altar. (c) In the case of the sin-offering for the “anointed” priest or
for the whole congregation it was carried into the holy place, and sprinkled seven times before the veil (possibly upon it), and on the horns of the little incense altar. (3) On the Day of Atonement it was carried within the veil, and sprinkled on and before the mercy-seat seven times. The use of blood in sacrifice goes back to a venerable antiquity. In the most primitive form of sacrifice the blood was consumed by the worshippers, what was spilt being the food of the god. Sometimes the stone or pillar was daubed with blood, the latter being regarded as a sacred cement. Later the belief grew up that the blood was too sacred to be eaten, and it was made over entirely to the deity. This naturally led to the total disuse of blood for food. In Ps. 50:13 blood libations are referred to as essentially offensive to God. The use of wine in libations may have taken the place of blood in the earlier system. (c) Burning on the altar. The victim was also flayed by the offerer, and cut up into pieces of which some were burned as sacrifices. The priest (as has been pointed out) received the blood, and carried it to the altar. Certain portions (in the case of sin- and peace-offerings) or the whole (in the case of burnt-offerings) were burnt upon the altar (the Heb. word for burn, ḥʿṭṭir = to cause to smoke or steam). The burnt offerings were a noticeable feature. It was a later mode of disposing of the flesh which superseded the ancient usage of consumption by the worshippers (in certain kinds of sacrifice). In the case of animals offered for sacrifice (the ox, the sheep, and the goat), as is well known, the intestinal fat, together with the "fat tail" (the fat of the tail of the sheep of the country, was forbidden to be eaten, and had to be burnt on the altar (cf. Lev. 4:31,35). The prohibition of "fat," as of blood, really goes back to primitive practice. The "fat" was also regarded originally as a special seat of life, and therefore sacred. In the primitive system the eating of the fat was forbidden: the blood denoted the death penalty (Lev. 7:25). (v) The ritual of the three main types of sacrifice. (a) The ritual of sin-offering. The victim was specified, and differed in different cases: for the high-priest or congregation a young bullock; for the people on the Day of Atonement a goat; for an ordinary Israelite on an ordinary occasion a goat or ewe-lamb; for a Nazirite on release from his vow a yearling ewe-lamb; for the purification of women a turtle-dove or brace of pigeons; for the very poor fine flour (Lev. 5:11). In the case of the trespass-offering only one victim was allowed viz, a bullock; and an exception was made in the case of a Nazirite whose vow had been interrupted, and a leper (cf. Lev. 14:12; Num. 6:1). The main idea underlying the trespass-offering (הַשָּׁם), as distinct from the sin-offering, seems to be a breach where material reparation was possible. Five distinct cases are enumerated in Lev. (5:8f., 6:1-7, 19, 25; 14:1-3; and Num. 5:1-21). Confes-
sion (verbal and detailed) was made in the case of the sin-offering, probably over the victim's head (cf. Lev. 5:5; Num. 5:6,7). (For the formula of confession cf. Ebersheim, Temple, p. 88.) The blood was sprinkled (see above, 3d) and the "fat" burnt. The rest of the victim's carcase was disposed of in various ways (for the "anointed" priest or whole congregation it was taken and burnt outside the camp, being too holy for human consumption; cf. Lev. 4:12). Ordinary sin-offerings were eaten by the priests in the court (cf. Ho. 4:8)—a relic of the sacrificial (communion) feast, but restricted to the priests. In considering the sin-offering care must be taken not to read into the ritual directions later Christian ideas as to sin. The sins contemplated were mainly and primarily breaches of ritual laws (sometimes involving a moral element) or failure to keep the prescriptions of the law. Venial "sins," sins of ignorance or infirmity, are alone contemplated. For open (presumptuous) breaches of the law there was no availling sacrifice. They were punishable by death (cf. Num. 15:30). (b) The ritual of the burnt-offering. The victim was always a male from the flock or herd, or of the fowls (turtledove or pigeon). After inspection by the priest (to see if it were in perfect condition) without blemish, it was slain. It was then cut up, washed, and (after being salted probably) was burnt entire. The main idea which came to be associated with it seems to have been that of grateful tribute to God as King. The chief act of national worship in Israel was the daily (continual) burnt-offering—a lamb morning and evening. This offering was doubled on the sabbath and greatly enlarged on the high festivals. The evening oblation took place "between the two evenings"—i.e. according to the view adopted in practice (the Pharisaic), between the decline and setting of the sun; the morning sacrifice was offered, according to the Mishna (Tamid iii, 2), at dawn as soon as it was light. With this burnt-offering always went a minḥā, or meal-offering, which usually consisted of fine flour and oil, unleavened and salted. A portion was burnt on the altar and was called the memorial (Heb. akārā; cf. Lev. 2:2). Another offering accompanied the burnt-offering (Heb. neşēk). The minḥā offerings (vegetable offerings) generally accompanied animal sacrifices, though in rare cases (that of the priest's offering, Lev. 7:12, and of jealousy, Num. 5:13) they might be presented by themselves. It should be noted that when other offerings were being made, burnt-offerings were brought, this being a form of preparation. This offering followed the sin-, but preceded the peace-offering. The burnt-offering was the only sacrifice that non-Israelites were allowed to bring. (c) The ritual of the peace-offering. The victim might be of the herd or of the flock, and of either sex, but was bound to be without blemish. The burnt-offerings were burnt on the altar, the breast and shoulder belonged to the priests. All that remained was eaten by the offerer and his friends on the day of sacrifice; the participants were bound to be "clean." This, the sacrificial meal, was the great feature of the offering. God was regarded, as it were, as the host; the offerers, as his guests, sat at His table and shared His bounty. After presentation the sacrifice was absolutely the property of the Deity. Here we have a vivid type of communion between God and His worshippers. What was called the wave bread belonged to the whole body of priests; the heave shoulder, or rather thigh,
SACRIFICE was assigned to the officiating priest. To *ave (Heb. hārīm) = to lift off* something from the offering, separate it. The *ave-offering* so called (Heb. *trāmā*, LXX. ἄφαιρεσις) is the term applied in connexion with animal sacrifice to the priest's share (the *ave thigh*) referred to above. The term *trāmā* also has a much wider connotation, being applied to contributions of various kinds (e.g. priests' share of Levites' tithe). See Oxf. Heb. Lex. s.v.
The original significance of wave-offering (Heb. *tnānêh* LXX. ἄφαιρεσις) was to denote the priest's share of the sacrifice which he handed i.e. moved toward altar and back "4a token of its presentation to God and its return by Him to the priest" (Oxf. Heb. Lex. s.v.). But the term received other applications where the original significance is lost. The peace-offering was the most joyous of the sacrifices. It is often referred to in the book of Psalms ([c. 54, 56, 12, 116, 17, 18]). Special varieties of the peace-offering were the *praise- or thanksgiving-offering* (Lev. 7, 12), the *tow- or votive-offering* (very common), and the *freewill-offering* (unblemished victim not absolutely required in this case). In Deut. 16 these offerings are enjoined as specially appropriate to the Feast of Weeks.

SACRIFICE in O.T. — ATONEMENT, DAY OF: FIRSTFILLS: FIRSTFRUITS. — The data given in O.T. must be supplemented by the oldest stratum of Jewish tradition contained in the Mishna (esp. the tractates Zebachim, Yoma), the Tosaphoth, and the early halakic Midrashim, Me'illoth, Sifra, Sifre. The accepted Jewish tradition is conveniently set forth by the following tractate of the Talmud: "Sacrifices." Of older treatises the most important are Spencer, *De Legibus Ritualibus* (1675), bk. iii.; J. D. Michaelis, *Mosaisches Recht* (2nd ed. 1775). More recently Kurtz, *Sacerdotal Worship of O.T.* (Eng. trans. 1865); Bähr, *Symbolik des mosaischen Cultus* (1857); C. Schuchert, *The archaeological sources of New- and Benzingher (1894); the arts. "Sacrifice" in *Encyc. Brit.* (by Robertson Smith), Hastings, D.B. (5 vols. 1904), Cheyne-Black, *Encyc. Bibl.* (very important), and *Jewish Encyc.* The most important treatise dealing with the subject in recent years is Robinson Smith's *Religion of the Semites*; cf. J. C. Curtis, *PrIMITIVE SEMITIC RELIGION TO-DAY*. [g.n.b.]

B. In the New Testament. — I. The sacrifices of the O.T. and of contemporary usage, both Jewish and pagan, are naturally presupposed and alluded to in N.T. The primeval sacrifices of Cain and Abel are noticed, and the acceptableness of Abel's contributed to his faith (Heb. 11, 4); and Abraham's offering of Isaac is twice used in evidence of his faith (11, 17; Jas. 2, 21). In the ep. to the Hebrews data from the O.T. are combined with details derived from tradition: the tabernacle is shortly described (Heb. 9, 1 ff.); and besides the general summaries of sacrifices as *dōrē te kai thvian* (5, 1, 8, 3; cf. 9, 9) in the definition of the specific function of the priesthood (cf. 7, 13), and as *thvian kai *προσφοράν ... *δοκεινώματα kai *περί *καρπη* (10, 5-7 from Ps. 40, 6), special sacrifices are particularly referred to—the fundamental covenant-sacrifice of Ex. 24 (Heb. 9, 18 ff.) and the great annual sin-offering of the Day of Atonement are shortly described (9, 7, 11, 13, 11); the daily sacrifices (7, 27, 10, 11) and the sin-offering (5, 3, 10, 26) are noticed; the original Pasover with the sprinkling of the blood (11, 28), and the shewbread (9, 2) are mentioned in passing; as well as the sacrificial principle of cleansing by the application of the blood (9, 22).

The fully developed Levitical system of the Herodian temple lies in the background of the historical books. There is the temple (*rē lēpār*, Mt. 4, 5, Ac. 3, 1 ff.) and its sanctuary (š vēdc, Lu. 1, 0, etc.) the great altar of burnt-offering (Mt. 5, 23, 25, 18, 35); the altar of blood outpouring at the foot of the altar is covertly alluded to; the temple-market for the sale of victims and the counters for the exchange of foreign money for the coin of the sanctuary, which alone could be tendered for sacrificial purposes (Mt. 2, 15; 2, 14 ff.); and the treasury, where the value of some priests' sacrifices was deposited (Jn. 18, 20; Mk. 12, 4, 1). Besides general allusions to various sacrifices (Mt. 5, 23, 18, 20; Mk. 12, 33; Lu. 13, 1), there are noticed the sacrifice of redemption of the firstborn, as offered for our Lord at the Presentation (L. u. 2, 14), the shewbread (Mt. 2, 26 and paral.), the double sacrifices of the Sabbath (Mt. 12, 18), the sacrifices in the declaration of the leper's recovery (Mt. 1, 44 and paral.), the sacrifice of the paschal lamb (Mt. 14, 18; Lu. 22, 7), and on one interpretation the paschal haghīd (Jn. 18, 2, 8). In His teaching our Lord requires charity as the condition of acceptable sacrifice (Mt. 5, 23, 18), and twice uses Himself to emphasize the prior moral to ceremonial obligations (Mt. 9, 13, 12, 7), while He approves the statement of the principle by the scribe (Mk. 12, 33). [SALVATION.] — In the Acts the Nazirites' oblation on the completion of his vow is noticed (Ac. 21, 26; cf. Num. 6, 1 ff.); and in 1 Cor. 9, 13, 10, 18 St. Paul alludes to the same offering of the sacrifices by the priests. Otherwise the allusions to Jewish sacrifice are of a kind to be referred to in the following sections. Pagan sacrifice appears in Ac. 14, 13, where the Lystrans prepare to sacrifice to St. Paul and St. Barnabas; in the discussion of *ēdōlōthēs* (1 Cor. 8, 10; cf. Rev. 2, 14, 12); and in the course of St. Paul's argument where the table of devils are contrasted with the Eucharist (1 Cor. 10, 21). — II. The essential place and importance of sacrifice in N.T. lies in its application to the interpretation of the life and death and resurrection of our Lord. To the Jews our Lord, whatever else might be true of Him, was one Who had died upon the cross; the "atonement of sacrifice," whatever claims to the Messianship might be made for Him. Accordingly in his speeches in Ac. 2, 5 St. Peter's task had been to vindicate our Lord's Messianship in spite of the cross, to interpret His death as consistent with His Messianship. And this he had done by three lines of argument: (i) that at least He had been manifestly approved by His miracles; (ii) that His death was foreknown and determined by God, as proved by prophecy; and (iii) that it had been reversed by the resurrection, also in accordance with prophecy. But there is no attempt to interpret His death in
SACRIFICE

itself, except as the necessary condition of the triumph of the resurrection. To the faithful, on the other hand, the cross and passion was an incident in the life of the Lord of glory, with Whom they lived in fellowship and through Whom they were heir of His glory; while the centre of their common life was a rite instituted by Himself, in its form thoroughly sacrificial, and embodying His own interpretation of His death—the Eucharist. Accordingly, throughout the apostolic writings our Lord's person in respect of His death and resurrection and ascension is represented by the category of sacrifice; the Atonement is conceived and stated in terms of sacrifice, and by the aid of Is. 53 (Mt. 8:17; Ac. 8:32ff.; Ro. 4:25; Heb. 9:28; 1Pe. 2.22-25; cf. Lu. 22.37). At the same time this is not the only category that is applied to it, and in treating of sacrifice here it is not required to confine attention to that which is the higher and more precise formulation of the idea of sacrifice through the Atonement, as to understand the Atonement through the idea of sacrifice. The epistle to the Hebrews stands apart from the rest of N.T. in the fulness with which it treats of our Lord’s sacrifice and in the precise form in which it states it. It is desirable therefore to notice the Hebrews separately. (i) Outside the Hebrews the statements and views of a general character, though not the detailed exposition or interpretation. (a) Our Lord “surrendered Himself for us a sacrifice and oblation to God, for a sweet-smelling savour” (Eph. 5.2), where θυσία και προφανέως seems to represent θυσίας καὶ πρεσβέσια τὸς αἵματος τοῦ βίατρυκτον τῶν ἁγίων (Ps. 40.6) of the bloody and the unbloody offering, and σωτήρ εἰδωλίας — θυσίας, the Levitical expression for the acceptability of such sacrifices or parts of sacrifices as were given over to God by burning (Lev. 1.9, etc.). He is the Lamb, whether of sacrifice in general, or the Paschal Lamb in particular (1Pe. 1.19; 1Jn. 1.29; Rev. 5.6); while in 1Cor. 5.7 He is explicitly the Paschal Lamb. He is the sin-offering (προφανέως ἁγιασμοῦ, Ro. 8.3; cf. 1Pe. 3.18; ἁγιασμοῦ, 1Jn. 2.2; 4.2), 1Cor. 5.7). He “offered our sins in His own body on the cross” (1Pe. 2.24), where θυσίας, though derived from Is. 53.12, seems to be applied in the usual sense of ἁγιασμός, as applied to the burnt-offering (Lev. 14.20, etc.). (b) In two places St. Paul suggests an interpretation of the sacrificial significance of our Lord’s death. (i) In Ro. 3.25ff. the cross is the exhibition of the sinfulness of sin, which is measured by the fact that it slew the Lord of glory. It makes it possible therefore for God to justify us—i.e. to forgive our sins—without the danger of its being supposed that this forgiveness is the result of moral indiffer-

ence; through it He may be seen to be Himself righteous while He forgives our unrighteous-

-nesses. (ii) In 2Cor. 5.21 our Lord was “made sin for us” in His death; which seems to mean at least this, that “He Who” in Himself was sinless was made sin to His stainless con-

sciousness the burden of the sin of the race in which He had involved Himself, and did the ultimate penance for it. (c) But the significance of sacrifice centres in the blood; the purpose of the death is to liberate the blood, which sums up and contains the significance of the death. Hence (a) our Lord’s death and its significance from this point of view is ex-

pressed by “His blood.” He made “peace by the blood of His cross” (Col. 1.20; cf. Eph. 2.16); “justified in His blood” is parallel with “reconciled by His death” (Ro. 5.9,10; cf. Col. 1.20,22). He was set forth as a pro-

tific for sins” (Ro. 8.3,4); it is sprinkled on us (1Pe. 1.1); the sacrifice and their roles are to be comprehended in white in the blood of the Lamb (Rev. 7.14), and His blood cleanses the faithful from all sin (1Jn. 1.7); or, as it is otherwise expressed, “sacrifice” (f) (1Jn. 2.2) to “take away (ἀφέναι) sin” or “sins” (1Jn. 1.9; 1Jn. 3.5), to win “reconcile-

lation” (Ro. 5.10ff.; 2Cor. 5.18ff.; Eph. 2.16; Col. 1.22) to “make peace” (Col. 2.10), to “make us nigh” (Eph. 2.13). (2) In the epistle to the Hebrews there is more detailed exposition, but the treatment is not systematic; it is not an interpretation of the Levitical system as a whole in relation to our Lord, but an interpretation of our Lord’s person and deadness as involving the relevant elements included in the Levitical system, of which a detail may be used for the special purpose in hand in a sense which does not seem logically coherent with the general exposition (Heb. 13.11ff.). (a) Our Lord is the ideal high-priest, Who, as such, fulfils on a higher plane the type of the Aaronic priesthood, and so supercedes it and its activities. As a high-priest “He must have somewhat to offer” (8.3; ἡ θυσία αὐτοῦ, 9.26; cf. 5.1-3); and that “somewhat” is “Himself” (9.4f.), His “body” (10.10), His “blood” (9.7,12); He “offers Himself” (προσφέρεις ἁλτάντει, 7.27; ἡ προσφέρεις ἐκ τῶν ἁγίων, 9.14,25); He “is offered” (προσφέρεται, 9.28). In particular, as “the mediator of a new covenant” (9.15,12,24) and “sacred of a better covenant” (7.22; cf. 8.6), He is also the covenant-sacrifice (9.15ff.) and His blood is “the blood of the new (9.20,10.28) and “eternal” (13.20) “covenant.” He fulfils the type of the Day of Atonement, entering into the archetypal
SACRIFICE

sanctuary (8.2, 9.11). "through His own blood" (9.12). Himself at once the minister of the ideal sanctuary (8.2). A sin-offering which He offers (13.11, 12). (b) In the Levitical system the death of the victim is not in itself the sacrifice, but only incidental to it. The offering of the life, and the purpose of the death is to enable the life to be dealt with sacrificially; and since the life is in the blood "(Gen.9.4), or "in the blood" (Lev.17.11), the essential sacrificial act is the manipulation of the blood. And the slaying of the victim is not the function of the priest (except in cases where the priest is also the offerer, whether for himself or as representing the priesthood or the community); the offerer brings the victim, lays his hand on it and slays it, and the priest only then deals with it when it has so been prepared for sacrifice. Accordingly, in the epistle to the Hebrews, while the Passion is necessarily implied in the sacrifice (Heb.9.26, 13.12), it is not dwelt upon in this relation. And on the other hand, our Lord's high priestly commission has once His moral perfecting and His priestly consecration; and His passion and death is the climax of His discipline, in which the moral reality of priesthood, obedience to the Father and sympathy with men, is finally proved, that so He might become morally what He was by nature (2.4, 5, 8), the one mediator, perfected through sufferings (2.10). (ii) The victim must be without blemish (8.3, Lev.1.1, etc.). The discipline of His life was the testing of His spotlessness; which was not an untried innocence, but He was "in all points tempted like us apart from sin " (Heb.4.15); and death was the last and culminating temptation, in which the obedience transcended the depths of an ideal human discipline (5.8, 10, 17), and proved "without blemish" (9.14; cf. 1 Pe.1.19), "holy, harmless, undefiled, and separated from sinners" (Heb. 7.26). (iii) His life was the continuous surrender of Himself to the Father. He came to do the Father's will, and a body was prepared for Him that He might do it (10.5). His life of obedience was the bringing of the victim to the door of the tabernacle (Lev.1.3f.); its discipline, the laying of His hand upon it to make it His own; and the death, in which the obedience and discipline of life culminated, was the ultimate sacrifice. "Through the offering of the body of Jesus Christ once for all" (Heb.10.10), the offering of Himself "through eternal Spirit" (9.14, on which see commentators), in which He prepared Himself as victim that as priest He might minister His blood within the holiest. In 13.11 our Lord's death is paralleled with the burning of the bodies of the highest class of sin-offerings outside the camp; but this interpretation is isolated and is not easy to adjust to the general representation. (c) As high-priest our Lord ministers His blood. (i) "Brought again from the dead in the blood of the eternal covenant" (13.20), He "entered into the holy place through His own blood " (9.12), and accomplished what in the type is represented by the offering of the blood (9.7) or the sprinkling of the mercy-seat (Lev.16.14f.). The author avoids saying that He carried His blood (or even that He offered it, since it may obviously be open to misunderstanding, as if our Lord's blood were something separate or separable from Himself; and in fact he describes the type in such terms as to suggest the necessary limitation of the correspondence between it and the antitype (Heb.9.7, ob χείρις αἵματος 12, δι' αἵματος 25, εἰς αἵματι αὐτοῦ). (ii) The blood of the sin-offering of the Day of Atonement was not only brought to God within the holiest, but was also applied to the sanctuary; and the blood of the covenant-sacrifice was sprinkled not only on the altar, but also on the people. So the blood of Christ is "the blood of sprinkling " (12.24), by which we have our hearts sprinkled from an "obviously open conscience " (10.22). The blood which is the life is communicated to us; He "sanctified us through His own blood " (13.12), and we have access to the holy place "in the blood of Jesus" (10.19). (d) In relation to our Lord's sacrifice the Church is not only the people but also the priesthood, and it is His priestly work to set us "in the holy place " (10.19), the way into which is now manifested (9.8); and it transends even the priesthood, since it eats of the sin-offering, which under the law was denied even to "those who serve the tabernacle " (13.10; cf. Lev.6.23, 18, 22). And the effects of our Lord's sacrifice are the "purification" (Heb.1.3), "expiation " (2.17), "taking away" (10.4), "stripping off" (10.11), "remission" (10.18) of sins, "the setting aside of sin " (9.26), "an eternal redemption " (9.12), "sanctification " (10.29, 13.12), "perfecting as touching conscience " (7.17, 9.9, 10.13), and "cleansing of conscience " (9.14, 10.2).—III. The sacrificial Eucharist of the Church. What can be asked, What does the author of Hebrews mean exactly by "the blood of Christ "? Does it mean the moral significance of His death—i.e. His death considered as abidingly significant in its effects? Or does it mean His life set free, glorified, through death? In the first case, the ministering of the blood within the holiest is little more than a metaphor for the restoration of the fellowship between God and man effected by our Lord in the past, which is realized by men morally, "through faith"; in the other case our Lord Himself is the bond of the new relation, which is realized in us by the consciousness of His life—He is Himself the blood upon the mercy-seat, which is also "sprinkled on " us, imparted to us. The Eucharist would seem to embody the second conception, and to imply that even if the first be the immediate meaning of Hebrews, it is still to be interpreted by the second. (1) The Eucharist, as the term of its institution and in its structure, is obviously a sacrifice in some sense; a religious meal instituted in such terms ("body," "blood," "blood of the covenant," "outpoured," "for remission of sins," perhaps also "do" and
SACRIFICE
"commemoration") suggests nothing else. The following points may be noticed in the terms of the institution: (a) "Broken" (λακονεον) is probably no part of the true text (1Cor.11.24), but a liturgical interpolation. In any case, it refers to the breaking of our Lord's body as bread, for distribution (15.58-7; Lam.4), not to a breaking of the body in death, an interpretation suggested by nothing in N.T. or in early Christian literature, and not corresponding to the facts of the Passion. The liturgical fraction is not the commemoration of the Passion. (b) ἔκαστοκεφαλήν, if it means "shed," yet must mean "shed" sacrificially, as the first stage in the "outpouring" (ἔκαστοκεφαλήν. Lev.4.18, etc.) and in the application of it to us, timelessly and continuously, in Lu.22.20 it is not the blood that is shed, but the cup that is outpoured. (c) Πάση has often been interpreted in the sacrificial sense of ἔργον, ποιεῖν in the LXX. (Ex.10.25, etc.; cf. πείθειν, εὐαρεῖς). This is very questionable; but to the passages in Just. Mart. Trypho 41, 70, commonly quoted, may be added the normal liturgical formula: τοῦτο ποιεῖτε εἰς τὴν εἰρήν ἀνάμνησιν. μεμονεῖτε οὖν ἡ προσφέρεισθι. (d) It has been debated whether ἀνάμνησις implies commemoration or renewal. But whether it is man or God who is reminded. The question seems unnecessary, because in the nature of things "to remind God" can only mean "to remind ourselves that God remembers," and "to remind ourselves" in the presence of God is what we mean by reminding God. The corresponding in the Eucharist with the Peace-offering is obvious on the surface; but allusions in N.T. relate it to other types of ancient sacrifice. (a) "We have an altar, whereof they have no right to eat who serve the tabernacle" (Heb.13.10)—whatever be understood by the "altar," and its doubt in the last resort it is the person of our Lord—evidently refers to the Eucharist, and relates it to the Sin-offering, as that in which we do our priestly part in the sin-offering of the Lord. (b) "This is My blood of the covenant" (Mt.26.28) echoes the words of the Covenant-sacrifice of Ex.24, which are quoted in this form (τοῦτο, ἐκ γενέσεως) in Heb.9.20. The Eucharist is thus related to the sacrifice of the New Covenant, as that in which the covenant relation is continuously renewed and sustained in us. (c) "My commeration" in the paschal context of the institution is naturally related to the "memorial" of the Paschal sacrifice (Ex.12.14). (d) In 1Cor.10.18-21 St. Paul asserts the parallelism between the Eucharist and pagan sacrifices, on the ground of the identity of principle embodied in them—that they who eat the sacrifices have communion with the altar (i.e. with God, Who is represented by the altar); to partake of the cup and the table of the Lord is to have communion with God, as to partake of the cup and the table of the gods is to have communion with them (i.e. with devils). (3) It has been pointed out in the former section of this article that a fundamental conception of sacrifice appears to be that of a meal shared by God and man, by which the fellowship between God and man is renewed and sustained; the sacrifice is the "bread of God" (Lev.21.6, etc.) placed on the "table of the Lord" (Ezk.41.22,44.16; Mal.1.7,12) for Him to consume, and also partaken by the worshipper. Whether or not "the bread of God" in Jn.6.33 bears this meaning of food consumed by God, our Lord as the "beloved Son in Whom" the Father is well pleased (Mk.1.11); the parallels in the "bread of love" (Col.1.13) offered for a sweet-smelling savour (Eph.5.2) and returned in His perfected humanity to the bosom of the Father, satisfies this conception of the "bread of God." And this "bread" (i.e. food), the flesh and blood of the Son of Man, is given to us to eat and to drink in the Eucharist that thereby we may have communion with God (1Cor.10.21,22) and with one another (ib.16), a communion of life (Jn.6.35,57. (4) In the Eucharist, therefore, the Church in thanksgiving (Mk.14.22,23 and parallels; 1Cor.10.16,11.21,14.16,17) commemorates our Lord in His historical acts. These acts, through His death, He offers Himself to God, and does thus "once for all" (Heb.7.27,9.26, 10.10), and are past; so that as acts they can only be commemorated. But they had value only as expressing and "perfecting" His will, and they live eternally in the will expressed and "perfected" through them; so that He offers Himself for ever. Through the commemorative thanksgiving the Church, who operates with the eternal act of His will and offers Him to the Father, and so, doing what He did in the original Eucharist, effects the consecration of its thank-offering of bread and wine to be both His body and His blood, as apart from His body and blood, as members of His body is, acceptable to God through Jesus Christ" (1Pe.2.5), a "pure and undefiled worship" of which the ceremonies are acts of charity and self-discipline (Jas.1.27). (i) We are to "present ourselves to God as alive from the dead and our members as instruments of righteousness" (Rom.12.1), to "offer our bodies a living sacrifice, holy, acceptable to God—our reasonable worship" (Ro.12.1). Hence an element in the "pure worship" is to "keep ourselves unsprinkled from the world" (Jas.1.27), since the victim must be "without blemish." (2) And since the victim must be slain, we have to "depart from him and worship our God upon earth." (Col.3.5), to "resist unto blood, striving against sin" (Heb.12.4). (3) As Christ loved us and surrendered Himself for us an offering and a sacrifice to God for a sweet-smelling savour, so we are "to walk in love," (Eph.5.2), "doing good and communicating, with such sacrifices God is well pleased" (Heb.13.16; cf. Ph.4.18), and, as a second element in the "pure worship," "visiting the fatherless and widows" (Jas.1.27). (3) We are to "offer the sacrifice of praise to God continually, that is, the fruit of lips giving thanks to His name" (Heb.13.15); which however we do in word or deed, doing all in the
name of the Lord Jesus, giving thanks unto God and the Father through Him" (Col.3.17; Eph.5.20); having our "speech seasoned with salt" (Col.3.17), like the sacrifice (Lev.2.13; Mk.9.49), that it "may minister grace" (Eph.4.29) as we "speak as oracles of God" (1Pe.4.11). Lastly (4), St. Paul represents himself in his apostolic life and ministry as, like Joseph of Arimathea and victim. He is "a minister [ἱερόφων] of Jesus Christ unto the Gentiles, ministering [ἱερόφων] the Gospel of God, that the oblation [κοσμήμα] of the Gentiles may prove acceptable, being sanctified by the Holy Ghost" (Ro.15.16). He interprets his own sufferings as his share in the Passion of Christ, in which he is "filling up on his part in his flesh for Christ's body's sake, which is the Church, what is still lacking [ῥα ἱεροφωματα] of the afflictions of the Christ" (Col.1.24), which are incomplete until all who are or shall be in Him "know the fellowship of His sufferings and are conformed to His death" (Ph.3.10). And the apostle's death is the outpouring of the libation (σπέρματι) of his life "over the sacrifice and service [τῷ θυσίῳ καὶ λειτουργίᾳ] of the faithful" of his churches (2.17; 2Tim.4.6).  

[RE.B]  

Sadamias (2Esd.1.1) = SHALUMM, 6.  
Sadás (1Esd.5.13) = AZGAD.  
Saddeus (1Esd.8.45), or Daddeus (8.46), a corruption of IDDO, 6.  
Sad' due (1Esd.8.2) = ZADOK, 1.  
Sadduces (Mt.3.7; 16.1,6,11,12,22; 23,34; Mk.12.18; Lk.20.27; Ac.4.5,15.7,23,6,7,8), a religious party or school among the Jews at the time of Christ.—Origin of the Name. Their Heb. name in the Mishna is כדּדֶהּוֹ, the plnr. of כָּדוֹהַ, “just,” or “righteous.” The Jewish statement is that they are named from a certain Zadok, a disciple of the Antigonus of Socho who is mentioned in the Mishna as having received the oral law from Simon the Just, the last of the men whom the Mishna calls "righteous" or ἁγιοι. Epiphanius states that the Sadducees called themselves by that name from “righteousness,” the interpretation of the Heb. כָּדֹהַ; but adds, “There was likewise anciently a Zadok among the priests, but they did not continue in the doctrines of their chief.” We have this two alternatives—either the name was thought to be descriptive of their tenets or their practice, or else it referred to some one who was regarded as in some sense their founder. As the Sadducees were so much more prominently a political than a religious party, we must seek for the origin of the name in the history of the present assertions rather than in its doctrines. The next question then is, Which Zadok is referred to? The most famous person who bore that name was the high-priest, contemporary of David, from whom all the subsequent high-priests claimed descent. The fact that the Sadducees were the priestly party had led to it being assumed that “Sadducee” meant “Zadokite.” Against this is the fact that the Hasmonaean, if generally in alliance with the Sadducees, were sometimes in antago- 

him, it is easily understood how the greater Zadok displaced the less known; and as the Samaritans maintain that they are called Shomerin not from Shimron (Samaria), but because they guarded (shidmar) the law, so the Sadducees claimed to be the “true righteous ones” as against the puritanism of the Pharisees. Historically the Sadducean sect made their appearance in history in the reign of John Hyrcanus as an already fully formed party. Alexander Jannaeus not only supported the Sadducees but persecuted the Pharisees; following his deathbed advice, his widow Alexandra, who succeeded him, reversed this policy. The struggle between her sons, John Hyrcanus II. and Aristobulus, was very much one between the Sadducees and the Pharisees. As a rule the business of the State was carried on by the Sadducees. This led to another characteristic—which, although in some things very conservative, they yielded much more than others did to the Hellenizing influences to which the Greek world was exposed in the Hellenistic period. Although (from the support which Herod's father Antipater gave to Hyrcanus II., the Pharisee candidate for the high-priesthood) the Herodians must at first have been in antagonism to the Sadducees, latterly they appear to have coalesced with them. (1) As a religious party the distinctive doctrines of the Sadducees consisted mainly of negations. As the Pharisees asserted, so the Sadducees denied, that the Israelites were in possession of an oral law transmitted to them by Moses. It is proper to bear in mind how destitute of historical evidence was the doctrine which they denied; although it is now maintained all over the world, by orthodox Jews. The Sadducees rejected the theory of oral law, divinely settled by Moses, but did not reject all traditions and decisions in explanation of passages in the Pentateuch; on the contrary, they probably, in numerous instances, followed the sources and sources of Moses of the Pentateuch. The Sadducees, the denial of immortality, followed in their conception as the logical conclusion of their negations. On a point so momentous as life beyond the grave, no religious party among the Jews would have deemed themselves bound to accept any doctrine as an article of faith which had not been proclaimed by Moses; and in the written law there is a total absence of any direct assertion by Moses of the immortality of the soul or of the resurrection of the dead. This fact is presented to Christians in a striking manner by the well-known words of the Pentateuch which are quoted by Christ in argument with the Sadducees on this subject (Ex.3.6; Mt.22.31-32; Mk.12.26,27; Lk.20.33). It cannot be doubted that in such a case Christ would quote to his powerful adversaries the most cogent text in the law; and yet the text actually quoted does not itself do more than suggest this great doctrine inferentially. Hence, as the Sadducees disbelieved the transmission of any oral law by Moses, the striking absence of that doctrine from the written law freed them
from the necessity of accepting the doctrine as divine (Ac. 23:8). (3) They likewise denied that there was "angel or spirit." A perplexity arises as to the precise sense in which this denial is to be understood, since in the Pentateuch there are references to "the angel of the Lord." Two principal explanations suggested are, either that the Sadducees regarded the angels of O.T. as transitory unsubstantial representations of Jehovah, or that they disbelieved, not in the angels of O.T., but merely in the system of an angelic hierarchy developed in the popular belief of the Jews after their return from the Babylonian Captivity. Perhaps, however, another suggestion is admissible. The Sadducees may have disbelieved in the occurrence of any such phenomena in their own time, while accepting all the statements respecting angels in O.T.; and thus the key to the assertion in Ac. 23:8 that the Sadducees denied "angel or spirit" would be found in the 6th verse. (4) The Sadducees, after all, had probably denied the doctrine of divine fore-ordination held by the Pharisees. Possibly the great stress laid by the Sadducees on the freedom of the will may have had some connexion with the fact that so many of the criminal judges were selected from among them. (5) Some of the early Christian writers (e.g. Epiphanius, Origen, Jerome) attribute to the Sadducees the rejection of all the sacred Scriptures except the Pentateuch. This, however, is doubtful; the writers mentioned may have confused the Sadducees with the Samaritans. It is an important fact that Josephus is wholly silent as to any antagonism on this point between the Sadducees and the Pharisees, and he would scarcely have been so had it existed. The fact that in arguing with the Sadducees on the doctrine of a future life, Christ quoted from the Pentateuch only, though there are stronger texts in favour of the doctrine in other books of O.T., has probably had more to do with anything else in occasioning this misconception than the Sadducees held the Torah in much higher repute than they did the works of prophets or psalmists; hence our Lord drew this proof from it rather than from other Scriptures. (6) The Sadducees rapidly disappeared from the scene after the destruction of Jerusalem by Titus; and secondly, the growth of the Christian Church—of which the Sadducees were the most important in the minds of the Pharisees—exclusively predominated. The Talmud is the work of the Pharisees. Two circumstances contributed indirectly, but powerfully, to produce this disappearance: first, the state of the Jews after the capture of Jerusalem by Titus; and secondly, the growth of Christianity, which was a sufficient reason for overestimating the consternation and dismay which the destruction of Jerusalem occasioned in the minds of sincerely religious Jews. In this hour of darkness and anguish, they naturally turned to the consolations and hopes of a future state; and the doctrine of the Sadducees that there was nothing beyond the present life would appear to them cold, heartless, and hateful. Again, while they smote in the lowest depths of depression, a new religion which they despised as a heresy and a superstition was gradually making its way among the subjects of their detested con-

SADDUCEES

SALAMIS

quers, the Romans. One of the causes of its success was doubtless the vital belief in the resurrection of Jesus, and a consequent resurrection of all mankind. Consciously, therefore, or unconsciously, these circumstances combined to induce the Jews who were not Pharisees, but who resisted the new heresy, to rally round the standard of the oral law, and to assert that their holy legislator, Moses, had transmitted to his faithful people by word of mouth the revelation of a future state of rewards and punishments. This doctrine, the pledge of eternal life to them, as the resurrection of Jesus was to Christians, is still maintained by the majority of our Jewish contemporaries.

San doc.—1. (2 Esd.1.1) = Zadok, 1.—2. A descendant of Zerubbabel in the genealogy of Jesus Christ (Mt. 1:14).

Saffron (Can.4.14) correctly renders the Heb. kar summed. The similar Arab word kurr um denotes the Crocus sativus or "saffron crocus." Saffron is a traded name for the dried stigma (threads or "stigmata") of the female flower of the Crocus sativus, a perennial herb of the same family as the Tawny crocus (Crocus chrysanthus) and the Persian crocus, (Crocus sativus), which is said to esteem as a perfume as well as a dye: "it was used for the same purposes as the modern potpourri" (Rosenmüller). The word saffron is derived from Arab. safr'an, "yellow" and to the Arabs its successful cultivation in Europe (Span. mafr an) is due. Pliny said, "To plant it within any garden in Italy is held no good husbandry, for it will not quit cost." A quaint attempt to identify the saffron of the Bible with turmeric (Curcuma longa) has been recently made by Prof. Henslow. [n.c.n.]

Saints. (1) In O.T. (A.V.), speaking generally, this word is used of (a) angels (Ps. 89:5; 57, etc.); (b) of men (Deut.33:3; Ps. 16, etc.) collectively, and especially of Israelites—not of individuals. The word represents two Heb. words, gôbhîshîm (Gk. ãgyo ã) and haîsidîm (Gk. ãsîos); but only the former of these is applied to angels. The distinction between the two, as applied to men, is that between consecration "by calling and election" and consecration of the heart responding thereto. In R.V. the word "saints" is usually replaced by "holy ones." (2) In N.T. both A.V. and R.V. render ãgôaî by "saints" (Gk. ãsîos in the O.T. sense never occurs), and the title is applied to any person by baptism (and the other means of grace) have made their calling and election sure in Christ—that is, are true members of His Body, the Church. The confining of the word to those who have been conspicuous for personal sanctity and holiness is non-Scriptural, nor was it contemplated in all probability when the clause "the communion of saints" was added to the Apostles' Creed (? in the 5th cent.). See Swete's Apostles' Creed, pp. 82 ff. [c. i. f.]

Salah or Saul, the son of Araphad and father of Eber (Gen.10.24,11.11,12-14; I n. 3:35). The name is significant of extension, thus seeming to imply the historical fact of the gradual extension of a branch of the Semitic race from its original seat in N. Assyria towards the river Euphrates.

Salamis, a city at the E. end of the island of Cyprus, and the first place visited by SS. Paul and Barnabas, on the first missionary journey, after leaving the mainland at Scleucna.
Here, alone, among all the Gk. cities visited by St. Paul, we read expressly of “synagogues” in the plural (Ac.13.5). Hence we conclude that there were many Jews in Cyprus: and this is in harmony with what we read elsewhere. Jewish residents in the island are mentioned during the period when the Seleucidae reigned at Antioch (1Mac.15.23). At a later period, in the reigns of Trajan and Hadrian, we read of dreadful tumults here, caused by a vast multitude of Jews. Salamis was not far from the modern Famagusta. It was situated near a river called the Pedias, on low ground which is in fact a continuation of the plain running up into the interior towards the place where Nicostia, the present capital of Cyprus, stands.

**Salasada'i** (1Th.3.1), an ancestor of Judaism = ZuriShadai.

**Sala'athiel**. [PHALTIEL.]

**Sala'athiel**. —1. The father of Zerubbabel (1Esd.5.1,48,56,62 ; Mt.1:12 ; Lu.3:27). The A.V. has Salathiel in 1Chr.3.17, but everywhere else in O.T. SHEALTIEL. See ZERUBBAEL.

**Sala'athiel**. —2. Another name of Esdras (2Esd.3.1, R.V. only).

**Sala'chah**, or Salachah, a city named as the extreme limit of Bashan (Deut.3.10 ; Jos.13.11) and of Gad (1Chr.5.11). The name seems to denote a district as well as a town (Jos.12.5). It is doubtless identical with the town of Sil'khad, or Sil'khat, at the S. extremity of the Jebel Hauran, about 20 miles W. of Queen's (the ancient Enath). Immediately below Sil'khad commences the plain of the great Euphrates desert. The town is 2 to 3 miles in circumference, surrounding a castle on a lofty isolated hill. The Roman eagle occurs on several doorways. Arab. texts belong to the mediaeval period. The Gk. inscriptions are mainly Christian texts of the 4th to 5th cent.

**Salam** (safety, peace). —1. Used for Jerusalem, “the city of peace” (Ps.76.2).—2. The city of Melchizedek (Gen.14.18), which the Jews (see Josephus, t Ant. x. 2 ; 7 Ant. lli. 2) have always identified with Jerusalem, and the Samaritans with Salam (Salem), 1 of the chief of Joshua's captains (Jg.7.4). [c.r.c.]

**Salim** (Jn.3.23), the present Sâlim, E. of Shechem. [SHAMEL; AENON.] [c.r.c.]

**Salla'ia**. —1. A Benjamite who settled in Jerusalem after the Captivity (Ne.11.8).—2. The head of a course of priests which returned with Zerubbabel (12.20).

**Sallu'**. —1. Son of Meshullam, 5; a Benjamite (1Chr.9.7 ; Ne.11.7).—2. (Ne.12.7) = SALLAI, 2.

**Sallu'mus** (1Esd.9.25) = SHALLUM, 11.

**Salma'** or **Salmon** (Ru.4.20,21 ; 1Chr.2.11,51,54 ; Mt.1:4,5 ; Lu.3:32), son of Nahshon, prince of Judah; probably one of the two spies sent to Jericho; as the entrance of the Israelites into Canaan he married Rahab. For chronological difficulty in this, see GENEBLON of J.C. He became father of Boaz, and ancestor of David. Perhaps Salmon's inheritance was Bethlehem-ephrahath, part of the territory of Caleb, the grand-ancestor of Ephrahath. Joshua was rebuked for taking the song of Caleb. [c.r.d.b.]

**Salmana'sar** (2Esd.13.40) = SHALMAN-ESER.

**Salmon** (Ps.68.14). —1. The word means shady, or shadowy, and is (Heb. zalmôn) rendered Zalmon in Judg.9.48; both being apparently mountains, though not of necessity the same. Mount Zalmon was near Shechem, and had trees or bushes on it; but the name has not been recovered. In Arab. it would appear as Dilm or Sulm. The Salmon of the psalm is mentioned in connexion with a defeat of kings by the addhnay (Ps.68.11), or “lord,” who rescued Israel in Bashan (vv. 15,22), in an age when all Israel, under its princes, used to gather in the temple at Jerusalem (vv. 24-27). If there be a reference to David's conquests in Bashan, and at Damascus, it seems possible that this dark mountain covered with snow (ver. 14) was Hermon; but it is also possible that a march through central Palestine, in winter, may have led by Mount Zalmon; and snow sometimes occurs on the summits of Ebal and Gerizim. —2. SALMA.

**Salmon** (Greek = Zalmon), the E. point of the island of Crete (Ac.27.7).

**Sa'son**, the Greek form of —1. SHALLUM, 6 (Ba.1.7).—2. SALU (1Mac.2.26).

**Salo'me**. —Her name is only found in Mk.15.40,16.1, as the wife of Zebedee, not as Salome (Jn.19.25), the wife of Mary “the mother of Jesus. When her two sons were called from their work as fishermen, she also followed Jesus, ministering to Him of her substance (Mt.27.55 ; Mk.15.32) as well as to her sons, as it were”, says Josephus. Salome “she stirred herself on the last journey up to Jerusalem (Mt.20,26). She was present at the crucifixion (Mt.15.40), and was one of the first to visit the tomb from which Jesus was found to have risen (Mk.16.1-8).—2. The daughter of Herodias (Mt.14.6 ; Mk.6.17-22), who, from the Gospels, would only be known as her mother's plant child. [HEROD.] [c.r.d.p.]

**Salt** (Heb. melah; Arab. milh). As a preservative salt became the emblem of constancy; as the Arab still says, “He has eaten my salt.” Hence a “covenant of salt” (Lev.2.13 ; Num.18.19 ; 2Chr.13.5) was binding, and the meat-offering (A.V. meat offering) was salt. The saltites, the salters of the Jews professing loyalty to Persia said, “Because we eat the salt of the palace” (R.V. Ezr.4.14). It was also a very widely spread custom to rub infants with salt, among Celtic peoples and Hindus, as well as Hebrews (Ezk.16.4), probably to preserve their flesh. Salt was an emblem of life and vigour (Mt.5.13 ; Lu.14.34,35): but salt earth produced nothing, for the salt is not “fit for the land.” Hence the sites of cities when destroyed were sown with salt (Judg.9.45). It was used with food (Job 6.6) and with fodder (1Sam.24); R.V. savoury, marg. salted, and is still given to horses. Salt was found at Jebel Usdüm on S.W. shores of the Dead Sea, whence it is still brought by the Arabs. This is called in the Talmud (Tal. Bab. Holin 105 b) “the salt of Sodom.” It was probably made also from sea water by evaporation for salting fish (cf. Ne.13.16), and salt-pans used in 13th cent. at the mouth of the Crocodile River, N. of Caesarea, where the ruin el Melâth represents the old
SALT, CITY OF

"Tour des Salines." Antiochus III. sent 375 bushels of salt for the Jerusalem temple, when it was probably a government monopoly (1 Mace. 17. 21). [c.r.c.]

SALT, CITY OF (Jos. 15. 62), in the desert, was probably at Tell el Milh (the mound of salt), often wrongly supposed to be MOLADAH; in 4th cent. A.D. it was called Malathia. It lies 13 miles E. of Beer-sheba. [c.r.c.]

Salt Sea. The name. In O.T. it is known as the Salt Sea (Gen. 14. 3; Num. 33. 12; Deut. 3. 17; Josh. 15. 13; Judges 3. 15; 5. 19); the sea of ARABAH (A.V. Plain, Deut. 3. 17; Jos. 3. 16; 12. 3; see R.V.); the East Sea (Ezk. 47. 18, cf. 8; 1 J. 2. 20; Zech. 14. 8, R.V.); the Sodomitishe Sea (2 Esd. 5. 7); also called the Asphaltic Lake in Diod. Sic. ii. 48, xix. 48; and Josephus, 1 Ant. ix. 1; 4 v. 7; 9 x. 1; 1 Wars xxiii. 5; 3 x. 7; 8 viii. 2. The name Dead Sea appears first to have been used by Pausanias, Galen, and Justin in the 2nd cent. The Arab. name is Ba'hr Lüt, "the sea of Lot." The sea lies N. and S., about 46 m. in length and 9 m. in width. In the northern portion, for about 25 m., the shores slope down steeply, and the greatest depth is about 300 ft. In the eastern portion, about 25 per cent. of chlorides, especially salt, and its specific gravity is very high. The remaining 20 m. to the S. is not a lake, but a vast shallow, composed of lagoons and marshes—a district of desolation, with hot springs, beaches of sulphurous incrustation, and huge saline deposits. The Tiberias (or Tiberias, 15. 12–15; 5. 19) from the sources of the Jordan (near Mount Hermon) to the mouth of the gulf of Aqaba, is a deep fissure on the earth's surface, running from N. to S., forming the vale of Suddim, where the valley of the Jordan and the Dead Sea are situated. Commencing at the level of the Mediterranean Sea, near Hermon, this fissure gradually descends until the surface of the Dead Sea is 1,300 ft., and the bottom 2,600 ft., below the level of the ocean. The level of the sea of Tiberias is about 680 ft. below the ocean. The ridges or tableland of the mountains E. and W. are about 3,000 ft. above the ocean; so that the fissure is about 5,600 ft. deep at the deepest point. The method in which this fissure is assumed to have been formed is as follows: At the close of the Tertiary period, the long era of rest and deposit of strata was followed by one of movement and rupture of the earth, resulting in vertical pressure, acting eastward and westward, the land (now forming Palestine) being forced into a series of synclinal and anticlinal curves at right angles to the line of pressure, with fractures and displacements where there were lines of weakness. Such a line of weakness was that of the Jordan Valley and Dead Sea. As the land gradually emerged from the sea, the tablelands of Judaea and Arabia were more and more elevated, and the waters of the Dead Sea were pressed toward the line of the Jordan and Arabah "fault"; accompanied by much fissuring and crumbling of the strata. The tablelands of Judaea and Moab may, then, be considered as antidinal (or arches), and the Jordan Valley as synclinal (or a trough), which would be occupied by salt water remaining from the ocean itself. As the lands on either side of the trough rose, the bed of the trough (owing to continued subsidence) became deeper over the area now occupied by the Dead Sea; and into this gulf all the waters flowing from the bordering lands would necessarily empty themselves (Sur. W. Pal., Geology, p. 108). During these displacements there has been a fracture of the crust, and displacement of the strata, in the line of one main fault along the eastern side of the Jordan and Dead Sea; so that the formations on the E. shores of the Dead Sea do not correspond with those on the W. On the western side of the cretaceous limestone, which forms the edge of the sea, whilst on the eastern side there are very ancient volcanic rocks at the water-level, overlain successively by carboniferous and older cretaceous beds, and only surrounded at about 3,000 to 4,000 ft. by the cretaceous beds which are at the water-level on the western side. During the occurrence of pressure, the beds of cretaceous limestone, which are nearly horizontal in Central Palestine, are tilted up along the western side of the line of faulting. If the flow of water into the fissure had been (at any time) sufficient to fill it, it would have run over either through the gulf of Aqaba or by the plain of Edraeleon—probably by the latter; but there is no evidence that this took place, except that the mouths of the various wadis debouching on the valley turn rather northward. It appears, however, that at an early epoch the waters rose sufficiently to have formed a lake some 200 m. from N. to S., to the west of the gulf of Aqaba (Sur. W. Pal., Geology, p. 108). As time went on, the shrinking of water due to evaporation became great, and continued until the lake was reduced to its present dimensions at the close of the Messenian period. At the commencement of the Pluvial period the waters again rose, till there was a depth of 2,000 ft.; but it was still a closed lake. During this time, and shortly before the advent of man, a great outbreak of volcanic action occurred, owing (it is supposed) to the waters of the inland sea penetrating the interior along the great line of fissure of the Jordan Valley and its branches, and reaching the internal heated masses, and setting in action the subterranean laboratories, which afterwards gave such striking evidence of their proximity in the great sheets and streams of lava which have overflowed the regions on both sides of the Jordan later. Volcanic pressure, acting eastward and westward, the land (now forming Palestine) was forced into a series of synclinal and anticlinal curves at right angles to the line of pressure, with fractures and displacements where there were lines of weakness. As the Pluvial period gave place to the climate of prehistoric times, the waters of the inland sea shrank, and became saturated with salt, and deposited it, as at Jebel
Usdūm; and there is reason to suppose that at the time when Abraham arrived in Palestine the level of the Dead Sea was much the same as it is at present.—Fauna. Throughout Palestine this belongs to the Mediterranean section of the Palaearctic type, with traces of boreal fauna in the N. and a large infusion of Ethiopian and some Indian types in the Jordan Valley. These exceptions show that the glacial period has left traces not wholly obliterated, while the preceding period of warmth has left yet larger proofs of its former northern extension in the unique tropical outlier of the Dead Sea basin. The Ethiopian and Indian types of avifauna are almost exclusively confined to the deep depression of the Dead Sea basin, which (with the exception of some winter migrants) affords very few Palaearctic species. This basin is decidedly distinct and typical in its species. An examination of the reptilian, fluviatile ichthyological, and invertebrate fauna leads to similar conclusions.—Flora. Although the Dead Sea flora bears a general similarity to the flora of Arabia Petraea, it is distinct from the adjacent flora E. and W. of it. Out of 160 plants 135 are Ethiopian, scarcely any of them extending into Europe, and many are local. Calotropis procera and Salvadora persica are never found, except close to the Dead Sea, at Engedi, Ṣāfiyeh, and Seisa-bān; and are separated by many degrees of long. and lat. from their other known habitats. The flora of the Dead Sea is remarkable for a small average number of species distributed through a large number of orders. We find in this isolated spot, comprising but a few
SALT SEA

square miles, a series of forms of life differing decidedly from the species of the surrounding region, to which they never extend, and having a strong affinity to the Ethiopian region, with a trace of Indian admixture. Here is a patch of tropical character, containing southern forms so unique and peculiar that we cannot connect their presence in it with any existing causes or other transporting influences. The solution appears to be that, during the Miocene and Pliocene periods, the Jordan basin formed the northernmost of a large system of fresh-water lakes, extending from N. to S., including perhaps, the Red Sea; the Nile basin; Nyanza, Tanganika, Nyasa lakes; and feeders of the Zambesi (Surv. W. Pal., Fauna and Flora, p. xx).—Climate. The climate of the neighbourhood of the Dead Sea is unique, in consequence of its peculiar position and depression of 1,300 ft. below the ocean. Whilst there are absence of life; but about February, when gentle showers fall for several days together, the salt is washed away from the surface of the rocks and little plants spring up and cover the ground, perhaps for only a few hours, even within a few feet of the Salt Sea itself.—Hot Springs. One of the characteristics of the Jordan Valley is the series of hot springs which line the "faults" from N. to S. Many of these springs are highly sulphurous, and they are now (and have been from early historical times) used as medicinal baths. The hottest springs are those of Tiberias, and Callirhoe (near Machaerus), on the N.E. side of the Dead Sea. Springs are found both warm and hot, at different points round the Dead Sea.—Minerals. Sulphur is found on W. and S. of Dead Sea, and a sulphur incrustation on the surface of the beach (Rob. i. p. 512). Nitre is found in small quantities (Rob. i. p.

snows on all the surrounding mountains of Palestine, the temperature about the Dead Sea is more than tropical. Josephus says that while the hills are covered with snow, the inhabitants of Jericho went about clad in linen only (4 Wars viii. 3); and in the rainy month of February, usually the coldest month in the Jordan Valley, the climate is sultry about the Dead Sea. The heat about Jericho is tropical, as is evidenced by the productions of former days—palm, and sugar, and indigo, and cotton at the present day. But the climate of the Dead Sea is equatorial—probably the most heated moist atmosphere in the world. It approaches very much to the climate of the Straits Settlements; but the thermometer has a much greater range, and the atmosphere is far more oppressive. During the summer-time the temperature continues at 110° F. during the night, the air being laden with moisture. During the greater part of the year the vicinity of the Dead Sea, except close to the springs, is a scene of desolation, aridity, and
garden of the Lord, and Lot chose him all the plain of Jordan (Gen.13.10). This description may, perhaps, be considered to indicate that the position of these cities was N. of the Dead Sea; but, on the other hand, it may mean only that the land N. of the Dead Sea was rendered barren by the same agencies that destroyed the Cities of the Plain elsewhere. The Salt Sea is first mentioned when the kings of the cities of the plain went to fight with Chedorlaomer, king of Elam, and his colleagues, in the vale of Siddim, which is the Salt Sea (14.3). The vale of Siddim appears to have included both the Jordan Valley and the Dead Sea, and was full of bitumen pits (14.10). In consequence of the great salt-giving properties of the rainwater, the ground was covered with rain-stone and firestone from heaven upon them and destroyed them; and Lot's wife, who lingered on the road, became a pillar of salt. Abraham, when he got up early in the morning, looked, from near Hebron, toward Sodom and Gomorrah, and saw that the smoke of the city rose like the smoke of a furnace. From the earliest times the country in the vicinity of the Dead Sea has been accounted as a "land of fire," and the chief difference of view between writers of modern times has been with regard to the manner in which the cities have been destroyed—either directly by fire or by submergence. Dawson (Egypt and Syria) supposes that the overthower of these cities may have been due to underground reservoirs of inflammable gases and petroleum escaping through a fissure along an old line of "fault," causing bitumen and sulphur to rain upon the city. Blankenhorn (Zeitschrift d. Deutschen Palastina-Vereins, p. 1-50) from the view of a critical geologist, states that at the beginning of the post-glacial period what is now the shallow S. end of the Dead Sea was fertile soil, but that an earthquake took place, which caused a subsidence of the ground and overthrew all the cities except Zoar; and that the site of the four great cities was chosen (14.10). The Dead Sea is the seat of the prophet Ezekiel of the waters issuing from under the threshold of the temple at Jerusalem, and proceeding down the Kidron Valley as a river to the Dead Sea, there to heal the waters, so that there shall be multitudes of fish there, as the river of the Temple was in the time of the great prophet Zechariah (Zech.14.12). In consequence of the leakage of the waters of the Dead Sea, the marshes (the southern portion) shall not be healed (Ezek.47.12). And there shall be upon every high mountain and upon every high hill, rivers and streams of water (Is.30.25). The mountains shall drop down new wine, and all the mountains shall flow with milk, and all the rivers of Judah shall flow with waters, and a fountain shall come forth of the house of the Lord, and shall water the valley of Shittim. It must be apparent to all observers of the results of careful cultivation and terracing of the hill-sides in Palestine, that the effect of cultiva-
tion over the whole country, carried out in a methodical manner, will be to make the waters of the mountains flow on all sides, and greatly to ameliorate the severity of the climate. The effect on the Dead Sea will be to raise its waters considerably, and to diminish the sterility of its borders. [c.w.]

**Salt, Valley of,** the valley S. of the Dead Sea named by Thesaurus sacrorum in the form of a "great Salt," 2Chr.25.11; Jer.9.17; 1Chr.18.12; 2Chr.25.11. [c.r.c.]

**Salu,** the father of Zimri, I (Num.25.14).

**Salum,—1.** (1 Esd.5.28) = Shalum, 6.

**2.** (1 Esd.5.1) = Shalum, 6.

**Salutation.** The forms of salutation in the East were naturally somewhat more de
terious and conventional than those of Europe. The most natural and common cus
tom between persons of the same sex was that of "embracing and kissing." When Esau met Jacob he "embraced him, and fell on his neck and kissed him" (Gen.33.4). Similar terms are used to describe Joseph's recognition of his brethren (42:15), and the welcome of the "prodigal son" by his father (Lk.15.20). When Judas betrayed our Lord, the most natural way of greeting him was used when he signed his Identity by means of a kiss. In the early Christian Church the "holy kiss" (Ro.16.16; 1 Cor.16.20; 2 Cor.13.12; 1 Th.5.26; 1 Pe.5.14) became a general form of recognition among members of the Christian brothers-
hood, even between members of the opposite sex, and it is stated (Wace and Cheetham, Dict. of Christ. Antig.) that the practice was only modified when scandals arose from its indiscriminate use. As an act of worship the kiss was often connected with idolatrous practices, a kiss offered to an idol, or a "hand-kiss" bestowed on the sun or moon (Job 31.26-28). [Idolatry.] Another form of salutation was *prostration.* David bowed himself three times before Jonathan (1 Sam.20.41), Jacob seven times before Esau...
SALVATION

(Gen.33.3). Mordecai refused to prostrate himself before Haman (Esth.3.2). Certain formulae of salvation were in common use. Such are the following: "'God be gracious unto thee" (Gen.43.39); "Blessed be thou of the Lord" (Ku.3.20; Is.15.13). The Lord be with you; and may the Lord bless thee and the blessing of the Lord be upon you; we bless you in the name of the Lord" (Ps.129.8), and the liturgical formula and its response, "The Lord be with thee" "And with thy spirit." Similar to these are the epistolary salutations found in N.T. The shalom, or salutation at parting, "Go in peace" (1Sam.1.17, 20, 42; 2Sam.15.0) finds its place in the greetings of the Pauline epistles. The invocation of "grace and peace from God the Father and our Lord Jesus Christ" is the commonest Pauline salutation. A form for use in pastoral visitation is given by our Lord to the disciples in Lu.10.5, "Peace be to this house." Of the kind of love better suited to two persons, there is little mention in Scripture. In O.T. it is found in Can.1.2 and in Pr.7.13. There is no reference to this use of it in N.T. [T.A.M.]

Salvation (cf. Saviour). As is noticed under Saviour, the idea underlying salvation includes the whole work of Christ for man. This may be divided into justification and sanctification. By the former we mean the remission of sins, by the latter the implanting and nurture of a new nature. Some have attempted to explain the former by stating that Christ died in man's stead, bearing man's punishment and even guilt. Against this view, may be divided into justification and innocence of sin and innocence of sin, there are insuperable moral objections. Merit and guilt are incapable of transference, nor would such a transaction manifest God's justice, rather His injustice. The satisfaction rendered to the broken law of God was that of obedience unto the bloody sacrifices, their blood figuring the life devoted (Lev.17:11); and in them the offering was enabled to present to God something which should represent himself not as he was, stained by sin, but as he would have been were it not for his sin. The moral principle of Sacrifice consists not in the substitution of the victim for the offerer, but in their identification. This principle is manifested in Christ's Atonement, and His acts are ours in proportion as we partake of His Spirit. Thus we are atoned, or at-one-ed, to God or, and not merely for the sake of Christ. Bp. Westcott, in a private letter dated 1855, wrote: "I say it is always most satisfactory to regard the person of Christ—absolutely one with Him, and then he does what Christ has done; Christ's actions become his, and Christ's life and death in some sense his life and death. This seems the real answer to the difficulties of the notion of sacrifice and vicarious punishment." (This subject is continued in REDEEMING, FAITH, CONVERSION.) [M.S.]

Samuel (1th.8.1; R.V. Salamiel) = Shemuel.

Samaria, Samaritans. Samaria was the capital of the northern kingdom of Israel, from the time of its builder Omri. It is consequently not noticed in the Pentateuch, Joshua, Judges, or Samuel, but appears first in Kings and in the writings of the prophets of 8th cent. B.C. It is noticed in 42 chapters of the Heb. O.T., especially in Kings: in 8 chapters of the Gk. Apocrypha, of which 1 samaria (R.V. Samapia) was the capital; and in N.T. in 6 chapters, the reference (except in Ac.8.5) being also to the later province. In Rev.13.32, where the name first occurs, the "cities of Samaria" are mentioned by anticipation. Omri bought the kér showrón from its 'dāhān Shemër, for two talents of silver, or about £1,000 (Rf.16.24), and fortified it. The walls and gate are specially noticed (22.10; 2 K.8.26; 2 Chr.18.9), and a pool (Rv.22.38). Ahab here built a temple to Baal of Sidon, with an ivory shrine, and an 'asbērā, or sacred artificial tree (14.13-33, 23.39). The trade relations with Damascus entailed a Syrian control of the route of sin and the corn rt. 16.24). The site was very strong, and was twice attacked in vain by Benhadad 1., in the reigns of Ahab and Jeoram (20.1; 2 K.2.34). It resisted the Assyrians also for three years (17.5). The Baal temple, with its "post" (marēqēbēh) of Baal, and other "posts," apparently of wood, was cut down by订单, while the temple was attacked by Shalmaneser IV. of Assyria (18.0), and taken after three years (vv. 10, 11) by a "king of Assyria," whom we know to have been Sargon, the successor of Shalmaneser IV. Its inhabitants were carried captives—according to the usual cruel and short-sighted policy of the Assyrians—to a distant foreign city, near the river of Gozan," and to Media (17.6), and were replaced by Syrians and Babylonians (17.24). Others were sent by Esar-haddon and by Assur-bani-pal (Esdr.4.2,10), who was probably Assurbanipal. In 2 Chr. we have an incident recorded, in the reign of Pekah (28.0-13), to which the book of Kings makes only a passing allusion (2 K.15.37,16.5; 17.4-9); and it appears that 200,000 women and children of Judah were taken captive to Samaria, till rescued by the prophet Obad. In the time of Nehemiah, Sanballat the Horonite (perhaps from Bethhoron) was a foe of Judah, with the "army of Samaria" (Neh.4.2); and a meeting between the two leaders, at the border town of Ono, was suggested (6.2). Isaiah foretold the ruin of Samaria (7.8,9) by the Assyrians (8.4), who apparently regarded its carved images as inferior to those of Syria (10.10), and its gods as powerless (36.10). Jeremiah speaks of the prophets of Bethel and Samaria (33.13) and the return of the remnant of Israel to the city (31).
SAMARIA, SAMARITANS

1-9). In his time worshippers from Samaria, coming up to Jerusalem (41.5) with offerings and incense, still observed the old practices of Baal worship, though Josiah had destroyed the bānāth (2K.23.19); only a few out of the remnant of Israel had attended the great passover of Hezekiah (2Chr.30.6,10,11). Ezekiel says that Judah will not return till Samaria receives her captives back (Ezk.16.46-53; see 22.4-33). Hosea, shortly before the fall of the city, speaks of its wickedness, and of its calf image at Beth-aven near Bethel, with its servility to Assyria (Ho.7.1,11,8.5,6,10,5,7,15.16). Amos, rather earlier, in the time of the powerful king Jeroboam II. of Israel, describes its luxury (8.12). Taken away, it left a form of 50 chariots long with a couch in the seat of honour still on a divān. He notices the unlawful sacrifices (4.5; Lev.2.11), and the ivory couches, the music of lutes, and the banquets, and says (according to the reading בְּעַיְלָה, for בְּעַלָּה) that its poets 'count them every song like David's' (Am.8.4-7). One of the most remarkable of all the kings of Samaria, and Micah (1.1,6) compares its ruined walls to the stone terrace walls of the vineyards which fall into the valley.—History. The monumental notices of Samaria begin with Jehu's tribute to Shalmaneser II. of Assyria, c. 840 B.C. [RIBIHAH.] The Assyrian record (Black Obelisk) from the time of Shalmaneser II. to that of Sennacherib, namely, the obelisk (Obelisk) of Samaria, and Micah (1.1,6) compares its ruined walls to the stone terrace walls of the vineyards which fall into the valley. [Chronology.] Tiglath-pileser III. a century later, mentions Menahem and Pekah, who sought (like the party in Judah whom Isaiah opposed) to get help from Egypt; and he claims to have set up Hoshea instead. Sargon records the fall of Samaria (722-721 B.C.), when 27,250 captives were taken away, and enlisting its inhabitants (1 War. II. 41.5) as a guard. In 715 B.C. he sent Arabs to colonize the vicinity. Sennacherib, in 703 B.C., received tribute from a certain Menahem (not the king so named in 738 B.C.—see 2K.15.19), who was then ruling Samaria. Eusebius says that Alexander the Great settled Macedonians in Samaria in B.C. 316; and Polybius, in the iMac. 3.17-18; see 2K.18.18. The later history includes the siege of the city by John Hyrcanus, in 129 B.C., in revenge for Samarian cruelties at Marissa. [MARESHAH.] He surrounded it by a double siege wall, said to have been to miles long, and took it after a year, flooding the valleys (Josephus, 13 Ant. x. 2, 3), and enslaving its inhabitants (1 War. II. 7). Pompey, in 63 B.C., restored Samaria to its people, and Gabinius rebuilt it (14 Ant. iv. 4, v. 3). Herod the Great built a wall 20 furlongs long round the city (15 Ant. viii. 5), and called it Sebaste (Ἀρχαγιά in Latin), in honour of Augustus, to whom he here dedicated a temple. The modern name is still Sebaste, in consequence. In the time of our Lord it was a great city, with a pagan shrine in it. Coins of the time of Nero and Geta are known, and yet later those of Julia Domna, bearing the legend Col. Sebaste (Robinson, Bib. Kes. ii. p. 310). The modern Sebastieh is a large village, on E. brink of the hill (Surch. W. Pal. ii. pp. 169-201), in a remarkably strong site, 5 miles N.W. of Shechem. The hill has a flat surface of 500 acres, 1,450 ft. above sea-level, with terraced sides 500 ft. above the surrounding valleys (N. and S.), which join on the W., while on E. a saddle, 200 ft. lower than the hill, joins it to the chain of Ebal. The N. valley expands into a small plain, and that to S. is also broad. The Mediterranean is visible from the hill top, and main roads E. and N. pass by the city. There are two springs, that on the S. (‘Ain Ḥ̄adūn, or "Aaron's spring") having a stream that turns a small mill, and the second to the E. (‘Ain Kefer Riwan, or "spring of the Rose") which also provides water; so that the valleys might be flooded (as in 120 b.c.) by damming the waters. There is also plenty of space on the hill for a city such as Josephus describes, which (like Jerusalem and Caesarea) must have had an area of 300 acres. A long double line of monumental columns appears to have formed a street with a street; so that the city a great mound probably covers Herod's temple. At the foot of the hill to N. is a flat quadrangle, with pillars, which may have been a hippodrome. In the village is the ruined 12th-cent. church of St. John Baptist, built over a Heb. tomb (supposed to be his), with Our Dome. The name of Samaria may be noted that six kings of Israel were buried in Samaria—namely, Omri, Ahab, Jehu, Jehoahaz, Jehoshaph, and Jeroboam II.; but this sepulchre is perhaps rather later than their time. A Heb. weight, inscribed in letters of C. 800 b.c., was found at Samaria. [Weights.] The Samarians were then expelled by Nebuchadnezzar II. by订单 at (2K.24.10), who named the town Samaria, and settled the tribe of Nethinim there. The people of Judah, after the separation from Judah (2K.23.18,19; 2 Chr. 22.9; cf. 2K.27) in two passages it would seem that we should read "in," rather than "from," to make sense. Thus the prophet (2K.23.18; see 1K.15.11), who lived in Bethel—was then within the Samaritan border (1K.15.20,13,12,15.17)—suggested to the people of Judah in Samaria" (such as Bethel, Mizpah, etc.), "even unto Beth-horon." In the Apros., Samaria may mean the city in some cases (Ezsd. 2.16; Jth.1.9,4.4), but usually the province (1Mac. 3.15-16); and in N.T. the word always means the province of Samaria (Lk.17.11; Jn.4.40; Ac.1.8, 11,9.14,9.31,15.3), except when the "city of Samaria." is noticed as evangelized by Philip. Our Lord reproved the disciples whom the natives of "a village of the Samaritans" had received (Luk.9.52); he healed the Samaritan leper (17.16); and taught the great parable of the good Samaritan (10.33), at a time when the Jews certainly had "no dealings with the Samaritans" (Jn.4.9), though the Sinaic MS. omits the clause (see Mt.10.5; Jn.8.48). In His time the province of Samaria practically coincided with the lot of the Manasseh W. of Jordan, with the W. and S. borders have already been described (Galilee; Judea): they extended to the Mediterranean and to the Jordan. Carmel was in Samaria (Josephus, 13 Ant. xv. 4), and the old Casta Samaritana, at its W. foot, retains its name as Keir es Simiran. Caesarea was in Samaria (A.9.10.21), and Antipates was on the border. Caphar-saba also was in Samaria (Tal. Jer. Demai ii. 2), where (on the E.) Beth-shean, which Josephus (Vita, 6) calls heathen, was not within the Holy Land (Tal. Bab. Holin, 5b). The oil of Regub (Rīṭiḥ) was rendered impure because the road to Jerusalem
ran through the S.E. corner of Samaria (Tel-Jer. Hagiha iii. 4), which is thus shown to have included the central part of the Jordan Valley W. of the river. There is still a ruin called "the Samarian" just S. of Beisan.—The Samarians. When Israel was taken away in 722 B.C. the Heb. population was replaced by people from Babylon, Cuthah, Ava, Hamath, and Sepharvaim (2K. 17.24). Sargon placed them under an Assyrian governor, and sent Arabs to Samaria 6 years later. In like manner Tiglath-pileser, 40 years earlier, had transplanted strangers to Simera and Arqa in Syria: and Sargon himself removed the Hitites from Carchemish. The new colonists worshipped foreign gods. The Babylonians made Succoth-benoth ("booths of girls")—devotees of Istar: the men of Cutha adored the Akkadian god Nergal; and the men of Hamath worshipped Asshur (Eshmun). The Avites adored deities who, like Nergal, were of Akkadian origin—Nib-Haz ("the divinity of judgment") and Tash-Tak ("the judge")—a name probably of Ea, the god who judged the dead under the ocean. The people from Sepharvaim worshipped the Babylonian deities Anû and Adad-IŠhtar. It is evident that an Aramaic (and also perhaps a non-Semitic) population was thus introduced into Samaria. But, when the ruin caused by war led to the appearance of lions, the Assyrians supposed the local deity of Samaria to be offended: and the king of Assyria ordered a priest to be sent back, to teach the colonists "the manners of the god of the land" (2K. 17.25-34), or some kind of worship of Jehovah, in addition to that of their own gods (ver. 33). The people whom we now call Samarians are relatives of their priests, who claim descent from Levi, and from those (probably) who came back to Bethel (ver. 28). Sanballat, whom the Samaritans call "the Levite," was connected by marriage (Ne. 13.28) with a Heb. priest, but Josephus places him (apparently in error) in the time of Alexander the Great (11 Ant. vii. 2); and Tobiah was, in the same way, connected with the high-priest Elishah, and had a chamber in the temple (11. 20). Modern Samarians are remarkable for their Heb. cast of beauty, and may be descendants, not of the Cubans, but of the Israelite priests—as they claim to be. The old jealousies between Judah and Joseph, which we trace to the time of David (2Sam. 19. 40-43), was increased by the separation of the kingdoms, and was bitter in Nehemiah's time (Ne. 4. 1, 6. 1, etc). The rival temple on Gerizim, whether built in his age or in that of Alexander (11 Ant. viii. 2), was hateful to the Judaeans, and was destroyed two centuries later (13 Ant. ix. 1). Josephus is hardly to be trusted when he speaks of the Samaritans, whom the Pharisees specially hated. He refers to this population usually as Cubans (e.g. 9 Ant. xiv. 3), and says that they claimed to be Sidonians (12 Ant. v. 5), though they said also that they were Hebrews (11 Ant. viii. 6). He accuses them of polluting the Jerusalem temple (6. 6) with dead bodies (18. 106. ii. 2), and of killing Galilean pilgrims (11 Ant. iii. 1). He says there were 200 Samaritans under the Great they paid for the privilege of worship in their temple (13 Ant. iii. 4). He seems to be rather pleased at their sufferings under Pilate (18 Ant. iv. 1, 2) and Vespasian (3 Wars vii. 32). So also, in the Wisdom of the son of Sirach (c. 200 B.C. Exclus. 50.26) we read of the "foolish people that dwell in Sicchem." The Rabbis are equally bitter. They accuse the Cubans of obstinate false worship; and insist on thereckoning of the new year (Mishna, Rosh hash-Shanah ii. 2), and say that they worshipped a dove (Tal. Bab. Aboda Zara 26 b), perhaps on account of their legends of messenger doves. They are accused—by Pharisees—of denying the resurrection of the dead (Siphri on Num. 18.31), which the Sadducees are also denied, and of saying that Ashma was Elohim (according to Ibn Ezra in our 12th cent.). The latter statement is a perversion of the fact that Samarians say Ha-Shem ("the name"), instead of reading "Jehovah": just as the Jews say Adonai (adonay). On such assertions the Jewish pilgrims of the Middle Ages harp, when they mention the Samaritans. On the other hand, we find that modern Samaritans preserve three ancient copies of the Pentateuch (Shechem; Samaritan Pentateuch), in an ancient Heb. alphabet [writing] and dialect [Semitic Languages]. They observe the Passover over a longer time (24 days) than the Jews; and keep more strictly than the Jews, and keep the great fast of Atonement, and all the feasts of the law. Their five tenets are purely Jewish, except the fifth; for they believe in one God, in Moses, in the law, in a day of retribution, and in Gerizim as the sacred mountain [Mount]. They are more numerous than the Jews, who live in great poverty, clinging to their old faith and books, and still distinguished by the crimson turbans which they are forced to wear (Sure. W. Pal. ii. pp. 218-220). In the 5th cent. A.D., according to the Jews (Tal. Bab. Gillin, 45 a), they existed even in Babylon; and about the same time, under the Goths, they were found even in Rome (Nutt. Sam. Hist. p. 27). Eusebius (Onomasticon, s.v. "Tersila") mentions them in Bashan. Edrisi (12th cent.) speaks of them on the shores of the Red Sea, whether they fled from Egypt in 638 A.D. They had a synagogue in Cairo as late as 1589 A.D., and its head was finally restored to the Samaritans, in 1671, found only 30 families at Shechem. Their history after Vespasian is fragmentary. In 135 A.D. they were said to have aided Hadrian against the Jews, and their temple was allowed to be restored. They seem to have flourished under the emperors of our 2nd and 3rd centuries, but (like the Jews) were persecuted by the Christian emperors of the E. and W. Laws against them were made by Honorius in 404 and 418 A.D., and by Theodosius II. in 426 and 439 A.D. They revolted against Zeno in 484 A.D., and were cruelly crushed by Justinian in 529 A.D. In 1163 A.D. Benjamin of Tudela speaks of 200 Samarians at Caesarea (where they existed in the Herodian age), 100 in Shechem, 300 in Ascalon, and 600 in Damascus. They were attacked by the Khazarim Tartars at Shechem in 1244 A.D., and nearly exterminated: though Isaac Khelo, in 1333, says there were many Samaritans and that the Arab king Bado killed an army of Samaritans in a battle about a dove idol. In 1480, Zanis found 50 families in Egypt. Scaliger began the learned correspondence, which has con-
The rendered doctrinal "in differences about legend be scholars Talmud their ining ben a 32 tans is continued Joshua. Jehonathan Arab. was iron phrase the called Samuel. schism of the high-priests goes the Romans and at Gerizim. Levi, Baba's nephew, goes to Constantinople to learn Latin, and returns as archbishop of Shechem; and here the fragment ends. It should be noted that the mediaeval Samaritans, like the modern ones, believed in a future prophet (Taheb, "restorer"; rendered Mahdy, or "guided one," in Arab.), as did the Jews in the time of Judas Maccabaeus. Among the chief works on this literature are Jyunboll's Liber Josueae, 1845; Neubauer's Chronique Samaritaine (Journal Asiatique, Dec. 1869); and Nutt's Sketch of Samaritan History, 1874. The geography was specially studied from the two works first cited by the present writer (Surr. W. Pal., vol. Special Papers, pp. 216-231) in 1876. A Hebrew version of the Sam. Book of Joshua, of which the Arabic book is a paraphrase with additions, was found by M. Gaster in 1907. The part borrowed from O.T. Jos follows the Masoretic text (see Journal R. As. Soc. 1908, pp. 795-809, and our next art.).

[Gr.c.

Samaritan Pentateuch. This is the recension of the Torah used by the Samaritans; it is essentially identical with the Masoretic, save in minute points. The earliest MS. of it is preserved in the Samaritan synagogue at Nâbus, in a silver case. There are now a very considerable number of codices, more or less complete, to be found in various libraries in Europe and America. Though it was referred to respectfully by the fathers (see O.T. Jos. 25:3, 26:1), it was later rejected as non-Mosaic. In the Talmud, it disappeared from knowledge till (in 1616) Pietro della Valle sent to Europe a copy, which he had purchased from the community of Samaritans which then still survived in Damascus. The number of codices available has since increased. Kenicott collated 18, of which six were of Octavo. Now there are probably 50 or 60 open to the inspection of scholars in Europe and America. When the first codex arrived, Europe was in the throes of the Thirty Years' War, and every literary discovery was pressed into the conflict between Protestant and Roman Catholic. R.C. divines hailed the Samaritan book with differences (as they were) as evidences of the necessity of the infallible decision of the Church to settle what was Scripture. On the other hand, Protestant theologians maintained the immaeulate correctness of the Massoretic text, some holding (as the younger Buxtorf) that Moses wrote the Pentateuch without a scribe. The arguments were, to a great extent, a priori—therefore for scholarship of little value. In 1815, nearly two centuries after della Valle had sent home his codex, Gesenius treated the question as one purely of scholarship, in his treatise De Pentateuchi Samaritani idolae, Originibus, Time. It is a very patient, careful piece of work; but its logic is not equal to its learning. He, to some extent, unconsciously assumes the correctness of the Massoretic text, and always regards the Samaritan as varying from it. He classified the differences of the Samaritan from the Massoretic; but neither his classification, nor Kohn's threefold division, is at all satisfactory. We should classify the differences under two heads: those due to (1) Intention; (2) accident. (1) The first contains grammatical differences; differences due to logical notions; (2) differences due to doctrinal ideas. (a) differences due to a young. In more ordinary Heb. the fem. is indicated by being appended. In the Massoretic the word is common; in the

SAMARIA, SAMARITANS

SAMARITAN PENTATEUCH
Samaritan the ordinary usage is followed. In the Massoretic recension there are survivals of case endings; these are omitted in the Samaritan. There is further in the Samaritan a proneness to insert rai in holem. As the different codices vary, the Nablus roll would have to be carefully examined and photographed column by column, to settle many of the questions involved. The above are differences between the Samaritan and the Massoretic; in many cases the qeri and the Samaritan are in agreement. If, as has been thought, the qeri represents another MS, from which the MS. slavishly copied in the kethibh was corrected; then, so far as those grammatical differences are concerned, the Samaritan is closer to it. The differences may, in some instances, have been caused by blunders in the Massoretic. (b) Logical differences. These are cases where one recension represents greater completeness of thought than the other. Of the two, the Samaritan usually represents the more expanded form. Although in ordinary currency there is a short recension, it is to be regarded as the primitive, yet repetitions (e.g., a command is given, and the narrative of the fulfilment repeats the terms of the command) are a sign of very primitive ideas of composition. Still, the pleonasm is, on the whole, an indication of a secondary formation. (c) Doctrinal differences. Most of the variations in the insertion of the “Gerizim” where the Massoretic has nothing. Thus Ex. 20.17, after the statement of the “Ten Commandments,” there is inserted from Deut. 27.2 the command to set up stones, on which are to be engraved the words of the law, and they are to be set up in Gerizim. (2) Unintentional differences due to mistakes of sight, of hearing, and of memory. (a) Mistakes of sight, by which letters resembling each other in appearance were mistaken. Thus, in the square character (as in the angular), מ and נ are liable to be confused. (b) Mistakes of hearing. Letters resembling each other in sound are apt to be confused; for, in copying MSS., the common practice was for one reader to dictate to a dozen or a score of writers. Thus arose not only mistakes as to the letters in the MS., but also mistakes due to indistinctness in pronunciation. (c) Mistakes due to memory. The scribe, forgetting the clause he had just heard dictated, and recalling a similar one which ended somewhat differently, might write the latter instead.—Of these (a) is the most important as an aid to approximating to the date of the recension. The script in which the MSS. of the Samaritan are written is older than the square; chronologically it is between the latter and the angular found in the inscriptions. As few, if any, of the variations of the Samaritan from the Massoretic can be traced to differences between letters similar in the Samaritan script, but are due to letters similar either in the square or in the angular, the mother MS., the angular recension, is of the Nablus MS. which must have been written in a script like that of the inscriptions. The variations that can only be explained by differences in the square character are probably due to blunders of the Massoretic copyists. Others are explicable only by differences in the angular script to each other in the older script of the inscriptions. But the angular script is of differ- ents a view that would be most in harmony with the data from which the Nablus roll was copied was, in the last resort, the MS. brought by the priest who was sent by Esar-haddon to teach the colonists “the manner of the God of the land.” In regard to this, cf. Deut.12.21 in the Samaritan with the Massoretic versions. There is a targum in Samaritan Aram. frequently written in columns parallel with those of the Heb. It is on the whole, close to the text; and its alleged dependence upon Onkelos is not obvious. Of this targum there are several recensions, presenting slight differences, with a general resemblance. Sometimes along with the targum, some sort of a column, which represents a superimposed recension. This also varies somewhat in different codices; it is attributed to Abu Said, and dated in the 11th cent. There are references in the fathers to a Gk. version of the Samaritan recension, but no portions of it survive. The relation of the Samaritan to the LXX. has caused considerable discussion. In several places the LXX. agrees with the Samaritan. From this it has been argued that the LXX. was translated from the Samaritan. This appears the more plausible, since some of the variations of the LXX. from the Massoretic are explicable as the confusion of letters similar in the Samaritan script. But on careful study it is found that the differences between the LXX. and the Samaritan are as numerous and important as the agreements. As the Samaritan script is older than the square character, the MSS. from which the LXX. was translated might be written in Samaritan characters without the square. If this be the case, we must regard the LXX. and the Samaritan as quite independent. [Schechm.] Gesenius, de Indole, etc., Pent., Sam.; Kohn, de Pent., Sam.; Frankel, Einlass. Text: Walton’s Polyglot; Blayney’s transcription in Hebrew characters useful, though not always accurate. Brill’s transcription of the Samaritan Targum is indispensable to the student.—As we are going to press we learn of the discovery of the Hebrew text of the book of Joshua in Samaritan characters, by M. Gaster. He tells us (in his article in the Zeitschrift der Deutschen Morgenländischen Gesellschaft, Band 26, Heft 2) that “the copist names himself in the epilogue, Abisha, son of Pinchas, son of Ithahaq the priest, the Levite, scribes of the synagogue in Shechem, and that he has made the copy in the year 1323 Hej (1905 A.D.).” The extremely recent date at which this copy has been executed renders it almost inaccessible, and before any definite judgment is pronounced it is necessary to see whether the original may not be collated. M. Gaster thinks that Josephus must have had a text before him at least as
much in agreement with the Samaritan recension as with the Massoretic." [J.E.H.T.]

Sam'tus, one of the "sons of Ozorea" who have their place in the corrupt list of iEsd.9.34 (cf. Ex.10.34-42).

Same'us (iEsd.9.21) = Shemaih, 13.

Samgar-nebo' (J.E.39.9). By comparison with ver. 13 there would appear to be some primitive confusion of the text (Zimmerm., p. 408), Nergal-sharezer occurring twice. Most moderns read as ver. 13, and strike out the first Nergal-sharezer and with it "Sam-gar," as a corruption of Rab-mag, "chief of the magi, or king's council" [MacG], and join Nebo with the following "Sarsechim," reading as ver. 13, Nebush-sahasban [Nabû-sezib-anni, "Nebo delivers me!"] or "deliver me!"

Passed by Ephesus without being there, the two Nergal-sharezers, the one, Samgar, "cup-bearer" (?), the other "Rabmag." The variations in the LXX. MSS. indicate considerable corruption. For another suggestion, see Sarsechim; and for the alternative interpretation of Rab-mag, see Nergal-sharezer and the reasons there given, we have the names of high Babylonian officials. [F.E.S.]

Sa'mi (iEsd.5.28) = Shobail.

Sa'mis (iEsd.9.34) = Shimeil, 15.

Samlah' of Masrekah; a king of Edom, successor to Hadad or Hagar (Gen.36.36,37; 1Chr.1.47,49).

Sam'oa (iEsd.9.43) = Shema, 3.

Sam's, a famous Greek island off the part of Asia Minor where Ionia touches Caria. Samos is a very lofty and commanding island. The Ionian Samos is mentioned in the account of St. Paul's return from his third missionary journey (Ac.20.15). He had been at Chios, and was about to proceed to Miletus, having passed through Samos and the rest of Ionia. He had formed the names of high Babylonian officials. [F.E.S.]

Daniel's prophecies were a forerunner of what we have called the names of high Babylonian officials. [F.E.S.]

Samothr'a. The mention of this island is at the head of St. Paul's first voyage to Europe (Ac.16.11) is worthy of careful notice, for being a very lofty and conspicuous island, it is an excellent landmark for sailors, and must have been full in view, if the weather was clear, throughout that voyage from Troas to Neapolis. Moreover, this voyage was made with a fair wind. Not only are we told that it occupied only parts of two days, whereas a subsequent return-voyage (Ac.20.6) the time spent at sea was five; but the technical word here used implies that they ran before the wind. Now, the position of Samothrace is exactly such as to correspond with these notices, and thus incidentally to confirm the accuracy of the unstudied narrative. St. Paul and his companions anchored for the night off Samothrace. The ancient city, and therefore probably the ancient anchorage, was on the N. side, which would be sufficiently sheltered from a S.E. wind. In St. Paul's time this foreign navigation, as Pliny, the privileges of a small free state, though it was doubtless considered a dependency of the province of Macedonia probably not of a sovereign, but of a place, which Grimm identified with Samson on the coast of the Black Sea, between Sinope and Trebizond.

Sam'on (the sunny; Judg.13-16), son of Manoah, of the tribe of Dan. He was dedicated as a perpetual Nazirite by the angel who predicted his birth. He was brought up at Zorah "in as fair a nursery for boyhood as you could find in all the land" (G. A. Smith, Hist. Geog., p. 221). He was predestined to begin the deliverance from the Philistines, and the Spirit of the Lord came early upon him in the camp of Dan. His recorded exploits start with his desire to marry the Philistine woman of Timnath (14.1). Manoah objected to alliance with an alien, and Samson appears not to have caught Paul's idea, but the idea, as Delilah Marriage, vide W. R. Smith, Kinship and Marriage.) Moore plausibly argues for omitting "his father and mother" (ver. 5) and "his father" (ver. 10). The narrative of the lion then becomes clear, also why the 30 comrades were not kinsmen but Philistines, and the reason that as the king's animals they had the names of high Babylonian officials. [F.E.S.]

Samson's next exploit was to carry off the gates of Gaza and set them on a hill facing towards Hebron. The traditional spot is a quarter of a mile from S.E. Gaza. Samson's father was called Manoah, who betrayed him. Thrice he deceived her. Thrice there were lurers-in-wait to seize him, but Samson probably believed that Delilah was only prompted in her experiments by feminine
curiosity. The fourth time he told his secret. His seven braided locks were torn. He was surprised, blinded, and carried to Gaza to grind corn in the prison mill. His hair had grown again before the Philistines celebrated their success by a sacrifice and feast in Dagon's honour. Samson was brought out to be mocked, but was allowed to rest between the central pillars that supported the temple roof. Then he prayed for strength to be avenged of the Philistines for one of his two eyes (Judg. 16. 28, R.V. marg.). Then crying, "Let me die with the Philistines," he pulled down the pillars, the roof fell, and he was killed with his enemies. His kinsmen came and buried him in Manoah's tomb, between Zorah and Eshtaol. Attempts have been made to identify him with Hercules, but there are as many dissimilarities as resemblances. He has also been treated as a solar myth, but his story is racy of the soil, the geography is accurate, and so are the references to the Philistines. Moreover, the whole interest of the story depends on the character of the hero. In Heb. 11:32 his faith is referred to, and it is noteworthy that this wild, self-willed man, ruined by his passions, kept a Nazirite's vow inviolate, prayed and believed that in God was his strength. The narrative, as we have it, is of extreme antiquity, but fragments of verse and passages derived from poetry (e.g. Judg. 15. 14, 16. 9) show earlier authorities. That he became the subject of ballads, and that the ballads are quoted, in no way militates against the historical character of the narrative. Oriental exaggerations like 15. 16 must be allowed for. See Judges for bibliography.

[Manoah; Delilah.

Samuel (whose name means "heard of God" [K] or "name of God") was one of the scribes (cf. Judg. 3. 9, 15) whom Jehovah raised up among His people, the last of the judges, and the unwilling founder of the Heb. monarchy. He was a Levite by descent, born at Ramathaim-zophim (1Sam. 1. 1), "the two heights of the descendants of Zuph, or Zophai," a Levite family, and belonging to the hill country of Ephraim, afterwards called the "height" Ramah. After the destruction of Shiloh, he made this place his home. To it he retired, and in it he was buried, with national lamentation (25. 1). (1) *His early life*. Because this is truly an idyll, it by no means follows that it is not historic. A universal historic experience shows such idyls in periods the most confused and corrupted. Like the instances which Neander collected from the Early and Middle Ages, and called "light in dark places," the story of Ruth, and of the child Samuel, together with many a hint of straight life and simple faith which shines out incidentally in Judges, show that the succession of faithful men and women has never wholly failed (1K. 19. 18). Elkanah, Samuel's father, followed Jacob's precedent of two wives, and was equally unhappy in it. The type of monogamy towards which the best in Israel gravitated is shown to be original by the constant margin of Ephraim, afterwards called the "height" Ramah. After the destruction of Shiloh, he made this place his home. To it he retired, and in it he was buried, with national lamentation (25. 1). (1) *His early life*. Because this is truly an idyll, it by no means follows that it is not historic. A universal historic experience shows such idyls in periods the most confused and corrupted. Like the instances which Neander collected from the Early and Middle Ages, and called "light in dark places," the story of Ruth, and of the child Samuel, together with many a hint of straight life and simple faith which shines out incidentally in Judges, show that the succession of faithful men and women has never wholly failed (1K. 19. 18). Elkanah, Samuel's father, followed Jacob's precedent of two wives, and was equally unhappy in it. The type of monogamy towards which the best in Israel gravitated is shown to be original by the constant
treat it out of Israel's history, leaves it maimed and unintelligible. Samuel wore a linen ephod or ministerial garment (less costly than that of priest or high-priest, worn by David, 2Sam.6.14), and the little outer robe which his mother made and brought him from time to time when she came up to the feasts with her husband, shows him not forgotten at home and not entirely separated from his mother. From first to last in Heb. history no shr is put upon the family. It is a picture of a dedicated life, as distinguished from the ascetic or anchorite. Samuel "grew up with Jehovah" (1Sam.2.21, Heb.). "The lad Samuel grew on and was in favour both with Jehovah and also with men" (2.26). (2) His function as prophet, priest, and judge. Samuel's position was extraordinary. He was raised up for a crisis. It would be a mistake to judge by him the ordinary tenour of Heb. law and life. It is also probably an error to see in him the founder of the prophetic "colleges." It is well to remember that a new religion existed more or less always. But Samuel's times saw a revival of them, which he directed and informed, as Elisha after him (9.9). He began his career as a prophet recognized in all Israel (3.19-21). His strong intercession for his people and the king is marked (7.8,12-23) and well rememered even by the LXX. (99.6; 7.1-18). As " the spokesman of Jehovah" he delivered His message publicly and privately, and established the unique relation of the prophet as the fearless adviser and rebuker of kings, which continued, with great advantage to freedom and religion, to the times of Jeremiah. He was who laid down the great prophetic principle which, by no means ignoring sacrifice, obedience and piety higher (1Sam.15.22), and which is expanded and applied by prophet and psalmist after him. It is probable that on his retirement from the growing manhood of Saul, he founded and presided over a special school or community of prophets for the fabricated Bethel, Gilgal, Mizpah, and Ramah as the centres of his assize. Though a man of peace who only drew sword once (15.33), his lofty faith and courage (ch. 7) relieved Israel from the Philistine oppression all the days of his life as judge (7.13), but that oppression revived in his old age, when he appointed his worthless sons his heirs and successors, to his lamentation and that of his successors (8.1-5). (3) His function as king-maker. When, in his old age, his sons forsook his way and sold justice for bribes, the elders of Israel came to him to Ramah and pressed for a king, "as all the nations" (8.5). He reluctantly assented, for though, as a statesman, he was taught to regard it as a necessity, as a patriot he counted it a falling away from the theocracy. Moses had foreseen the rising of a national wish for a king, and had arranged for it (Deut.17.14f.). Samuel, in accordance with this, first pointed the moral of the lesser freedom of the change (1Sam.8.11-22), and then publicly arraigned it as an apostasy from a divine ideal (ch. 12). But he set the type of the kingdom in Israel—a monarchy strictly limited by dependence on Jehovah, and responsibility to His law, and therefore not removed from a sense of brotherhood (ch. 12). The true king was "the light of Israel" (2Sam.21.17). This type he emphasized by his inspired, but none the less courageous, prophetic history, as a failure, and by cutting off the succession from his sons. Saul he had privately anointed, and after his election he had publicly ratified and proclaimed him (8Sam.10). So, at personal risk and by the leading of Jehovah, he privately anointed David to the succession (16), and, with this sacred secret, he was called from the grave to confirm the stern words of his life (ch. 28). He may have written "the history of Samuel" (1Chr.29.29). There is an important, if sometimes fanciful, delineation of Samuel and his times in Stanley's Lect. on Jewish Church. [e.g. Samuel, Book of, Eng. tr. 1875]. We can have no better witness than Ewald as to the character of the Hebrew of these books. He groups together Judges, Ruth, Samuel, and Kings, and says that "this great book of the Kings is distinguished on the whole by a peculiar cast of language. Many fresh words and expressions become favourites here, and supplant their equivalents in the previous history; others that are thoroughly in vogue here are designily avoided in the primitive history, and evidently from an historical consciousness that they were not in use in the earliest times. I have no hesitation in saying that the established usage of centuries must have sanctioned for the primitive author the present choice of words, and a cast of language utterly different from those customary in the history of the Kings" (History, p. 133). Ewald gives a true account of the facts, but his explanation is improbable. The ordinary literary inference is that the younger style proves the books of the older style to have been written generations before. Further, the picturesque manner of Judges and Samuel grows less marked in the Kings, as the political horizon enlarges. It reappears in prophetic and personal anecdotes, but not quite in the earlier manner. (2) Text. The text is doubtless complete in places, and the Greek translation (LXX.), hundreds of years before the Massora, is of varying value for restorir it. But the traditional text is earlier than the attempt to settle it, and is manifestly faithful enough to have preserved most interesting traces of original and contemporary writing. Many have undertaken the restorir and have sometimes provided a warning rather than an example. The sounder critics are agreed against unnecessary alteration, for a relative presumption is in favour of the difficult reading (see König, Introduction, p. 130). There is a primitive confusion in 2Sam.12.31 (see R.V. marg.), and its parallel
SAMUEL, BOOKS OF

SAMUEL, BOOKS OF

1 Chr. 20.3. By change of a letter we have the Chronicler’s false reading, “cut,” or “tortured with.” The manifestly old text of Sam. may be restored by change of single letters. David set “the” Ammonites “upon” or “at” tools, of which the only remaining trace is in stone masonry (1 K. 7.9), and “made them serve in brick moulding.” The usage of the proposition is possibly antiquated, but it cannot mean “under.” After the precedent of the Gibonites, they were set to do the hard work of the building, which was characteristic (2 Sam. 5.11, 7.2) of David’s reign. On the other hand, the Chronicler restores (1 Chr. 20.5) the true text of 2 Sam. 21.19, “Lahmi the brother of Goliath.” The early confusion of the text of Sam. appears from the insertion of “weavers” after “Jair,” which gives an improbable personal name. The source of the confusion is the comparison of Lahmi’s spear to a weaver’s beam, “as before of Goliath’s. This may point to a Bethlehemite origin for the tradition, but on the other hand, they being a people of weavers. (See Smith’s D. B. 1st ed. i. p. 202.) (3) Historical Value. The books of Samuel, though by a right instinct separated, form a continuous narrative, of which the first part continues Judges, the latter part shows slight traces of the style of Kings. We have every consideration to the creators of history, some 500 years before Herodotus. The Hebrew way of telling a story should be diligently noted. As Gasser has well pointed out, the Hebrew annalist has a purpose unique in literature, and his steadfastness in it is the measure of his inspiration. The monumental records of Benjamin, Egypt, Assyria, and Assyria aim at the egotistical glorification of kings and conquerors. Herodotus wrote to interest and instruct; Thucydides to point the human causes of events. But our writer selects, from an astonishing mass of vivid contemporary tradition, what we may call simple portraits of character. Their reference and standard, expressed or understood, is their relation to the Lord of Hosts, which name occurs first in Samuel. They form an instruction in God’s progressive dealings with men. The advance of events is in the background. The finest evidence of the truth of these delineations is the indifference of the writer as to whether his persons were good or disgraceful in his nation or his heroes. The difficulties occur not in the development of character, which is always consistent and concatenated, but in numbers, in which a later tendency to exaggerate sometimes creeps into the text, and in the external subsidiary events. No little difficult arises from the writer’s disregard of chronological sequence in his desire to present his picture in one view. To suppose, e.g., two discrepant accounts of David’s first relations with Saul is to suppose a remoteness from trustworthy tradition contrary to the evidence. 2 Sam. 17.15 shows David backward and forward from Saul’s surroundings, and tending his sheep, when he met Goliath; 16.21-23 adds residence and appointment at court, which belongs later, to complete the picture. With regard to the sources of Samuel, we cannot accept the positive conclusions of some arises from the hypercritical attack upon the historical character of the O.T. tradition, distinguished as it is by the extraordinary richness and depth of its constituent elements,” says Gasser, “has its ground in defective points of view, in fundamental principles and presuppositions, arising not from the facts, but brought to them.” What Löhr says of a part of Samuel applies to the whole. “From the living portrayal of several arcaic persons we are forced to the conclusion that he who could carry out his work, as we find it, must have stood the nearest possible to the things themselves” (p. lxviii). Men’s memories were fresher in these old times, and the historical sense was highly developed in the Hebrew people. 2 Sam. 11.12 alludes to the manner of Ahimelech’s death, two generations before, as well collected. With so much lost evidence, absolute conclusions are beyond the grasp of scholarship. But careful study seems to lead to the view that the “colleges” of the prophets, which we meet with in 1 Sam. 10.5, 10, and from which with the tradition we are surrounded by “the Spirit of the Lord,” and engaged in collecting and preserving the traditions of their nation. These colleges had their origin before Samuel (Num. 11.29). From this prophetic school of history Judges and Samuel came. That there was one type and method, seems probable from a similar handling of material, and the similar chronology and appendices at the end of both Judges and Samuel. That the final editor found traditions already in writing seems probable from favourite words, which mark parts of them. The unity of Samuel, on the other hand, seems clear from its pervading purpose, which was to show that the new departure of God’s kingdom on earth in a theocratic monarchy was based upon heroic personality (Löhr. p. lxvii). The vividness with which the first heroes of the monarchy stand out, both in faults and virtues, seems to belong to an age before the material greatness and cosmopolitan horizons of Solomon had dimmed the earlier purely national and narrower patriotism. With this agrees the archaic geography (notice, e.g., 2 Sam. 17.15-21), in the midst of which the story moves securely. A note such as 1 Sam. 27.6 may well have been added later. (4) Contents. (i) 1-12. The story begins with the failure of Saul, which was to show that the new departure of God’s kingdom on earth in a theocratic monarchy was based upon heroic personality (Löhr. p. lxvii). additional light on Saul's character and David's life; and a list of those men whose bravery for the Lord had given security to the kingdom. And after the law of about the account of the plague, which chastened the temptation of David and the people to trust in man. The poems in the books are: (a) Hannah's "prayer," (b) David's "elegies" over Saul and Jonathan and over Abner (1.17-27, 3.33,34). The former elegy was probably known as "the bow" because of Jonathan's prowess with the bow (ver. 22 and 1Sam.20, 36), and Saul's death by archers. (c) David's "song" of praise, and his "last words." There are also popular songs and sayings, and a probable snatch of a soldier's song (see Klostermann on 2Sam.23.8). The palpitant and of Literature in Israel. A careful study of Judges and Samuel shows it to be most precarious to assume that a thing did not exist because it is not mentioned. Men and women are drawn with unqualified precision and felicity. Things and sometimes events are the subject only of incidental allusion. We only find from the tabernacle of Shiloh, altered and strengthened; coming up to the feasts (1Sam.1.3); high-priest, ephod (passim), and priests (3. et passim); in senate (2.28); differing kinds of sacrifice, shewbread (21.4); the "breach of Uzzah" and "the bearers" of the ark after it (2Sam.6.7, 13; 1Chr.15.13, "Levites," who are mentioned in 1Sam.6.15, 2Sam.15.24; priest's portion of sacrifice (1Sam.9.24); the grief of Eli and his daughter on the loss of the ark (4.18-22); the dwelling (or sitting) of Jehovah upon (or among) the cherubim (4.1; 2Sam.6.2); the sanctuary and of the ark throughout, which comes to the surface in such phrases as "this uncircumcised Philistine is defaying the armies of the living God" (1Sam.17.26), "as Jehovah liveth" (passim); Samuel's reluctance in appointing a king, and yet his yielding to it (8ff.,12), which implies past history (Judg.8.22,23 and Deut.17.14,35-37); and the law of the land or ordination to the law (Deuteronomy) (2Sam.12.6; Ex.22.1); and Bathsheba's observance of the law of ceremonial uncleanness (2Sam.11.4; cf.1Sam.20.26). The men going up to the magistrates (the gods) at Bethel (1Sam.10.3) reminds us of Ex.22.8,27 (Heb.), where also the magistrates are called "hokim. The total destruction of Shiloh by the Philistines, the massacre at Nob (1Sam.22.19), and the disturbed state of the times made normal customs of worship well-nigh impossible, but David's heart is set upon a central sanctuary as soon as "it can be had" (2Sam.7); and there is a probable allusion to it called "theolim. (3.34). The Books of 1K.18.29. Note the rise of king's law, differentiated 1Sam.30.25—i.e. not "for ever." The existence of a preceding literature and history is similarly made clear. There is public allusion to the unknown "man of God" (2.27), by Samuel (12), and by Nathan (2Sam.7,6). The history of the Philipistines is a thin thread, but its intellectual presentation of character is manifest. The fancy portrait of David as a primitive and half-heavenly savage is shattered upon the elegant taste and generous tact of the "bow" song, which critics agree is his. Some find two discrepant stories (i) of David's adventures with Saul; (ii) Saul's illness and death. In (i) there are essential differences, indicating that there were two separate pursuits. (ii) The Amalekite was a liar. He did not kill Saul, but found the corpse and despoiled the regalia. It is the simple confidence of the writer which sets the stories side by side. (5) Relation to the History of Worship and the History of Religion. The relation of the two was discussed by Driver in The History of Worship and Religion (1901). The relation of these books to the Bible and to the history of the land is closely similar to that of Isaiah and to the Books of History. The relation of the Mosaic covenant, e.g., the existence of the tabernacle at Shiloh, altered and strengthened; coming up to the feasts (1Sam.1.3); high-priest, ephod (passim), and priests (3, et passim); in senate (2.28); differing kinds of sacrifice, shewbread (21.4); the "breach of Uzzah" and "the bearers" of the ark after it (2Sam.6.7, 13; 1Chr.15.13, "Levites," who are mentioned in 1Sam.6.15, 2Sam.15.24; priest's portion of sacrifice (1Sam.9.24); the grief of Eli and his daughter on the loss of theark (4.18-22); the dwelling (or sitting) of Jehovah upon (or among) the cherubim (4.1; 2Sam.6.2); the sanctuary and of the ark throughout, which comes to the surface in such phrases as "this uncircumcised Philistine is defaying the armies of the living God" (1Sam.17.26), "as Jehovah liveth" (passim); Samuel's decision in appointing a king, and yet his yielding to it (8ff.,12), which implies past history (Judg.8.22,23 and Deut.17.14,35-37); and the law of the land or ordination to the law (Deuteronomy) (2Sam.12.6; Ex.22.1); and Bathsheba's observance of the law of ceremonial uncleanness (2Sam.11.4; cf.1Sam.20.26). The men going up to the magistrates (the gods) at Bethel (1Sam.10.3) reminds us of Ex.22.8,27 (Heb.), where also the magistrates are called "hokim. The total destruction of Shiloh by the Philistines, the massacre at Nob (1Sam.22.19), and the disturbed state of the times made normal customs of worship well-nigh impossible, but David's heart is set upon a central sanctuary as soon as "it can be had" (2Sam.7); and there is a probable allusion to it called "theolim. (3.34). The Books of 1K.18.29. Note the rise of king's law, differentiated 1Sam.30.25—i.e. not "for ever." The existence of a preceding literature and history is similarly made clear. There is public allusion to the unknown "man of God" (2.27), by Samuel (12), and by Nathan (2Sam.7,6). The history of the Philipistines is a thin thread, but its intellectual presentation of character is manifest. The fancy portrait of David as a primitive and half-heavenly savage is shattered upon the elegant taste and generous tact of the "bow" song, which critics agree is his. Some find two discrepant stories (i) of David's adventures with Saul; (ii) Saul's illness and death. In (i) there are essential differences, indicating that there were two separate pursuits. (ii) The Amalekite was a liar. He did not kill Saul, but found the corpse and despoiled the regalia. It is the simple confidence of the writer which sets the stories side by side. (5) Relation to the History of Worship and the History of Religion. The relation of the two was discussed by Driver in The History of Worship and Religion (1901). The relation of these books to the Bible and to the history of the land is closely similar to that of Isaiah and to the Books of History. The relation of the Mosaic covenant, e.g., the existence of the tabernacle at Shiloh, altered and strengthened; coming up to the feasts (1Sam.1.3); high-priest, ephod (passim), and priests (3, et passim); in senate (2.28); differing kinds of sacrifice, shewbread (21.4); the "breach of Uzzah" and "the bearers" of the ark after it (2Sam.6.7, 13; 1Chr.15.13, "Levites," who are mentioned in 1Sam.6.15, 2Sam.15.24; priest's portion of sacrifice (1Sam.9.24); the grief of Eli and his daughter on the loss of the ark (4.18-22); the dwelling (or sitting) of Jehovah upon (or among) the cherubim (4.1; 2Sam.6.2); the sanctuary and of the ark throughout, which comes to the surface in such phrases as "this uncircumcised Philistine is defaying the armies of the living God" (1Sam.17.26), "as Jehovah liveth" (passim); Samuel's
The opponents of the Tishthatha. His companions in this hostility were Tobiah the Ammonite and Geshem the Arabian. (2 Chr. 29:4, 7.) Cf. Nehemiah; Nehe-emiah; Book of Neh. and Ne. 6. There was a Samaritan faction also in Jerusalem itself bitterly opposed to Nehemiah, a prominent supporter of which was the high-priest Eliashib, whose grandfather had married Sanballat’s daughter (13:28). [N.C.B.]

Sanctification. [Holy; Justification.]

Sanctuary, the rendering of two cognate words in Heb. (1) qôdesh, the common word for “holiness,” is applied to the tabernacle and to the temple, or to portions thereof. (2) miqdash, “holy place,” the more expressive and prevalent word, applied also to both. It is also applied to old Canaanite and heathen sanctuaries (e.g. Is. 16:12). It is not correct, however, to say (as is said in Hastings, D.B. iv. 395 note) that miqdash was synonymous with bâna, or “ high place,” as if any and every bâna might be called a miqdash. In Am. 7:13 the king’s “chapel” (A.V.) is a miqdash, “sanctuary” (K.V.). [Cf. Refuge; Homicide; Law in O.T.; High Place.]

Sand, familiar to all residents in Palestine and Egypt, hence used figuratively in several passages of Bible—Gen. 22:17, etc.—generally to describe numerical extent or greatness. It is Job 4:5, and Ps. 27:13 used of heaviness, or despondency. [S.N.S.]

Sandals (mâ‘alâyim). These were made of leather, and attached to the feet with leather thongs (Gen. 14:23). They were not worn indoors, nor in the sanctuary (Lk. 7:38; Ex. 5:5; Jos. 5:15). To go about barefoot was a sign of mourning (2 Sam. 15:30; Ezek. 24:17-18). The symbolic action of giving a sandal to any one denoted a declining of a duty or right (Deut. 25:10; Nu. 4:6, 7, 8), and the phrase “to cast the sandal [or shoe] over” meant “to take possession of” (Ps. 60:8). [Law in O.T.] Shoes, as distinct from sandals, appear as worn by Jews in Assyrian monuments.

Sanhedrin. This term (which is borrowed from the Gk.; hence Sanhedrin is an incorrect term) is first used by Josephus (14 Ant. v. 4; 1 War. viii. 5) in connexion with the councils appointed by Gabinius in 54 B.C., one in each of the five provinces into which he divided Palestine. A few years later Herod was summoned to appear for trial before the Jerusalem Sanhedrin (14 Ant. ix. 3-5), an indication that it was firmly established at that time. But there was a Council of Senate, in Jerusalem in the time of Antiochus the Great (12 Ant. iii. 3), 223-187 B.C., the members of which, with the priests and scribes, were exempted from certain taxes. [Synagogue, The Great; Elder.]

According to Jewish tradition Jose ben Joëser and Jose ben Johanan, c. 170 B.C., were the first president and vice-president of the Sanhedrin, and formed the first of a line of duumvirates which ended with Hillel and Shammai in the second half of the 1st cent. B.C. The chain of tradition is carried back from Jose through the Men of the Great Synagogue, the prophets, the elders, and Joshua, to Moses, who is said to have organized the first Sanhedrin (Pirke Aboth i.; Sanh. i. 6; and Genara). This tradition supports the theory that from the time of Moses there was always a representative body (though not in session at all periods) which had the power of the Sanhedrin to time but never became defunct—the Elders, Men of the Great Synagogue or Synod, Council of Elders (ýpôsia), and finally the Sanhedrin, the one merging into the other. Some (e.g. Lauterbach, in Jews. Encyclopedia) assume two councils in Jerusalem: a political Sanhedrin of the Gezerus, which administered the criminal law, and was assisted by the high-priest, and a religious Sanhedrin, which had control of matters pertaining to the temple service, sacrifices, the priesthood, etc. (cf. Ac. 5:21, where both the Sanhedrin and the Gezerus are mentioned).—I. The Great Sanhedrin. (1) Constitution. The Great Sanhedrin was composed of priests, elders, and scribes, in what proportion is not known. It was presided over by the Nazi (prince, or patriarch), assisted by a vice-president, the Ab Bîth Din (Father of the House of Judgment), making a total of 71 members, 23 from the priests, and 68 from the laity. There were two secretaries, one to record acquittals and the other condemnations (iv. 3). Vacancies were filled up from among those who had held office in each of the lower courts in succession (see II.). A man was not elected to membership unless he was faultless morally and physically, versed in language and possessed such knowledge as would qualify him to decide cases of witchcraft, etc. (Menach. 65a; Sanh. 17a). (2) Functions. Etc. The Sanhedrin met in the Lishkath ha-Gâzhîth (Hall of Heem Stones) within the temple area (Sanh. xi. 3), and was in session every day except sabbath and festivals, between the hours of morning and evening sacrifice (Sanh. 88b). It was the supreme Jewish tribunal, deciding questions religious, criminal, and civil. On the destruction of Jerusalem the seat of the Sanhedrin was transferred to Jabneh, and finally to Tiberias, where it gradually lost its distinctive character, and became extinct c. 425.—II. The Lesser Sanhedrin. (1) There were courts of three in all parts of the country, the members of which were appointed and ordained by delegates from the Great Sanhedrin (Sanh. 88a; Maim. Sanh. ii. 7, 8). The cases to be brought before these courts are
enumerated in *Sanh*. i. 1-3. (2) Towns with not less than 120 representative men had a small Sanhedrin of 23 members, also appointed by the Great Sanhedrin. The power of the lesser Sanhedrin was also limited, but extended to capital causes in certain cases (*Sanh*. i. 4). There were two of these Lesser Sanhedrins in Jerusalem (*Sanh*. xi. 2). [COUNCIL.]—Buchler, *Das Synh. in Jerusalem*, etc.; Bacher, in Hastings, *D.B.* (5 vols. 1904), art. on *Sanhedrin*; Ginsburg, in Kittio's *Cyc. of Bib. Lit.*; Manasseh of Jerusalem, *Sanannah*, a town in the S. of Judah (Jos. 15.31 only). The word means "palm branch." The site is unknown. [C.R.C.]

*Saph* (2Sam. 21.18). [SIBBECAL.]

*Saphat* (1Esd. 5.9) or *Saphatias* (8.34) = Sheepiah, 2.

*Saph* (1Esd. 5.33) = Sheepiah, 3.

*Saphir* (R.V. *Shaphir*), one of the villages addressed by Micah (1.11), not elsewhere mentioned. By Eusebius and Jerome (Onomasticon) it is described as "in the mountain district between Eleutheropolis and Ascalon." Three villages called *es Sufir* (plur. of *Sufir*) exist in the upper Wady, at the foot of the E. of Ashkelon. This site is apparently the *Isphar* of the list of Thothmes III. (No. 78) in Philistia, noticed in 16th cent. B.C. [C.R.C.]

*Sapphira*, wife of Ananias, 2, and participant in both his guilt and his punishment (Ac. 5.1-11), was apparently one of the noble families of Jerusalem. She was a native of Tyre, and was near approach to a Levite. She was a member of the Sanhedrin, and was set over the congregation of the women who made offerings at the great feasts. She owned a house in which she held some power, and was used by the high priest to make the gift of her husband known publicly. She is called *Esaphias* (see above).

*Saph*, a precious stone, apparently of a bright blue colour (see Ex. 24.10); the second in the second row of the high-priest's breastplate (28.18). It was extremely valuable (Job 28.16); and one of the precious stones of the king of Tyre (Ezk. 28.13). It is mentioned altogether eleven times in O.T., once in N.T., and once in Apocalypse. Notwithstanding the identity of name in Heb., Gk., Lat., and Eng., it is practically certain that the ancient sapphire was not the stone which we denote by that word, viz. the blue (dark or light) variety of corundum. As the best examples of these come from Ceylon, Cashmere, and Burmah, and are used in the manufacture of the gems they supply, and that the jewellers of Tyre have supplied to the Jews for many years, it is clear that the sapphire described by Theophrastus and Pliny is the lapis lazuli. It is fairly hard, but can be engraved without much difficulty, takes a good polish, and has been for long; as it still is, much valued for decorative purposes, the best specimens being obtained in, and to the E. of, Persia. It was so employed in Egypt; was known to, though apparently not common among, the Assyrians and Babylonians when they appear in Biblical history; was occasionally engraved in pre-Roman Greece; and has since then been largely used. [T.G.B.]

*Sarah*.—1. Sarah, wife of Abraham (Heb. 11.11; 1Pe. 3.6).—2. The daughter of Raguel. She had had seven husbands (Tob. 2.7ff.), and was afterwards married to Tobias, who drove away the wicked spirit which had slain her previous spouses (7,8).

*Sarah* (1Esd. 8.8) = Sheberiah.

*Sarah*.—1. The wife of Abraham, and mother of Isaac. Her name is first mentioned in Gen. 11.29. According to 20.12 she was Abraham's half-sister, the daughter of his father, but not the daughter of his mother. Jewish tradition identifies Sarai with Ischab, the daughter of Haran and sister of Lot. The name "Sarah" signifies 'princess,' but the meaning of 'Sarai' is still doubtful. The change of names was made thirteen years after the birth of Ishmael, when the covenant of circumcision was given and a son was promised to Sarah (17.15,16). The incidents of her life have already been related in connexion with Abraham, Hagar, Isaac, and Ishmael. She came with Abraham from Ur to Haran, from Haran to Canaan, and accompanied him in all the wanderings of his life. Her only independent action is the demand that Hagar and Ishmael should be cast out. The times in which she plays the most important part in the history are when Abraham was sojourning, first in Egypt, then in Gerar, and where Sarah shared his deceit towards Pharaoh (12.11-15) and towards Abimelech (20.9-11). She died at Hebron at the age of 127 years, 28 years before her husband, and was buried by him in the cave of Machpelah. Imperious, haughty, and jealous, she was always mourning over the meek and quiet spirit, she is held up to us as a pattern for wife and mother. Sarah is alluded to only once more in O.T. (Is. 51.2), where she is spoken of as the mother of the chosen race. In N.T. she is referred to as a type of conjugal obedience in 1Pe. 3.6, and as one of the types of faith in Heb. 11.11. She is mentioned in St. Paul in Ro. 4.19, 9.9, and the story of Sarah and Hagar is treated allegorically in Gal. 4.1-5.11 to illustrate the privileges of Christians, the children of promise.—2. (Num. 26.40) = Serah, the daughter of Asher. [H.C.B.]

*Sara*, the original name of Sarah, wife of Abraham. It is always used in the history from Gen. 11.29 to 17.15, when it was changed to Sarah.

*Sara'ias*.—1. (1Esd. 5.5) = Seraijah, 2.—2. (1Esd. 5.1; 2Esd. 1.1) = Seraijah, 7.

*Saramel*. The A.V. treats this word as the name of a place (1Mac. 14.29); but it seems that the Greek transliteration is a mistake for *Sarame*, an impossible name in the Greek, and a translation of a Greek name (*Sarameus*). The Arab. *sirme*, "army," and *sarem*, "sword," suggest that the "host of God," or army of Israel, is meant. [C.R.C.]

*Sarah*.—Mentioned in 1Chr.4.22, among the descendants of Shelah the son of Judah.

*Sardech'donas*, a collateral form of the name *Esar-haddon* (Tob. 1.21).

*Sard'eus*. (1Esd. 9.28) = Aziba.

*Sardine, Sardius* (Gk. *sardion*; Lat. *sarda*; Heb. *'oshem*), occurs in Ex. 28.17,39.10 as the first stone in the first row of the high-priest's breastplate and among the treasures of the king of Tyre in Ezk. 28.13. In Rev. 4.3 He Who sat on the heavenly throne "was to look upon like a jasper and a sardine stone." A *sardius* (Rev. 21.20) was the sixth foundation of the wall of the heavenly Jerusalem. The sard, of which Theophrastus and Pliny give descriptions, must have been large, now it is a clear red Chalcedony, pale to deep in shade, which is not uncommon and is obtained in many countries. It was often engraved by Greek and Roman artists, and is sometimes
Sardis, a city about 12 miles to the S. of the river Hermus, and below the range of the Tmolus (Bos Dugh), on a spur of which its acropolis was built. It was the ancient residence of the kings of Lydia. Sardis was in very early times, because of the extremely fertile character of the neighbouring region and its convenient position, a mart of importance, until the invasion of Asia by Alexander. The art of dyeing wool is said by Pliny to have been invented there; and at any rate Sardis was the entrepôt of the dyed woolen manufactures. It was also the place where the alloy electrum was procured; and thither the Spartans sent, in the 6th cent. B.C., to purchase gold to gild the face of the Apollo at Amyclae. It recovered the privilege of municipal government (and, as was alleged several centuries afterwards, the right of a sanctuary) upon its surrender to Alexander the Great, but its fortunes for the next 300 years are very obscure. It changed hands more than once in the contests between Britain and Europe away from Sardis. Of the few inscriptions which have been discovered, all, or nearly all, belong to the time of the Roman empire. Yet there still exist considerable remains of the earlier days. The massive temple of Cybele still bears witness in its fragmentary remains to the wealth and architectural skill of the people that raised it. On the N. side of the acropolis, overlooking the valley of the Hermus, is a theatre near 400 ft. in diameter, attached to a stadium of about 1,000. This probably was erected after the restoration of Sardis by Alexander. The modern name of the ruins at Sardis is Sered. The ruins are not large; and the appearance of the locality, on approaching it from the N.W., as a complete solitude. The Pactolus is a mere thread of water, nearly dry in summer. The Wadi-it-tchait (Hermus), in the neighbourhood of the town, is between 30 and 60 yds. wide, and nearly 3 ft. deep. In the time of the emperor Tiberius, Sardis was desolated by an earthquake, which is said to have changed the whole face of the country. The calamity was increased by a pestilential fever which followed. In the time of Pliny, Sardis was included in the same conventus juridicus with Philadelphia. Sardis is only mentioned in the Bible in Rev. 3.1-6.

Sardites, The (Num. 26.26). [Sered.] Sardonyx (Rev.21.20 only). The sardonyx, like the sard [Sarbine], is a variety of Agate, and consists of "a white opaque layer, superimposed upon a red transparent stratum of the true red sard." (King, "Antike Gens, p. 93.) It is frequently employed by engravers for the purposes of a signet-ring.

Sarea, one of Ezra's swift scribes (Ezr. 14.24).

Sarepta (Lu. 4.24), Gk. for Zarephath.

Sargon (Is. 20.1), in Assyrian Sargina or Sarru-kimu, succeeded Shalmaneser IV. in 722 B.C. (Tellet 12). His origin is unknown, but he claimed descent from an early Assyrian ruler named Bē-bani. Samaria, the siege of which began in the preceding reign, he claims to have taken, carrying 27,290 people into captivity. More important was Sargon's conflict with Humbanigas of Elam and Merodach-baladan of Babylon, but the result of his battle with the allies at Dēr seems to have been doubtful. In 720 B.C. took place the revolt of Yaub-ībidi, or Ilu-ibidi, of Hamath, in league with Arpad, Damascus, Samaria, etc., ending in their defeat at the battle of Qargar. Hanun of Gaza, who seems also to have been one of the league, was defeated, with his supporter Sib'ē (So or Sabaco), at Raphia. In 719 came the invasion of Ararat, and the following year (718) Kiakki of Tukur was captured and brought to Assyria. The same fate overtook Pissiris of Carchemish, which then became an Assyrian province (717). In 716 B.C. Sargon went against Rūṣ of Ararat, and, entering Media, received the tribute of 28 Median chiefs. Dayankku (Dejoices) of Minni, urged by his brother and successor, who, it seems, was captured and transported to Hamath (715). In this year Nīṣa of Moschi was deprived of Que, which he had taken, and the N. Arabians were chastised. Rūṣa was finally defeated in 714, and committed suicide in despair. In 713 Anbarid of Tubal was subjugated, and the next year Sargon led an expedition against Medidun, and besieged Tikgarinne [Togarmah], which was captured, and its king carried away to Assyria. In 711 B.C. the expedition against Ashdod took place. Sargon had deposed king Azuri, and set his brother Ahi-miti in his place, but a revolt took place under the leadership of Yawani, whereupon Sargon, having recaptured the city, annexed the district to Assyria. Philistia, Judah, Edom, and Moab seem to have encouraged this revolt, possibly supported by Merodach-baladan, against whom Sargon was soon to be followed by Sennacherib. Having conquered Babylon, the Chaldæans took refuge in the marshes of Bit-Yakin, the seat of his tribe, and Sargon became king of Babylon. Sargon's generals were likewise successful against Moschi and Ararat, and, hearing of this, the kings of Cyprus sent gifts, and Sargon caused to be set up at Iddinum the stele which is now at Berlin. Comagene was annexed to Assyria about 708 B.C., and a dispute with regard to the succession in Elam led to a conflict with Elam in 707, after which the history of his reign is doubtful. His death, apparently by assassination, took place in 705 B.C., when his son Sennacherib became king. He is renowned as the builder of Dūr-Sargina (Khorsabad, also known as Sargahum), a model fortified palace, adorned with inscriptions and sculptures, and provided with a noteworthy temple-tower. See The O.T. in the Light of the Records, pp. 356 ff., and Winckler, Die Keilschrifttexte der Sargoniden.

Sard (Jos. 19.10, 12), on S. border of Zebulun, W. of Chisloth-tabor. Possibly for Shaddi (LXX. Saddok). The ruin Tell
Shaddid, at the foot of the hills of Zebulun, is 4½ miles W. of Kf ssid or Chisloth-tabor. [c.r.c.]

Saron (Agg. 9:35 only), the SHARON of O.T.

Sarothie (Lk.8:35) = SERUG.

Saron, the name of the principal evil spirit.

—Development of the doctrine. (1) The pre-captivity books of O.T. characteristically refer little, except in Gen.3 and Lev.16, to Satan and evil spirits, for their aim was to establish mono-
thecism, to the exclusion of the popular worship of false deities. Consequently, with pharisaic influence of Greek philosophy, evil spirits was stigmatized as superstition, and punished as crime (Deut.18:10; Lev.19:31, 20:6, 27; 1Sam.28:3; 2K.21:5, 6, 24; I Sam.8:10, 19.3; 1Chr.10:13; 2 Chr.33:6). The drawback of this virtual ignorance of evil spirits was that it resulted in an apparent ascription of evil to God (e.g. Deut.2:30; Jos.11:20; Judg.9:23; I Sam.26:19; 2 Sam.15:20, 1, 10; 1 K.22 = 2 Chr.18). In all these cases later writers would have said that the evil was due to Satan, and was permitted by God (see 1 Chr.21:1, and contrast 2 Sam.24:1, 10). (2) The Captivity saw a development of views about Satan, which does not necessarily de-
mand Babylonian or Zoroastrian influence to explain it, resulting in a definite Jewish de-
monology and angelology (Dan.10, etc.). The problem of the sufferings of the righteous became more insistent. The solution of the Psalmist (Ps.37) no longer seemed adequate.

The term principle now explained as de-
expiatory, or atoning (Is.53); and it was sug-
gested that there is a life beyond the grave, in which all earthly wrongs are righted (Job 19:25; Dan.12:2). But these explanations failed completely to satisfy. Gradually the convic-
tion grew that there existed a malignant power, the enemy of man, and the persistent
opponent of the Creator's benevolent designs. This supposition also served to account for
temptation, which it was now felt could not be ascribed to an all-holy God (Eccles.15:11,12). These ideas first found clear expression in the book of Job, and hence the transition to the full N.T. doctrine is easily traced (Zech.3:1, 2; Wis.2:23; Eccles.21:27; Ba.4:7, 35; Tob.3:8, 17, 6, 7, 14-17, 8, 3).—Names and Titles. "Satan" in O.T. usually has the article, ἠσαάθην (so Job 1,6, etc.; Zech.3:1f). It occurs once an-
archous, as a proper name, σάλαθ (1 Chr.21:1). In N.T. it is Σαρανάς, also very frequently trans-
lated as ὁ διάβολος, and once as ὁ κατηγορ, (so Alex.5f., followed by Westcott and Hort), a rabbinical form of κατηγοροῦ (Rev.12:10). The word signifies adversary (Num.22:32; 1 K.11:14), also accuser (Ps.109,6). As applied to the evil one, the latter sense predominates—as

is evident from Job 1,9, 24; Zech.3:1; and from N.T. translations διάβολος (malicious
accuser, calumniator), and κατηγορ (accuser). Thus Satan, according to the etymology of his name, is he who calumniates God to man (Gen.1:11, and man to God (Job 1,9), with the object of setting them at variance. His other titles are "the evil one," ὁ παρινηθ (about 14
times) "the tempter," ὁ ερυθάτων (Mt.4:3; 1 Th.3:5) "the enemy," ὁ σεφθρος (Mt.13:38) "the prince of the [or, this] world," ὁ σεραν τοῦ κόσμου τοῦ σωτίου (Jn.12:31, 34, 30, 16, etc.; cf. 1 Cor.2:8, 6) "the god of this age," ὁ θεός τοῦ αἰωνοῦ τοῦ σωτίου (2 Cor.4:4) "the prince of the demons," ὁ σεραν τῶν δαιμονίων (Mt.9:34) "the prince of the power of the air," ὁ διάβολος τῆς ἐωσίας τοῦ θέου (Eph.2:2) "the dragon," or "serpent," ὁ σεραν ὁ μέγας, ὁ βασιλς ὁ σεραν (Rev.12:9, 14, 15, 20, 2) Beelzebul or Beelzebul [Baалzebul] (Mt.10, 25, etc.); Be-
lier, or Belial (2 Cor.6, 15); possibly also Azazel (Lev.16,8), and Asmodeus ( Tob.3, 8, 17); and Apollony, i.e. the destroyer (Rev.9, 11): not, however, Lucifer, for the application of Is.14, 12. The later term is due to the supposition that there is a piece of mistaken exegesis.—Personality. Every attribute of personality is repeatedly
ascribed to Satan in N.T. The only question is, whether this language may not possibly be
figurative—evil being personified to express vividly its seductive power. This is hardly possible; for in the N.T. Satan realized vividly the personality of demons: and had this view been seriously incorrect, he
would hardly have used language calculated to conform it. (ii) The theory of an impersonal
devil presents greater difficulties to faith, than
the theory of a personal one. Evil is not merely negatively; it opposes itself actively to
God, and to all that is good. It is much easier to conceive a rebellious will doing this,
than a rebellious force. Resistance to God by anyth-
ing infra-personal is, to modern minds, almost unthinkable (see the present writer's Pr. Eide, pp. 223, 224).—The Position of Satan in the Universe.

The idea that Satan is personified and pre-

sented in Scripture as exceedingly great. He
is the "ruler" of this world, and its "god"
(Jn.12,31, 34, 30, 16, 17; 2 Cor.4, 4). It is even said that "the whole world lieth in the evil one" (ἐν ῥῷ παρερηκαί, ἱηαμ, 1 Jn.5, 19). All
the kingdoms of the earth and the glory of them are his to bestow (Lu.4, 5). Mankind, through sin, has come under his power; and it is he who instills death upon men (Heb.2, 14). His
followers are apparently more numerous than the true children of God (Mt.7, 13, 14). Through his wiles and subtilty (Eph.6, 11; 2 Tim.2, 26), whereby he even transforms himself into an angel of light (2 Cor.11, 14), he is able to deceive the whole world. However, he shall pass the destruction of the very elect (Mt.24, 24). Sometimes he controls the elements (cf. Mt.8, 26), and inflicts disease, not only by way of actual "possession," as in the case of the gospel demonsiae [DEMONIACAL POSSESSION], but also in ordinary cases (e.g. fever, Lu.4, 39; gout, He.2, 17; crooked body, Lu.11, 14; blindness, Mt.12, 22; epilepsy, Mt.17, 15; sore boils [elephantiasis?], Job 2, 7; "a thorn in the flesh," 2 Cor.12, 7). He
Satan can also inflict other forms of physical evil, such as imprisonment (Rev. 2:10), and loss of life and property by lightning, tornado, or robbery (Job 1). The power of Satan extends beyond this earth, and disorders those higher spheres also, as the Bible calls the "heavens" (šāmāyim, öigvov; both forms are pl.). In O.T. he occasionally appears in the highest heaven (1 K. 22:21; Job 1). In N.T. he is called "the prince of the power of the air," i.e. of the super-terrestrial regions or "heavens," where he rules over a hierarchy of evil angelic powers (Eph. 6:12; [1] Demost.). It is perhaps because the things in the heavens have been polluted by the presence of Satan's evil hierarchy, that they, as well as the things on earth, require to be reconciled to God by the blood of Christ's cross (Col. 1:19, 20). But Satan's power, though great, is neither original nor absolute. He is a eternal, uncreated being, as is the Seraphim, but a creature. This is obvious from the book of Job, where he appears as the court of heaven as one of the "sons of God" (1.6.2.1). His power, therefore, is delegated and, moreover, strictly limited. The subordination of Satan to God is most distinctly marked in O.T. than in N.T. In O.T. it is almost complete (see 1 K. 22:20-23; Job 1.12.2.6). In N.T., Satan seems to assume a more independent attitude, and, we may add, an attitude of greater malignity. It is as if, along with the manifestation of the absolute good, evil also was allowed to manifest itself in darker forms and in more irreconcilable or at any rate less evident manner. As against the kingdom of God a kingdom of Satan—against the hierarchy of good angels a hierarchy of evil ones. Even in N.T., however, the ultimate subordination of the devil to God is a familiar truth. Thus, at our Lord's temptation, Satan, while boasting of his power, yet confessed that it was delegated (μοι παρακλητόρα, Lu. 4.6). The devils recognized the power of Jesus, and came out at His word (Mk. 1.24, 31.11 etc.). They feared lest He should send them to "the abyss" for punishment (Lu. 8.31). If Satan is "the strong man," yet there is a Stronger, Who can bind him hand and foot (Mt. 12.29). The fall of the kingdom will surely come to an end; in fact, its fall has already been virtually secured by the Passion and Resurrection of Jesus (Jn. 12.31). Our Lord transmitted some part of his power over Satan to His Church (Lu. 9.1.10.17-20). A curious instance of this is found in Rev. 5:5 (cf. 1 Tim. 4.13), where offenders are handed over to Satan for disciplinary punishment, "that the spirit may be saved in the day of the Lord Jesus." [Excommunication; Hymnaeus; Crimes in N.T. (13.)]—Satan's Influence upon Mankind. Leaving to archaeologists to decide the precise original meaning of the ancient Semitic tradition embodied (doubtless in a greatly altered form) in Gen. 3, we may affirm, without fear of contradiction, that when the canon of O.T. was formed, this narrative was generally interpreted of the fall of man, and the tempting serpent was understood to be the devil. Such a view already underlies Wis. 2.24 ("through the devil and the world"), and is expressly affirmed in the N.T. (Rev. 12.2, 20). [Fall.] Thus Satan, in relation to mankind, is primarily the tempter. He tempts, partly by misrepresenting God as a harsh Ruler, careless of the happiness of His creatures; partly by acting upon the strong desire to create, which Adam and man will find inherent in the Biblical man. He tempts, partly by presenting to the appetites or passions their objects in captivating forms. His temptation, however, can always be resisted, because it is under the control and overruling power of God (1 Cor. 10.13; Jas. 4.7; 2 Pe. 2.9; Lu. 22.31). It is exercised both negatively and positively. Its negative exercise is referred to in the parable of the sower, where the devil snatches away the seed that is sown in the heart (Mt. 13.19). Its positive exercise is set forth in the parable of the wheat and the tares (13.39). Our Lord's temptation is particularly instructive. We have here the devil's subtle attempt to make evil appear good. He even quotes Scripture in support of his suggestions. He spreads outwards before the eye of the soul the temporal goods which he judged to be most attractive to one in our Lord's situation—bread, before one who was hungry; temporal sovereignty, before one who was anxious to do good in the world; compromise with evil, before one who was self-resistant to the inevitable. He tempts all men, and one who (for every reason) longed to be successful (Lu. 4.2). For us mere men there is a natural kind of temptation, inseparable from a life lived in a world like ours; and this natural temptation gives Satan his opportunity. Where the flesh struggles against the spirit, he throws away the sin of pride (1 Cor. 10.13), and in the case of the man newly fallen and since in fallen man the balance of human nature no longer hangs true, for the flesh tends to outweigh the spirit, he is only too often successful. Those who habitually yield to temptation become the servants of sin (Jn. 8.34); "sold under sin" (Ro. 7.14), and captives to the law of sin (7.23). They may even become the devil's absolute and irredeemable property, like Judas, whom Satan—after successfully implanting in his heart the resolution to betray Jesus (Jn. 13.2)—finally entered, and drove to his inevitable doom (13.27).—The Fall of Satan. Since Satan is the creature of a God who is good, Satan must have possessed good angels (cf. Gen. 1.31), and have become what he is through a voluntary fall. Holy Scripture, however, rarely (and for the most part obscurely) refers to this event. Is. 14.12 really describes the fall of the king of Babylon, not of Satan. Jn. 6 = 2 Pe. 2.4 refers to an obscure event, which may indeed have some bearing upon the subject, but was actually subsequent to the creation of man. [Demon.] Rev. 12.7 is a poetical description of the overthrow of Satan's power in the universe through the Incarnation, and the work of the Church. There remains Jn. 8.44. From this we learn that Satan once existed in a state of innocence (Iv Íλέγη), but did not persist in it (reading ὁφελεῖν ἄντικερ [from σφηκα] with R.V., W.11.). To this may be added Lu. 10.18, which, though it does not describe Satan's original fall, but rather his discomfiture through the mission of the Seventy, yet seems to allude to it. The only Biblical hint of the cause of Satan's fall is Tim. 1.7. This verse is often allegorized, but never satisfactorily. [Angels.]—Conclusion. Upon the whole, Scripture seems to indicate that
SAUL

Sathan is an angelic being of great power and wisdom, to whom was entrusted at the creation an extensive authority over the universe, analogous to that which man exercises over nature: that he was subjected to a probation, in which he was found wanting, and, rebelling against God, introduced sin and disorder into the universe. It is generally supposed that his period of probation is already over; but the toleration which God extends to his evil-doing would be more intelligible, if it is permissible to suppose that it extends to the Last Judgment. There seems no adequate ground for hoping (much less believing) that he will ever repent and be pardoned. The only passages which seem to favour this view (1Cor.15.28; Col.1.19,20) are obscure, and can be otherwise explained. Rather does Holy Scripture seem to regard the punishment of Satan as already nearly as great as the consequences of Adam's disobedience. Its nature we can only dimly conjecture. Perhaps an essential part of it will be the loss of freewill—degradation from the rank of a free agent. This view provides for the final extinction of moral evil. Momerie, Origin of Evil; Naville, The Problem of Evil; Tennant, On the Confining Santa of the Egyptians; The Kernel and the Husk; S. Laing, A Modern Zoroastrian; art. "Satan," in Hastings, D.B. (5 vols. 1904); works of systematic theology.

Sathrabuzanes (1Esd.6.3,7,27) = SHE-THARBOZAN.

The Heb. s'irim, the rendering in A.V. of the Heb. plur. noun, which, having the meaning of "hairy" or "rough," is frequently applied to "he-goats," the s'irim of Is.13.21 and 34.14, where the prophet predicts the desolation of Babylon, have, however, probably nothing to do with goats, either wild or tame. According to the old versions, and nearly all the commentators, A.V. is correct, and the word refers to mythical creatures, or "satyrs"—that is, demons of woods and desert places, half-men and half-goats (cf. Lev.17.7; 2Chr.11.15). On the other hand, it has been suggested that s'irim may refer to dog-faced baboons, of which there is an ancient Egyptian picture, and a second (P. arabicus) inhabits S. Arabia. Both have a mantle of long hair on the shoulders, and the former, like the thoth (P. thoth), is commonly represented in Egyptian frescoes and sculptures. Since, however, no member of the group is found in Syria or Palestine, the proposed identification cannot be regarded with much favour, especially as Biblical writers would be likely to take their similies from familiar animals, mythical or otherwise. [R.L.]

Saul, more accurately Shaul.—1. The sixth in a list of eight Edomite kings, apparently elective and successor to Ethalion, and rebelled against as in 1Chr.1.48, R.V. has Shaul). As belonging to "Rehoboth by the River" (i.e. Euphrates), he seems to have been of foreign origin.—2. The first king of Israel, the son of Kish, a Benjamite, and grandson of Abiel (1Sam.8.1,2.14,51), or, if we accept the genealogies in 1Chr.5.33,9,90, where Kish's sepulchre (2Sam.21.14) was probably Saul's birthplace, his family was of little importance (1Sam.9.21). Saul's character is illustrated by the fierce, wayward, fitful nature of the tribe, and in part accounted for by the struggle between the old and new systems in which he was involved. To this we must add a taint of madness, which brooked violent frenzy at times, with long, lucid intervals. He was remarkable for strength and activity (2Sam.1.23), and (like the Homeric heroes) of gigantic stature, taller by head and shoulders than the rest of the people, and of that beauty denoted by the Heb. for "goodly" (1Sam.9.2); cf. the description "glory (or, beauty) of Israel" (1Sam.1.19). Kish sent his son Saul in search of a drove of asses, gone astray on the mountains (1Sam.9.3-10). In this search Saul seeks Samuel's aid (9.5,6). Samuel had received (cf. 8.7-9) a divine intimation of the approach and future destiny of the youthful Benjamite, a "distinguished stranger, and next morning poured over Saul's head the consecrated oil, and with a kiss of salutation announced to him that he was to be the ruler and (LXX) deliverer of the nation (9.25-10.1). Saul returned to Gibeah by a route for which see Zuph; its incidents may be called the private, inner view of his call. The outer call, setting its seal on the former, follows: An assembly was convened by Samuel at Mizpeh, and lots were cast to find the tribe and family which was to produce the king. Saul was named, and (by a divine intimation) found them in the pasturebage around the encampment (10.17-24). His stature at once won the heart of the people. He was hailed king by acclamation, though with a few dissentients, and returned to his native Gibeah. His election was justified and his authority confirmed by his prompt and vigorous action on learning of the threat of Nahash, the king of Ammon, and his procession of threescore gilead. "The Spirit of the Lord came upon him," as on the ancient judges. Three (or six, LXX) hundred thousand men followed from Israel, and thirty (or seventy, LXX.) thousand from Judah: and Jabesh was rescued. The punishment of the murmurers was demanded, but refused by Saul; and the monarch, who had roused anew at Gilgal (11.1-15). He still, however, so far resembles the earlier judges, as to be virtually king only of his own tribe, Benjamin, or of the immediate neighbourhood. But this limitation was soon to cease. The Philistines would naturally oppose the quickening of their neighbour's national life, and in the second year of his reign Saul began to organize an attempt to shake off their yoke. A Philistine garrison had long been stationed even in his own home (10.5,13). An army of 3,000 was formed; and Jonathan, apparently with Saul's sanction, rose against the garrison and smote them (13.2-4). This roused the whole force of the Philistine nation against him. The spirit of Israel was completely broken. In this crisis, Saul found himself on the very confines of his kingdom at Gilgal, longing to exercise his royal right of sacrifice, yet deterred by his sense of obedience to the prophet. That evening, whereupon Samuel arrived, and pronounced the first curse on his impenitent zeal (13.5-14). Meanwhile the adventurous
exploit of Jonathan at Michmash brought on the crisis which ultimately drove the Philistines back to their own territory. It was signalized by two remarkable incidents: the first appearance of Saul's madness in the presence of all his courtiers (1 Sam. 14:24, 44); and the erection of his first altar, built either to celebrate the victory, or to expiate the savage feast of the fanatical people (14:35). The expulsion of the Philistines (although not entirely completed, 14:52) at once placed Saul in a position higher than that of any previous ruler of Israel. The warlike character of his reign naturally still predominated; and he was now able to attack the neighbouring tribes of Moab, Ammon, Edom, Zobah, and finally Amalek (14:47-48; cf. 15:1-10). The chief connexion of the war against Amalek with Saul's history lies in the disobedience to the prophetic command of Samuel shown in the sparing of the king, and the retention of the spoil. This second act of disobedience called down the second curse, and the first distinct intimation of the transference of the kingdom to a rival. The struggle between Samuel and Saul in their final parting is indicated by the rendering of Samuel's part final, in which he tears himself away from Saul's grasp (for the gesture, see Josephus, 6 Ant. vii. 3), and by the long mourning of Samuel for the separation (15:35, 16:1). The rest of Saul's life is one long tragedy. The frenzy, of which indications had occurred before, now at times took almost the possession of him. Inter-tribal jealousies, all the stronger because Saul's own tribe was one of the smallest, may well have been an important cause of this frenzy. It is described as "an evil spirit of God" (much as we might speak of "religious madness"), which, when it came upon him, almost choked or strangled him by its violence. In this crisis David was recommended to him by one of the young men of his guard. From this point their lives are blended together. [DAVID.] In Saul's better moments he never lost his strong affection for David. Occasionally his prophetic gift returned, with his madness, in acts of fierce, wild zeal increased. At last the dynasty, which he had established, came to an end through his weakness. The Philistines, keen to keep open the commercial route by which the Euphrates trade passed through their country to Egypt, after a course of border warfare occupied in large force the plain of Edessaion. Their camp was pitched on the S. slope of the range now called Little Hermon, by Shunem. Opposite, on mount Gilboa, was the Israeliite army, clinging as usual to the heights which were their safety. The heart of the king, as he pitched his camp, "greatly trembled" (1 Sam. 28:5). Having lost all the usual means of consulting the divine will, he determined, with that wayward mixture of superstition and religion which marked his whole career, to apply to a necromancer at En-dor, on the other side of Little Hermon, who had escaped his persecution. The obvious meaning of the narrative tends to the hypothesis of apportionment as against that of a simple imposture. The woman recognizes the disguised king first on the appearance of Samuel, seemingly from his threatening aspect or tone towards his enemy. Saul apparently saw nothing; but she described a supernatural figure of an aged man in prophetic garb. On hearing the denunciation which the apparition conveyed, Saul fell full length on the ground, and remained motionless till the woman and her servants forced him to eat. Dismayed by Samuel's summons to a fatal trust, he entered the next day on the battle. The Israelites were driven up the side of Gilboa. The three sons of Saul were slain (1 Sam. 31:2). Saul, with his armoured body protected by the archers and charioteers of the enemy (31:3; 2 Sam. 1:6). He was wounded. His shield was cast away (2 Sam. 1:21). According to one account, he fell upon his own sword (1 Sam. 31:4). According to another, an Amalekite who came up at the moment of his death-wound, and found him "fallen," but leaning on his spear, at his own request put him out of pain, and carried the news to David (2 Sam. 1:7-10). [SAUL, BOOKS OF.] His body and those of his three sons were stripped, decapitated, and exposed on the wall of Beth-shan, whence they were secretly carried off, and burnt by the grateful inhabitants of Beth-gilead (2 Sam. 21:13-14). Saul and his sons were buried in their resting place, in the part of his ancestral sepulchre at Zelah in Benjamin (2 Sam. 21:14). —3. The Jewish name of St. Paul. The best conjecture as to the double name is that Paulus was the apostle's Roman name as a citizen of Tarsus, naturally adopted into common use by his biographer when his labours among the heathen commenced (Acts 13:6). [A. V.—S.]

**Sav'ar-yan, an erroneous form of the title Avar-an, borne by Eleazar, 8 (1 Mac. 6:43).**

**Savi'as (1 Esd. 8:2) = Uzzi, 1.**

**Saviour.** (Five articles are closely connected and by the same writer. Saviour and Salvation deal with the divine part in man's restoration; Repentance, Faith, Conversion with the part of man.) The name Saviour, to which (cf. Mt. 1:21) Jesus is equivalent, was the human name of the Christ. The name defines the mission, "to save His people from their sins." We must be careful not to limit the whole significance of the name "Savior," which is used for recovery from sickness, protection, assistance, deliverance, and the result of such relief in happiness and security. The name "saviours" is applied to the judges, and to the deliverer of the people from the Syrian yoke (2 K. 13:5). It was frequently included in Jewish names as a word of good omen, e.g., Joshua (Gk. Jesus), Hoshea, Ishi, Isaiah. The word was raised by the prophets from a temporal to a special spiritual meaning, and applied to God Himself (Is. 45:21, "a just God and a Saviour"). We must be careful not to insert a.art, as if it were part of salvation to deliver from the justice of God. So far from this, God saves by and to righteousness. In many passages of Isaiah righteousness and salvation are equivalent, and the "role of righteousness" is the "garment of salvation" (cf. Is. 61:10). The same spiritual meaning is constant in the Psalms. The term Saviour is also employed for the Lord of Redemption (cf. Is. 14:14; 60:16). Thus the word Saviour as applied to Christ must be taken in a wide sense, as including both the remission of sins and all other benefits of Christ's passion, and not only this,
but of His teaching, example, and church. When there is any distinction made between Jesus and Christ, the former refers to the person, the latter to the name of Jesus which is in common use among the Jews, but found its full meaning only in the Saviour. [M.S.]

Saw. In ancient Egyptian saws, as in modern Oriental saws, the teeth usually incline towards the handle, instead of away from it like ours. They have, in most cases, bronze blades, apparently attached by leather thongs: but some of those in the British Museum have blades let into handles, as our knives have. A double-handed iron saw has been found at Nimrud. No evidence exists of the use of the saw applied to stone in Egypt, but we read of sawn stones used in the temple (1 K. 7:2). The saw was under, "or in," which Braid is said to have placed his captives were of iron.

Scape-goat. [ATONEMENT, DAY OF; DEMON.]

Scarlet. [COLOURS.]

Sceptre. The original of the sceptre was the short club, with bulging head, used by shepherds for purposes of defence and warding off animals as characteristic of the shepherd's life (Lev. 27.32; A.V. rod): while he, defending his flock by its means, becomes a figure of God's defence of His people (Ps. 23.4; Mi. 7.14). Thus it became a symbol of authority in general (Judg. 5.14, R.V.), and of the king's in particular (Am. 1.5; Esth. 4.11). The king's sceptre was used metaphorically to express the prerogative of the royal tribe of Judah (Gen. 49.10), the future dignity of Israel (Num. 24.17), the rule of the wicked, whom Jehovah will overthrow (Is. 14.5), and, supremely, the rule of God Himself (Ps. 45.6), interpreted in N.T. of the rule of the eternal Son (Heb. 1.8). [J.C.V.D.]

Scribe. A. Older use of the word. (1) sôphâr (the usual word), lit. writer or perhaps enumerâtor, stands in Judg. 5.14 (cf. Je. 52.25 = 2 K. 25.19; 2 Chr. 26.11) for a high military functionary, perhaps a mustier-officer (R.V. marshal, scribe). It also denotes a royal officer or minister, distinct from the recorder or chronicler, probably the chief secretary of state (2 Sam. 8.17 = 20.25 = 1 Chr. 18.16; 2 K. 18.18, 37 = lS. 36.3, 22; 2 K. 19.2 = Is. 37.2; Je. 36.10, 12, 20, 21, 37.15, 20), who also acted at times as chancellor of the exchequer, and chief paymaster (2 K. 12.10, 11 = 2 Chr. 24.17; 2 K. 22.3ff. = 2 Chr. 34.15ff.), and was sometimes a Levite (1 Chr. 24.6). Solomon's great empire required two such officers (1 K. 4.3). In Esther, sôphâr stands for the secretaries of the Persian king (3.18, 8, 9). (2) šôcher (also a frequent word), lit. writer, or possibly organiser, arranger (R.V. officer, overseer), is a term for

attributed. The question as to how far there may be any truth in this conjecture is discussed under the books concerned. [B.R.]

Science (1 Tim. 6.20). [FOR SCRAMBLING.]

Scorpion (Heb. 1 qarâbâh). Scorpions are twice mentioned in O.T. (Deut. 8.15; Ezk. 2.6), and four times in N.T. (Lu. 10.19, 11.12; Rev. 9.3, 10): the wilderness of Sinai being alluded to as the resort of scorpions at the time of the Exodus, as it also is at the present day. Scorpions, of which several species inhabit Palestine, are generally found in dry and dark places, under stones and in ruins, chiefly in warm climates. They are carnivorous, and move in a threatening attitude with the tail elevated. The sting, situated at the extremity of the tail, has at its base a gland secreting a poisonous fluid, which is discharged through the mouth by two orifices: and often occasions much suffering, and sometimes alarming symptoms. The "scorpions" of 1 K. 12.11, 14 and 2 Chr. 10.11, 14 indicate some instrument of scourging —unless indeed the expression is allegorical. Celsius believed the "scorpion" scourge to be the spine stem of the egg-plant (Sol. melongena esculenta), known to the Arabs as heder. Scorpions are not insects, but relatives of spiders, with which they constitute the class Arachnida. [R.I.]

Scouring. [CRIMES.]

Screech-owl. [OWL.]

Scribe. A. Older use of the word. (1) sôphâr (the usual word), lit. writer or perhaps enumerâtor, stands in Judg. 5.14 (cf. Je. 52.25 = 2 K. 25.19; 2 Chr. 26.11) for a high military functionary, perhaps a mustier-officer (R.V. marshal, scribe). It also denotes a royal officer or minister, distinct from the recorder or chronicler, probably the chief secretary of state (2 Sam. 8.17 = 20.25 = 1 Chr. 18.16; 2 K. 18.18, 37 = lS. 36.3, 22; 2 K. 19.2 = Is. 37.2; Je. 36.10, 12, 20, 21, 37.15, 20), who also acted at times as chancellor of the exchequer, and chief paymaster (2 K. 12.10, 11 = 2 Chr. 24.17; 2 K. 22.3ff. = 2 Chr. 34.15ff.), and was sometimes a Levite (1 Chr. 24.6). Solomon's great empire required two such officers (1 K. 4.3). In Esther, sôphâr stands for the secretaries of the Persian king (3.18, 8, 9). (2) šôcher (also a frequent word), lit. writer, or possibly organiser, arranger (R.V. officer, overseer), is a term for
any minor official—judicial, civil, military, or industrial (Ex.8.11; Jos.1.10,3.2; Deut.1.13; 1Chr.27.1; 2Chr.19.11,34.13, etc.). (3) Jephdei, lit. tablei-master, (scribe) (R.V. marshal, scribe), occurs only Mt.5:18, (see R.V. marg.),(4) harim, lit. engraver, writer (R.V. 

magician, sacred scribe; only pl.), is used of the magicians or wise men of Egypt (Gen.41.8; Ex.8.36f.,9:11), and of Babylon (Dan.2.2).

For another derivation of this word, see SEMITIC LANGUAGES.—B. Later use. After the Captivity sopher almost always denotes a professional student of Holy Scripture, especially of the Mosaic Law. The Gk. equivalents are γραμματεύς, "scribe" (67 times in N.T.), νόμοκος, "lawyer" (10 times), νομοδοξάσσω, "doctor of the law" (3 times), and once simply διδάσκαλος, "doctor," "teacher" (Luk.2.46). Josephus also uses ἐπεργασιατές, "sacred scribe," σοφος, "learned man," "interpreters of the ancient laws." The "wise" (ḥakkānim) of the Wisdom literature (Pr.1.6,22.17; Ec.9.17, etc.) may perhaps be scribes, but more probably their early predecessors, not yet entirely devoted to legalism. Scribes were addressed respectably as ῥάββη, "master," or ῥᾳβδί (pseud.), "my master" (16 times in N.T., also frequently in translation as ῥάββης, γὰρδί). A title even the scribes accorded by courtesy to our Lord (Mt.12.38, etc.), Who was generally regarded as a rabbi with a school of pupils. The Aramaic equivalent, ῥβδόν ῶ ῥβδονι (pseudow), also occurs (Mk.10.51, see R.V.; Jn.20.16). The scribes in our Lord's time were greedy of titles of honour, and sought and received the honourable designations of ἀββᾶ = πατής, "father," and μισρ = καθγράπτης, "teacher," "guide" (Mt.23.3,10). Already in N.T. times, or a little later, ῥάββη, ῥᾳβδί, and ῥβδον were prefixed to titles of scribes' names (Rabbi Zadok, Rabban Gamaliel, etc.), and a distinction was drawn among them: greater than ῥαββη is ῥαβδί, and greater than ῥᾳβδί is ῥβδόν (pseud.). The R.V. (2Mac.5:12) generally calls the ancient scribes sopherim, but those of its own age ἡκακάττιν, "the wise," (i) History. The transformation of the O.T. religion into orthodox legal Judaism, a process which, beginning with the Captivity (586-538 B.C.) or a little earlier (cf. Is.6.6), received an enormous impetus from the labours of Ezra (458) and Nehemiah (445), and was finally consummated in the age of the Maccabees (175-135), when the nation, rising in arms against a persecuting paganism allied with an apostatizing aristocracy, became inspired with an indefatigable and fanatical enthusiasm for the letter of the ceremonial law, was mainly the work of the scribes, an organized body of professional students of the law, who, when prophecy failed, gradually established themselves first as the accredited teachers, and afterwards as the real rulers of the nation. To the exclusive devotion to the study of the prophetic scrolls, the religious exiles in Babylon, the prophetic scribes. The Lord alludes when He says, "All that came before Me are thieves and robbers" (In.8.18). Siding in the Hasmonaean age with the Assidians (Ith. ḫəṣḥədhim, lit. pious ones, cf. Ps.149.1,5,9, etc.), a zealous sect of "mighty men who offered themselves willingly for the law" (1Mac.2.42,7.13; 2Mac.14.6), and sharing with them the glories of death and martyrdom (see the account in 2Mac.6.18ff. of the torture and death of Eleazar the scribe, "ascertains the scribes"), they formed, after the foundation of the Hasmonaean state, an intimate and enduring alliance with the rising party of the Pharisees, who, inheriting the inflexible principles of the Assidians, acquired in the reign of John Hyrcanus (135 B.C.) their distinctive character as the "principal," the "separated ones." [PHARISEES]. Persecuted by him in his later years, and also by his son and successor Alexander Janneus(104-78), who favoured the Sadducees, they triumphed with the Pharisees under his widow and successor Salome Alexandra (78-60). She had indeed," remarks Josephus, "the name of queen, but the Pharisees had all the authority" (13 Ant. xvi.1). The leading scribes in the Sanhedrin formed, until the extinction of the Jewish state (70 A.D.), a distinct and most influential class alongside the chief priests and elders (cf. Mt.2.4,16,21,20.18,26,57; Ac.4.5,23,27). As the recognized spiritual guides of the all-encompassing Pharisaic influence over the nation was almost unlimited. Only a very few of them adhered to the Sadducees or were neutral (Mk.2.16; Luk.5.30; Ac.23.9). Priests and Sanhedrin obediently adopted the decisions of the scribes, who, when the Sanhedrin fell, became in name as well as in fact the supreme rulers of the nation. Of individual scribes before our Lord's time we know but little. The first known name is Ezra, though he seems to have had predecessors, whom Jeremiah denounces quite in the N.T. manner for falsifying and evading the law (Je.8,6ff., R.V.). Ezra is the priest, the scribe, even the scribe of the words of the commandments of the Lord, and of His statutes to Israel (Ezr.7.11); and a ready scribe in the law of Moses, which the Lord the God of Israel had given" (7.6). Already "scribe" was a technical word, used as a title in formal documents of legal description, and in the law by Ezra, and its acceptance by the people, 444 B.C. (Ne.8,5ff.), marks an epoch. From this time, for an Israelite, religion meant not so much spiritual communion with God (the ideal of the prophets), as a legally correct walk before Him (the ideal of the scribes). The ceremonial law was regarded as God's greatest gift to Israel, and to obey its every precept, down to the minutest detail of ritual observance, was the whole duty of man. In such an atmosphere of formalism and legalism did scribal originate, develop, and mature. The early scribes, such as Ezra (Ezr.7.11), Zadok (Ne.13.1), and Simon the Just, 300 B.C. (see Exclus.50), were priests, but soon after the last date the scribes were clearly differentiated from the priesthood as a body of professional, but lay scholars, who claimed the exclusive right, even as against its original guardians the prophetic scribes, to interpret the ceremonial law. Henceforward a priest, unless he was also a scribe, was not an accredited teacher of religion. So far the O.T. Apocrypha, and Josephus. Additional facts (unfortunately contaminated by fiction) may be gleaned from
the Mishna (200 A.D.). The Mishna characteristically represents Moses as the first scribe. He delivers the scribal traditions to Joshua, Joshua to the elders, the elders to the prophets, and the prophets lay down to the Great Synagogue, by which unhistorical title it collectively designates the succession of scribes from Ezra (444 B.C.) to Simon the Just (300 B.C.). [The existence of “the Great Synagogue” as an actual organization is now disbelieved; but see Synagogue, GREAT.] The Great Synagogue and the Mishna laid down these rules: Be careful in pronouncing judgment; bring up many pupils, and make a fence about the law. Simon the Just said: “The world subsists by three things: by the Law, the worship of God, and benevolence,” and delivered the tradition to Antigonus of Socho, he to Moses ben Joeser of Zereda and Joes ben Johanan of Jerusalem; they to Joshua ben Perachiah and Nithai of Arabela; they to Judah ben Tabbai and Simon ben Shetach; they to Shemaiah and Abtalion (perhaps the Sameas and Pollio of Josephus, Ant. iv. 4, etc.); they to Hillel (the elder) and other pupils. The flow of the traditions of the reign of Herod the Great (37-4 B.C.) and founded important and opposing schools. Hillel, a mild and amiable man, was inclined to mitigate the strictness of the law; Shammai, a man of rigid temper, to aggravate it. Hillel had emigrated from Babylon to Palestine, and taught in Borsippa, from which he came. He was so poor that he was obliged to hire himself out as a day-labourer, to defray the cost of his education at the Rabbinical schools. His mitigating interpretation of the law is well illustrated by his important decision that Deut.15.1-11, which requires a release of all debts every seventh year, should, on account of its great inconvenience, be evaded by a characteristic scribal artifice (cf. Mk.7.11). The questions disputed between the schools of Hillel and Shammai were for the most part trivial—e.g. whether an egg laid upon the sabbath day might be eaten, or whether it had been on the Sabbath or not. There is one which is important both intrinsically and because our Lord’s opinion was asked about it (Mt.19.3-6). The laxer school of Hillel ruled that a man might put away his wife for every cause—e.g. even if she only spoilt his dinner; the stricter school of Shammai permitted it only for adultery. One of Hillel’s maxims was, “Be a disciple of Aaron, a lover and maker of peace; love men, and attract them to the law.” The next great scribe, Gamaliel I. (Rabban Gamaliel the elder) was St. Paul’s teacher (Ac.22.3). His reputation and influence were immense. “Since Rabban Gamaliel the elder died,” says the Mishna, “there has been no more reverence for the law; and purity and abstinenice died out at the same time.” His moderation and commanding personality are well illustrated in Ac.5.34-40. His son Simon was also a famous scribe. He lived at the time of Nehemiah (Josephus, Ant. xii. iii. 9). After the fall of Jerusalem (70 A.D.), the headquarters of the scribes were transferred to Jamnia (Jabneh), Tiberias and Lydda being subordinate centres. During the 2nd cent. A.D. the traditions of the scribes, previously transmitted only orally, were written down and collected in the Mishna (180-200 A.D.). The Mishna, though unreliable as a historical record, acquired a trustworthy authority for the time of Christ. The later scribal compilations (the Jerusalem Talmud, 4th cent., and the Babylonian Talmud, 5th cent.) contain more legendary matter, and require to be used with greater caution. (ii) Functions. The functions of the scribes were three: (1) to interpret and develop the law; (2) to train students of the law; (3) to act as judges. (1) In strict theory the written law (Torah) was exalted as supreme, and the scribes’ whole duty was to interpret it. This process, called midrash, from dárásh, “to seek, consult,” involved not only the fixing of the meaning of each precept of the Torah, and the explanation of all apparent discrepancies, but also the drawing of all possible inferences from it; and inasmuch as these inferences were often of a very arbitrary kind, the scribes became in fact, if not in intention, legislators. They were thus legally (or, more accurately, not legally) legislated. To prevent a danger of a breach of the letter of the Torah, they “made a fence round the law,” i.e. they forbade all actions which in their opinion could possibly lead to inadvertent transgression. They also legislated, when they declared (as they frequently did) a prevailing custom or tradition to be binding. The highly traditional were numerous, intricate, puerile, and burdensome (Mt.7; Mt.23; cf. Ac.15.10). About fifty of them were supposed to be Mosaic, but the great bulk were admitted to be only dibbër sopherim, “ordinances of scribes.” Yet even these they declared to be as important as, or more important than, the letter of the Torah—“An offence against the sayings of the scribes is worse than one against Scripture”; “The sayings of the elders have more weight than those of the prophets.” Ordinances which the scribes regarded as binding were called kalákha (lit. walk, custom). kalákha embraced (a) the laws interpreted (midrash) by the scribes’ interpretations (midrashhìm) thereof, (b) the scribes’ customs and traditions. Whether a midrash or a tradition was binding was decided by a majority of scribes, and decisions were, as a rule, unalterable. Those scribal interpretations of Scripture which were not binding were called hazgiddhá or 'agháddhá, “narrative,” “story,” from higgidi, “to tell.” haggiddá attached itself mainly to the narrative portions of O.T. The books of Chronicles are a scribal midrash or recension of the earlier books of Kings (2Chr.34-27). In these the haggadic element is kept within moderate and edifying limits. But haggiddá was frequently extravagant and unedifying. The stories of the Creation and of the patriarchs and heroes of the O.T. were often spoiled by puerile and superstitious additions. For examples of haggiddá in the N.T. see Ac.7.22-33; Gal.4.21ff.; 1 Tim.3.10ff.; Heb.11.6ff.; [Tal-]mud, i. (2) In their “houses of teaching” the scribes assembled young men, called “disciples of the wise,” whom they trained in the oral and written law. The teacher sat on a raised platform, and the pupils sat on the ground at
his feet (cf. Ac. 22.3). The teaching was in theory gratuitous, the teacher maintaining himself by some trade, but there is good reason to believe that substantial fees were often exacted. The chief qualification of a pupil was a retentive memory. He was to be "like a well lined with cement, which loses not one drop. The scribe recited the exact words of his own teacher, and his pupils repeated them after him until they knew them by heart. When fully trained, the pupils were solemnly ordained with laying on of hands (šmîkhâ) in the presence of at least three scribes. The Sanhedrin was recruited from the most promising pupils of the scribes. (3) Laymen could be judges, but the professional training of the scribes specially fitted them for the exercise of this office, both in the supreme Sanhedrin at Jerusalem and in those of the local synagogues. Judicial work was unpaid. (ii) Our Lord's attitude towards the scribes, which was unfavourable, may be gathered from Mt. 5.20-23; Mk. 7 and parallels, 12.38; Lk. 11.43, 20.46, 47. In Mt. 13.52, 23.34. He uses the word, in a good sense, of Christian teachers. The Mishna, ed. Surenhusius (contains Lat. trans.); Ederheim, Life and Times of J. the Messiah; Schürer, History of the Jewish People; Taylor, Sayings of the Jewish Fathers; The Jewish Encyclopedia; Weber, Jud. Theologie auf Grund des Talmud.

[C.H.]

Script (yâlîqî), used in 1Sam. 17.40 as a synonym for the bag in which the shepherds of Palestine carried their food or other necessaries. The scribe of the Galilean peasants was of leather, used especially to carry their food on a journey, and slung over their shoulders (Mt. 16.10; Mk. 6.8; Lk. 9.3, 22.35). The English word "scribe" is probably connected with sârâp, sârâf, and was used in like manner for articles of food: it is thus an extremely close equivalent for the Heb., which means "colleague, scribe." The phrase in its modern sense is hardly represented in the earlier books of O.T., and only in late writings do we come to the equivalent phrase, "As it is written" (e.g. 2Chr. 30.5, 15). This is in accordance with what we should expect before the introduction of the Canon, in which k'tîbîlîm (writings) was confined by later Jews to one particular portion (the Hagiographa) of the Canon. But mishâq (reading; cf. Nc. 8.8) became the general collective term, and equivalent to the γραφαί of N.T. usage, which is constantly used with a sense of authority and sacredness (cf., e.g., Mk. 12.24, 14.19; Lk. 24.27, 28; Jn. 13.30, 28; 2Tim. 3.15, 16). Besides many citations of O.T. passages as "scripture," and is applied in N.T. to all the several Jewish divisions of O.T., and in 2Th. 3.16 even already includes the epistles of St. Paul. (1) A religion is, strictly speaking, a practice. In the art, Revelation we have shown that there are two distinct types. Those classed as heathen represent the various notions evolved by generalization from the common experience of nature and of men's own lives, of which, therefore, they are only a reflection. Judaism and Christianity are based upon a revelation of God Himself, given in the phenomenal facts which belong to a personal Presence. The distinctive character which ensues only becomes permanent through the embodiment of those phenomenal facts in a fixed form or record, which thus constitutes a secondary basis for other than the original observers. The "word of God uttered in the ages (Heb. 1.1) is set before us in Scripture. The myth of heathenism are after-thoughts, attempts to make fiction (which is the expression of our notions) do duty for the missing facts (which are the basis whence notions should be derived). The narratives of Scripture are fundamental. Yet, however far we may be carrying it, we are not the discoverers but the heirs also of that teaching, which was learnt and taught as the substantial meaning involved in those facts from the beginning. (2) Holy Scripture is, therefore, mainly composed of three parts; (i) a narrative presentation of the fundamental facts in which the Revelation consists; (ii) some statement of the principle involved; (iii) a narrative of the way in which those facts were developed, partly were led to, an appreciation of those principles. In N.T. the presentation is contained in one well-defined group of events, the salient features of which were almost at once arranged in an authoritative form. It is noteworthy that the matter common to the Synoptists, whether derived from a written or oral tradition, consisted mainly of incidents, mostly of a miraculous character. On the other hand, although no doubt some development of ideas can be traced in St. Paul's epistles, the gradual understanding of the full significance and application of the facts is shown in Acts. O.T., however, there is no one group, but a series, of fundamental facts, not themselves developed or evolved, but graduated according to the development or evolution of ideas which went on concurrently with the events. Even with the admitted facts, it was as well as it is today for people to realize that the Unseen is more than their own abstraction of nature as they see it, or of inner experience as they feel it. It follows, therefore, all three elements are intermingled, though they must not be confused. The results are such as could only have rested on an objective, not an imaginary, authority, and which, therefore, in whatever way they may have been, not in notions to which supposititious facts were fitted. In the long course of the intellectual development of a people, stories may be transferred from the common legendary or mythical stock, or true incidents developed by legend, or the precise historical placing lost; but all this affects rather the appellation than the substance, and it is what is fundamental. The elements which seem incongruous to a mind accustomed to exact criticism are those which a quite valid narrative would attract to itself under the circumstances. No student could understand the popular account of the main facts about the historic Napoleon, but the account would be gravely defective if it did not include a good deal about the Napoleonic legend. We should expect to have the two elements formally distinguished, but it is not really necessary for the purpose. The presence of possible legend
in the history of Moses does not concern us here, for the subject of the Pentateuch is not the revelation of Moses but of God. (3) The word "inspiration" in regard to Scripture must bear the generic meaning it has in all other contexts but it has also a specific meaning. The personal presence of God in Christ, in the miracle, in the sacrament, His voice in Scripture, are given that His presence in every man, in the whole world, in every action, in every true word uttered, may be more than a vague sentiment; they are the very meanings by which abstract belief becomes known. By which, in short, "we may know Him in Whom we have believed." On its own showing, the controversy of verbal and plenary inspiration seems futile. Does any sane critic discuss whether the inspiration of Hamlet was in Shakespeare or in the play? Even in our own efforts to think, observation and reflection prepare men for action, we bolt out, test, and apply ideas; but the latter are not themselves results of any logical process. If original, we can only say, "They came as an inspiration"; and of expression that it is a "gift." These are not separate; for what a man expresses is the idea he had in mind. This must not, however, blind us to the great fact that an inspiration is often curiously limited to the one thing given, so that a man may be ignorant of all else, and even stupidly indifferent to its significance. In any case, his meaning can never be rightly limited to what he would himself recognize as such at the time. This is why the same view of Scytho-Seythian barbarism appears in 2Mac.4.47 and 3Mac.7.5. The Scyths dwelt mostly on the N. of the Black Sea and the Caspian, stretching thence indefinitely into inner Asia, and were regarded by the ancients as very uncivilized.

Scythopolis, that is probably "the city of the Scythians," occurs in A.V. in Jth. 3.10 and 2Mac.12.29 only. The LXX. renders Beth-shean in Judg.1:27 "Baithshan which is Skuthōn-polis"; Josephus (12 Ant. viii. 5, 13 Ant. vi. 1) says the same. This may refer to the invasion recorded by Herodotus (1.103-106), when the Scyths, after their occupation of Media, passed through Palestine on their road to Egypt (c. B.C. 620). Scythopolis was a city of the Decapolis, the only one of the ten which lay W. of Jordan. It became the seat of a Christian bishop, and its name is found in the lists of signatures as late as the Council of Constantinople in a.d. 536. The latest mention of it under the title of Scythopolis is probably that of William of Tyre (xxii. 16 and 26). He mentions it as if it was actually used, explaining that it was formerly Beth-shean.

Sea (Heb. yām, pl. yāmmim; Gen.1.10). "From sea to sea" (Ps.72.3) meant from the Red Sea to the Mediterranean. The Hebrews used also of great lakes with crocodiles (Job 41.32), as the Arab. Bahy (sea) is also used. The O.T. refers often to the sand on the sea shores, to waves and billows, and havens or harbours. [ISLE.]

In Ac.27.41 the meeting of two "seas" refers to cross currents. [MELITA.] The Hebrews called the West the "sea" quarter, which sometimes creates a wrong impression when a W. boundary parallel to the Mediterranean, not one reaching to the sea, is described. A.V. renders the word "west" in 56 passages of O.T. Thus W. Palestine was on the seaward side of Jordan (Jos.5.7) and the ambush on the seaward side of Ai (8.12). It could be so rendered in Jos.16.3 ("at the west"), 16.6 ("west of Michmethah"), 16.8 ("at the west"), 18.14 (referring to N.W. corner of the tribe, at Beth-horon), 19.11 ("towards the west"), when in each case A.V. reads "sea." The Great Sea (Jos.15.4) is S. of the Philistines (Ex.23.31). The Mediterranean; the Salt Sea (Num.34.12) is the Dead Sea;
the name is also applied to the fresh waters of the lake of CHINNERETH (Num.33.11; Jos.13.27): it even applies to the great reservoir in the temple (1K.7.23; 2Chr.4.15); but in Job "Am I a sea-fowl?" (7.12) is perhaps better rendered "Am I a mule, or a wild beast?"

[Sea, Former and Hinder (Zech.14.8; R.V. eastern and western), the Salt Sea and the Mediterranean respectively. Cf. "utmost sea." (J.2.20; see NEBO), and GREAT SEA.]

[Sea, Great. [GREAT SEA]"

[Sea, Hinder. [SEA, FORMER.]

[Sea, Molten. To replace the Laver of the tabernacle, Solomon caused another to be cast, which from its size was called a sea. It was made partly or wholly of the "brass" (properly, copper) which had been captured by David from Tibhath and Chun, cities of Hadadezer king of Zobah" (1K.7.23-26; 1Chr.18.8). Its dimensions were: height, 5 cubits; diameter, 10 cubits; circumference, 30 cubits; thickness, 1 handbreadth; and it is said to have been capable of containing 2,000 (or, according to 2Chr.4.5, 3,000) baths. Below the brim there was a double row of "knobs," 10 (i.e. 5 + 5) in each cubit. These were probably a running border or double fillet of tendrils, and fruits, said to be gourds, of an oval shape. The brim itself, or lip, was wrought like the brim of a cup, with flowers of lilies, i.e. curved outwards like a lily or lotus flower. It stood on twelve oxen looking upwards, three towards each quarter of the heavens. It was mutilated by Ahaz, who replaced the oxen by a stone base, and was finally broken up by the Assyrians (2K.18.14; 25.13). Josephus says that its form was hemispherical, and that it held 3,000 baths; and he elsewhere tells us that the bath was equal to 72 Attic eisitai, or 1 metryphos. To reconcile the contents of the laver with its dimensions, the Jewish writers supposed that it had a square hollow base for 3 cubits of its height, and 2 cubits of the circular form above. A far more probable suggestion is that of Thearius, in which Keil agrees, that it was of a bulging form below, but contracted at the mouth to the dimensions named in 1K.7.23.

[Sea monsters (1Am.4.3). [WHALE.]

[Sea of the Philistines (Ex.23.31). [GREAT SEA.]

[Seal. In the East no document is regarded as authentic without a seal, and the use of some method of sealing is of remote antiquity. Among those used in Egypt at a very early period were engraved stones, pierced through their length and hung by a string or chain from the arm or neck, or set in rings for the finger. The most ancient form was the scarabaeus, formed of precious or common stone, or even of blue pottery or porcelain, on the flat side of which the inscription or device was engraved. The use of clay in sealing is noticed in Job 38.14, and the signet-ring in Gen.38.18. The Babylonians used cylinders of hard stone for sealing a clay tablet, rolling them over it before it was baked. One of the Amarna letters (Brit. Mus. 58) is so sealed. Similar cylinders (about an inch, or less, in length) are found in Phoenicia, and in the earliest strata at Lachish, Gezer, etc. The Canaanites thus evidently used them. The Gezer examples include a tablet of 649 B.C. and another representing the symbols of 12 gods. The cylinder was inscribed in cuneiform, or in Phoenician alphabetic letters, with the owner's name, to which is commonly added a mythological design, or the figure of the god whose name the "writer" (dub-sar or "tablet-master") bore. [WRITING; ORNAMENTS, PERSONAL.]

[Seal. [LAYING ON OF HANDS.]

[Seal. [AGRICULTURE; RAIN; YEAR.]

[Seal. The words signifying seats in Heb. do not throw much light upon the subject. The poorer people of the Jews were accustomed to squat upon the floor, whilst the richer classes used a divan or couch. An honoured guest was provided with a "stool" (2K.4.10), the word signifying literally a throne, or chair of state. Chairs are noticed, as presented by kings, in the Amarna tablets of 14th cent. B.C., and actual examples of early date are found in Egypt. They also appear on Hititic and Assyrian bas-reliefs. Sennacherib (702 B.C.) mentions chairs sent to him by Hezekiah. A teacher or Rabbi used a seat, whilst his pupils stood or crouched in front of him. Hence the expression is used to express the authority or office of a teacher, or judge; see Mt.23.2,3; Job 29.7; Rev.2.13, etc. [S. N. S.]

[Seba] (Heb. סבנ), a son of Cush (Gen.10.7; 1 Chr.1.15), and thus of non-Semitic race. The kings of Seba and Sueda offer gifts to Solomon (1K.10.10); Isaiah also connects Seba with Cush (43.3), and with Egypt. Josephus places Saba near Meroe (2Ant. x. 2), in Upper Egypt. [BRIT. MUS.]"
CLIFFS AT PETRA, SHOWING ROCK-TOMBS.
Egypt: perhaps, however, referring to the Sheba Arabs who, before his time, had crossed from Yemen into Abyssinia. The ethnic form Sabes occurs in Is. 45:14, also connected with Egypt and Cush; and they are described as tall men (Sheba), which still applies to the Abyssinians. Ezk.23:42 speaks of them as coming from the desert, with crowns and bracelets as ornaments. In Job 1:15 the A.V. renders Sheba by Sabes; but the words Sheba and Seba have no connexion. The latter refers to a race—probably Akkadian—entering Arabia, and passing on to Africa. It is remarkable that the word has no appropriate Semitic derivation; but the Akkadian sib (rendered siblot) asynt means a “shepherd.” [C.R.C.]

Seba. [Months.]

Secacah, one of the six cities of Judah which were situated in the midst bar (wilder- ness)—that is, the tract bordering on the Dead Sea (Jos.15:61). Its position is not known.

Secheni as.—1. Shechaniah, 2 (Esd.8.29; cf. Ezr.8.3).—2. Shechaniah, 3 (Esd.8.31; cf. 2CH.20.21).

Sechuth (2Sam.19:32), a place with a great well, between Ramah and the Nahoroth near Ramah, which Saul passed by. There is a ruin called Swawilekh just s. of Beeroth; but this is perhaps too far N. [C.R.C.]

Second coming of Christ. [Coming, Second.]

Secundus was a Thessalonian who went with St. Paul from Corinth into Asia, on his return from his third missionary tour (Ac.20.4).

Sedecia as.—1. An ancestor of Baruch (Ba.1:1).—2. Zedekiah, king of Judah (18).

Seed, Mingled (Deut.22:9). [Agriculture; Titles.]

Seedtime. [Agriculture; Year.]

See. [Prophecy; Divination.]

Segub.—1. The youngest son of Hiel the Bethelite who rebuilt Jericho (1K.16:34).—2. Son of Hezron and father of Jair (1Chr.2.21).

Seir the Horite, one of the early inhabitants of the land of Edom (Gen.36.20; 1Chr.1.38). He may have given his name to the country, or, as its name has a natural meaning (see nect art.), taken from his. The “children of Seir” (2Chr.25.11,14) are the inhabitants of the land (cf. 20:23) rather than the descendants of the man.

Seir’, Mount (the rugged mountain).—1. The rugged ridge near Kirjath-jearim (Jos.15.10).—2. The mountain region of Edom. In Deut.1.44, the words “in Seir” refer to some rough pass near Hormah. In the reign of Hezekiah five hundred men of Simeon invaded mount Seir (1Chr.4.42). It is noticed as a mountain, or as a land, in Gen.14.6,32.3, 33.14,16,36.8,30; Num.24.18; Deut.1.21.21-29, 32.22; Jos.11.17.12,24.4; Judg.5.30; 2Chr.10,22.23,25.11,14; Is.51.17; Ezk.25.8,35.2,3.7; and in the last-quoted verse it forms a part of “all Edom.” [C.R.C.]

Seirath (R.V. Seirath), the place to which Ehud fled after his murder of Eglon (Judg.3.26,27). It was in “mount Ephraim,” but the site is unknown. The LXX. (Var. MS.) reads Setaroth. [C.R.C.]

Sela or Selah (2K.14.7; Is.16.1) rendered “the rock” in A.V., in Judg.1:36, 2Chr.25.12 Ob.3; R.V. Sela or Petra.). The LXX. twice renders it Petra (Ezr.3.1). It was taken by Amaziah, and called Jechoniah. In the end of the 4th cent. B.C. it appears as the headquarters of the Nabateans, who successfully resisted the attacks of Antigonus. About 70 B.C. Petra appears as the residence of the Arab prince named Aretas (Hārith). It lingered on to submission to the Roman empire. The city Petra lay, though at a high level, in a hollow shut in by mountain-cliffs, and approached only by a narrow ravine through which, and across the city’s site, the stream flows. The rock tombs are of the Greco-Roman age.

Sela’-hammahlekoth (tSam.23.28), “the cliff of slippings,” whether meaning slip- pings away (or escapes), or otherwise slippery places. The first is the explanation in O.T., but there may be a play on the original name. The cliff was in the desert of Maon (ver.25), and David slipped away thence to escape Saul. The great valley, with its slopes, which runs E. from Maon into the Jeshimon, is called Wady el Malalqah (valley of the smooth stone), perhaps a corruption (by loss of the guttural) of the Heb. name. [C.R.C.]

Sele’ed, the childless son of Nadab, a descendant of Jerahmeel (1 Chr.2.30).

Seleuc’us IV. [Philopator] succeeded his father, Antiochus the Great, as king of Syria, in 187 B.C. He is called “king of Asia” (2Mac. 3.3); but the title was claimed by the Seleucidae even when they had lost their footing in Asia Minor (1Mac.8.6.11.13,13; 9.13.32). His reign was undistinguished. He inherited from his father the responsibility for paying the annual tribute to Rome of 1,000 talents, imposed for 12 years by the victors at Magnesia in 190 B.C. To Rome also he was forced to send as a hostage his young son, afterwards Demetrius I. (Soter). On one occasion, induced by a temple official named Simon (Simon, 3), he attempted to carry away the treasures of the temple of Ephesus. When Ephesus was stopped, it was said, supernaturally (2Mac.3.4-28). Apart from this, he continued his father’s conciliatory policy towards the Jews, bearing much of the expense of the temple services (3.2,3,5). In 176 B.C. he was
“destroyed, neither in anger nor in battle” (Dan.11.20), but poisoned by Heliodorus. Sem (Lus.3.30) = the patriarch Simeh. Semachiah, son of Shemaiah, 9 (1Chr. 26). Sem. —Sem el.— (1 Esd.9.33) = SHIMEI, 14.—2. (Est. Apoc.11.2) = SHIMEI, 16.—3. Father of Mattathias in the genealogy of Jesus Christ (Lus.3.26).

Séméll’us (1 Esd.2.16, 17, 25, 30) = SHIMEI, 13.

**Semitic Languages**

References to language are not numerous in O.T., because the Hebrews lived surrounded by nations who spoke tongues closely akin to their own. In Genesis the nations are divided into three families by their “tongues” (Gen.10.5, 20, 31), answering to the three families of speech commonly called Arayan, Turanian, and Semitic. Somewhat later, in speaking of Babylonia (11.1, 6), we are told that “the whole land was of one language,” and this we now know to have been the Akkadian (the parent of pure Turkish), an agglutinative Turanian tongue, which alone appears on the earliest known tablets. The Aramaic speech of Laban (31.42) differed from the Heb. of Jacob; and this passage would imply that the differences had arisen in three generations, which cannot be said to be impossible: for—among illettrate peoples like the Bechman in S. Africa—yet greater variations in the speech of tribes of one stock, are well known to have arisen within a century, when they were separated from each other. The Hebrews were shepherds, and very probably illettrate in the time of the patriarchs, although the Canaanites were not [Writing]; for there is no allusion to Hebrews writing till Moses, and the language of Genesis, at earliest, cannot be supposed older than his time. On the other hand the litigary languages—such as the Babylonian, and the Heb. of the O.T.—changed very slowly indeed, being preserved by their sacred writings. The only allusion to an “interpreter” (Gen.42.23) refers to the Egyptian. Any knowledge of Semitic language, and Joseph, Semitic speech was used in Egypt—the Hyksos being Asiatics. Thus Jacob and Joseph may have been able to speak direct to the Pharaoh, but Joseph’s brethren supposed him to be a native Egyptian who did not understand them. In Deut.38–49 the invasion of Palestine by a people of unknown language is predicted, which may refer to the Akkadian, or to the later Mede, which began to be known, as that of tribes at the “end of the earth,” even a century before Isaiah, who alludes to foreigners of “a barbarous tongue without meaning.” i.e. to Hebrews (Is.33.19). He also predicts (19, 18) a time when the language of Canaan—or of the Palestine plains—will be spoken in Egypt, which came about with the Assyrian conquest, and with the spread of Phoenician trade. In the time of the judges the Heb. dialects E. and W. of Jordan already differed (Judg.12.6), just as the Arab dialects of these regions now did. In Hezekiah’s time the educated Hebrews understood the “Aramean” (2 K.18.26), by which the Assyrian language appears to be intended. The Aramaic proper was known to Jeremiah, after Syriac tribes had been brought to Samaria (Je.10.11; see note in R.V. marg.). In Nehemiah’s time the “speech of Ashdod,” which was mixed up with Heb. (Ne.13.24), must have been a Semitic dialect; and the Philistines are called Aram (and, in monuments) to have spoken a Semitic tongue in 1500 n.c. and afterwards. In N.T. the linguistic evidence shows that Aram. was the language of the Jews in the time of our Lord, Heb. being a dead tongue and a sacred language. Most of the Semitic words mentioned in Hebrews are very clearly Aram.; and, at Jerusalem in this age, we find the tomb of the Beni Hezir [Kedron] inscribed in Heb., whereas as another semi-Gk. tomb, N. of the city, bears a short Aram. text. Aram was then the prevailing Semitic tongue—from Persia to Asia Minor, and from Armenia to Egypt, among traders and rulers alike. The N.T. words include amin ("truly" = "amen"); mammona ("wealth," Mt.6.24); sabakkhtah-nei ("thwarted me," 27:46; from an Aram. rendering of the Heb., Ps.22.1); talitha ("lamb," or "child," Mk.5:41), where the Semitic MS. shows ignorance of Semitic grammar; and—as in the passage (6:34), which seems to mean "be whole," rather than "be opened": rabbottin (10.51, cf. R.V.: Jn.20.16), "my Lord"; abba, "father" (Mk.14:36; Ro.8:15; Gal.4:6); mana, "measure" (Lus.19.13); maran-atha, "come, O Lord" (1 Cor.16:22); luma, "twice" (Jn.11:16); and (for Hebrews it seems) that these words prove that the authors of the four gospels and of Acts, and St. Paul also, understood Aram. The Semitic languages form a distinct family of speech in W. Asia, distinguished from others, and connected among themselves, by laws of syntax, and structure, no less than by vocabulary. The only language which agrees with them in its grammatical structure is the ancient Egyptian (see Renouf, Egyptian Grammar, 1875); and this is in a much more primitive stage. The Egyptians seem to have been a very early offshoot of an Asiatic stock, and were followed by Egypt peoples of oriental, and Semitic peoples, even before the Hebrews. We are told (10:22) that the original family of Shem spread over Elam, Assyria, Jud. (probably Luden, an Egyptian name for Syria), and Aram. Some of the oldest known inscriptions (before 2100 n.c.), on the borders of Elam, are Semitic, and the other regions all contain early evidence of the presence of Semitic peoples. The testimony of language is very valuable in this question, and the words common to all branches of Semitic speech show that the common home could not have been, as some suppose, in Arabia (see Von Krenner, Semitische Culturtendenzen, 1875; and Hommel, Die Namen der Säugentiere, 1879). Thus the first Semitic tribes knew not only mountains but rivers: they named the vine, the fig, the almond, and olive; and cultivated wheat and barley: they possibly knew the walnut, and were acquainted not only with the bear, but with the bear, and they appear to have named the wild ass and the pelican. On the other hand, it appears very doubtful if they knew the ostrich or the palm. Such indications point to the N., and not to the S., and agree with O.T. state-
The Semitic languages are as closely connected as the Aryan; and all present not only a considerable common vocabulary, but the same triliteral roots, which appear to have been formed by coupling two monosyllabic roots together. They all form words in the same way from these roots, apply gender to the verb, have a dual for verb and noun, besides singular and plural, have but two genders, use prepositions, and have suffixed pronouns. The numerals are the same, and so are the names of the primary colours, indicating a somewhat advanced civilization as common to all the Semitic stocks. These languages may be regarded as including two groups, one the Eastern—each subdivided into two classes—Northern and Southern. Of these the Eastern is known much earlier than the Western, from monuments. The classification may be thus detailed. (1) Eastern: (a) Babylonian and Assyrian; (b) Arabic, Ghezeh, Ethiopic, Aramaic; (2) Babylonian, including especially the Semitic dialects of the Moabite, late Phoenician, and Samaritan. These may be considered in turn, before proceeding to the special question of Biblical Hebrew.—Babylonian. We have Babylonian dated texts as early as 2,200 b.c., showing slight differences only from the language of 600 b.c. (which was the Babylonian of the exile period). The language is not fully known till c. 600 b.c., when it distinguished the characteristic Semitic sounds more sharply, in writing, than the early Babylonian, which sometimes confuses the gutturals. The texts, however, prove that all the 22 sounds of the Phoenician alphabet existed long before that alphabet was used. [Writing.] The Babylonians pronounced נ as /n/ like the Arabs. The Assyrians, in later times, pronounced נ as /f/ (proved by a Greco-Assyrian bilingual text, in which נ stands always for this letter); but the Babylonians probably had a /p/ sound (like the Akkadians) which does not exist in Arabic. The language, even in the earlier times, seems to have lost the characteristic Semitic development. It had not only three cases for the noun (preserved in Arabic), but 12 voices, 5 moods, and 5 tenses for the verb; whereas Semitic speech originally seems to have had no cases, only 6 voices, 2 moods, and 2 tenses. The Babylonians borrowed the art of writing from the Akkadians, whose civilization was at least as old as that of Egypt; and they also used Akkadian culture terms, and official titles, and names for gods. Thus, for instance, tar-tān(“general”) was the Akkadian tar-tān (“great chief”); ēkātu (“temple”) the Akkadian ē-gal (“great house”); and the names of Istar, Dagon, Tammanuz, and Nergal were Akkadian, while the eaglehead being a figure found, like that of Dagon, in Assyria is no doubt the Semitic nisr, “eagle,” and the Babylonian uth, “man,” the Akkadian uk. The Babylonians used a suffixed demonstrative ma (“this”), and had no definite article; and this suffix is also used as “m” in the Sabean, instead of the article, and is attached to personal names (just as in Babylonian), whence came the “nominative” of the Heb., and the Arab. tāwīn, in a dialect where m took the place of “m. The main difference between Babylonian and later Assyrian seems to be that the latter is more purely Semitic, in consequence of the decay of the Akkadian population. In the time of Hammurabi, chronicles and historic texts occur in both Akkadian and Semitic Babylonian; but after c. 1,400 b.c. the former ceased to be the prevailing speech of civilized regions.—Arabic. This name should be confined to the speech of Joktan [Arabia], and does not include the Nabathean of the N.W. We are unable to trace it earlier than c. 250 b.c., when it appears on the Sabeian texts of S. Arabia. The dialect of the E. (according to Lenormant) was nearer in its sounds to the Babylonian (as for instance in having a šaphēl instead of an aphêl voice for the verb) than was that of the W., which was nearer the Aram.; indicating the colonization of Arabia by two streams along its two coasts. The distinctive sounds of the E. and W. Semitic families of speech, which constitute a Semitic “Grimm’s Law” for language, were East Š, N, Š (final), Š (initial), W, N (final). The Semitic languages, which are spoken in Arabia, however, even in the Sabean texts, distinguishes (by new letters) seven intermediate sounds not found in more ancient speech (dh, th, ḫ, ḡ, ḏ, ẓ, f), while on the other hand it has no p sound at all. The grammatical structure is much less advanced than that of the Babylonian. The language, however, has two tenses, and seems, from the inscriptions, to have had few voices, though modern Arab. has eight and sometimes ten. The noun had probably three cases, as at present, and the suffixed מ and ה were ancient (as above explained), while the Sabean texts show a prefixed ḫ, to form the genitive, like the ꟏ of the Aram. A Sabean text gives the date 264 b.c., and shows the šaphēl voice for the verb, also found at Mā‘ān. These are the leading feautures of the Sabean, and it is not necessary to consider the language of the Ghezeh, or “emigrants,” at Axum in Abyssinia (4th to 6th cent. A.D.), the Ethiopic of Christian literature, or the Aramaic, which becomes full of African words. Aramaic. This language is known as early as 800 b.c. in Syria; and, in the Persian age, it had a diffusion as wide as that of Arab. after the Moslem conquest of W. Asia. It appears to be perhaps the most archaic of Semitic languages, its forms being older than those of O.E. and Heb. Thus “Aramaisms” in the Bible (when not due to the errors of Massorete scribes) are marks of ancient dialect rather than signs of late date. The oldest known Aram.—as found in inscriptions of Samala [Syria] c. 800 and 750 b.c.—is nearer to Heb. than is the later Aram. of Daniel and Ezra. The main feature is the cancellation of curs instead of ꟏, and the relative ꟏ instead of ꟏. These inscriptions give some 200 words, including ꟏ “and,” ꟏ “the,” ꟏ “son,” which are of importance for Bible study. The tephēl voice, unknown in Heb., is found at Samala, as well as on the Moabite Stone, and in Babylonian, and later Aram. The Aram., as known to Jeremiah (10.11), while it includes the word ꟏ and the masculine plural ꟏, has already the ꟏ (instead of ꟏) which prevailed later; but Jeremiah wrote two centuries after the oldest Samala text was engraved. The Aram. language had spread
to Assyria before 850 B.C., being no doubt used by traders from Syria, for whose benefit dockets, in their own language and alphabetic characters, were added to official documents in cuneiform. The oldest instance is the lion weight from Nineveh, which bears in cuneiform the text: "Palace of Assur-nazir-pal, the great king, king of Assyria; one mana of the king," and below this, in Phoenician characters, the words mana-mašeck (without the definite article). In a later example (probably c. 700 B.C.) the word נבג for "land" again occurs. The dockets continue in use, on commercial tablets, down to at least 425 B.C.; so that a Syrian population seems gradually to have established itself in Babylonia. The Aram., was a much less highly developed language than the Babylonian, with which, however, it was very intimately connected; for the exact explanation of Babylonian and Assyrian words may often be better traced in Aram., than in either Heb. or Arab. The language has two tenses of the verb, only six regular voices, with occasional ḫpbēl and ḫtaxaphal voices (as in Babylonian) in addition. It used the prefixed ʾ for the genitive, like the Sabean; but, instead of three cases, it used a final ʾ (the so-called "emphatic ḫlep") and also (like Arab.) a prefixed ʾ for nouns as well, but for Aram., uses for the masculine final plural like Arab.; but, while it had an ḫlep instead of a ḫaphel voice, it also prefixed ʾ to both nouns and verbs—which is explained by the Babylonian prefixed ʾa. The later history of the language is traceable on the coins of satchars in Asia Minor, and in Aram., papryi from Egypt. Gradually it divided into two dialects: that of the W., whence came the Palmyrene of the 2nd cent., A.D., and the Syr. of the 4th and 5th cents., A.D., still spoken in four villages of the Anti-Lebanon; and that of the E., represented by the Aram., passages in Ex. 4:8, 6:15, 7:12-26, and the Aram., chapters in Dan. 2:7-7:28. This dialect, which appears in the Talmud after 300 A.D., used to be called "Chaldee"—an unfortunate term, since it was not the language of Chaldea, but of foreign settlers E. of the Euphrates, and because the "Chaldeans" are never mentioned in O.T., the LXX. having so rendered the Heb. words for "conquerors." The Aram., of Daniel is remarkable for the admixture of foreign words of various origin. Thus while סִמְאָנָה (Pers. kshattapad, "clapper") and perhaps סִמָּאָה (Pers. dîlbar, "law bearer") are Persian (Dan. 3:2), the titles לֹֽאִדּוּר (Bab. šakûru, "resident") and לֹֽאִדּוֹ (Bab. šadîru, "chief," from the Akkadian pâšû), in the same passage, are Babylonian terms of very early occurrence. There are other terms in the Aram. of Daniel for which a Persian origin has been mainly sought, but which are easily explained as of Akkadian derivation (as for instance סִיְנָאָה; and even the supposed Gk. names for four musical instruments (Dan. 3:5) have no Gk. etymology of a satisfactory nature, one of these (Συνδόμος) "sackbut" in A.V.) being stated by Strabo to be a word of "barbarian" origin. The Gks.—as is well known borrowed many culture words from the Aram., and even from the Akkadian. Finally, the Nabāṭeans is an Aram. dialect, known from the texts of M'ain and Timna (Doughty), perhaps as early as 500 B.C., and from the Sinitic texts, which go down to the 4th cent. A.D. The E. Aram. also survives in the sacred language of the Mandaite Gnostics on the Euphrates, and in other dialects of Mesoopotamia and Persia. (See Aram., Nabāṭeans.) Stone gives us this language as it was c. 900 B.C. The monument includes 100 distinct words, besides personal and town names. In vocabulary it closely resembles Heb., but it is a distinct dialect in other respects. Thus the masc. plural is ʾ, as in Aram., not ב, as in Heb. The Moabite verb has an ḫphael voice, as in Assyrian, etc., not found in Heb., and the root נבג is used in the Aram. sense ("to follow"), which it never has in Heb. We thus see, even as early as the time of Ahab, Aram. peculiarities in a language belonging to the Heb. group. It is therefore not remarkable that they should occur early also in Heb. itself. The use of ה for the feminine singular, which is not found in the construction of the construct, in Moabite, found at Samala as well, and cannot be regarded as a mark of late date in Heb. Our ideas about Aram. dialects, which were derived from a study of the Talmudic language of 300 A.D., have indeed been completely reversed by the discovery of the Samal and Diabon inscriptions; and (as Rawlinson pointed out long before) Aram., instead of being a later language than Heb., is perhaps the most archaic member of the Semitic family. The definite article, which never occurs in Babylonian, is also not found at Samala. It is sometimes used in Moabite and Phoenician, but its omission (in Heb. of Gen. 21.28, 2.3) cannot now be regarded as a sign of late date in the language (Wellhausen, Hist. Isr. p. 380).—Phoenician. By Phoenician is usually meant the Semitic dialect in Phoenician texts of between 500 and 100 B.C. Whether from original identity of race, or because—as is frequently supposed—of Heb. influence, or for no certain reason, this dialect is hardly more than a local variety of Heb. It uses, for instance, the word בן for "son," and not the Aram. bar found at Samala; and, out of a list of 74 common words, 18 are found in Heb. but not in Aram. The masculine plural is ב, as in Heb., and the definite article is used; but on the other hand the final ה appears (when not in the construct case) for the Heb. ה, thus resembling the more archaic Aram. form—the Babylonian ת as a nonnominal singular.—Samaritan. This also may be regarded as no more than a Heb. dialect of the age after the Captivity. It is so called from the Heb. place-name of Heber. Quite early, perhaps to early Heb. outside O.T., is derived from the Sibonite inscription (Sillothai), c. 728 B.C. From it we learn that the language of Isaiah was that used at Jerusalem in the time of Hezekiah. The Heb. and the later Aram. seem to have diverged very slowly from the old mother language. The Canaanites, in 15th cent. B.C., wrote—and probably spoke—Babylonian; and it is very doubtful if even the few supposed "Canaanite peculiarities" in the Aramaic letters really exist. This tongue was more highly developed than the Heb., which
SEMAH

803

retained its primitive character, though it seems in time to have dropped its aorist tense (as Delitzsch has seen), and either lost, or never developed, the noun cases. Heb. also has less primitive terminations than the older and more emphatic Aramaic. In like manner, modern English has lost the Anglo-Saxon inflexions, and modern Persian those of the language of Darius. Such simplification generally occurs when a race is long in contact with another speaking a language with a different grammatical development; and it is likely that this has been influenced by lost contact with the less-developed Egyptian, and by isolation in the desert. The Heb. of the age following the Captivity presents marked differences from that of the older books (see Driver, *Introduct. to Lit. of O.T.*, pp. 471-476, 502-507). The Pentateuch presents two remarkable peculiarities which Eichhorn regarded as archaic, namely נַשֶּה, "she," which occurs throughout (the later נַשְׂנָה being used only 11 or 12 times), and יִשְׂנָה, "girl" (textual יִשְׂנָה), which occurs 20 times, the later feminine form (נַשְׂנָה) being only found once (Deut.22:19). The Heb. of Genesis is supposed to contain Egyptian words in connexion with Egypt; but, though it is certain in some cases that the words were used in Egypt, it is not certain that they are Egyptian. In, and after, the Hyksos period the Egyptians borrowed a large number of Semitic words. Before that period per-a meant (according to Griffith) only a "great house," and after it (under 18th dynasty) it stood for Pharaoh, which Renouf derives from the Semitic עַרְבָּד (as does Gesenius), with the meaning to "rule" or "tyrannize." The Heb. עַרְבָּד is the Egyptian paibh, for "ax;" but, Heb. עַרְבָּד, "river," though found in the Egyptian yor, is a Semitic word (as Delitzsch notes), occurring as yar in Assyrian. The word עַרְבָּד, "rush," is very likely the Egyptian and Coptic akhi; but, גַּרְבָּד, "corn," is used in Arab., and cannot have been borrowed from the Egyptian per. The Egyptian measure ḫanu is compared with the Heb. hin; but the latter was 12 times as large as the Egyptian unit. Other words, like the title עַרְבָּד (Assyr. aharakhu), are not Egyptian; and this especially applies to עַרְבָּד (a "magician"), for which no Egyptian parallel is found. This word is used in Daniel (1:20,2:2), and in the Pentateuch (Ex.13:11, 20:3, 31:1), and seems to be the Akkadian har-tum, or "omen decider." The Heb. may have taken עַרְבָּד from the Babylonian eku, "temple"; but they clearly did not take עַרְבָּד ("abn) from the Assyrian ubod, "charm," but directly from the Akkadian ebu, "indulgence," etc.; A.V. "consultor with familiar spirits" was the "master of the charm;" and the word was taken from the non-Semitic Canaanites, or from the Akkadians. The word שֶׁבֶד, for a queen (Ne.2:6; Ps.45:9), does not seem to be Semitic. It may be the Akkadian sha-pal, or "great bride." These ancient words disappear as a rule in later Heb., though some of them are found in the language of the Heb. chapters of Daniel. Thus the עַרְבָּד (the Melzar, Dan. 1:11,16), or the "steward" is apparently the Akkadian mal-sar, or "house-keeper." In the Pentateuch there are no Persian words, such as appear in the later Heb. after the Captivity. In Ezra there are four certain instances of pure Persian terms: ăxahdarpān (Akkaem. Pers. khshatrapavān), "satrap"; ḫīghām, "order"; ġdāḥbār, "treasurer"; and dar-kōmōn (the Dacian coin). Others occur in Esther; and, in the Heb. of Daniel, parthēmion (Akkaem. frałama), "noble," i.e. ġdābātā (Akkaem. apṣadaqā), "palace"; ḫīghām, "order"; and ġdāḥbār, "treasurer," may be regarded as certainly Persian. The Dacian is also noticed in Nehemiah (7:70-72). If we turn to the first chapter of Genesis, and to other chapters in the same book which have been ascribed to a late author (P), we find a vocabulary of 250 words, most of which contain one or other of these less than 80 have already been found in the Aram., Moabite, and Phoenician of the monuments, as in use between 800 and 500 B.C. There are no Gk. or Lat. words in O.T. Heb.; but in the Mishna (150 A.D.) we find clear evidence of Roman rule and of Gk. civilization. But if there are Persian terms—gesture, "treasurer"; dar-kōmōn ("the Dacian") and ġāngara, "servant"—as against 21 Lat.; and 44 Gk. terms, referring to trade and to foreign products. Thus, while the Pentateuch presents archaisms, and borrows from Egyptian, Babylonian, and Akkadian, the historic books notice (Tartan, Rabshakeh, and Rab-shakeh) in later times. The books in which the later Heb. is found (after the Captivity) are the first to show Persian influence, and the Gk. conquest gave rise to the borrowing of Gk. words after the close of O.T. Such features of the development of Bible Heb. are of the highest value for the study of the Semitic races. [Bibliography. The study of Heb. in Europe received a great impetus at the Reformation. The Lexicon Hebrewum of Reuchlin (Capnio) appeared in 1512, and the early comparative grammar of De Dieu (Grammatica Linguarum Orientalium) in 1628, while in 1536, the elder Erasmus of Rotterdam published a grammar of Persian. In 1570, the first Oxford professor of Hebrew, John Leland, published a Grammar of Hebrew, in which he gave the first attempt at a critical and exhaustive study of Jewish antiquities. The Mishnaic Heb. can be studied in Surenhusse's Mischna (3 vols., fol. 1608); the Akkadian in F. Lenormant's *Études Acadiennes* (5 vols. 1873-1879). The earliest Assyrian Dict. is that of Norris in 1596. The grammar may be found in Sayce's *Assyr. Gram.* (1887), or in Menant's Manuel de la Langue Assyrienne (1886). The vocabulary is best studied in Strassmaier's *Assyr. Wörterbuch* (1886); the Aram. of Samala in works already quoted. [SYRIA.] The Sabean is elucidated by Capt. Prideaux's "Sketch of Sabean Grammar" (Trans. Bib. Arch. Soc. v. pp. 177 seq.), and the later Ethiopic by Dalman's *Gram. Ethiop.* (for Semen.) 

Senaah. The "children of Senaah" are
Senach (born), the name of one of the two isolated rocks which stood in the "passage of Michmash" (1Sa.14.4). It was the southern one of the two (ver. 5). [Boezel.]

Senach (born) (Ac.10.5), Eth, 27.5, A V and R.V. Dent.3.9, Can.4.3. [Boezel.]

It was the Amorite name for the range of Hermon, the Sidonian Siron; Abulafia says that the part of Anti-Lebanon N. of Damascus was in his day (14th cent. A.D.) called Saurir, and Saurir is noticed in an Assyrian text (842 B.C.) as a mountain near Damascus. [C.R.C.]

Senacherib was the name of the son and successor of Sargon, king of Assyria. His name in the original is read as Sin-ah-er-va—i.e. "Sin [or, the Moon] increases brothers." We know little or nothing of Senacherib during his father's lifetime. From the meaning of his name, and from a circumstance related by Polyhistor, we may gather that he was not the eldest son, but the heir to the crown till the year before his father's death. Senacherib mounted the throne 705 B.C. His first efforts were directed to crushing the revolt of Babylonia, which he invaded with a large army. Merodach-baladan ventured on a battle, but was defeated and driven before the Assyrians. After this the king returned to Nineveh, which was still dependent on Assyria, took Libnah and Lachish on the Egyptian frontier, and, having probably concluded a convention with his chief enemy, finally marched against Hezekiah, king of Judah. It was at this time that "Senacherib came up against all the fenced cities of Judah, and took them" (2K.18.13). There can be no doubt that the record which he has left of his campaign against Hiszapyn is involved (according to Assyrian records) in the campaign of 701 B.C., in which and the deportation of over 200,000 persons, is the earlier part of the war with Hezekiah so briefly referred to in 2K.18.13-16. In the same year, or (less probably) in the next, and in spite of Hezekiah's attempt to avert his attack by valuable presents, he sent from Lachish Rab-Shakeh and other prominent officers to receive Hezekiah's submission, and on their return (without accomplishing their errand) wrote him a threatening letter (2K.19.14). Tirhakah, king of Ethiopia, was hastening with the Egyptians, when an event occurred which dashed both Egypt and Judah from their danger. In one night the Assyrians lost, either by a pestilence or by some more awful manifestation of divine power, 185,000 men. The camp immediately broke up—the king fled. Senacherib reached his capital in safety, and was not detoured, by the terrible disaster which had befallen his arms, from engaging in one more fruitless effort to have more carefully avoided Palestine. In his fifth year he led an expedition into Armenia and Media; after which, from his sixth to his eighth year, he was engaged in wars with Susiana and Babylonia. From this point his annals fail us until his death, which (according to the widely accepted view) took place on the 20th of Tebet, 682 B.C. It is impossible to reconcile these dates exactly (but see Chronology for emendations and an approximation) with the chronology of Hezekiah's reign, according to the numbers of the present Heb. text. Senacherib was one of the most magnificent of the Assyrian kings, a statement to have been the first which fixed the seat of government permanently at Nineveh, which he carefully repaired and adorned with splendid buildings. His chief works are the grand palace at Kouyunjik, and the great wall of Nineveh, which had a circumference of 8 miles. He also erected monuments in distant countries. Of the death of Senacherib Scripture briefly notes that "as he was worshiping in the house of Nisroch his god, Adrammelech and Sharezer his sons smote him with the sword, and escaped into the land of Armenia" (2K.19.37; Ls.37.38). The non-Biblical authorities, including the Babylonian Chronicle, mention Adrammelech and Sharezer as having attacked Nineveh, and being themselves killed. It is possible that the estimate which has fixed the number of his men at 185,000 is exaggerated.

Sennacherib (Ne.11.9), properly Hasseanah (as R.V., cf. 1Ch.9.9), with the def. article. A Benjamite, the father of Judah, 4.

Seorim, chief of the fourth of the 24 courses of priests instituted by David (1Ch.24.8).

Sephar (Gen.10.30), on a mountain in the east, the limits of which are unknown; but an ancient text, found at Susa, given by Scheil (Mém. Délégation en Perse, 1900, vol. ii. p. 77) mentions a place called Sipar, with Elam and Susa, and this position would be suitable. [C.R.C.]

Sepharad (Ob.20) is mentioned as a place where the vessels were in captivity. It was originally identified with the Saparâd of the Assyrian inscriptions, which is mentioned by Sargon as one of the districts he had added to the land of Harhar to the N. or N.E. of Assyria. Saparâd is also said to have attacked Assyria, in concert with the Medes, Kimmurians, and Mixnî, during the reign of Esar-haddon, a statement which confirms their north-eastern position. In the inscriptions of Darius Hystaspis at Behistân and Naspî-Rustem, however, Saparâd is mentioned between the sea and Ionia and between Cappadocia and Ionia respectively, but it is doubtful whether this can be regarded as an indication of position. The LXX has Ephrâthah, Sapaphathâ, and Saphaphathâ, and the Vulg. Bosporus, which, however, was adopted by Jerome from his Jewish instructor. The Targum of Jonathan and the Peshittâ Syriac, and from them the modern Jews, interpret Sepharad as Spain (Ispania and Ispania, cf. the late Susan form Sipar), hence the appellation Sephardim or the Spanish.

SEPHARVAIM, SEPHARVITES

Sepharvai'm (2K.18.34, 19.13; 1Es.15.13). Sepharvites (2K.17.31). Sepharvaim is generally identified with the Sippur of the Assyro-Babylonian inscriptions, which was situated on the Euphrates, 16 miles S.W. of Baghdad. It was one of the great seats of the worship of Samaš, the Babylonian sun-god, and also of the other Sun-gods of the Mesopotamian pantheon. It would seem to have been originally two cities, "Sippur of Samaš" and "Sippur of Anunit," which would account for the dual termination -aim in Heb. This site, which is now known as Abu-habbah, was first excavated by Mr. Hormuzd Rassam. In 2K.19.13, however, its king is referred to, and this makes the above identification exceedingly uncertain, Sippur having been one of the cities of the kingdom of Babylon for at least 1,200 years before the reign of Sennacherib. Moreover, in 2K.17.24, though Babylon and Cuthah head the list, Sepharvaim is mentioned after Avad and Hamath, implying that it was a Syrian town. J. Halévy, therefore, suggests that Sepharvaim may be the Sibraim of Ezek.47.16, which was situated between Damascus and Hamath, the dual termination implying a frontier-city, as stated. He regards it as probably Sabard'in, mentioned in the Babylonian Chronicle as having been captured by Shalmaneser. [ADRAMMELCH; SAMARIA.]

Sephela (1Mac.12.38), the Gk. form of the Heb. שֵׁפֶלָה, meaning "low." The A.V. renders it "vale," "plain," "low plains," and "low country"; but it is clear, from Jos.15.33, that the term applied to the foot-hills W. of the mountains of Judah, and not to the plains. These foot-hills exist all along the borders of Philistia and Sharon; but in Judaea especially they form a distinct region. The old name still survives, at the villages of Silheh and 'Altrès-Sifleh, in this region, and retains the old meaning in Arab. See Deut.1.7; Jos.1.10, 16.12, 15.33; Judg.1.9; 1Ki.10.29; 2Ki.19.20; Ps.18.10; Jer.27.8; 2Ch.1.15.9, 27, 36.20, 28.18; Je.17.26, 32.44.33.13; Ob.19 (the Philistine plain); Zech.7.7. [C.R.C.]

Septuagint. I. Texts. (1) Holmes and Parsons (1827 A.D.) catalogued 311 codices (262 uncial, 49 cursives). But since 1827 a large number of papyri have been discovered, transcribed with portions of the Gk. O.T. (2) Codices Alexandrinus (A), Vaticanus (B), Ephraemi Syri rescriptus (C), contain the entire O.T., or originally did so. Thus the present text of B commences at Gen.48.25. (3) The greater part of the remaining MSS. are fragmentary, including only a book or group of books. The uncials date from the 3rd to the 10th centuries. A.D., cursives from the 6th to the 16th. —II. TITLE AND ITS ORIGIN. From the Latin "septuaginta" (70); an abbreviation of "secundum septuagintam," which corresponds to the Gk. κατὰ τὴν σεπταβίντα ἑξάδεκα, as it occurs in the oldest MSS. This title is generally referred to the LXX, as ἢ κωνική ἐκδοσις, or simply ἢ κωνική—i.e. the authorized translation in contradistinction to those of Aquila, Symmachus, and Theodotion (cf. vulgata" as applied to Jerome's version). Eusebius conjectured that the title arose through the acceptance of the version by the "sundredion" of Alexandria, a conjecture unsupported by historical testimony. The Fathers connect the title not with the version's acceptance, but with its origin. It was the work of seventy-two elders. In Philo and Josephus the word is used of the Pentateuch. From Origen downwards it is applied to the whole Gk. version (for reason, vide infra).—III. GENESIS OF THE SEPTUAGINT. A. The Letter of Aristeas. The statements of Philo and Josephus are practically identical. They are based on a document of uncertain date and pseudonymous authorship, known as the Epistle of Aristeas (Philo, Ἀριστεας; Josephus, Ἀριστεας). Its contents are briefly as follows: Ptolemy II. (Philadelphus: 285-27 B.C.), at the instigation of Demetrius, librarian of Alexandria, determined to undertake a translation of the Hebrew Torah. An embassy is dispatched to Jerusalem. Some Scroll of the Law is sent from each of the twelve tribes, a circumstance which excites the suspicion of the historian. They return with the Egyptian legates. The work of translation is conducted in a building specially erected on the island of Pharos. When the translators attain agreement as to rendering, the passage is copied down by Demetrius' scribes. Observe: (1) The translation was official; (a) civilly—made at the emperor's command; (b) ecclesiastically—the authorities at Jerusalem lent their approbation. (2) Only the Torah is mentioned; there is no reference to the prophets or Hagiographa. The statements of Pseudo-Aristeas are re-echoed by the Fathers with two significant additions: (1) The entire O.T. canon was regarded as the work of "the Seventy." While Jerome denies this, Tertullian characteristically adds that he had seen the original MSS. in the library of Alexandria. (2) The translators attained a miraculous unanimity—such was their uniformity and concord that the work was worked together in pairs. But it is quite clear that we cannot regard these assertions as historical. (3) Is contrary to the original form of the story—i.e. to the letter of Aristeas. Moreover, there is some reason to suppose that the O.T. canon did not reach its final form until the Hasmonaean period. If so, a translation of the entire O.T. would seem to be almost impossible previous to that date. (2) represents a development of the statements of Aristeas in the interests of the doctrine of inspiration. Possibly the idea of unanimity may have been suggested by a mystical interpretation of the LXX, in Ex.24.12, ὁ ἑλπιστὴν τοῦ Ἱσραὴλ οὐ δισφυγμένον ἀδελφὸν ἐγὼ (Nestle). B. Place of Origin. That the LXX. originated in Alexandria is practically undisputed. This is vouched for (a) by the internal evidence of the LXX. itself. In style, phrasing, and construction the Gk. bears the closest resemblance to that found in the Egyptian papyri. Moreover, with the Gk. of LXX. contrasted to the Septuagint of Sirach. Hence the statement of Pseudo-Aristeas—viz. that the Seventy were Pales-
tion of the LXX. translation of the Torah. Here again most scholars are inclined to accept the statement of Pseudo-Aristes that the translation took place during the reign of Ptolemy II.

This was the unavailing verdict of antiquity, confirmed by Demetrius' use of the version and by the intrinsic probabilities of the case; for (a) by this time the flourishing Jewish settlement of Alexandria had become sufficiently denationalized to feel the need of a Gk. translation of the Torah. (b) Such an undertaking would be entirely congenial to the mind of Philadelphus, who, like Alexander Severus, was interested in religious cults. Graetz, however, considers the reign of Ptolemy II. to be too early. He argues: (i) As the Alexandrine community did not reach the acme of prosperity until the reign of Philometor (183–146 B.C.), a translation of the Scriptures previous to that date is a priori improbable. (ii) The version shows marks of Pharisaic influence. Thus Graetz cites the LXX. translation of ἐπὶ τῆς πρωτῆς, as evidence for his contention. But the occurrence of ἐπὶ τῆς ἐπιφάνειας τῶν αὐτάσιῶν (τοῦ αὐτασίων, Swete) in ver. 15 seems to tell against this view (Swete). Recent scholarship is inclined to invert the historical sequence as given in Aristeas. The LXX. of the Torah first originated in the Jewish community of Alexandria as the natural result of its religious needs; then received the royal approval of the Ptolemy. For (a) the character of the Gk. seems inconsistent with the idea of an official translation intended to be an authoritative monument to the Ptolemy's literary interest—e.g. γεμάτοις for τῷ (why not πρωτάσιοι;?) and τῶν αὐτάσιων for τῶν αὐτάσιων (ἄρα παπαίας would have been sufficient, and good Gk.). (b) The rôle of Demetrius can hardly be historical. The favourite of Soter, the predecessor of Philadelphus, he was banished shortly after the latter's accession and died 282 B.C. (2) Date of the translation of the rest of O.T. Philo (c. 20 B.C. to c. 50 A.D.) has numerous citations from the prophethical and historical literature. But Lamentations, Song of Songs, Esther, Ecclesiastes, Daniel, and Ezekiel are passed over; and, moreover, the argument from silence certainly cannot be pressed. Similarly, the N.T. makes frequent use of the LXX., but many books are not quoted. Josephus mentions the LXX. translation of the prophets and Hagiographa, but he refrains from giving a catalogue. Wisd. (c. 50 B.C.?) 2.12 contains references to the peculiar LXX. rendering of Is.3.10. It has been already suggested

that the prophets and Hagiographa could hardly have been translated before the beginning of the 2nd cent. B.C. But, according to the preface of Ecclesiasticus (c. 135 B.C.), it would appear that this was an accomplished fact before 125 B.C. But, in any case, it is possible to suggest a still more definite date. (a) Job. Aristeas (not the pseudonymous author of the epistle, but the writer of a treatise, Παντελέοντα διευκρίνων) quotes the LXX. of Job. Some scholars have suggested that he was the author of the LXX. codex to Job. But the evidence of the Hexapla. (Philometer 185–146 B.C.), the book may have been translated just before or shortly after that monarch's accession. (b) Esther. According to the LXX. this story was brought from Palestine in the reign of Ptolemy and Cleopatra. The data are too indefinite for any certain inference to be drawn. Possibly this Philetov was Philometov (Swete). But some scholars are inclined to date the book as late as 48 B.C.—IV. Popularity of the Septuagint. The LXX. became the generally accepted Bible of the Jews of the Diaspora; but in Palestine it seems to have met with a less enthusiastic reception. The Targums rendered it almost unnecessary. The Rabbis appear to have disliked the idea of a translation, and the LXX. was especially objectionable on account of its discrepancies with the received Heb. text. Moreover, after the dawn of the Christian era the LXX. became the battle-ax of the new faith (Cf. LXX., 405–523, ἐνικόρος, referring to the LXX. of 15774), where the Heb. has τὴν ἐνικά τῷ Βικλία, etc.] "a young woman of marriageable age"; ἐπωθός, "virgin," would require τὴν ἐνικά τῷ Βικλία).—V. Versions. Hence arose the desire, in the interests of Judaism, for a version nearer to the official Heb. text. The various Gk. versions (Aquila, Theodotion, Symmachus, etc.) subsequent to the LXX. are dealt with in our art. Versions, § VIII., to which reference for fuller information must be made.—VI. Recensions. A Origen and the Hexapla. The LXX. is largely regarded as the present state of the LXX. The Hexapla was written between 240–250 A.D. The principles of Origen's criticism are given in his letter to Africanus (240 A.D.). (1) The LXX. had received the "Imprimatur" of the Church and was of divine authority. Hence he defends its additions to Daniel. (2) Yet he believed the text as received by the Rabbis to represent the Grundschrift of the LXX. Therefore divergences in the existing LXX. text were detachements of the work of the Seventy. It appears that Origen originally intended to give the LXX. without comment. But this proved impossible. The outlines of his method here as follows: (a) Slight variations of LXX. were tacitly emended (LXX. ὑθοορῦν becomes ὑποτοῦρ). (b) Since he follows the order of the Heb. throughout (Proverbs excepted), considerable textual transposition (viz. in Exodus, Kings, Jeremiah) of the Gk. was rendered necessary. (c) Omissions of the LXX. were remedied by interpolations from one of the other versions and marked by an asterisk (κ. ή ό).
Thus, to supplement Jeremiah he employs Theodotion. (d) When the LXX. contained matter additional to that in the Heb., this additional matter was marked by an obelus (—at). When, on the other hand, the Heb. text was the fuller, he inserted an exact equivalent from one of the versions and marked it with an asterisk. The close of an annotated passage was indicated by a metaboleus (—). The text was arranged in parallel columns in this order: (1) Hebrew; (2) Transliteration into Gk. characters; (3) Aquila; (4) Symmachus; (5) Septuagint; (6) Theodotion. Occasionally, as in the Psalms, two other columns were added, thus forming an Octapla (Epiphanius regards this word as denoting a separate work). The MSS. ("Quinta" and "Sixta") were discovered at Jericho and Nicomedia respectively. So Eusebius, Epiphanius reverses the order. The "Sixta" appears to have been of Christian and ecclesiastic origin. Origen also published an abridgment of the Hexapla—viz. the Tetrapla. The Hexapla was deposited in the library of Caesarea, where it remained until the capture of the city by the Saracens in the 6th cent. A.D. Only a few fragments survive, as the work was never copied as a whole, being too voluminous. But the LXX. was frequently subsequently revised. Thus Eusebius and Pamphilus issued a Caesarean edition (c. 311 A.D.). Origen's critical principles were strictly adhered to, and his notations carefully reproduced. The text had a wide circulation in Palestine and has influenced the following LXX. MSS. of the Gentile books, 86, 88 (Prophets). But Origen's influence may also be traced in the LXX. recensions of Lucian and Hesychius. B. Lucian (c. 299—311 A.D.). Pseudo- Athanasius regards this as a new version (ἐδοξη ἑνανκια). Jerome, however, identifies it with the κωνις, suggesting a revision of the LXX. on the lines of the New Testament. It appears to have influenced the following LXX. MSS.: 19, 82, 108 (Octateuch), 93 (Historical Books), 22, 30, 48, 51, etc. (Prophets). That these MSS. represent a Lucianic type of text is clear from their agreement with (a) the citations of Chrysostom, (b) the Lucianic readings of the Syriac Hexapla. Characteristics of Lucian's work: (1) Completeness. (2) A preference for renderings synonymous with, but different from, the LXX. (3) Occurrence of double renderings. (4) Translations not represented in the LXX., and supposed to be a Hebrew original self-evidently superior in the passages concerned, and the existing Masoretic text. (5) Description. This was similar in scope to that of Lucian, and executed almost contemporaneously. Hesychius may be identified with the martyr-bishop mentioned in Eusebius (H. E. viii. 13). The recension does not survive as a whole. The following MSS. of the LXX. appear to have been influenced by Lucian: tive, 34, 76, 108, etc. and its group, 26, 105, 198. This is attested by (a) quotations of Cyril, (b) correspondence with Egyptian versions.—VII. RESULTS OF ORIGEN'S WORK. As scribes were careless in reproducing the critical notations, confusion was inevitable. The text became a literary mosaic. It was commonly believed that the Hexaplaric column represented the original state of the LXX. Such was the opinion of Jerome, who desired to reinforce it with all the rigour of ecclesiastical authority. The Church, however, did not share his conviction. Various types of MSS. continued to flourish side by side, influencing one another, yet remaining distinct, no one LXX. text attaining official pre-eminence.—VIII. CHARACTER AND VALUE OF LXX. (1) The translation is literal. The grammatical order of the Hebrew is generally preserved; even peculiar constructions are retained (e.g. "instrumental" ἵππων with dative = Hebrew עַל). And attempts are made to represent paraphrasias and alliteration. But the translator's knowledge of Hebrew was not sufficiently minute to ensure complete accuracy as to the rendering of detail. Thus they often confuse ἱλαστήριον in the phrase ἱλαστήριον ἱλαστήριον ("My Lord!"") with ἱλαστήριον ("in me,") giving ἐν ἱλαστήριον (1Sam.1.20). Sometimes they transcribe (e.g. Gen.35.16, ἱλαστήριον = χαζανάβδη). In 48.7, χ̄ρ. ἱλαστήριον is found, as if hinting at a possible translation. Occasionally the choice of a Gk. word seems to have been owing to anason (e.g. 1Sam.8.4, ἱλαστήριον, LXX. διάφορα). Observe also the tendency to avoid anthropomorphic expressions of deity; cf. Gen.5.22, μετα-ναβανιαὶ ἡμέραι becomes εἰπο- σεργεὶς δὲ τῷ θεῷ. (2) The LXX. is valuable: (a) As the only witness extant, save a few quotations in Philo and elsewhere, as to the character and condition of the Heb. text previous to the Christian era. Hence it is of great assistance: (i) in elucidating the obscurities of the Massoretic text (cf. 1Sam.17—18, LXX. B); (ii) as a guide to vocalization (cf. Gen.18.20, ἱλαστήριον, ἱλαστήριον; LXX. ἱλαστήριον). (b) As the Bible of the Early Church, it had a strong formative influence on the development of dogma (cf. Mt.1.13—Ac.15.16; Ep. to Heb. passim). For the text: Swete's Cambridge LXX. General: Intro. to Study of O.T. in Gk. (Swete); also Nestle, s.v. in Hastings, D.B. (5 vols. 1901). For linguistic purposes consult Essays on Biblical Gk. (Hatch). [D.C.S.]

Sepulchre. [Bibliography; Tomb.] Serah, daughter of Asher (Gen.46.17; 1 Chr.7.30), called in Num.26.16, Sarah, 2. Serahai.1—1. The scribe or secretary of David (2Sam.8.17). [Sheva, 1.—2. High-priest in the reign of Zedekiah (2K.25.18; 1 Chr.6.14; Je.55.24).—3. Son of Tanhumoth, the" "the Netophatheite" (2K.25.23; Je.40.8).—4. Son of Kenaz, and brother of Othniel (1Chr.4.13,14).—5. An ancestor of Jehu (4.35).—6. (Est.2.2) Azariah, 20.—7. Father of Ezra (7.1), whom some identify with 2, but see Ezra.—8. A priest, or priestly family, who resigned the office of the 20th, and Presumably the son of Hilkiel (11.11).—10. The head of a priestly house which went up from Babylon with Zerubbabel (12.1,12).—11. Son of Nehemiah, and brother of Baruch. He went to Babylon with Zedekiah in the fourth year of the latter's reign, and is described as
**SERAPHEM**

"ser m'nuiba" (lit. "prince of rest"); A.V. "a quiet prince"; marg. "or, prince of Mena-chah, or, chief chamberlain of the R.V.; chief chamberlain of the emperor's quarters (omitted in the prophet's quotation)."

Perhaps he was an officer who took charge of the royal caravan on its march, and fixed halting-places. He was commissioned by Jeremiah to take with him the roll in which he had written the dooms of Babylon, and sink it in the Euphrates, as a token that Babylon was to rise no more (Jer.51:59-64).

—12. Son of Azriel (38:26). He was one of those sent by king Jeboiahin to arrest Baruch and Jeremiah, "but the Lord hid them.

**Seraphim**. This order of celestial beings is mentioned by name but once in O.T. (Is.6:2,6). The prophet there sees them in attendance at the divine court; each one had six wings; with two he covered his face, and with twain he did fly. A.V. has "above it stood the seraphim, i.e. above the throne; seraphim stabant super illud (Vulg.); but R.V. gives "above him," i.e. above the Lord as revealed in the vision. They sing the *trisagion* anti- phonal: "Holy, holy, holy, Lord God of hosts, all the earth is full of His glory." They are human in form, with face and hands and feet, albeit having six wings. In ver. 6 one of the seraphim flies unto the prophet to touch his lips with a live coal from off the altar, saying, "Thine iniquity is taken away, and thy sin purged." Thus the idea would seem to be that by purifying the fire, the root of the original word probably signifying "to burn." The etymology, however, is not entirely clear, and attempts in this direction have led to curious results. The word seraph has been supposed to have some connexion with the Egyptian god Serapis, but there is no relationship between them. The name Serapis is a combination of Osiris with Hp, the Nile god, and this cult did not make its appearance until the time of the later dynasties, when offerings were made to Osiris-Apis, or Serapis. In Heb. Rabbinic lore and in the Egyptian writings the seraphim ranked as the highest of the classes of angels. "They, according to their position and importance, became the interpreters of the will of the Deity." Here, no doubt, Heb. thought has touched Egyptian mythology. The living creatures named in Rev.4:6 resemble the seraphim in some details, and sing the same song (cf. Is.6:1).

It was their function to proclaim aloud the holiness of Jehovah, and to purify, as by fire, those to whom they were sent. [A.R.F.]

**Sered**, firstborn of Zebulun and ancestor of the Sardites (Gen.46:14; Num.26:26).

**Sergius Paulus**, the proconsul of Cyprus when St. Paul visited that island with Barnabas on his first missionary tour (Ac.13:7). He is shown as an intelligent man, truth-seeking, and eager for information. It was this last trait of his character which led him to admit to his society Elymas the Magian, and likewise to seek out the missionary strangers and learn from them the nature of Christian doctrine. On becoming acquainted with Paul he received the truths of the Gospel and accepted the evidence of its truth. The _proconsulship_ of Paulus is mentioned in an inscription recently discovered in Cyprus. Hogarth, _Devia Cypria_, pp. 113 fl.; Headlam, art. "Paulus Sergius" in Hastings, _D.B._ (5 vols. 1901); Ramsay, _St. Paul the Traveller_ (2nd Ed. 1913) pp. 73 ff.

**Securians** (σακχείος, rod-bearers, Act.16:35-38), Roman "fictors," attending on magistrates and carrying out their orders. At Philippi, a Roman colony, they attended the duumviri, popularly called "practors," στρατηγοί. [I.e.]

**Sermon on the Mount**. Most critics are agreed that the Sermon on the Mount is the substance of a discourse actually spoken, but no more than the substance of it. On one side many of its sayings are their own evidence, and may well be preserved nearly as they were spoken; on the other, the sermon as a whole is too condensed to be more than an outline of a fuller discourse. It has come down to us in two forms. In Mt.5-7 it is a sort of manifesto to the multitude at an early stage of our Lord's ministry; in Luke6.20-49 it is an address to His disciples at the choosing of the Twelve, and is given in a much shorter form. SS. Matthew and Luke are agreed in connecting the discourse with the mountain country of Galilee, and in beginning with the Beatitudes and concluding with the parable of the vineyard builders. The variations are considerable, as we should expect from oral transmission by two channels, but it is plainly the same discourse. St. Luke omits the whole central portion of the sermon, giving parts of it (e.g., the Lord's Prayer) in other contexts. This raises the question, Which is nearer the original discourse? Did St. Matthew put in all this on his general principle of grouping together similar material? As he groups miracles in 8.9 and parables in 13, so he may here be adding to the sermon sayings spoken at other times. Or did St. Luke leave them out as unsuited to Gentiles? Or did the sermon reach him with the omissions already made? If we consider its coherence in St. Matthew and the greater vividness of the expression, we can hardly escape the conclusion that this is the earlier form. At the same time, our Lord is likely often to have said the same thing to others than the Twelve; and the Holy Spirit may have incorporated in His ministry, so that the connections given in St. Luke to particular sayings need not be set aside as inaccurate. Taking, then, the sermon as it stands in St. Matthew, its central theme would seem to be the principles of the kingdom of heaven. Principles, not laws—for here, as elsewhere, our Lord is dealing with character and motives, not enjoining particular actions. Men have attempted in all ages to obey literally such commands as Swear not at all, Resist not evil, Give to him that asketh thee; but they have never been able to carry out their purpose consistently, and they would nullify the entire sermon if they could. Our Lord's own action (Mt.26.64; In.18.23) is enough to show that He meant them to be obeyed as principles rather than literally. The sermon falls naturally into three sections: (1) The new character (Mt.5.1-16). (2) The new law (5.17-48). (3) The new life (6.7-20), and a conclusion (7.21-27). It will be convenient once more to examine the claims of the Gospel and accepted the evidence of its truth. The _proconsulship_ of Paulus is mentioned in an inscription recently
persecuted as the prophets were in old time; (ii) in relation to others (5.13-16), as the salt of the earth and the light of the world—a preserving and a guiding power among men. (2) The new law is presented (5.17-20) as the completion of the old—carrying out what was only begun by the old. The righteousness of the kingdom is far more searching than that of the scribes and Pharisees. Of this examples are given (5.21-18): Ye have heard what God said to them of old; but I tell you something better. It is not murder only that is wrong, but anger and malice: not adultery only, but every kind of lewdness; not whoredom only, but divorce for every cause except adultery; not false swearing only, but swearing generally; not retaliation only, but the spirit of resistance; not hatred of our neighbours only, but hatred even of our enemies. Ye then shall be perfect as your heavenly Father is perfect. The precepts are set forth in relation first to outward religion (6.1-18). Instructions are given on three great Jewish practices of alms, prayer, and fasting. In each case the point is that we are not to make a show of them like the hypocrites. What is done before God must not be done before men. In almsgiving, for instance, do not let your right hand know what your left is doing. In fasting, do not exhibit a dirty face. Prayer is dealt with rather more fully than the others. First come warnings not to use vain repetitions or endeavour to dictate to heaven, like the Gentiles; then the Lord’s Prayer is given as a model, and our own forgiveness is conditioned on our forgiving others their debts. The true treasure is heavenly (19-21), the true service must be single (22-24), and the true care is to cast all your care on God (25-24), for He knows your needs and will care for you. After this, the conduct of the new life (7.1-12). Be not fornicators, and the like. The new life is to correct the faults of others. Rather be good to men as your Father is good to them, for love is the fulfilling of the law and the prophets. Then come the dangers of the new life (7.13-20). It is a narrow way, and the deceivers are many; but you will recognize them, for they will come in the name of Christ. The conclusion (7.21-27) sets forth the paramount need of sincerity and truth. He that doeth God’s will, not he that doeth mighty works, shall enter into the kingdom. He that doeth these sayings of Mine is building on the rock—all others on the sand. The Sermon on the Mount was a revolution in religion. True repentance, Christ teaches, is not repenting of one’s sins, but repenting of what he did but complete for the Jews the revelation of God’s holiness given in O.T., and for the Gentiles the vision they had caught of the unity of mankind. But it did not complete them only by its preaching of a Father in heaven. Momentous as the teaching is, it almost sinks to insignificance before the person and character of the speaker. Christ completes for the Jews by shifting the ground of religion from the law that was given through Moses to the grace and truth incarnate in Himself; and for the Gentiles by revealing Himself as the organic head of mankind and the future judge of all men. St. John himself says no more than is here implied. If Jesus Christ is not in the highest sense divine in Person and authority, the Sermon on the Mount is an empty boast from first to last.

Se’eron, the Syrian commander (1 Mac. 13.23, 24) defeated at Beth-horon by Judas Macaeabaeus (1 Mac. 7.25).

Serpent. The Hebrew, words denote serpents or snakes of some kind or other—namely, *akhshābb, pethen, cepha* or *chiphōn, š̂erkhīphōn,* nāhāsh, and *ephē*. The first four are noticed under Ader and Asp. As a general term for any snake, Ṽarda occurs frequently in O.T. The presumed subtlety of serpents is mentioned in Gen. 3:1: their supposed wisdom is ascribed to our Lord in Mt. 10.16; the poisonous properties of some species are often mentioned (Ps. 58.4; Pr. 23.32); their sharp tongues, which in some cases the Hebrews apparently regarded as the instruments of poison, are mentioned in Ps. 140.3, Job 20.16. As a symbol of evil, however, as *serpent* (Pr. 21.19), the venom is correctly ascribed to the bite. Their habit of lying concealed in hedges is alluded to in Ec. 10.8, and in holes of walls in Am. 5.19; their dwelling in dry sandy places in Deut. 8.15; while their mode of progression is expressly mentioned by the author of Pr. 26.7, the other three evil things—which were “too wonderful” for him (ver. 19). The oviparous nature of most members of the group is alluded to in Is. 59.5, where A.V. has the unfortunate rendering “cockatrice.” [Snake-charming.] As it was under the form of a serpent that the devil beguiled Eve, Satan is called “serpent” (Rev. 12.9, cf. 2 Cor. 11.3). [Dragon.] It was an ancient belief, both amongst Orientals and western nations, that serpents were endowed with a large share of sagacity; and the particular wisdom alluded to by our Lord may refer to their sagacity in avoiding danger. Unless there is a reference to the fact that snakes are dangerous animals, and that the lizard-like reptiles, the old idea that serpents prior to the Fall moved along in an erect attitude is, of course, absurd, and is not required by the words of Scripture. The form of the serpent and its mode of progression must have been the same before, as after, the Fall; but subsequently to that event they were often regarded with hatred by mankind, so that these reptiles were cursed “above all cattle,” and a mark of condemnation was stamped upon them. The expression in Scripture that serpents “eat dust” (Gen. 3.14; Is. 65.25; Mi. 7.17) may perhaps be explained by the fact that as many of these reptiles take their food on the ground, they may swallow with it a certain amount of sand and dust. “Almost throughout the E.” writes Dr. Kalisch, “the serpent was used as an emblem of the evil principle, of the spirit of disobedience and contumacy. A few exceptions only can be discovered. The Phcenicians adored that animal as a beneficent genius and the Chinese consider it as a symbol of superior wisdom and power, and ascribe to the kings of heaven [tien-hoang] bodies of serpents.” The evil spirit in the form of a serpent appears in the Ahriman, or lord of evil, who, according to the doctrine of Zoroaster, first taught men to sin under the guise of this reptile. Much has
been written with regard to the "fiery serpents" of Num. 21.6,8, with which the "fiery flying serpent" of Is. 14.29 and 30.6 has been usually identified. For the Heb term rendered "fiery" by the A.V. is in the Alexandrine MS. of the L.X.X. translated "deadly" (οιδ φθοιρουσας); Onkelos, the Arabic version of Saadias and the Vulg., translate the word "burning," in allusion to the sensation produced by the bite: other authorities understand a reference to colour of the skin, and the Heb term rendered "serpent" is evidently used of poisonous snake which destroyed the people in the Arabian desert, it is obvious that either the homed viper, the cobra, or any other venomous Arabian species may denote the "serpent of the burning bite." The "fiery flying serpent" of Isaiah (3.30) has no existence in nature; but monstrous snakes with birds' wings appear on the Egyptian sculptures. The term έρυθρη occurs in Job 20.16, Is. 30.6, and 59.5 (A.V. viper); but there is nothing in the context to give a clue as to the species referred to by this name, which is derived from a root which signifies "to hiss." The serpent mentioned in Ex. 25.17, which was fastened on St. Paul's hand at Melita (Ac. 28.3) may have been one of the southern species of viper, such as Vipera aspis, V. latastei, or V. ammodytes, although none of these are found in Malta at the present day. [811.1]

**Serpent, Brazen.** The incident of the brazen serpent is given in Num. 21.4-9 (1K). The place where it happened is not named, but the last-mentioned camping-ground is Mount Hor (20.22), on the (W.) border of Edom, where Aaron died. The next camping-ground mentioned in Numbers is Oboth (21.10). In the list of stations in Num. 33, the order is Mt. Hor, Zalmonah, Punon, Oboth. The scene of the incident at the brazen serpent would accordingly be either Zalmonah or Punon. The material of which the serpent was made was probably copper, or possibly bronze, but not brass (as A.V. gives it). Articles of bronze have been discovered at Tell el Hesy (Lachish) and elsewhere in Palestine. A point in the Heb text which is lost in translation, is that the words for "serpent camping-ground" and "copper," or "bronze," have nearly identical connotations—much as if in English one should say "Moses made a serpent of serpentine." That Moses should have made a model of any living creature is remarkable after Ex. 20.4, but it is clearly shown in the narrative that the purpose was not worship but saving. It was not, however, surprising that this image should, in course of time, become an object of worship (2K. 18.14; Neh. 8.16), as relics of Christian saints have done, or as the Black Stone at Mecca practically has even to Mohammedans. Indeed, the bronze serpent is still shown upon a column in the wave of the church of St. Andrews in Scotland. As various attempts have been made to explain the whole incident. (1) Frazer (Golden Bough, ii, 126 f.) gives several instances of plagues being stayed by making an image of the venom which caused them. Thus the Philistines made models of Na'ar, a Thing with the country was overrun (5.6, L.X.X.). (2) The allegorical interpretation of the Targum of Jonathan renders Num. 21.8, "He shall be healed if he direct his trust unto the name of the Lord." Similarly Philo regards the narrative as an allegory of man's victory over his outer powers (B. G. ii. 599). (3) The typical interpretations based on Jn. 3.14,15; [1897, p. 129] C.F. Hackett, in his *Arabia Deserta*, i, 374, etc.; and on the whole passage Grav, *Numbers* in the Internat. Comm.: Bliss and MacAlister on their excavations in Pal.: Philo Judaean (Bohn's Lib. i. 100). [Poison; Serpent; Flaty. *SERPENT.*] [T.R.W.]

**Sergy**, son of Ken, and great-grandfather of Abraham (Gen. 11.20-23; Lu. 3.35, R.V.). The name is connected with Serai, a district and city lying N. of Haran (see Dillmann, *Gen.*, ad loc.).

**Servant.** (1) Heb. *sbd* is usually means primarily "slave" (L.E.V. generally "servant"), but is used for the relation of worshippers to God or to subjects to a king—e.g. 1Sam. 27.12, *n'aar, pur, par, nàas, "boy," "laid," and applied in other connexions even to married men (Benjamin), denotes in this connexion either a "slave," or "free attendant." *m'shârîth* also expresses "servant" or "minister"—e.g. Ex. 24.13. (2) "Hired servant" *'aḇe* is which position was due to contract, not status. He ranked with the sojourner, and was not part of the family (Ex. 12.45; Lev. 22.10, 25.10). He might be a native or a stranger. For protection he depended not on the courts, but on religion (Lev. 19.13); and especially in Deut. 24.14f., with the idea of economics. He was something of a vagrant in our sense (Lev. 25.53; cf. Is. 16.14, 21.16), but there may have been engagements for different periods. The hired servant of the Mosaic age was to be paid day by day (Lev. 19.13; Deut. 24.14f.). [Wages.] He was better treated than a slave (Lev. 25.40,53), but belonged to a poor class (Deut. 24.14f.), had an unenviable life (Job 7.12), and was frequently subjected to oppressive treatment (Mal.3.5). [Slave Poor] *Encyc. Bibl.* s.v. [I.M.W.]

The only passages in N.T. in which the words strictly meaning "hired servant" occur are, Lu. 15.17-20; Mk. 1.29; Jn. 10.12-13. *Δομός, a bondservant" or "slave," corresponding to Heb. 'ab ; *Δομώρας* appears about "copper," or "bronze," and is rendered "servant" in R.V., with mar, "bondservant," except where "bondservant" appears in the text—e.g. Jn. 8.34,35; 1Cor. 7.21; Gal. 4.1,7; 1Pet. 2.16; 2Pet. 2.19. *Δουκρος* is in R.V. a few times "servant," twice "deacon," but mostly minister. For N.T. teaching about the relative duties of masters and servants cf. Col. 3.22-4. [M.T.]

**Servant of Jehovah.** [Isaiah; God.] *Ses'is* (1E. 9.34) = Shashai.

**Session.** the sequel to the Ascension. (1) The fact is recorded in Mk. 16.19, which, at latest, belongs to early sub-apostolic periods. The frequency of its mention is affected by its relation to the date of Col. 3.4-5. As various attempts have been made to explain the whole incident. (1) *F* azer (Golden Bough, ii, 125 f.) gives several instances of plagues being stayed by making an image of the venom which caused them. Thus the Philistines made models of Na'ar, a Thing with the country was overrun (5.6, L.X.X.). (2) The allegorical interpretation of the Targum of Jonathan renders Num. 21.8, "He shall be healed if he regard
to which all honour and worship, all service and obedience, are due to Him from all creatures." (Barrow, serm. xxxi., on the Christian Church. "Sitting at the right hand denotes permanent continuance in the presence of God."

Consequences. The suggestions of the Psalms on this point are taken up into the Christian revelation (cf. Ps.88.18 with Eph.4.8; and Ps.110.1 with Heb.10.12,13. See further 1 Cor. 15.25.) From their continuity the suspicion that the Session at the right hand of God may be understood in its bearing, first on sovereignty, secondly on the heavenly priesthood. For the former, see Heb.10.12,13; for the latter, 9.24, 1 n.2.1,2, and the idea of intercession in Rom.8.34, Heb.7.25, Rev.8.3. See also Milligan, Acts (p.234), etc., and the discussion of the Scriptural basis of the opinion that the Church is the seat of Christ's intercession in the place of Abel; but Ewald, Dillmann, and others prefer "setting," "seeding," or "slip." In the 4th cent. there existed in Egypt a sect called themselves Sethians, who are classed by Neander among those Gnostic sects which, in opposing Judaism, approximated Christianity.

Sethu', the Ashterite spy (Num.13:13). Seven. In the Heb. mind a mystical significance was attached in a peculiar degree to the number "seven"; the origin of which is probably to be found in the number of the days of the week. The week of seven days was not an arbitrary division of time, but suited approximately phases of the moon; the fourth part of the lunar month being a convenient division of time. But further, the seven-day week attained a religious significance as associated with the Creation, and the seventh day, the sabbath, had an ever-increasing prominence and sanctity, and was regarded as the day on which the sabbath obligations were most in evidence. To the mystic mind the sabbath was holy, perfection, and completeness which it came to possess [NUMBER], as is seen from its usage in the Bible. Thus the number seven continually occurs in the O.T. regulations for worship (e.g. Lev.4:6), the arrangements for the sanctuary (e.g. Ex.25:37), the sacred seasons (Lev.23:14), etc. It is frequently used in the sacred imagery of the prophets (Is.4:1; Zech.3:9, etc.) and apologists (Dan.9:25; Rev. passim), and is the basis of the symbolism of Pharaoh's dreams (Gen.41:28f.) and of symbolic action (Job.8:4; 2K.5:14), and it was the number of deacons chosen by the Church (Ac.6:3). The entire imagery of the Apocalypse rests upon this number, which is used throughout the book to express the idea of completeness or totality. The seven churches are taken as representative of the Church as a whole (Rev.1:4); the three great series of visions of the seven seals, the seven trumpets, and the seven bowls, are equally well fitted into a chain of world-conflict to its final issue. But frequently the sacred association of "seven" is dropped, and the number is used to express simply the full complement required under particular circumstances (Lev.26:8; Num.23:1), or the completeness of satisfaction (1 Sam.2:5; Is.30:26), or the entire occupation of the field within a sabbath (Deut.7:7,18). But cf. Is.26:25; Is.11:15; or as the equivalent of a large number (Pr.6:31; cf. Ex.23:14; Dan.3:19; Mkh.16.9). Indeed, our Lord Himself shows that in such language the number is not to be understood in a literal sense (Mt.18:21). Sometimes "seven" is used as a typical number where the particular number is not important (Ezk.39:9-12; Mt.22:25); sometimes it is merely a round number (e.g. Gen.4:13). Milligan, "Lectures on the Apocalypse." [J.C.V.]

Seven Words, The. The probable historic sequence of the Words of our Lord from the Cross is: (1) The interceding, which, after from a group which shared in the advances in widening circles to include His contemporaries, and ultimately the entire human race. The basis of the plea, recognizing responsibility and ignorance, is universal. The intercession, objectively complete, still requires to be subjectively realized in each individual case. (2) The Second Advent, a definite day, as opposed to the "day" of judgment. The promise of the Saviour to be "with His people," and, therefore, to be present in a new effective way for the "sinner," is thus fulfilled. (3) The claim of Christ for His mother. Recent criticism probably correctly, draws attention to Christ's abstention from the word "mother" in His address to her. [MARY.] In the work of redemption He is absolutely alone (cf. Mk.3:35). (4) The cry of desolation. Adopted from Ps.22:1, and, like all other words adopted by Christ, filled with new contents and profounder meaning. It cannot signify the anger of the Father towards the Son. This strange theory, however prevalent, conflicts with Their identity of will and the Unity of the Trinity; has no support in Scripture; and has introduced immoral conceptions of transgression from the guilt of the "Innocent which have done untold harm to the doctrine of Atonement. We can only say that the loving self-identity of Christ with the sinner caused Him to experience the sinner's isolation. Death as the wages of sin is consciously experienced by the sinner. Note, in this connexion, Christ's refusal of the suppliant draught. He would experience death in full possession of unclouded human mental powers (cf. Heb.2:9). (5) The dying thirst. Primarily a physical reference; but those who place the apostolic interpretation on this death naturally find in the Word a spiritual reference also. (6) The Word of consummation. It is finished. Objetively, the Godward effect of the sacrifice is complete. Subiectively, the individual appropriation of the sacrifice is not complete, and will not be till the end. This Word contains the first suggestion of the redemptive victory. (7) The prayer of the sinner. An amazing feature of Christ's life and death is its deliberate, calm control of circumstance. Nowhere is this more conspicuous than in His death. It seems like a deliberate act of will,
a self-recollected yielding up of His human soul (cf. Jn. 10.17, 18). [w.j.s.s.]

Shaalabim' (Jos. 19.42) or Shaalbim' (Judg. 1.35; tR.4.9), a town of Dan, named between Jeshemesh and Ajalon. Probably S. of N.W. of Yada (Jos. 18.4). It appears as "the land of Sabalim," in one of the Amarna letters from S. Palestine (Berlin 190), taken by the Abiri invaders in the 15th cent. B.C. [c.r.c.]

Shaal bonite, The. Elieah the Shaalbonite was one of David's 37 heroes (2Sam. 23: 32; tR.6.11.33). He was called after a place named Shaalbon, perhaps Shaunabain.

Sha'aph—I. Son of Jahdai (1Ch. 2.17).
—II. Son of Caleb, by his concubine Maachah; the father (i.e. founder) of Madmannah (2.49).

Shaara'im (gates). (1) In 1Sam. 17.52, the LXX. reads, "the way of gates, and unto Gath, and unto Ekron." The passage probably means that the Palestinians led to the gates of both Gath and Ekron, and not to the town of Shaaraim. (2) In 1Ch. 4.31, Shaharaim stands for Shirahun (1os. 7.6). [c.r.c.]

Shaashgaz', the commander of Ahasuerus who had the custody of the women in the second house (Esth. 2.14). The LXX. identifies him as Saadibim, perhaps Shaunabain.

Shabbethai—I. Levite who helped Ezra in the matter of foreign marriages (Ezr. 10.15). He is mentioned also, with Joshua and others (Ne. 8.7), as instructing the people in the law. —II. One of the "chief of the Levites" (Neh. 11.16), possibly identical with 1.

Shachath, son of Shaharaim by his wife Hodeth (1Ch. 8.16).

Shaddai (Almighty). The use of this word bears out the statement of Elohim to Moses in Ex. 6.3, 6, "I, (that is, Elohim) am JHVH; and I appeared to Abraham, Isaac, and Jacob," in the character of El-Shaddai; but as to My Name JHVH, I was not known to them." This puts the name JHVH and the word Elohim on one side of a line of demarcation; and the word El and the name Shaddai on another. Accordingly, Shaddai is never found in parallel with Elohim, but with Eloah, El, and 6lyon. In fact, these three words, with Shaddai as used among the Hebrews, form the most frequent -and the constant use, established under Moses, of Elohim in combination with JHVH. Yet the antediluvian patriarchs are presented to us in Genesis as speaking of Elohim and JHVH, and except that the primeval word El appears in three or more of their names, they might all be Israelites in their theology. But surely Ex. 6.3 is a double sentence, like "I desired mercy and not [i.e. more than] sacrifice," not two separate statements, and we cannot say what actual words in use before the Deluge stood for what we read as Elohim and JHVH. It seems as if Shaddai, which is connected with shad (destruction) in Is. 13.6, 13.15, came into use as a name of the Creator at the flood, signifying Destroyer, and was used with other words of power, until the Almighty revealed Himself again as JHVH (El"merciful and gracious"), and faithful to His people from generation to generation. The interpretation of JHVH, given through Moses to the secondinstants (4:14) to the Abrahamic family, "What I have been to your fathers, that I am to you," suits this view, although it is deduced from, rather than affirmed by, revelation. Shaddai is commoner in Job than in Genesis, occurs in the prophecies of Balaam, in the words of Naomi returning from Moab (where it is parallel with JHVH), in a psalm of David (89.14), and of Moses (91.1). But, as stated in Ex. 6.3, it belongs to the Abrahamic patriarchal theology. Ezekiel, in his captivity, twice mentions the "voice of Shaddai." Like other names of God, this is found in combination in personal names, e.g. Zurishaddai (R.ck.) [c.n.w.]

Shadrach, the Babylonian name of Hananiah, one of the "three children," whose song ("Benedicite, omnia opera"), as given in the apocryphal Daniel, is used in the service of the Church of England. A longer prayer in the furnace is also ascribed to him in the LXX. and Vulg., but this is thought to be by a different hand from the song. His history and the account of his deliverance from the fiery furnace are told in Dan. 1-3. A pointed allusion is made to the three in the Ep. to the Hebrews, as having "through faith quenched the power of fire" (Heb. 11.33, 34). There are also repeated allusions to them in the later apocryphal books, and the martyrs of the Macca- bucan age and the Christian church have been encouraged by their example. See tRac. 2.59; 3 Mac. 6.6; 4 Mac. 13.9, 16.3, 21, 18.12. The name Shadrach is of doubtful origin, and may mean "command of Aku" (i.e. the moon-god), or be a Persian title.

Shage', father of Jonathan the Hararite, according to 1Ch. 11.14. [Shammah, Shemah, Shema'.]

Shahara'im, a Benjamite mentioned in an obscure text (1Ch. 8.8). His home was in "the field of Moab." (R.V.), where he is said to have begotten children after he had sent away Hushim and Baara, his wives (R.V. marg.). [t.n.c.]

Shahazimah', a town of Issachar (Jos. 19.22). The site is unknown. [c.r.c.]

Shalem' (Gen. 33.18). The R.V. reads "Jacob came in peace to the city of Shechem." The LXX., Peshitta-Syr., and Vulg. alike regard the word as the name of a place. The village Silim is 2½ miles E. of Jacob's well, near the Jordan, and to the N.W. Jacob's camp would have been in the plain S.W. of the village, before he bought the field in which the well was dug. [c.r.c.]

Shalim, Land of (1Sam. 9.4), a region in which Saul searched for the lost asses. His expeditions led N. through Mt. Ephraim, N.W. to Shalisha, and finally S. beyond Benjamin into Judah. Hence Shalim may be supposed to have been N.E. of Gibeah. The Heb. sha'lan means "hollows," and the fox is called sha'ul because he makes a burrow (Arab. thulhal and whatab). Probably the land of Shual (1Sam. 15.17), near Omriah of Benjamin, is the same (Heb. sh'lah), and means, not the "land of a fox," but of a "hollow." This would apply to the desert E. of Tayibeh, remarkable for caves and narrow gorges running down to the Jordan Valley—a region into which the asses might stray from Gibeah. [c.r.c.]

Shalisha' (1Sam. 9.1). Probably the land near Bethel (14.7). [R.V. rendering.] .

Shallecheth, The Gate. apparently the name of one of the gates of the "house of Jehovah"
(1Chr.28.16: cf. 12.) It was the gate “to the causeway of the ascent.” See 1K.10.5, where however the word “ascent” is otherwise rendered “sacrifices.” [C.R.C.]

Shallum.—1. King of Israel. who conspired against Zechariah, son of Jeroboam II., slew him, and brought the dynasty of Jehu to an end. After reigning one month he was in turn dethroned and killed by Menahem (2K. 15.10-13) —2. The husband (or son, L.XX. in 2K.) of Huldah the prophetess (2K.22.14; 2Chr.34.22).—3. A Judahite (1Chr.2.40,41).—4. Generally known as Jehozabad (1J.e.22.11). Possibly the former is here used as an epithet, “the required one,” or it may be that Shallum was the original name of Jehozabad. The chronicler takes Shallum as a proper name and makes him the fourth son of Josiah (1Chr.3.15).—5. A Simeonite (4:25).—6. A high-priest, son of Zadok and ancestor of Ezra (rChr.6.12; Ezr.2.41). At the end of three years Shallum vs. 9.17; Ezr.2.42; Ne.7.45 = Meshullam, 20, perhaps the same as—9. A Korahite gatekeeper (1Chr.19.17,19,31); called Meshelemiah in 26.1, 2, 9, and Shelemiah in 26.14. —10. Father of Jehizkiah, an Ephraimite (2Chr.25.12).—11. A porter of the temple who had married a foreign wife (Ezr.10.24).—12. A son of Bank (1Chr.2.56).—13. Son of Halosheth and ruler of a district of Jerusalem (Ne.3.12).—14. The uncle of Jeremiah (Je.32.7).—15. Father of Maaseiah, keeper in the threshold in the time of Jeremiah (35.4). [H.C.B.]

Shalun’, son of Cole-hozeh, and ruler of part of Mizpah, who assisted in the repairs of the wall of Jerusalem (Ne.3.12).—16. The child of Shalmai were Nethinim who returned with Zerubbabel (Ezr.2.46; R.V. Shalmai; Ne.7.48, R.V. Salmai).—17. Shalman’ (Hos.10.14) = Shalmaneser. [BETH-ARDEL.]

Shalmaneser (Assyr. Shalman-asaridu, the original meaning of the name has ruled). The biblical king of this name was Shalmaneser IV. His previous name was Ulul. In 727 B.C., on the death of Tiglath-pileser III., he seized the Assyrian throne, to which he does not appear to have had any claim beyond that furnished by successful generalship. Soon after his accession, however, the Hittite king Shalmaneser IV, or some one of his vassals, invaded the land of Israel, and captured the city of Samaria (2K.17.3). Shalmaneser himself attacked and captured the city of Samaria, and a large proportion of the Israelites departed to Assyria (2K.17.4-6, 18.9-11). At a somewhat earlier date Shalmaneser died or was murdered, and was succeeded by Sargon. [SAMARIA.] Josephus (6 Ant. xiv. 2) relates that Shalmaneser invaded “all Syria and Phoenicia,” and in particular that (in spite of the destruction of the Assyrian vessels by the much smaller fleet of Tyre) he besieged that city for five years. [A.W.S.]

Shama’, one of David’s guard, son of Hothan of Aror (1Chr.11.44).—Shamariah, son of Rehoboam (2Chr.11.19).—Shamed (Shemed, R.V.), a Benjamite (1Chr.5:12).—Shamer.—1. A Merarite Levite (1Chr.6.46).—2. (7.34) = Shomer, 1. [H.C.B.]

Shamgar (Judg.3.31, 5:4-8), son of Anath. Both names are possibly of Hittite origin, but the etymology is doubtful. Shamgar probably belonged to the tribe of Judah, and he led the Israelites “too delivered Israel” when oppressed by the Philistines. It has been suggested that 3:31 is an interpolation, but its position is supported by the reference in Deborah’s Song, which all acknowledge to be ancient. From the reference to his weapon the Philistines seem to have pursued their usual policy of disarming (1Sam.15.19-23). The Philistine oppression probably accounts for there being no reference to Judah in Deborah’s Song. That Shamgar was a patriotic outlaw may be inferred from 5:6. It is not stated either that he slew 600 men with his own hand, or that the 600 were slain at one time. The Syrian in Judg. is 8 ft. tall, armed at one end with a spike and at the other with a chisel-shaped blade for cleaning the plough. It would be an admirable substitute for a spear. [H.M.S.]

Shamhuth’, the fifth captain for the fifth month in David’s army (1Chr.27.8).—Shammoth.

Shamir’, a Kohathite, son of Michah (1Chr.24.24).—Shanim.—1. A town in the mountain district of Judah (Jos.15.48 only). Perhaps Sómerah, a ruin 2 miles W. of Debr, with which it is mentioned.—2. A place in mount Ephraim, the residence and burial-place of Tola the judge (Judg.10.12). The site is unknown. [C.R.C.]

Shamma’, son of Zophar, an Asherite (1Chr.7.37).—Shammah.—1. The son of Reuel, son of Esau (Gen.36.13,17; 1Chr.1.37).—2. The third son of Jesse, and brother of David (1Sam.16.9,17,13). Called also Shime, Shem, and Shimma.—3. One of the three greatest of David’s heroes. He distinguished himself by defending a piece of ground full of lentils against the Philistines on one of their marauding incursions (2Sam.21.11-17), an exploit wrongly attributed to Eleazar the son of Dodai (1Chr.11.27), and, however, a discrepancy in the two narratives. The scene of Shammah’s exploit is said in Sam. to be a field of “lentiles,” and in 1Chr. a field of barley. Kennicott proposes in both cases to read “barley.”—4. The Harodite, one of David’s mighty men (2Sam.23.25), called “Shammoth the Harorite” in 1Chr.11.27, and 27.8 “Shamhuth the Izrahite.” The hero-lists in 2Sam.23 and 1Chr.11 are admittedly in confusion, and hence it is possible that 3 may be identical with 4 and with “Shammah the Hararite” of 2Sam.23.33. Cf. 1Chr.11.34, where we read Shage the Hararite. (See Driver, ad loc.) [JONATHAN, 4.1] [H.C.B.]

Shamma’i.—1. Son of Onam (1Chr.2.28,32).—2. Son of Rekem (2.44,45).—3. Brother of Miriam and Ishshah, in the genealogy of the descendants of Judah (4.17).—Shammoth’, the Harorite (probably an error for Harodite), one of David’s guard (1Chr.11.27); possibly the same as Shammoth (2Sam.23.25) and “Shammuth the Izrahite” (1Chr.27.8).
Shammua. — 1. The Reubenite spy; son of Zaccur (Num.13:4).—2. (1 Chr.14:4) = Shimea, 1.—(N.11:17) = Shemaila, 6.—4. The representative of the priestly family of Bilgah, or Bilgai, in the days of Joiakim (12:18).

Shamshera'i, one of the sons of Jeroham, a Benjamite (2 Chr.8:26).

Shapham', a Gadite of Bashan (1 Chr.5:12).

Shaphan, the scribe or secretary of king Josiah. He was the son of Azahil (2 K.22:3; 2 Chr.34:6), father of Ahikam (2 K.22:12; 2 Chr.34:20), Elasah (Jer.29:3), and Gemariah (26:10,11,12), and grandfather of Gedaliah (39:14,40:5,9,11,41:2,43:6), Michaiah (36:11), and probably of Jazaaniah (Ez.8:11). There seems to be no sufficient reason for supposing that Shaphan the father of Ahikam, and Shaphan the scribe, were different persons. The history of Shaphan thrice lived without any trace of him on the stage. He appears on an equal footing with the governor of the city and the royal recorder, with whom he was sent by the king to Hilkiah to take an account of the money which had been collected by the Levites for the repair of the temple and to pay the workmen (2 K.22:3; 2 Chr.34:14,15). Shaphan then overtook Hilkiah, and called him Minister of Finance (Gesch, iii. 697). It was on this occasion that Hilkiah discovered in the temple the "book of the Law," which he entrusted to Shaphan. By him it was read in the ears of the king, who at once sent him, with Hilkiah and three others, to seek the advice of the prophetess. It was while Shaphan was thus apparently an old man, for his son Ahikam held a position of importance, and his grandson Gedaliah was already born; and probably Shaphan died before the fifth year of Jehoiakim, eighteen years later, when we find Elishama was scribe (Jer.36:21).

Sharon, a town of Bani (Num.33:23), the name of a desert station where the Israelites encamped. The distance, 60 miles N.E. of Hazeroth, suggests the mountain now called Tell el Atsar, as Shapher was the sixth station after Hazeroth. [G.K.C.]

Sharon, one of the sons of Bani who had taken a foreign wife (Ezr.10:40).

Sharonim (Jos.15:56), a town of Judah in the Shephelah district, probably the present ruin Sa'id, 6 miles N. of Adullam, with which it is grouped, and E. of the valley of Elam. It was a mile W. of the village of Sijte [SHEPAH], and only about 1,000 ft. above sea-level. Whereas the rock Elam, about 2 miles E. of Sa'id, rises to 2,050 ft. in the mountain district. Hence Sa'id would be described as in the Shephelah. [G.K.C.]

Sharrar, father of Ahiam the Hararite (2 Sam.23:31), called Sarch (1 Chr.11:35).

Sharzer, one of the two sons of Sennacherib, who murdered their father (2 K.19:37).

Sharon, Sharon. — 1. The latter (Sharon in R.V., v.9:15) is the Gk. form of the Heb. word, which signifies a "plain." On the Moabite Stone it is applied to the mishör, or plateau of Moab. Eusebius and Jerome (Onomasticon) say that the plateau E. of Tabor was called Sharon in their time, and the village Sarōna still stands in its midst. [LASHON HEBRAICA.] But in the Bibl. the seaside plain, especially N. of Joppa, is so called. In the inscription of Eshmunazar II. of Sidon occurs the passage: "And for this cause has the lord of kings given us Dor and Joppa, which are in the plains of Sharon, as a reward for the great things I have done; and has added them to the boundaries of the land, that they may belong to the Sidonians for ever." This refers to conditions existing in 3rd cent. B.C. In 1 Chr.5:16, Sharon means the plateau of Moab, as on the Moabite Stone, and the reference is to the N. border of the mishör, on the S. limit of Gad. But in 27:29 the Sharonite, who was over the herds in Sharon, was no longer a Sahmari, but a native of the Sea coast. Solomon's bride (Can.2:1) likens herself to lowly wild flowers—"the rose of Sharon and the lily of the valleys"; and the Targum renders the former marījas, or "narcissus," a flower with which the plain of Sharon abounds in spring.

In 1 Chron.6:3 Sharon, in time of death, becomes a desert; but Isaiah, "excellent," speaks of the desert that "blossoms as the rose" (55:1,2). It is, moreover, a country of flocks (65:10). This plain, though now much neglected, has a good soil, and grows corn, while in spring it is gay with flowers. To the N., near mount Carmel, there are remains of an open oak wood, to the E. are the ruined banks of Phæstus, and to the W. the broad plain of Moab, to the S. the desert of the Fatimids, and to the E. the palm groves of the Jordan valley. In Judges iv. 19, we have the same term as occurs in Gen. 18:3, 1 Was xi. 2) refer under the term Drumos, in connexion with Carmel. [C.R.C.]

Sha'ronite, The, only applied to Shitritai, who had charge of the royal herds in Sharon (1 Chr.27:29).

Sharuhen (Jos.19:6), a town of Simeon. In 15:12 Shilhim stands instead; and in 1 Chr.4:21 Sharran. It is probably the present Tell esh Sher'i, a mound of the drinking-place, a large ruin in the valley of the same name, 15 miles S.E. of Gaza, with remains showing it to be an ancient site. This also is probably the Sharuhen of Egyptian records, the first of the names of the borders of Philistia. In 27:29 it is rendered by the name of Sharon. In his first campaign, about 1580 B.C. (Brugsch, Hist. Egt. ii. pp. 210, 320). [C.R.C.]

Shasha'i, a son of Bani who put away his foreign wife (Ezr.10:40).

Shashah, a Benjamite of the sons of Beirah (1 Chr.8:1,25).

Shaul. — 1. Son of Simeon by a Canaanitish woman (Gen.46:10; Ex.6:15; Num.26:11; 1 Chr.4:21), and founder of the family of the Shalumites. — 2. (1 Chr.14:8,10; A.V.; Gen.36:37, R.V.) = Saul, 1.—3. A Kohathite, son of Uziah, 2 (1 Chr.26:24).

Shaveh, Valley of, a name found only in Gen.15:17. It was a deep valley (šemqādī) called also "the King's valley" (šemqā ham-makedh), perhaps the same as that in which Absalom erected a memorial stone (2 Sam.18:18). Josephus (Ant. x. 7, 7 Ant. x. 3) places it 1 mile from Jerusalem, which he regards as the modern Beth Milchitated, noted in the first cited passage. [C.R.C.]

Shaveh, Kiriathim, mentioned (Gen.
14.5) as the residence of the Emim at the time of Chedorlaomer’s incursion. Probably the “valley” near Kirjathaim in Moab. [C.R.C.]

**Shaving.** [HAIR; NAZARITE.]

**Shavsha** (1 Chr. 18.16). [Shева, 1]

**Shawm.** In 1st. P. version of Ps. 89.6 with trumpets also and “shawans” = E.V. “with trumpets and a sound of cornet.” The “shawm” resembled the clarionet. Its name is derived from Gk. κάλαμος, Lat. calamus, a reed, through Old French chalumie, a reed pipe. [CORNET; PIPE.]

**Shea** I, one of the sons of Bani who had married a foreign wife (Ezr. 10.29).

**Shealtiel,** father of Zerubbabel (Ezr. 3.2, 8.5); Ne. 12.1; Hag. 1.1; [SALATHIEL.]

**Sheariah,** one of the six sons of Azel, a descendant of Saul (1 Chr. 8.38, 9.44).

**Shearing-house, The,** a place on the road between Jezreel and Samaria, at which Jehu, on his way to the latter, encountered 42 members of the royal family of Judah, whom he slaughtered on the spot, and then proceeded to the place (2 K. 10.12, 14). See Beth-eked under Beth. The modern Beit Qad lies on the way from Jezreel to Samaria. [C.R.C.]

**She'ar-jashub** (lit. “a remnant shall return”), a name given to a son of Isaiah to signify that God would restore the remnant of the people that had been carried into captivity by the Assyrians (Is. 7.3; see 8.18, 10.20-22). He accompanied his father when the latter went to meet Ahaz “at the end of the conduit of the upper pool in the causeway of the fuller’s field.” [H.G.B.]

**She'ba** (שׁבָה).—1. The son of Bichri, a Benjamite from the mountains of Ephraim (2 Sam. 20.1-22), the last chief of the Absalom insurrection. Though described as “the man of Belial,” he must have been a person of some consequence, from the immense effect produced by his appearance. It was, in fact, all but an anticipation of the revolt of Jeroboam.

The occasion seized by Sheba was the enmity, as if from loyalty, between the northern and southern tribes on David’s return (20.1.2). The king might well say, “Sheba the son of Bichri shall be no less to me than on David (ver. 6). Sheba traversed the whole of Palestine, apparently rousing the population, Joab following in full pursuit. He seems to have intended to establish himself in the fortress of Abel-beth-maachah, famous for the prudence of its inhabitants (20.18). That prudence was now put to the test. Joab demanded the head of the insurgent chief. A woman of the place undertook the mission to her city, and proposed the execution to her fellow-citizens. The head of Sheba was thrown over the wall, and the insurrection ended. —2. A Gadite of Bashan (1 Chr. 5.13).

**Sheba** (שׁבָּה).—1. As an Arab word this means “tall,” or “of high,” whether because the people were of tall stature, or because the tall people of Saba in Upper Egypt, 2 Ptl. x. 2, or because the region of Sheba was “high,” including the Hijaz hills. The term seems to be geographical, for its population included both descendants of Cush, who were non-Semitic (Gen. 10.7; 1 Chr. 1.9), and of Joktan, who were Semitic (Gen. 10.28; 1 Chr. 1.22), and also of Keturah (Gen. 25.1-3; 1 Chr. 1.32). The queen of Sheba visited Solomon (1 K. 10; 2 Chr. 9), who also received gifts (Ps. 72.10, 15), including gold, from kings of Sheba. In Is. 60.6 we also read of gold and incense, and in Je. 6.20 of incense from Sheba. The merchants of Sheba are first noticed by Ezekiel (Ezek. 27.23, 36), and in a list of caravans of Sheba in Job (6.19), while Sabean raids extended into Edom (1.15). Sheba is coupled with Dedan (Gen. 10.7, 25.3); and, from the Assyrian record of the invasion by Tiglath-pileser III., in 734 B.C., it appears that Sabeans were to be found not far S. of Edom. Moslem references to Sheba include the Korbish in the Koran (xix. 14) to the “flood of Irem,” which punished Sheba for unbelief. This “flood of the tanks” is supposed to have occurred in 2nd cent. A.D., at Uzai (Uzal) or the modern San‘ā‘ (tank), the capital of the Yemen. There is no doubt that Sheba represents the same people known to the Greeks as Σαβαῖος, and to the Romans as Saba, Felix; but the name seems to apply to tribes yet further N. in the Hijaz hills, at an earlier period. These Sabeans were famous for wealth, and formed settlements in Abyssinia about the time of the Ptolemies. [ARABIA; SEMITIC LANGUAGES; WRITING.].—2. [SHEBAH]. [C.R.C.]

**Shebah** (Sib.) (Gen. 26.33; 38.19).—1. A town of Simeon close to Beer-sheba, where Isaac’s servants dug a well and made a covenant with Abimelech. In the list of the cities of the S. of Judah, there is a Shema (15.26) which stands next to Moladah, and the LXX. (Vat. MS.) reads Samaa for Sheba. There is, however, a ruin called Tell es Sā‘, where are two wells (see 1 K. 15.25, 7; Gen. 26.31); and, to the N., Beer-sheba, 3 miles E. of Beer-sheba, which may represent Sheba. The spellings shibb‘a and sheba‘, referring to the same place, recall the case of Geba, otherwise GIBBAH. [C.R.C.]

**Shebam** (R.V. Sabahm, or Sibmah). Num. 33.3; Shibmah (32.38; R.V. Sibmah); Sibmah (Jos. 19.2).—1. A place in the S. of Palestine, all forms of one name, denoting a town in Moab, noticed with ELEAZEH and Nebo, and apparently not far from Heshbon. Isaiah and Jeremiah notice its vines. [JAAZER.] Jerome (on Is. 16.8, 9) says that it was half a mile from Heshbon; but probably it is the present Summeh, a ruin 2 miles S.W. of Heshban, with a name that may mean “towering.” It is a well-watered site, with a fort on a cliff, and ruined houses below. Roman tombs and Christian buildings show the place to be ancient. On the W. is a dolmen, and to the S.E. and E. four good examples of wine-presses, cut in rock, were found (pp. 98, 158; see SAAM; Vat. papyri, p. 227); of which plans were made, as of importance in showing the ancient cultivation of Moab. Another wine-press was found N.W. of Heshbon (p. 146). [C.R.C.]

**Shebaniah**.—1. A Levite who joined in the service of thanksgiving and sealed the covenant (Ne. 9.4, 10.1).—2. A priest, or priestly family, who sealed the covenant (10.4, 12.14); called Shechaniah in 12.3.—3. Another Levite who also sealed the covenant (10.12).—4. One of the priests appointed by David to blow the trumpets before the ark (1 Chr. 15.24).

**Shebarim,** a place named in Jos. 7.5 only, as one of the points in the flight from Ai.
The word means "broken places," referring perhaps to the precipices E. of Ai. [c.e.c.]

Sheber (Sheba) of Caleb is called Mezon by his contemporary Maachah (1Chr.2:48).

Shebna, a person of high position in Hezekiah's court, holding at one time the office of prefect of the palace (Is.22.15-19), but subsequently the subordinate office of secretary (Is.36.3; 2K.19.2). This change appears to have been effected by Isaiah's interposition. From the omission of his father's name, it has been conjectured that he was a novus homo, perhaps a foreigner.

Shebuel. —1. A descendant of Gershom (1Chr.23.10,26.24), who was ruler of the treasurers of the house of God. He is the last descendant of Moses of whom there is any trace. 

—2. One of the fourteen sons of Heman the minister and leader of the fourteenth course of the temple-choir (25.4).

Shecaniah. —1. The tenth in order of the priests appointed by lot in the reign of David (1Chr.24.11). —2. A priest in the reign of Hezekiah (2Chr.31.19).

—3. A descendant of Zerubbabel (1Chr.3.21,22). —2. Two families who returned with Ezra (Ezr.8.3,5); but in ver. 5 some name has appeared to be omitted. Perhaps the reading should be, "Of the sons of Zattu, Shecaniah, the son of Jahaziel. —4. Son of Jehiel, 5, of the sons of Elam (10.2).

Shechem (ZWB). —1. The son of the chief Hamor of Shechem. He ravished Dinah, and was slain by her brothers Simeon and Levi (Gen.34; Jos.24.32; Judg.9.28). 

—2. A Gileadite, son of Shemida, and nephew of the foregoing (1Chr.7.19).

Shechem. In Gk. Sychem (R.V. Shechem, Ac.7.16), and Sichem (R.V. Shechem) in Gen.33.15, Shechem is the "back" between the shoulders (Gesenius), or neck, referring to the position of the town, on a saddle, with the lofty shoulders of Ebal and Gerizim rising some 1000 ft. above it to N. and S. The word is rendered "portion" (Gen.48.22), where a play on the town-name seems to be intended (see Gen.33.); and "by consent," where the true meaning (Ho.6,9, marg.) may be "to Shechem." When Shalem is called "a city of Shechem" (Gen.33.18), it may only mean a place under the rule of that city, and not refer to its prince. The first site mentioned in O.T. as reached by Abraham in Palestine (Gen.12.6) is the "place" (Heb. maqom, Arab. maqam, often meaning a "station" or sacred place) of Shechem, by an oak which is noticed later also (35:1; Jos.24.26; Judg.9,37). [Pillar, Plain of the.] The Canaanite then held this land, but the Hivites of Shechem were massacred later by Simeon and Levi (Gen.34.25). In Jacob's time Shechem was a walled city with a gate (33:20), Jacob's well, and the land in which it stood, were no doubt between Shchem and Shiloh (33:18-20), and his altar probably near Abraham's oak. The plain here was fit for his cattle; and the fact that he dug a well (Jn.4:12) when there were springs near (at Sychar, etc.) is explained by the jealousy as to water rights, which made a cruel feud to break out on his own land. Joseph revisited this district (Gen.37.12-14) on his way to Dothan. The book of Joshua includes no account of any resistance at Shechem, which perhaps submitted to the Hebrews, like the other Hivite towns (Jos.9.7-17). The great meeting in the vale between Ebal and Gerizim, in fulfilment of the law (Deut.11.26-30), took place before the contest in Galilee (Jos.8.30-35); though the order in which this passage should occur seems doubtful—in LXX. it follows 9.2. Shechem was at the extreme N.W. corner of the lot of Ephraim (1Chr.7.28), and was in Mt. Ephraim (Jos.20.7; 1K.12.1). It was a city of refuge and of Levites (Jos.20.7, 21.21; 1Chr.6.67). All Israel gathered again at Shechem under Joshua, round the oak that was "by the holy place of Jehovah" (Jos.24.1, 26); and, in the land bought by Jacob, Joseph was then buried (ver. 32). In the time of Aun- melech we learn that Shechem was fortified, and had a 1,400 foot tower (Judg.9.15). 

Shechem. The city-name is no doubt meant "a chief's house." It also included a temple of Baal-berith (the "lord of the covenant"); but the place where Aunmelech was made king was the old sacred centre of the oak of the pillar (Herod.1.2,8). Since the time of Josiah (725 B.C.) there is no doubt meant (Jos.24.26; Judg.9.6). At Shechem also Reboboam was made king and rejected (1K.12.1-18), and Jeroboam built it up (ver. 25). But the site—though very fertile—was not strong; and this probably led Omri to select the new centre at Samaria, after which transfer of the capital we hear very little of Shechem, though it probably remained the sacred centre of Samaria, Gerizim (the "mount of blessing") being the site of the Samaritan temple. The only other notices of Shechem in O.T. (see 1Chr.6.67,27-28; 2Chr.10.1; Ps.60.6; 108.7; Je.41.5; Ho.6.9, marg.) do not add to these early memories. The most famous event in Samaria (Ac.8.25,9.31,15,3). Shechem is only once noticed in N.T. (7.16; cf. R.V. "in Shechem"). Justin Martyr, however, was a native of this city in our 2nd cent. Shortly after the fall of Jerusalem, Titus appears to have given it the name Aurelia Flavia Neapolis, as a "new city" of the famous Flavian emperors; and his coins bearing this title are known (Robinson, Bib. Res. ii. p.201; Reland, Pal. Histori. ii. p.1006). In the same age it is called Mamor- thana by Pliny (Hist. Nat. v. 13), and Mabortha by Josephus (4 Wars viii. 1), both words meaning "exalted," and representing perhaps an Aram. translation of the Heb. shechem, "shoulder," or "back." From the name Nea- polis the present name Nablus, or Nabbis, is derived. The coins continue till Gallienus (253-268 A.D.) and 72 A.D. was the "era of Nea- polis." Those of Hadrian apparently represent the temple on Gerizim. Under Philip the Arab, Shechem became a Roman colony, called "Colonia Julia Sergia Neapolis" (Nutt., Som. Hist. p. 15, note, quoting De Saucy, p. 241). The present town is the centre of government of a province including the Belqa E. of Jordan. It has a population of about 20,000,
including 160 Samaritans, and 600 Christians and Jews, the rest being Moslems. The site is probably unchanged; for the old Heb. tombs, cut in rock, lie just N. of the city (Surv. W. Pal. ii. pp. 167, 203-210; and pp. 172-174 for Jacob's well, 104 for Joseph's tomb). The town lies at the head of the valley, which descends W.; and this valley is remarkable for its 13 springs, close to the city. On the E. a fine olive grove occupies the flat ground; a few palms grow among the houses. On W., and on the N.W. spur of Gerizim, there are orchards and gardens in which are found olive trees, figs, walnuts, apricots, mulberries, pomegranates, vines, and the cactus on which (and also on the Syrian oak) the cochineal insect [COLOURS] now feeds. The city belonged, in 12th cent. A.D., to the knights of St. John, and their Lazard House is still inhabited—though in ruins—by lepers, in N.E. corner of the town. Their church of St. John—with a fine Gothic gateway—is now the principal mosque. A smaller mosque just outside the town, on S.W., is called Hizn Y'aqub, or "the mourning of Jacob," from a legend which makes it the site of Jacob's mourning for Joseph (Gen. 37.31-35): this was once the Samaritan synagogue, and a fine Samaritan text of 6th cent. A.D. is built into the tower, which is now a minaret. The present synagogue (near by) is a poor modern house. Here, on four occasions between 1872 and 1882, the present writer saw—side by side on a shelf—three separate rolls of the Samaritan Pentateuch. One is comparatively modern, the second (in a brass roll-case engraved with representations of the cherubim, the pot of manna, the laver, and Aaron's rod) has on its case the date 820 A.H. This the Samaritans have recently endeavoured to sell in London. But the third and oldest copy—very rarely shown—is in a silver case, with green silk cover, and is a roll of vellum bound with green edgings. The faded letters resemble in form those of the Samaritan text already noticed at the Hizn Y'aqub, being later forms of the old alphabet of Israel. [WRITING.] This MS. is shown to the congregation when they assemble for the Heb. feasts on Gerizim. Jacob's Well lies E. of Nablus, a mile distant, half a mile S.W. of Sychar, and about 2½ miles W. of Shalem. It is 75 ft. deep, and 7½ ft. in diameter. Arculphus, c. 680 A.D., found the well inside a small cruciform church. This was replaced in 12th cent. by a larger building, of which the foundations were excavated in 1893 (see Bliss in Quarterly Statement Pal. Expl. Fund, April 1894). It had a nave and four aisles, with an apse to E. The old well mouth of this age (marked with the peculiar tooling of Norman work in Palestine) still exists, the well being in the crypt under the chancel. It is sometimes dry, and sometimes has to or 12 ft. depth of good water (see J.t.311). The term πηγή (ver. 6) means either "spring" or "well" (see ver. 12). Joseph's Tomb is about a quarter of a mile N. of Jacob's Well, and is venerated by Jews, Samaritans, Christians, and Moslems alike. It is a modern cenotaph, of stone plastered over, in a modern enclosure. At the head and foot are rude pillars, with hollows at the top of each. Jews and Samaritans alike light lamps and burn incense in these hollows in honour of Joseph. (See our illustration in art. Joseph.) It is remarkable that Josephus—perhaps out of hatred to the Samaritans—places Joseph's tomb at Hebron (2. Ant. viii. 3), though in O.T. it is placed at Shechem (Jos. 24.32), and that a tomb of Joseph is shown, just outside the W. wall of the Hebron haram, by Moslems—probably representing a Jewish traditional site. Whether the cenotaph at Shechem covers a rock-sunk tomb it is impossible to say. Joshua's Stone (Jos. 24.26) and the oak of Abraham, are supposed to have stood at the foot of
SHECHEMITES, THE

Gerizim, where the small magām called el 'Amid now exists, a mile W. of Jacob's Well; but the older site was at Balādīt, a village near the well on W.[c.r.c.]

Shechemites, The (Num.26.31), the family of Sū'chem, 1.

Shechinah. [GLORY.]

Shedu', a Reubenite; father of Elizur (Num.1.5,2.10,7.39,35,10.18).

Sheep. The first mention of sheep occurs in Gen.4:2. Sheep were used in sacrificial offerings, both as adults (Ex.20.24; 1K.8.65; 2Chr.29.33) and as lambs; e.g. "a male from one to three years old." Lambs of the first year were, however, more generally used as offerings (see Ex.29.38; Lev.9.3,12.6; Num.28.9, etc.), but no lamb under eight days old was allowed to be killed (Lev.22.27). A young lamb was called "ālī (see 1Sam.7.7; Is.65.25). The flesh of sheep and lambs formed an important article of food (1Sam.25.18; 1K.1.19,4.23; Ps.44.11, etc.); their wool was used as clothing (Lev.13.47; Deut.22.11; Prov.31.13; Job31.20, etc.); while "rams' skins dyed red" were used as a covering for the tabernacle (Ex.25.5). (Rosso's Shekels). Sheep-shearing and lamb-shearing were sometimes paid as tribute (2K.3.4). Immense numbers of sheep were reared in Palestine in Biblical times. Sheep-shearing is alluded to in Gen.31.19,36.13; Deut.15.19; 1Sam.25.1; Is.53.7, etc. That sheep-dogs were employed in Biblical times is evident from Job 30.7, "the dogs of my flock." Shepherds in the E. often walk before their flocks, which they induce to follow by calling (cf. Ps.77.20,80.1; Jr.10.4), though they also drive them (Gen.33.13). In some parts of Eastern Europe and probably also in Syria, each sheep in a flock has a name, to which it will respond when called by the shepherd. The ordinary sheep of Syria and Jacob's conduct being condemned by some writers. It is impossible to account for the success which attended his device of setting pecked rods before the ewes and she-goats so that when they came to drink, they would pass through troughs on natural grounds; and it seems imperative to agree with the Greek fathers and ascribe the production of Jacob's spotted sheep and goats to divine agency. In Gen.31.5-13, where he states that his success was due to divine interference, it is hard to believe that Jacob was uttering a wilful untruth. The sheep is an emblem of meekness, patience, and submission, and is mentioned as typifying these qualities in the person of our Lord (Is.53.7; Ac.8.32, etc.). The relation existing between Christ, "the chief Shepherd," and His members, is compared to that of the shepherds in the East to their flocks. [k.t.]

Sheep-market (A.V. Jn.5.2). The word "market" is an interpolation of the translators, and gate is now substituted in R.V. The Sheep-gate was rebuilt by Nehemiah (3.1,32,12.39), and was between the tower of Meah and the chamber of the corner or gate of the prominent. (A.V. p.Rabbi-Moses-Bar-Nachman.) The sheep-gatapool. [Bethesda.] [C.G.W.]

Shehariah", a Benjamite; son of Jeroham (1Chr.8.26).

Shekel. In a former article [Money] a full account has been given of the coins called shekel and sheqel. The word is employed in the "Israelite" character; so that the present article will only contain a few other particulars. (1) Although some shekels are found with square letters instead of Israelite, these are undoubtedly all forgeries. Ramban—i.e. Rabbi-Moses-Bar-Nachman—who lived about the commencement of the 13th cent. describes a shekel which he had seen, and of which the Cuthaeans read the inscription with ease. The explanation they gave of the inscription was, on one side: Shekel ha-Shekalim, "the shekel of shekelis," and on the other: Jerusalem the Holy." The former was doubtless a misinterpretation of the usual inscription "the shekel of Israel"; but the latter corresponds with the inscription on our shekels (Bayer, De Numic, p. 11). More important is the description quoted by R. Azarías de Rossi of a shekel seen by Ramban at St. Jean d'Acre, 1210 A.D. He gives the inscriptions again as above, but also determines the weight, which he makes about half an ounce. We find, therefore, that in early times shekels of like weight were known to the Jewish Rabbis with Israelite inscriptions, corresponding with those now found (except in one point, which is probably an error). (2) A coin was published by De Saulcy which he supposed to be a counterfeit coin. It is scarcely legible, but it appears to contain the name Eleazar on one side, and that of Simon on the other. During the troubles which preceded the final destruction of Jerusalem, Eleazar (the son of Simon), who was a priest and Simon ben Giora, were at the head of large factions. Dr. Levy suggested that money may have been struck which bore the names of both these leaders; but it seems scarcely probable,
as they do not appear to have acted in concert. But a copper coin has been published in the *Revue Numismatique* which undoubtedly bears the inscription of “Elæazar the priest.” Its types are—1. A vase with one handle and the inscription “Elæazar the priest, in Solomon’s time.” R. A bunch of grapes with the inscription, “Year one of the redemption of Israel.” Some silver coins also, first published by Reichardt, bear the same inscription on the obverse, under a palm-tree, but the letters run from left to right. The reverse bears the same type and inscription as the copper coins. The coins, as well as some that bear the name of Simon or Simeon, are attributed by Dr. Levy to the period of this first rebellion. It is, however, quite clear that some of the coins bearing similar inscriptions belong to the period of Bar-cochba’s rebellion (or Barcoceba’s, as often spelled) under Hadrian, as they are stamped after Simon’s predecessor. See *Proceed. of Soc. Bibl. Arch.* May 1897, and Burkitt, *Fragments of Kings acc. to the Vers. of Aquila*, p. 16: but for the opposite view that these are all forgeries, see Weights, Coins.

**Shekinah.** [Glory.]

Sheelah. 1. The youngest son of Judah by the daughter of Shuil, and ancestor of the family of the *Selenites* (Gen.38.5,11,14,26; Num.26.20; rChr.2.3.21).—2. The proper form of the name of *Salaomon* son of Arphaxad (rChir.1.18,24).

Shelep (Gen.10.26; rChir.1.20). The second in order of the sons of Joktan. Gesenius compares the name with that of the Σαλαπαφαί (Ptolemy vi.7) in the S. of Arabia, apparently in the district of Sulaf in Yemen which appears to be the same as Nibbu’s Sallhe, written in the former geographical trace of Shelep, we have the tribe of Shelih or Shulaf. Yâqût in the *Mo‘ajam*, says, “Es-Selfi or Es-Sulaf are two ancient tribes of the tribes of Yemen; Hishâm Ibn-Mohammed says they are the children of Yuqțān (Joktan); . . . And a district in El-Yemen is named the Sulaf; El-Kalâkasri, ‘Es-Sulaf, called also Beni-es-Silfân, a tribe of the descendants of Qahtân (Joktan).” Finally, according to the *Kâmûs*, Sulaf was a branch-tribe of Dhu-ul Qilâ’a.

Shelesh, son of Helam (rChir.7.35).

Shelom’r, father of Alihu (rNum.34.27).

Shelomith. 1. The mother of the man who was stoned to death for blaspheming the Name (Lev.24.11).—2. Daughter of Zerub-babel (rChir.3.19).—3. Chief of the *Ichithare* (22.18).—4. A descendant of Eliezer, son of Moses, in the reign of David (26.25,26,28).—5. A Gershomite (23.9).—6. The sons of Shelomith, the son of Josiphath, were amongst those who returned from Babylon with Ezra (Ezr.8.10). The true reading is probably, “Of the sons of Bani, Shelomith the son of Josiphath.”

Shem, the eldest son of Noah, born (Gen.5.32) when his father had attained the age of 500 years. He was 98 years old, married, and childless, at the time of the Flood. Two years afterwards he became the father of Arphaxad (11.10), and other children were born to him subsequently. With the help of his brother Japheth, he covered the nakedness of their father which Canaan and Ham did not care to hide. In the prophecy of Noah connected with this incident (9.25-27), the first blessing falls on him. He died at the age of 600 years. The land occupied by the descendants of Shem (10.21-31), beginning at his N.W. extremity with Lydia, includes Syria (Arar), Chaldea (Arphaxad), Assyria (Assur), Persia (Elam), and Arabia (Joktan). [Races.]

Shema. 1. A Levite, an ancestor of Beja (1Chir.5.36).—2. Son of Elpaal (8.13). Probably the same as Shemmi (ver.21).—3. One of those who stood at Ezra’s right hand when he read the law to the people (Ne.8.4).

Shema’, one of the towns of the S. of Judah (Jos.15.26). [Sheba.]

Shema‘h, a Benjamite of Gibeah, and father of two of David’s guardians (rChir.12.3).

Shelminah. 1. A prophet in the reign of Rehoboam. After the revolt of the northern kingdom, Shelminah was commissioned to charge Rehoboam and his host to return, and not war against their brethren (1K.12.22; 2Ch.11.2); and upon the occasion of the invasion of Judah and siege of Jerusalem by Shishak the king of Egypt, Shelminah exhorted the people a message of encouragement after they had humbled themselves for their idolatry (2Ch.12.5-8). He wrote a chronicle of Rehoboam’s reign (12.15).—2. Son of Shechaniah, and a descendant of Zerubbabel (1Ch.3.22). He was keeper of the E. gate of the city, and assisted the wall (Ne.6.20).—3. Ancestor of Ziza, a Simeonite (rChir.4.37). Perhaps the same as Shimeal, 6.—4. Son of Joel a Reubenite (5.4); perhaps the same as Shema, 1 (ver.8).—5. Son of Hasshub, a Merarite Levite (9.14; Ne.11.15).—6. Father of Obadiah, or Abda; a Levite (rChir.9.16; cf. Ne.11.17).—7. Chief of the sons of Eliphaz; he assisted in bringing the ark from the house of Obad-edom (rChir.15.8.11).—8. Son of Nethaneel; a Levite and scribe in the time of David (24.6).—9. The eldest son of Obad-edom the Gittite (26.6,6,7).—10. A descendant of Jeduthun the singer, who assisted in Hezekiah’s purification of the temple (2Ch.29.14).—11. One of the sons of Adonikam who returned with Ezra (Ezr.8.13).—12. One of the “men of understanding” whom Ezra, at his camp by the river of Ahava, commissioned to obtain ministers for the temple from “the place Casiphia” (8.16).—13. A priest of the family of Harim, who put away his foreign wife (24.14).—14. A descendant of Israel, son of father Harim, who also had...
married a foreigner (10.31).—15. Son of De- 
lation, 3, a false prophet tribed by Sanballat 
to frighten the Jews from rebuilding the wall 
(Ne.6.10,16). The head of a priestly house, 
which owned the covenant (10.8). His family 
went up with Zerubbabel, and were represented 
in the time of Joiakim by J chonathan (12.6,18). 
Probably the same family is mentioned again 
in 12.35.—17. One of the princes of Judah 
at the dedication of the wall (12.34).—18. Two 
of the priest-musicians on the same occasion 
(12.29,32).—20. "The NEHELAMITE," a false 
prophet in the time of Jeremiah (Je.29.24-32). 
—21. A Levite whom Jehoshaphat sent to 
teach the people the law (2Chr.17.8).—22. A 
Levite in the reign of Hezekiah (31.15).—23. 
A Levite who made offerings at the Passover 
in the reign of Josiah (35.9).—24. Father of Uri-
jah of Kirjath-jearim (Je.26.20).—25. Father of Delaiah, 4 (36.12).

Shemariah:—1. One of the Benjamite 
warriors who joined David at Ziklag (rChr.12. 
5).—2. Three laymen, of the families of Ha-
rim (Ezr.10.32) and Bani (10.41), who put away 
their foreign concubines.

Sheme ber, king of Zeboim, and ally of 
the king of Sodom in the war with Chedor-
laomer and his allies (Gen.14.2).

She'mer, the owner of the hill on which the 
city of Samaria was built (1K.16.24), and after 
whom it was called Shomer or its founder Omri, 
who bought the site for two silver talents.

Shem'al, son of Nethaniah, father of 
Shem'diah (1Chr.7.19). A descendant of Manasseh 
and ancestor of the Shemidai'tes.

Sheminith. [Psalms, Titles of.]

Shemiramoth.—1. A Levite-musician in the 
time of David (1Chr.15.18,20,16.5).—2. A 
Levite and teacher of the law in the reign of 
Jehoshaphat (2Chr.17.8).

Shemuel.—1. Son of Ammihud, appointed 
from the tribe of Shimeon to divide the land of 
Canaan (Num.34.20).—2. Samuel the prophet 
r(Chr.6.33).—3. Son of Tola, of the tribe of Issa-
char (7.2). Shen, a place mentioned only in 
Sam.7. 
12. "Klesh-shen (the tooth)." The Old 
(Vat. M.S.) renders it "the old," which suggests 
Jeshnah ("Am Shina"), 6 miles N. of Mizpeh 
(Tell en Nasbeh). [EBENZER.] [C.R.C.]

Shenazar, a descendant of Jeconiah (1 
Chr.3.18).

Sheni r (1Neut.3.9 ; Can.4.8). [Semen.] 

Sheol. [Hel.]

Shepham, perhaps for sphaim, con-
ected with sapha (Arab. she'ah), "lip"—a 
geographical term for the edge of a mountain 
region (Num.34.10,11). The border of the 
land of Israel E. of the Lebanon turned S. at 
Shepham, and went down from she'pham harbatha, E. of Arv. This indicates a line along 
the W. foot, or slope, of the Anti-Lebanon en-
closing Riblah, and passing by the present 
village of "Ain.

Shephathiah' (R.V. Shephathathah), a Ben-
jamite, father of Meshullam, 6 (rChr.9.8).

Shephathiah.—1. A son of David, born of 
his wife Abital in Hebron (1K.4.15).—2. 
The family of Shephathiah returned with 
Zerubbabel (Ezr.2.1; Ne.7.9). A smaller de-
tachement, led by Zebadiah, came up with Ezra 
(Ezr.8.8).—3. The family of another Shepha-
tiah were among the children of Solomon's ser-
vants, who came up with Zerubbabel (Ezr.2. 
57; Ne.7.59).—4. A descendant of Perez, or 
Pharez, the son of Judah (Ne.11.4).—5. The 
son of Zalmon: one of the Levites who con-
selled Zedekiah to put Jeremiah to death (Je.38.1).—6. The Haruphite, one of the 
Benjamite warriors who joined David at Ziklag (rChr.12.5).—7. Son of Maachah, and 
chief of the Sheconites in the reign of David 
(27.16).—8. Son of Jehoshaphat (rChr.21.2).

Shepherd. The progenitors of the Hebrews 
in the patriarchal age were nomads, and in that 
state of society practically every man was a 
Shepherd. Flocks were tended not only by 
the sons of wealthy chiefs (Gen.30.20ff, 37. 
12ff), but even by their daughters (28.6ff.; 
Ex.2.16). Jacob and his family naturally 
bring their flocks and herds with them into 
Egypt. The dislike of the Egyptians for she-
pherds (Gen.46.34) was due to hatred of the 
uprising Hyksos, or "Shepherd-kings." In 
Egypt the Hebrews learned something of the 
life of towns, and on the entry into Canaan only 
the sons of the Levites, priests and Levite 
pastoral character: three settled on the broad 
pasture-lands of the Trans-Jordanic district 
(Num.32). [Issachar; Simeon.] Though the 
Shepherd's office had now become a subordinate 
one, the idea associated with it remained deeply 
fixed in the thought and language of the people. 
The term "shepherd" and his special functions 
tended to produce a strong, simple, and devout 
type of character, such as we see in David, in 
Amos, and in the shepherds of Bethlehem (Lu. 
2). The shepherd's life was one of hardship 
and danger. He was exposed to the extremes 
of heat and cold (Gen.31.40); he had to en-
counter the attacks of wild beasts (rSam.17. 
34; Is.31.4; Je.5.6; Am.3.12) and robbers 
(Gen.31.39). The shepherd's equipment was 
simple: a mantle of sheep-skin; a scrip 
or wallet containing a small quantity of food; a 
 sling, still the favourite weapon of Bedouin 
Shepherds; and lastly, a staff serving the 
double purpose of a weapon and the support 
of the management of the flock (rSam.17.40; 
Ps.23.4; Zech.11.7). A shepherd's tent is 
also alluded to in Can.1.8, Is.38.12. Towers 
for spying an approaching enemy and for pro-
tection and flock (like the "peel-
towers" of Northumbria) existed from early 
times (cf. Migdal-eder, "tower of the flock," 
Gen.35.21, Mi.3.8), and were erected also by 
Uzziah and Jotham (2Ch.26.10,27.4). In 
the morning the shepherd led forth his flock from 
the fold (Jo.10.1), going before them and calling 
to them, as is still usual in the E. [Sheep; 
at the pastureage he watched the flock, with 
the help of dogs (Job 30.1), though these do not 
seem to have been trained or valued, as by 
modern shepherds. If a sheep strayed, he 
searched for it until he found it (Ezk.34.12; 
Lu.15.4); he supplied the flock with water, 
either at a running stream or at troughs 
attached to wells or cisterns (Gen.29.8,30.38; 
1Sam.17.17). If a wolf came near, he would 
run them back to the fold, and counted them by 
passing them "under the rod" or "under the 
hand" as they entered (Lev.27.32; Je.33.13; 
Ezk.20.37). Finally, he or a deputy ("the
hierling”) watched the entrance of the fold throughout the night (Jn.10.3). The metaphorical use of the word “shepherd” in the Bible is worth careful study. As in Homer, the real meaning (not in Paul) lies behind the word “shepherd of his people” (cf. the great denunciation of “the shepherds of Israel” in Ezk.34). Our Lord appropriates the title pre-eminentiy to Himself, as describing His work towards mankind, and His words to St. Peter (Jn.21.15-17; cf. 1 Pe.5.2-4) led naturally to the description under the same heading in the figure of the apostolic office, and the work generally of the ministers of the Christian Church. [A.R.W.]

Shephi’ (1 Chr.1.40) or Shepho’ (Gen.36.23), son of Shobal, of the sons of Seir.

Shephuphan’, a son of Bela, the first-born of Benjamin (1 Chr.8.5). His name is also written Shephupham (R.V. Num.26.39; A.V. Sin.) and Shupham (1 Chr.7.12,15), and Muppim (Gen.46.21).

Sheerah, daughter of Ephraim (1 Chr.7.24), and foundress of the two Beth-horons, and of Uzen-Sheerah.

Sherebih, a Merarite Levite who accompanied Ezra to Jerusalem to serve as a “keeper of the vessels of the house of God” (Ezr.8.18,24). When Ezra read the law to the people, Sherebih assisted him (Ne.8.7). He took part in the psalm of confession and thanksgiving sung at the solemn fast after the Feast of Tabernacles (9.4,5), and signed the covenant (10.12), and is mentioned among the Levites of the fifth course (12.24).

She’resh, apparently a son of Machir ben-Manasseh by his wife Maachah (1 Chr.7.16).

Sherezer (Shareser, R.V.), one of the messengers sent in the fourth year of Darius by returned exiles to inquire concerning fasting in the fifth month (Zech.7.2). [Regemmelch.]

Sheshach, a name found only in J. (25.26,51,41), and apparently a synonym for Babylon (Babylonia). It is generally regarded as representing “Babel” on a principle well known to the later Jews—the substitution of letters according to their position in the Heb. alphabet, counting backwards from the end, instead of forwards from the beginning. All will be doubted, however, whether this fanciful practice is as old as Jeremiah, but, notwithstanding this, the explanation is worthy of note. Sir H. Rawlinson noticed that the name of the moon-god, Nanna, might also be read Shashak, in which case Sheshach might stand for Ur of the Chaldees, and, by extension, for Babylon itself. There is also the name of a Babylonian city, which may be read Šisku or Shiskhuk. See Dr. Selbie’s art. in Hastings, D.B. (vol. Iv. 1902).

Sheshai, one of three sons of Anak who dwelt in Hebron (Num.13.22) and were slain by Caleb (Jos.15.14; Judg.1.3). [Aub.] Sheshai, a descendant of Jerahmeel. As he had no son, his line was continued by his daughter’s marriage with his Egyptian slave (1 Chr.2.31,34,35). [A.H.S.]

Sheshbazzar, the Babylonian Samas-bal-usur (O Sun-god defend the son). He brought forth the image, supposed to be back from Babylon, and is called the “governor.” It is doubtful whether he is to be identified with Zerubbabel. See Ezr.1.8,11, 5.14,16; 1 Esd.2.12,15. In the LXX. his name seems to be Sanabazar, with Sin, the Moon-god, for Samas. Some scholars have also identified him with Sheneazzar (10.18,28). [ZERUBBABEL] [A.H.S.]

Sheth.—1. The patriarch Seth (1 Chr.1.1).—2. “The sons of Sheth” in Num.24.17 (A.V.) should be “the sons of tumult” (as in R.V.), i.e. the wild warriors of Moab (cf. Je. 48.15). [A.C.B.] Shethar* (Esth.1.14; some MSS. “his name”), the name of one of the “seven princes” (cf. Her. iii. 70) of Persia and Media who “saw the king’s face,” and were the chief men in the kingdom in Xerxes’ third year. The name is Persian, Ushtra,” a camel “[a man so named is mentioned in the Avesta; cf. the final element in Zarathushtra’s (Zoroaster’s) name], and the next art.], Mod. Pers. Usthr. and Shutur. Geldner’s ed. of the Zend-Avesta. [Wst.-c.t.]

Shetar-boznai* (Ezr.5.3,6, etc.), a colleague of Tattenai (R.V.), “governor beyond (R.V.) the river” Euphrates (i.e. of Syria) under Darius Hystaspis. They referred the question whether Zerubbabel and his companions were authorized to rebuild the temple to Darius, and were directed to assist them. The name is Persian, and is found in Babylonian inscriptions mostly of the name Artaxerxes I. in the form Ushtra-bazona, for Ushtra-bazona (cf. SHERTH). The Aram. form bazonai closely follows the Babylonian; the Persian word Artabazona “lofty,” Avic.: cf. Barzants, Ariobazants, Satibarzants (all in Arrian, some also in Xenophon and Pompeius Trogus) and Mithrobazants (Lucian). Nearer to the weaker Babylonian form is Artobazona (Artabazans) in Herodotus. Otherwise bazonai must be from Aves. root bzn, Skt. bhzn, “to enjoy,” “possess.” “use,” Hilpricht, Babylon. Exp. of Univ. of Pennsylly. ser. A. vol. Ix. [W. s.t. c.t.]

Sheva.—1. The scribe or royal secretary of David (2 Sam.20.25). He is called else-where Seraiha (8.17), Shisha (1 K.4.3), and Shavvsha (1 Chr.18.16). The qri of 2 Sam.20.25 reads shvei = shewa, the k-tehth reads skvni.—2. Son of Canton, mayor by his concubine Maachah (1 Chr.2.49).

Shewbread. Heb. bread of the face, or Presence-bread (R.V. marg. Ex.25.30,35,13), with reference to the face, or presence of Jehovah, Ex.25.30, 1 Sam.21.6[7]; “bread only, Ex.40.23; bread of continuance, Num.4.7; ord, of a row of two rows, and row of four rows, Ex.25.6, “two rows”; same Heb. word) bread, 1 Chr.9.32,23,29, Ne.10.33[34], 2 Chr.13.11 (cf. 2.4[6]); holy, as opposed to common bread, 1 Sam.21.4[5],6. There were twelve cakes (Lev.24.5), unleavened (Josephus, 3 Ant. vi. 6, x. 7), each contained one-fifth of an ephah (Lev.24.8), fourths of a pert (Lev.24.5); placed the table in two rows (R.V. marg., piles, ver. 6); a cup of frankincense on the top of each pile (ver. 7), a memorial offered on the altar to Jehovah. The cakes remained seven days, being changed every sabbath (ver. 8), and were eaten by the priests in a holy place (ver. 9). The hot cakes were set on the table; Josephus (3 Ant. x. 7) says they were baked on the
Friday and taken into the sanctuary on the morning of the sabbath. They were provided out of the common charges (Josephus, loc. cit.; Ne.10:32,33), and prepared by the Kohathites (1Chr.9:32). Though the stalk cakes might be eaten by the priests only, they were in an extreme case on the sabbath given by the priest at Nob to David and his young men who were ceremonially pure (1Sam.21:4-6;57); Mt.12:3,4; Mk.2:25,26; Lu.6:3,4.—Table of Shewbread (Ex.25:23-26.37.10-15). The Presence-table, Num.4:7 (cf. Ezk.41:22); pure table, Lev.24.6, 2Chr.13.17; table of ordered (or, row of bread), 2Chr.29:18 (cf. only 1Chr.28:16). As Josephus only notes the length, 1 broad, ½ high; made of acacia wood overlaid with pure gold, and with a gold moulding round the top. According to Josephus (3 Ant. vi. 6), the legs were square in the upper and round in the lower part. A piece of wood about 4 in. wide encircled the legs, probably at the point where the four moulded round occurred, and this, like the top, had a moulding of gold. Four rings of gold were attached to the legs below, and through them were passed the gold-plated acacia rods for carrying the table. When carried about, it was covered with a purple-blue cloth, on which the vessels and cakes were placed. Over these was put a scarlet cloth and then a covering of sealskin (Num.4:7,8, R.V.). There was only one table in the tabernacle, but according to 2Chr.4:8 ten in the temple, five on the N. and five on the S. of the holy place (cf. 1Chr.28:16; 2Chr.4:19). In 1K.7:48, 2Chr.13.11,12, Solomon says Solomon dedicated a great number of tables, but only one for the shewbread. It stood on the N. side of the holy place (Ex.26:35), opposite the golden lampstand. The first table was probably either burnt or carried to Babylon (2K.25:18.; Je.52:13f.). The one dedicated and templed was taken by Antiochus (1Mac.1:22), but was replaced by another under Judas Maccabaeus, 165 B.C. (4:19). This was in use till the fall of Jerusalem (70 A.D.), when it was taken to Rome with other spoils, and is depicted on the Arch of Titus (Vitellus (Ex.25:29,97,16). These were (1) q’sǎridbh, probably vessels in which the cakes were baked, or in which they were kept from the Friday to the sabbath. (2) kāpelfth, bowls or pans, probably for the frankincense. (3) q’s₂sawth; jars for the wine libations. (4) mēnaqyrinyaḥ, sacrificial bowls, connected with the drink-offerings. The meaning of the rite is uncertain. It was an ancient custom to prepare such cakes for a deity (Je.7.18,44,19; cf. the Roman lectisternium). The Babylonians offered their gods unleavened cakes of wheat flour, twelve or three times twelve being set out on tables before the deity, and called, like the Heb. Presence-bread, " shall pani." It was probably a sacrificial meal. Reland, De Spongis Templi Hierosolymitani; Zimmern, in Schrader’s K. J. T. ii. 600; Keil, Bibl. Arch. vol. 1. p. 146.

Shibboleth (Judg.12:6; 22:38; 1Xx. 31aɪæs = an ear of corn). The men of Ephraim, having quarreled with the Gileadites on account of the expedition against Ammon, were routed by Gideon under the leadership of Jephthah, and driven to a ford of the Jordan, where they hoped to cross unrecognized in the turmoil. But Jephthah posted guards on the bank, who required the pronunciation of this word from every passer-by. The dialect of Ephraim was evidently different from that of their pursuers, and they bewrayed their tribe by pronounced the word as "sibboleth." w (sh) and D (g) are constantly interchanged in Heb. words. In a similar way the Heb. w is often represented in Arab. by sh rather than sh. The word is also found with the sense of "flood," and but for the fact that this meaning is only found in later literature, it would seem fairly obvious that the river itself suggested the word. There is an interesting parallel in French history; and the Arabs E. of Jordan still say sejera for "tree," which on the W. of the river is shejera.

Shek, the name of the landmarks can be referred to the W. end of the N. boundary of Judah (Jos.15:11). It lay between Ekron (Agur) and Jabneh (Yehna). The sites is unknown. (c.r.c.)

Shield. [Arms, Defensive, 1.]

Shiggaion. [Psalms, Titles of.]

Shihon (R.V. Shimon, Heb. shī'ōn; Jos. 19:11) a son of Issachar, noticed with Axshaithai (Got. Nan, and thus perhaps towards E. Eusebius (Onomasticon) places it "near mount Tabor," and the name may perhaps survive in a gutturized corruption) at the Assyrian Shaim, springs about 2 miles N.W. of the summit. [Tabor.]

Shiloh. [Genealogies, 1.]

Shiloh-'ibnath. (Jos.19.26), a place mentioned with Mt. Carmel as somewhere S. of Achor, and W. of Beth-Dagon. The term shibhōr appears to be connected with shiḥōr (otherwise sīḥōr), which (Is.23.3) means "black mud." Shihor (Jos.13:3) was on S. border of Palestine. Shihor-'ibnath may mean "the (river) of black mud for (making) bricks" (šbñhā ḫān), and the river Belus, just S. of Achor, is probably intended. It flows W. for 5 miles through marshy ground to the sea, a mile S. of the city (Surv. W. Pal. p. 268). Pliny (Hist. Nat. xxxvi. 26) says that glass was made from sand near this river. The conjectures of Michaelis that Libnath mean "glass," as being "transparent"; but the words for "glass" are different. (c.r.c.)

Shilhi, the father of Azubah, Jecoshaphat's mother (1K.22.42; 2Chr.20.31).

Shilhim (Jos.15.32). [Sharuhen.]

Shillem, son of Naphtali, and ancestor of the family of the Shillemites (Gen.46:24; Num.26:38).

Shiloah, Siloam. The Heb. shlhōāh means "sent out," or "directed," and this applies to "the pool of Siloam" (Jn.9:7). In Isaiah (8:6) the waters of Siloah are said to "go softly" or, better, covered over, "secretly" (pēqāh), which is explained by the Arab. mikāh, which means before the Assyrian invasion, in 728 B.C. He "stopped up the torrent that ran through the midst of the earth," lest the "kings of Assyria come and find much water" (2Chr.32:14); or, as further detailed (ver. 30), "stopped the upper spring of Gihon, and brought it down west to the city of David."
SHILOH, SILOAM

In 2 K. 20:20 we are told that he made "a pool, and a conduit, and brought water into the city." (Edom, R. B.) Hezekiah, about the same date (22.9,11), says, "Ye gathered together the waters of the lower pool," and "made a gathering [mikwah] between the two walls of the waters of the old pool." This is all explained by the discovery of the Siloam inscription, near the mouth of the rock aqueduct which Hezekiah then made, and which runs for a third of a mile from the mōḏa', or spring of Gihon, to the bērēḵā, or pool of Siloam. The text—now removed and partly destroyed—is in the old alphabet of Israel [Warren], and consists of 6 lines—damaged (even in 1880, when it was found by a Jewish boy) at the left ends of the lines. It runs thus: "The excavation; and this has been the method of the excavation; while yet ... the call of one crying out to his fellow, for there has been an excess in the rock to the right ... on the day of excavation they hewed this mine, each to meet his fellow, pick to pick; and the waters flowed from the source [ḥammōḵā] to the pool [ḥabboḵā] for two hundred and a thousand cubits; and an hundred cubits has been the height of the rock above this mine." The two parties of miners, working from Gihon and Siloam, met at a point determined by survey in 1881 (Surv. W. Pal., Jerusalem vol. pp. 345-371), when the present writer took a paper cast of the inscription. Shiloah was so called because the water was "sent," along this aqueduct whenever the natural supply of water in the cave of the Gihon spring caused an overflow of water, which—before Hezekiah dammed the cave mouth—had run down the Kidron, but afterwards ran, "in the midst of the earth," to the newly made pool of Siloam, which lies S. of the city, at the mouth of the Tyropeoon Valley, between Ophel on E. and the upper city on W. This pool was called "the pool of Siloam," because it was brought "into the city" by a rock shaft, and stairs, at the back of the Gihon cave, leading within the water-gate (Ne.3.26,12.37). The "tower in Siloam" (Lu.13.4) was probably a tower of the city wall, and not of the village Silwan, which now rises round the stone Zohe-leth, on E. side of the Kidron. Josephus (5 Wars iv. 2) describes the wall as bending twice at Siloam, and running on E. side of Jerusalem (vi. 1). He places the pool outside the wall (ix. 4). Recent excavations (see E. J. Bliss, Excavations at Jerusalem, 1894-1897) show that the present Birket Silwan represents only part of the old rock-cut pool, which was about 70 ft. square. An early Christian church was built on the N. side, and a long flight of steps led up the valley—representing probably the "stairs that go down from the city of David," which were close to the "pool of Siloah," to the "king's garden," and to the "seulphur hot water ... the Tyropean Valley, below the old palace on Ophel (Ne.3.15,25.12.37). The wall built by the empress Eudocia (c. 450 a.d.) to include the pool within its circuit was also discovered; being the only one that did not leave Siloam outside, but close to, the ramparts on the high ground to W., N., and E. a.c.

Shiloh. The phrase in Gen.49.10, "Until Shiloh come," has been the subject of such various interpretations by scholars of the highest authority that it is scarcely reasonable to pronounce a positive opinion as to its meaning. The variation goes back to ancient versions and Jewish commentators, so that the difficulty is not one of modern criticism. The Vulg. renders Shiloh "qui mittendus est," which may be compared with the expression in Mt.11.3, "Art Thou He that should come?" the LXX has "Until there come the things stored up for him." One of the Targums, some Rabbins, and Calvin render "his son," and the medieval Rabbins called Shiloh the "heir" or "heir-apparent" of God. It is customary to take Shiloh in this passage to be the name of the city Shiloh (q.v.), and that the meaning was "Until he come to Shiloh"—that is, until the settlement of the Israelites in Canaan, when Judah lost its leading position. This interpretation is supported in the present day by the high authority of Dr. Strack, in the 2nd ed. (1905) of his translation of, and commentary on, Genesis. Another interpretation gives Shiloh the interpretation "Peace," or "Peace-maker," and thus the Messiah. No less authorities than Gesenius and Rosenmüller support this meaning. But there is a variant reading of the Heb. of shilḥō, which omits the letter yod after sh, and which may be rendered, according to Dr. Driver "Until he that is his [or, that which is his] shall come"; or—though he adds that this is not free from grammatical objections—"Until he come whose [it is]" (Comm. on Genesis). This is the reading of the ancient versions, and, according to Dr. Harold Browne (Speaker's Comm.), the authority of the ancient versions is "almost overwhelming in favour of the sense 'He to whom it belongs' or 'He
whose right it is.' It seems safest to follow the substantial agreement of two such scholars, and the rendering of R.V. "Until that which is his shall come," or "Till he come whose it is." As to the significance of the prediction, we may again be content with Dr. Driver's statement that "the verse, in either case, will then promise that the sovereignty will not depart from Judah till it is not yet in the highest degree more perfect than the sovereignty to be exercised by its ideal ruler, the Messiah." When he adds that "such a reference to the Messiah seems to presuppose the teaching of Isaiah and other prophets," it may justly be replied, with Bp. Harold Brown, that the assumption that the patriarchal age had for itsJoasheen a type of the coming Messiah is simply gratuitous. If Abraham was vouchsafed a foresight of the future pre-eminence of his seed, there is nothing improbable in a similar foresight being granted to Jacob, in the vague sense intimated by the words, of a sovereignty and leadership in the higher type, which must be left to the perfect rule of Messiah. A Messianic interpretation in this sense is adopted by the great body of the Christian Fathers.

Shiloh' (rest, peace, or safety), the first mentioned of the stations of the tabernacle after its removal from Gilgal. With the ark it here remained 400 years. Jeremiah says: "But go ye now unto my place for "station," Heb. mágôm which was in Shiloh, where I set my name at the first" (7.12), referring no doubt to the successive central shrines at Shiloh, Nob, and Gibeon, and to "all places where I record my name" (Ex.20.24), successively adopted, after Shiloh was desolate. The temple was set up at Shechem when Israel was first gathered there; but very early it was established at Shiloh by Joshua, perhaps as being a "safe" place, remote from the highways of armies, and less exposed to capture than it would have been at Shechem. Israel assembled "at the entrance of the tent of meeting" (Jos.18.1; 5.10,19.5,21.11), which other writers call the "house of God," the "house of Jehovah," or the "temple [lit. "great house"] of Jehovah" (Judg.18.31; 1Sam.1.9,24). The Rabbis believed that, at Shiloh, the tabernacle became a more permanent building, with doors (see 1Sam.3.15); but in a palm written later rather than David's time, by Asaph, the tabernacle of Shiloh is called a "tent" (Ps.78.60); and in another (27.4,5), attributed to David, temple and pavilion are equivalent terms. After the loss of the ark and the death of Eli (1Sam.4), we hear very little of Shiloh, but it was inhabited by a prophet in the time of Jeroboam I (1K.13.3). Asaph, the "son of Berechiah, the singer," singing "unto the Lord" in the ruin of the "place" at Shiloh (7.12,14,26,69), it appears to have been an inhabited town in his age (41.5), whence (and from Shechem and Samaria) came men shaven and gashed (in token of woe), with offerings and incense for the temple. Shilonites are also mentioned in times later of great age (1K.14.25,12,15,19,29; 1Chr.9.5; 2Chr.9.20,10.15). The meaning of the phrase "till Shiloh come" (Gen.49.10) has been discussed by Jews and Christians alike for twenty centuries. The Rabbis said that the coming of the Messiah was thus foretold. I.e.x. renders the lettering in the vineyards of Bethel (Judg.19.4), as "to the little hill of S., below the hill of Seilin. The ruins are those of a modern village, with a spring three-quarters of a mile to E. On N. is a deep valley, and on this side there is a terrace, artificially made by scarping the rock on its E. It measures 77 ft. N. and S. and 412 ft. E. and W., so that it would be large enough for the court of the tabernacle. Sir C.W. Wilson (Quart. Stat. Pal. Expl. Fund, Jan. 1873, p. 38) suggested this terrace as the place where the tabernacle stood, and there is very little flat ground elsewhere at Shiloh. There is a little mosque ("of the servants of God") on a hill of the village, shaded by a fine oak; and near this, on S.E., is an older building of some interest. It is square, and made of good masonry. The roof was supported by four pillars, and the N. gate has a lintel, with carvings representing an amphora, two wreaths, and two doctas (or two-handled jugs). This is clearly Jewish work of the 1st. or 2nd. century. For the curve of the terrace, see the ruin of the little hill of Keft Beleia over the porch of Heb. tombs. The building may be a small synagogue. A sloping revetment was added to its outer wall later, and a little mosque of the "forty" (champions of Islam) was built against the E. side of the older building.

Shimeah.—1. (2Sam.21.21) = Shimeam.—2. A descendant of Jehiel, the father or founder of Gibeon (1Ch.9.32; cf. 29.9,35).

Shimeam' (1Ch.9.38) = Shimmeah. 2.

Shimeath', an Ammoniteess, mother of Jozaah, or Zabad, one of the murderers of king Joash (2K.12.21.22); 2Chr.24.26.

Shimeil.—1. Second son of Gershon
Shim'on (Jos.11.1,19.15), or Shim'on-meron' (15.20), a royal Canaanite city, in the lot of Zebulun. The Talmud (Tal. Jer. Megilla i. 1) states that its later name was Sihmih'ta; and the LXX, renders in all three passages Sunoon (Σωονω'). This is the Simonias of Josephus (Life, 24), and the present village Seminín, 5 miles W. of Nazareth, a very small place, but with three springs (Surv. W. Pal. i. p. 280). [MEROM.] [C.R.C.]

Shimshai', the scribe or secretary of Remur, 2 (K.r.2.4). In Exod.2.16 he is called Semelius (R.V. Samelius).

Shi'nah, the king of Admah in the confederacy of the 4 kings against 5 (Gen.14.2).

Shin'ar (shin'âr) is the ancient Heb. name of the great alluvial tract through which the Tigris and Euphrates pass before entering the sea—the tract known, or Sumero-Akkadian, Chaldea or Babylonia. Being an alluvial plain, brick had to be used for stone, and bitumen (from the springs at Hit) for mortar (Gen.11.21). Among its cities were Babel, Babylonia, Erech (Warka), Accad close to Sippar (Abuhabbhah), and Calneh (probably Niffer). The name Sinar is possibly Sinsamia and may be the corruption of kingir-Ura, the non-Semitic designation of the N. and S. districts, with sb for k and 'ayin for g. In the earliest times it was divided into a number of small states, of which Babylon, Erech, Isin, Lagas, Larsa, Niffer, and Ur seem to have been the chief. The state of Akkad (Akkad) was probably the most of them, in which, in early times, Semitic influence was strongest, whilst "the land of the sea," on the S., seems to have become later, at least in part, one of the strongholds of the Chaldeans, and perhaps also their kinsmen the Arameans. The primitive language of the country was that now called Sumerian, or Sumero-Akkadian, which gave way to Semitic Babylonian 2,000 years B.C. or earlier, whilst Chaldean and Aramean dialects were spoken in the S. See BABEL, BABYLON, and art. "Shinâr" in Hastings, D.B. (vol. iv. 1902). [T.G.P.]

Ship. No one writer in the whole range of Gk. and R.V. and other references is so well supplied with so much information concerning the merchant-ships of the ancients as St. Luke in the narrative of St. Paul's voyage to Rome (Ac. 27.28). It is important to remember that he accomplished it in three ships: first, the Adramyttian vessel which took him from Caesarea to Myra, and which was probably a coasting vessel of no great size (27.1-5); secondly, the large Alexandrian corn-ship, in which he was wrecked on the coast of Malta (27.6-28.1); and thirdly, another large Alexandrian corn-ship, in which he sailed from Malta by Syracuse and Rhegium to Putoei (28.11-13).—(1) Size of Ancient Ships. The narrative which we have of the ship, like our modern vessels, is not always the best guide for estimating this. The ship in which St. Paul was wrecked had 276 persons on board (27.37), besides a cargo of wheat (vv. 10, 38); and all these passengers seem to have been taken on to Putoei in another ship (28.11) which had its own crew and its own cargo. Now in English language transport-ships were so designed for carrying troops, it is a common estimate to allow a ton and a half per man. On the whole, if we say that
an ancient merchant-ship might range from 500 to 1,000 tons, we are clearly within the mark.—(2) Steering Aground. In 27.10 ("the fastenings of the rudders") St. Luke uses the plur. for ancient ships were not steered by rudders fastened or hinged to the stern, but by means of two paddle-rudders, one on each quarter, acting in a rowlock or through a port-hole, as the vessel might be small or large.—(3) Bows and Sterns of Ships. In 27.10 it is probable that there was no very marked difference between the bow and the stern. The "hold" (Jon.1.5) would present no special peculiarities. One characteristic ornament, rising in a lofty curve at the stern or the bow, is familiar to us in works of art, but no allusion to it occurs in Scripture. That personification of ships, which seems to be instinctive, led the ancients to paint an eye on each side of the bow (cf. Ac. 27.15). The "sign" of the ship which bore St. Paul from Malta to Puteoli was Castor and Pollux (28.11); and the symbols of these heroes were doubtless painted or sculptured on each side of the bow.—(4) Undergirders. The inner and outer girdles of the hull, and a little more in the stern, were known as the undergirders below, 6) the peculiarity of the rig, in ancient ships, resulted in a greater tendency than in our times to the starting of the planks, and to consequent leaking and foundering. Hence it was customary to take on board peculiar contrivances, suitably called "helps" (27.17), as pieces of gear or machinery. These were simply cables or chains, which in case of necessity could be passed round the frame of the ship, at right angles to its length, and made tight.—(5) Anchors. It is probable that the ground-tackle of Gk. and Rom. sailors was almost as good as our own. Ancient anchors were similar in form to ours of to-day, but without link-pins. Instructions as to anchoring are found in N.T., one in a very impressive metaphor concerning Christian hope (Heb.6.19). The other is in the narrative of St. Paul's voyage at its most critical point. The ship had four anchors on board, and these were all employed in the night, when the danger of failing on breakers was imminent. The anchors on this occasion anchored by the stern (Ac.27.29).—(6) Masts, Sails, Ropes, and Yards. These were collectively called σκόριον or σκόριον, i.e. gear. We find this word twice used for parts of the rigging (27.17,19). The rig of an ancient ship was more simple and clumsy than that employed in modern times. Its great feature was one large mast, with one large square sail fastened to a yard of great length. Hence the strain upon the hull, and the danger of starting the planks, were greater than under the present system, which distributes the mechanical pressure more evenly over the whole ship. Any masts or sails more than one in an ancient merchant-ship were regarded as the same general unit of rig. In O.T. the mast is mentioned (Is.33.23); and from Ezk.27.5 we learn that cedar-wood from Lebanon was sometimes used for this. In 17.23,34 the top of a ship's mast is probably intended. In Ezk.27.20 corn is mentioned; and it seems that oak-wood from Bashan was in making them.—(7) Rate of Sailing. St. Paul's voyages furnish excellent data for approximately estimating this, and are quite in harmony with what we learn from other sources. We must notice here, however (what commentators sometimes forget), that winds are variable. Thus the voyage between Troas and Philippi, accomplished on one occasion (Ac.16.11,12) in two days, occupied on another occasion (20.6) five days. With a fair wind an ancient ship would sail full 7 knots an hour.—(8) Sailing before the Wind, and near the Wind. Rig which has been described is, like the rig of Chinese junk, peculiar in being able to a quick run before the wind (16.11,27.10). A modern ship, if the weather is not very boisterous, will sail within 6 points of the wind. To an ancient vessel, of which the hull was more clumsy, and the yards could not be braced so tight, it would be safe to assign 7 points as the limit.—(9) Laying-to. A ship that could make progress on her proper course, in moderate weather, when sailing within 7 points of the wind, would lie-to in a gale, with her length making about the same angle with the direction of the wind. This is done when the object is, not to make progress at all hazards, but to prevent the force of the wind from reaching the ship. The ancients had a yard to this effect. The ship of St. Paul when she was undergirded and the boat taken on board (27.14-17) under the lee of Clauuda.—(10) Ship's Boat. The σκόριον appears prominently in the narrative of the voyage (27.16,32) of the Alexandrian corn-ship in which St. Paul was sailing from Fair Havens, and which had two boats (17.22). Every large merchant-ship must have had one or more boats.—(11) Officers and Crew. In 27.11 we have both κυβερνήτης and παράσκευος. The latter is the owner (in part or in whole) of the ship or the cargo, receiving also (possibly) the fares of the passengers. The former has the charge of the steering. The word for "shipping" (27.27,30) and " sails," (Nov.18.17) is the usual term ραφήνα.—(12) Storms and Shipwrecks. The 1st cent. A.D. was a time of immense traffic in the Mediterranean; and many vessels must have been lost there every year by shipwreck and by foundering. This last danger would be much increased by the form of rig described above. Moreover, the ancients had no compass, and very imperfect charts and instruments, if any. Certain coasts were much dreaded, especially the African Syrtis (Ac.27.17). The danger indicated by breakers (ver. 29), and the fear of falling on rocks, are matters of course. St. Paul's experience gives illustrations of all these perils.—(13) Boats on the Sea of Galilee. In the narratives of the call of the discipies to be "fishers of men" (Mt.4.18-22; Mk.1.16-20; Lk.5.1-11) there is no special information concerning the characteristics of these boats. It is instructive to compare the accounts of the storm and the miracle on the lake (Mt.8.23-27; Mk.4.37-39; Lk.8.22-25). A boat in this sea is more technical than St. Matthew, and St. Mark than St. Luke. With the large population round the lake of Tiberias there must have been a vast number both of fishing-boats and pleasure-boats, and boat-building must have been on a large scale on its shores. Mk.4. Merchantships in O.T. The earliest allusions to seafaring in O.T. are: Gen.49.13, in the prophecy of Jacob concerning Zebulun; Num.24.24, in Balaam's prophecy; Deut.28.68, in
CYLINDER OF ESAR-HADDON, MENTIONING MANASSEH, KING OF JUDAH.
(From the Brit. Mus.) See art. "Manasseh."

ARMED GALLEY IN MOTION: TYRIAN GALLEY GOING TO SEA.
one of the warnings of Moses; Judg. 5.17, in Deborah's Song. There are illustrations and descriptions connected with this subject in Job 9.26; Ps. 48[47].7, 104[103].26, 107.23; Pr. 23.34, 30.19, 51.14. Solomon's own ships may have suggested some of these illustrations (1K.9.26; 2Chr.3.18, 19.21). We must notice the disastrous expedition of Jehoshaphat's ships from the same port of Ezion-geber (1K.22.48, 49; 2Chr.20.36, 37). The passages which remain are in the prophets (Is. 2.16, 33.1, 4, 60.9; Ezek. 27; Jon.1.1-16). In Dan. 11.40 we touch the subject of ships of war. The Hebrews doubtless had a knowledge of navigation from the Phoenicians, the leading seamen of ancient days.—(15) Ships-of-war in the Apoc. Warlike operations both by land and water (1Mac.8.23, 32) are prominent subjects in the books of Maccabees (8.26, 28; 2Mac.4.26). Here we must not forget the monument erected by the Hasmonean on his father's grave. Finally must be mentioned the noyade at Joppa, when the resident Jews, with wives and children, 200 in number, were induced to go into boats and were drowned (2Mac.12.3). [MODIN; PHRENICE.]

Shiphi', a Simeonite, father of Ziza (1Chr.4.36).

Ship'mite, The. Probably, though not certainly, a native of Shephem (1Chr.27.27).

Shiprah' (Ex.1.15-21), one of the two midwives who disobeyed Pharaoh's command to kill the male Hebrew children.

Ship'tan', an Ephraimite, father of Kemuel (Num.34.24).

Sh'inaq (1Mac.3.149, 162). Sh'inaq was the daughter of the high priest of Beth-sirah (Ramses), who was killed by the Philistines (2Sam.4.2; 1Chr.11.23).

Sh'ishim, king of Egypt, the Sheshenih of the monuments, 1st sovereign of the Bubastite 22nd dynasty, who invaded Palestine in the 5th year of Rehoboam. He was originally the chief of the Libyan mercenaries, an office which he inherited from his father Namured. Through his grandmother Mehtuseseht he was connected with the 21st (Tanite) dynasty. His expedition against Palestine must have taken place before his 21st year, when he began the erection of a new court in the temple of Karnak at Thebes, and inscribed the names of the conquered cities on its walls. Among them are "Yehud, the king," in which the earlier Egyptologists fancied the "recognized king of Judah." As the basons are not invaded to Judah, it would appear that Shishim's campaign was conducted against the northern kingdom as well as Judah, and that consequently he did not enter Palestine as the ally of Jeroboam. He did not pillage Jerusalem, but exacted all the treasures of his city from Rehoboam, and apparently made him tributary (2Chr.12.5, 9-12, esp. 8). The narrative in 1K.14.25-26 mentions only the invasion and the exactation. [JEHUD.] [A.M.S.]

Shit'ra', a Sharonite who was over David's herd that fed in Sharon (1Chr.27.29).

Shittah-tree, Shittim (Heb. shit'ā, is without doubt some species of Acacia, of which three or four kinds occur in Bible lands. This wood was extensively employed in the construction of the tabernacle (see Ex.25, 36-38). The Arabic name of the Acacia is suni. The Heb. term is, by Jablonski, Celsius, and many other authors, derived from the Semitic seal, and the Arabic seal is common in some parts of the peninsula of Sinai, but much less so in Palestine, though the Wady Seiyd on the W. of the Dead Sea derives its name from a few acacia-trees there. The A. seyal, like the A. arabica, yields gum arabic, which is obtained by incisions in the bark. Stanley, in his narrative, who was the first to tongue thickets into which the stem of this tree expands may arise the use of the plur. form of the Heb. noun sh itm, the sing. occurring once only in the Bible (Is.41.19). Henslow, however, interprets the plur. "wood in blocks," i.e. timber. Besides the A. seyal, there is another species, the A. tortilis, on Mt. Sinai.

Shittim, the place of Israel's encampment between the conquest of the Trans-jordanic highlands and the passage of the Jordan (Num.11.19; 20.1; 21.1). Its full name appears to be given in the first of these passages—Abel hash-Shittim (the meadow of the acacias). It was "in the Arboth-Moab, by Jordan-Jericho" (Num.22.1, 26.3, 31.12, 33.48, 49). That is to say, it was in the Arabah or Jordan Valley, opposite Jericho. This plain, E. of the A. tortilis, now called the Ghor es Seissehin, or "valley of the acacias." The Nahal-Shittim of J.3.18 appears to be somewhere on the Kidron. [C.R.C.]

Shiza', a Reubenite, father of Adina (1Chr.11.42).

Shoa (Ezk.23.23) is mentioned in connexion with the Chaldeans, Pekod, Koa, and all the Assyrians, who were to work their will upon Abilah. The inscriptions show that Pekod, Koa, and Shoa do not mean "officers, princes, and rulers," but are really, as rendered, the names of places. Schrader identified Shoa with the Assyro-Babylonian Sutu (parallel to Koa with Kutu), according to Delitzsch, the plains E. of the Diyala towards Elam as far as the Kerkha. This nationality, whose name appears shortened to Su, occurs fairly often in cuneiform literature. Delitzsch, Wo lag das Paradies, p. 235. [T.G.P.]

Shob'ah.—1. Son of David and Bathsheba (2Sam.5.14; 1Chr.3.5, 14.1).—2. A descendant of Caleb (1Chr.8.18).

Shoba'ah or Shoba'ah. A general of Hadarezer king of the Syrians, who was defeated and slain by David at Helam (2Sam.10.15-18).

Shobo'ah. The children of Shobai were a family of the doorkeepers of the temple, who returned with Zerubbabel (Ezr.2.42; Ne.7.45).

Shob'al.—1. A second son of Seir the
Horite and one of the "dukes" of the Horites (Gen. 36.20, 29; 1 Chr. 1:38). — 2. Son of Caleb, the son of Hur, and "father" or founder of Kirjath-jearim (1 Chr. 2:50, 52). In 1 Chr. 2:1 he appears with Hur among the sons of Judah.

Shobek,' one of the heads of the people who sealed the covenant (Ne. 10:24).

Shobi,' son of Nahash of Rabbah of the children of Ammon. He brought provisions to David at Mahanaim on his flight from Abishai (2 Sam. 17:27-29).

Shochoh (1 Chr. 26:28, 29), Shochoh' (1 Sam. 17:1), Shocho (2 Chr. 11:7), Socho (1 Chr. 4:18), Sochoh' (1 K. 4:10), or Sochoh' (Jos. 15:35), a town of Judah, near Adullam. It was fortified by Rehoboam, and is represented by the present ruin Shweikeh, on a hill S. of the valley of Elah, near the great bend where it turns W. This was the scene of David's victory over Goliath. — The Socho of Jos. 15:38 is also a town of Judah, but in the mountains. Now the ruin Shweikeh, 2 miles E. of Debir, is [C.R.C.]

Shoe. [Sandals.]

Sho'ah, a Merarite Levite (1 Chr. 24:27).

Shoeb, an Asherite; son of Heber (1 Chr. 7:32). — 2. Jehozabad, 3, is described as the "son of Sho'er" in 2 K. 12:21; in the parallel passage in 2 Chr. 24:26 the name is converted into the fem. form Sheinrith, who is further described as a Moabitess.

Shophach' (1 Chr. 19:16, 18) = Shophach.

Some of the fortified towns on the E. of Jordan which were taken possession of and rebuilt by the tribe of Gad (Num. 32:35). The word means a hyrax (A.V. coney). The site is unknown. [C.R.C.]

Shoshannim, Shoshannim-Eduth.

[Psalms, Titles of.]

Shua (1 Chr. 2:3). The "daughter of Shua" (R.V. Edithshua), a Canaanite, was Judah's wife.

Shu'ah,—1. Son of Abraham and Keturah (Gen. 25:2; 1 Chr. 1:32). — 2. (R.V. Shukah) Brother of Caleb (1 Chr. 4:11). — 3. Father of Judah's wife (Gen. 38:2, 12); called Shua in 1 Chr. 2:3.

Shu'el, son of Zophan, an Asherite (1 Chr. 7:36).

Shual, Land of. [Ophrah, 1; Shalem, land of.]

Shu'ael,—1. (1 Chr. 24:20) = Shubael, 1. — 2. (1 Chr. 25:20) = Shubael, 2.

Shuham, son of Dan, and ancestor of the Shuhamites (Num. 26:12, 43). [H.U.H.]

Shuhiite (Job 2:11, etc.), the title of Biledah, Job's friend. The region or place intended is unknown. [C.R.C.]

Shulamite, The (Heb. shuh-lameth; R.V. Shulamit). The name given in Can. 6:13 to the country maiden beloved of Solomon, the heroine of the Song. It probably means a native of Shunem (Jos. 19:18; 2 K. 4:8, etc.), a place in N. Palestine, on the hills of Little Hermon, N. of the valley of Jezreel, in the ancient territory of Issachar. She has often been identified with Abishag the Shunammite (1 K. 4:2). [Cant. 7:7.]

Shushan, The, one of four families who sprung from Kirjath-jearim (1 Chr. 2:53).

Shunammite, The, i.e. the native of Shunem (see 2 K. 4:8). It is applied to two persons: Abishag, the nurse of king David (1 K. 1:3, 15, 21, 22), and the nameless hostess of Elisha (2 K. 4:12, 25, 36). [Shulamit.]

Shunem. Probably the town (Arab. shahm) or place of Isaac (Gen. 28:28) now the village Sillem, 3½ miles N. of Jezreel. Here the Philistines camped, attacking Saul in Jezreel (1 Sam. 28:4, cf. 29:1). It was on Elisha's road (2 K. 4:4), between Abel-meholah and Ophel. The Shunammite "great woman" rode thence 15 miles, to Carmel, to fetch the prophet's anointing oil (2:12, 25, 36). At an earlier Shunammite woman Abishag (1 K. 1:4, 5) was famous for beauty. This is perhaps the reason why the LXX-reads "Shunamite" for "Shulamite" (or as now pointed in Heb. shulamith) in the Song of Songs (Can. 6:13); on which reading the theory of Jacobo as to the Song (founded on a remark of Ibn-Ezra) was elaborated in 1771 A.D. Shunem is probably the Semana of the list of Thothmes III. (No. 38), in 16th cent. B.C., and the Shennau of Shishak's list (No. 15) in 10th cent. B.C. It is noticed in the Onomasticon as 5 miles from Tabor. The village is on N. slope of the valley of Jezreel, and is built of stone and mud. It has a perennial stream from spring on W. and S. on which grow the lemon trees. There are cactus hedges on E. and S., and a few palms (Surv. W. Pal. ii. p. 87). The Shunammite could quickly add a little chamber of sun-dried bricks to her house (2 K. 4:10), to receive the holy man, who so often stayed there on his road. [C.R.C.]

Shunah, ancestor of the Shunites (Gen. 46:16; Num. 26:15).

Shupham (R.V. Shephupham), a Benjamite, and ancestor of the Shuphamites (Num. 26:39). [Shephupham.]

Shuppim, the name of a family of Benjamites (1 Chr. 7:12, 15, 26:16). The name appears in rChr. as Shephupham, and as Shuppin in Gen. 46:21. [H.C.N.]

Shur, a place just without the E. border of Egypt, mentioned in the narrative of Hagar's flight (Gen. 16:7). Abraham afterwards "dwelled between Kadesh and Shur, and sojourned in Gerar" (20:1). The first clear indication of its position is in account of Ishmael's posterity. "And they dwelt from Havilah unto Shur, that [is] before Egypt, as thou wentest toward Assyria" (25:18; cf. 1 Sam. 15:7, 27, 8). The wilderness of Shur was entered by the Israelites after they had crossed the Red Sea (Ex. 15:22, 23). It was called also the wilderness of Etham (Num. 33:8). Brugsch (Hist. of Eg.) supposes Shur to be Heb. for the Egyptian Amu, or "wall" protecting the frontier in the time of the 12th dynasty, and closing the isthmus N. of the gulf of Suez. It would thus have existed in the time of Abraham, and is noticed by Diodorus (i. 7). Brugsch connects Etham with Khedem, a fortress on or near this wall mentioned in 14th cent. B.C. [C.R.C.]

Shushtar (Sas or Shush). Gk. Susa) was for many centuries the capital of the non-Semitic kingdom of Elam, having, however, previously been a Babylonian (Semitic) province (c. 1100 B.C.). It is noticed in cuneiform with Babylonian documents of c. 2400 B.C. After destruction by the Assyrian monarch Assurbanipal it was restored either by Cyrus, or
SHUSHAN-EDUTH

more probably by Darius Hystaspis, on the same plan as the palace at Persepolis. Inscriptions show that Darius built the palace. Under the Seleucid rulers Susa fell into decay, being superseded by Babylon and Seleucia. Susa was cut in two by the river Choaspe (Kerakh). The populous quarters on the right bank are now marked by considerable undulations of the plain. On the left bank were the royal city, the palace, and the citadel, now marked by three huge mounds, 4,500 ft. long from N. to S. and 3,000 broad from E. to W. The acropolis covered 300 acres. It included the house of the women (Esth.2.3), the royal palace with a central court (4.15-18), a garden and square for military manoeuvres, and a hall or throne-room (apadana), with roof supported by fluted limestone columns, surmounted by elaborately carved capitals. It had, moreover, on either side of its front a pylon or colonnade, furnished with a frieze 12 ft. high, which exhibited figures of Hons and marching in triumphal procession. M. Dieulafoy, a French architect and engineer, in 1884-86 carried out important excavations at Susa, and brought to light many interesting features, recovering the plan of the citadel, and extensive remains of its buildings. The ruins show that there was abundance of space for the exercise of royal hospitality such as is described in Esther. [PALACE. ] [A.W.S.]

Shushan-eduth. [PSALMS, TITLES OF.] Shuthalhites, The (Heb. shithalh'; Num.26.35), descendants of Shuteh'lah (Heb. shithelah), a son of Ephraim who was killed (see Elead) by the men of Gath (1Chr.7.21). He had a son Eran (Num.26.36). In this passage only three sons of Ephraim are noticed—Shuthelah, Becher, and Tahath. In 1Chr.7.20,21 Bered stands for Becher, and Tahath for Tahan (the name being repeated, apparently by clerical error); Shuthelah is twice mentioned, and three other sons of Ephraim are added—Oz, Zabud, Eladah (Elead in ver. 21), and Ezer. Of the seven sons of Ephraim mentioned, three were named Zabud, Othniel, and Ezer, and Eked—were slain during the lifetime of their father Ephraim, and a son Beriah was born to him later (ver. 23), from whom Joshua was descended (ver. 27). The passage in Chr. is of great chronological importance; and a confusion has been caused by a misunderstanding, as explained under Elead. The genealogy of Joshua repeats the family name Taham, and includes the name Laadan (ver. 26), which occurs among the names of Levites (1 Chr.23.7-9, 26.21), suggesting a marriage connexion between persons of the two tribes of Levi and Ephraim. Joseph was 30 years old or more, and he had been resident in Egypt (as in Gen.37.2,41.46), and the genealogy includes 17 generations in 500 years, from the birth of Joseph to the death of Joshua—who is said to have been 110 years old (Jos.23.29), giving an average of less than 50 years for a generation. This calculation perhaps favours the LXX. computation of 215 instead of 400 years for Israel in Egypt (as giving only 26 years for a generation), and may be the cause of the LXX. alteration in Ex.12. 41. The Heb. text, however, agrees with Gen. 15.13 and with Ac.7.6,15.20, which the LXX. dates do not; and the expression "son" constantly means a "descendant," names being omitted in many Heb. genealogies. [C.R.C.]

Sia' (Gen.7.47) or Siha (Ex.2.44), a family of Nethinim who returned with Zerubbabel.

Sibbecai, Sibbechei', one of David's guard, and captain for the eighth month of 24,000 men of the army (1 Chr.11.20,27,11). He belonged to a principal family of Judah, the Zarthites, or descendants of Zerah, and is called "the Hushathite," probably from the place of his birth. Sibbechei's great exploit was his single combat with Saph, or Sippai, the Philistine giant, whom he slew at Gezer, or Goz (2 Sam.21.18; 1 Chr.20.4).

Sil'boleth. [SHIBBOLETH.]

Sibmah (Jos.13.19). [SHEMAR.] Sib'raim (two heaps; Ezk.47.16), a landmark between the lands of Hamath and Damascus. The site is unknown. [C.R.C.]

Sie'couth (Am.5.26 R.V.), Moloch, TABERNACLE OF YOUR; REMPHAN.

Sichem.—1. (Gen.12.6; Ecclus.30.26). See Sichem, which is the R.V. reading in the first passage. In the latter, the Sichem stands for Syc'gonos. [C.R.C.]

Sickle. Of the two Heb. words, her'mesh and mazeld, each occurs twice only; the former in Deut.16.9, 23-25[26], the latter in Je.50.16 and figuratively in Jl.3.13. It is difficult to say what, if any, distinction there was between the two words. Remains of sickles made of wood, with teeth, are found early in Egypt. In N.T. (ἡμέρας) it is used once in a literal sense (Nk.4.29), and several times figuratively (Rev.14.14-19).

Sicy'on a city mentioned with several others in 1 Mac.15.23. The oldest name of the town on the coast (the Sicyon of the times before Alexander) was said to have been Άλυκάνη, or Άλυκάλη. This was probably the common native name, and Sicyon that given to it by the Phoenician traders. But the Sicyon referred to in the book of Maccabees was built on the site which served as an acropolis to the old one, and distant from the shore from 12 to 20 stadia. Demetrius Poliorcetes, in the year 303 B.C., surprised the garrison which Ptolemy had five years before placed there, and made himself master of the harbour and the lower town. The acropolis being surrendered to him, he persuaded the population, whom he restored to independence, to destroy all the buildings adjacent to the harbour, and to remove thither; the site being one much more easily defensible, especially from attacks by sea. Diodorus describes the new town as including a large space surrounded by precipices as to be unapproachable by the machines at that time employed in sieges, and as possessing a plentiful supply of water within its circuit. Modern travellers completely confirm his account.

Siddim' (Gen.14.3,8,10). Gesenius renders the Heb. שִׁדְיָם, valley of fields; or rather, "lands of dunes." As a "valley of sand" this was the Saddle Sea, full of "bitumen pits." [CITIES OF THE PLAIN.] [C.R.C.]

Síde', a city on the coast of Pamphylia in lat. 36° 46', long. 31° 27', 10 or 12 miles to the E. of the river Eymeredon. It is mentioned in

SIDE
SIDON

1Mac.15.23 in the list of places to which the Roman senate sent letters in favour of the Jews. It was a colony of Cumeans. Sidé was closely connected with Aradus in Phoenicia by commerce, even if there was not a considerable Phoenician settlement in the population. It is possible that the name has the same root as that of Sidon, and that it was originally a Phoenician settlement, and that the Cumean colony was subsequent. When Sidé appears in history it had become a place of considerable importance. It was the station of Antiochus's navy on the eve of the battle with the Greek fleet described by Livy (37.2.24). The remains, too, which still exist are an evidence of its former wealth. They stand on a low peninsula running from N.E. to S.W., and the maritime character of the former inhabitants appears from the circumstance that the walls towards the sea were but slightly built, while the one which faces the land was of excellent working of stone, and, in a considerable portion, perfect even to this time. A theatre (belonging apparently to the Roman times) is one of the largest and best preserved in Asia Minor, and is calculated to have been capable of containing more than 15,000 spectators. Three gates led into the town from the sea, and one, on the N.E. side, into the country. The two principal harbours, which at first seem to have been united in one, were at the extremity of the peninsula: they were closed, and together contained a surface of nearly 500 yds. by 200. The country behind Sidé is a broad swampy plain, stretching for some miles inland. The belt of low hills which fringe the sea-shore. Low hills succeed, and behind these, far inland, are the mountains, which, by the sea, 40 miles to the W., and again about the same distance to the E., come down to the coast.

Sidon, the Gk. and—more familiar—form of the Hebr. (zidon) fishery), usually rendered Zidon by A.V. in O.T. Its original founders were apparently of the race of Cush, akin to Hittites and Akkadians (Gen.10.15; see rf. 8.10; iChron.1.13); and these Canaan-ites, or "lowlanders," held the shores from Sidon to Gaza (Gen.10.16). In the blessing of Jacob, which he thus invoked on the seed of Zidon (49.13), Joshua pursued the kings of Lower Galilee to "great Zidon" (Jos.11.8), and "great Zidon" bounded Asher on N. (19.28); but the tribe could not expel the "inhabitants of Zidon" (Judg.1.31), who claimed S. Syria as far E. as Hermon (Deut.3.9; Judg.18.7). They were unconquered, and were oppressors of Israel (Jos.13.46; 17.3.10.12), skilled in hewing wood in Lebanon (1K.5.6), worshippers of Ashoreth (11.5.33), and of Baal, and allied to Ammon, through his marriage with Jezebel, the daughter of Ethbaal, "king of the Zidonians" (16.31). See 2K.23.13; 1Ch.22.4; Ezek.37, where the Zidonians are noticed. In Ezek.32.30 the Zidonians princes of the N. are among the slain in Shob; on which passage the text of Eshmunazar of Sidon is an interesting commentary. Israel, early after the conquest, worshipped the gods of Zidon (Judg.10.6), which city lay outside David's kingdom (24.6), and included Zarephath (1K.17.10) in its territory. Isaiah speaks of merchants of Zidon crossing the sea, and flewing to Chittim from (Assyrian) invaders (Is.23.2,4,12). Jeremiah mentions kings of Zidon (25.22) at the time of Nebuchadnezzar's inroads (27.3,47,4). Ezekiel notices the sea trade of Zidon with Tyre (27.8), at a time when these cities probably formed a single kingdom under Babylon. He sees his face especially against Zidon (28.21,22), which prospered while Israel was captive (13.4), being politic in its relations to invaders (see Zech.9.2). The "two provinces of Tyre and Sidon" (2Esd.1.11) were however "scattered" by Assyria (see Jer.2.28). They both opposed Judas Maccabeus in 164 B.C. (1Mac.5.15). In N.T. Sidon is mentioned as visited by our Lord (Mt.11.21.22.15.21; see Mk.3.8.7.24.31; Lu.4.26.6.17.10.13.14), and as displacing Herod Agrippa (Ac.12.20). Sidon remained an important port till 1791 A.D., and even later. It is now a town of some 6,000 inhabitants, situated near the sea, and built on a promontory, with a good harbour on N.W. formed by a reef. This harbour is a quarter of a mile long, and 150 yds. in mean width, or less than 20 acres in area. The citadel, at S.E. corner of the town (which covers 50 acres), is said to be as old as 1253 A.D. The harbour, in which the ships of the Gk. or Roman age; but is more probably the work of the Franks in 12th or 13th cent. The real antiquities of Sidon are the rock tombs to E. About two-thirds of the inhabitants are Moslems, and the rest are Jews and Gk. and Maronite Christians. The gardens E. of the town, and the hills behind, are full of figs, apricots, pomegranates, oranges, lemons, and plums—History. The history of Sidon is too great an extent that of Phoenicia (Phenice). The city is noticed in the Amarna Tablets early in 15th cent. B.C.; and one letter is from a certain Zimridi (Berlin 90), who ruled it for Egypt. Tyre and Sidon had fleets in this age, and were bickered about the waters of Hosam, till the Amorites captured both cities. Sidon was tributary to Assur-nazir-pal of Assyria about 885 B.C.; and in 710 B.C. Liluia was king of Tyre and of Sidon. About 724 B.C. (Menander, quoted by Josephus), the sea-ports of Sidon and Tyre appear to have received the submission of Sidon; while Semacherib, in 703 B.C., conquered it, with other cities of Liluia. He speaks (Epenom Canon) of "great Sidon and little Sidon," the latter perhaps a suburb in the plain. He set up a new king named Tubel, who was soon succeeded by 'Abd-Milkut, who fled before Esar-haddon (after 680 B.C.); but was captured and beheaded. Esar-haddon destroyed Sidon, uprooting its citadel and palace, and casting the stones into the sea. Its treasures were plundered, and its inhabitants carried off as captives, and replaced by foreigners from the E. A text ascribed by Bock (Corpus Inscription. Graecum, No. 87) to about 380 B.C. speaks of fellowship between the Athenians and Strato, king of Sidon; and, according to Dio Diodorus Siculus (book xxvi.), the Sidonians joined the revolt against Persia in 151 B.C., and brought Gk. mercenaries from Egypt to Rome. Berytus, then capital, Mentor of Rhodes—with the connavence of Tennes the king—betrayed Sidon to
SIDONIANS

Artaxerxes III, and the Persians entered the city, but the inhabitants, who had already burned their fleet, set fire to their houses, and 40,000 are said to have perished. "Tennes" is supposed to represent the Sidonian name Tabnith, or Tavnith. Out of hatred for Persia, Sidon submitted to Alexander in 333 B.C. The sarcophagus of Eshmunazar, found in his tomb in 1855, and now in the British Museum, bears Phoenician text on the lid, stating that he was "king of the Sidonians," son of "king Tabnuit" and of Am-Ashtoret (a priestess of Ashtoreth) and grandson of a former Eshmunazar. He built temples of Baal and Ashtoret; and the "lord of kings" gave him Sharon and Joppa [SHARON]. He left his son of Sidon, or priest of Ashtoret, was also found in 1886 near Beirut, with a similar text. In 221 B.C., he or his son is supposed to have died, as his sarcophagus was unearthed near Joppa. It is said that Eshmunazar II. may have died c. 300 B.C. But it is not clear who the "lord of kings" was, whether a god, or one of the later Persian suzerains, or possibly one of the Ptolemies. The sarcophagus is a copy of an Egyptian mummy-case of the Ptolemaic age (the king being regarded as the son of the goddess of the city like the Egyptian kings); and the text is in letters very like those of dated inscriptions—one at Mâsûh of 221 B.C., and another at Umn el 'Amûd as late as 171 B.C. A text found at the Piraicus [Corpus Inscrip. Semit. No. 119] was inscribed by Eshmun-sibbeh, high-priest of Nergal, in honour of the daughter of "Eshman-sibbeh of Sidon." Sidon is remarkable for its sarcophagi, with figures of the deceased on the lids, most of them of the Gk. age. Fine sarcophagi now at Constantinople come from Sidon, one representing a combat of Greeks and Persians; and others are in the Louvre. These were found in rock-sunk tombs like the Egyptian Tombs of modern Egypt. Sidon was the first city to use the rocking ship, and the best ships of Xerxes, in 480 B.C., came thence (Herodotus, vii. 96). The city prospered under the Romans; and Gk. coins of Sidon exist (Keland, Pat. Illustr. ii. p. 1014). Strabo says (xvii.) that it was disputed by Phoenicians, in his time, whether Sidon or Tyre was the chief city of Phoenicia. The Sidonians then still preserved the old Babylonian astronomy, and studied Aristotelian, and Gk. philosophy. Gk. and Lat. texts from Sidon are given by Waddington (Nos. 1865-1873). [TYRE.] [C.R.C.]

Sido-\ni-an-s, the Gk. form of Sidonians, found in A.V. in Deut. 8:9 (where alone R.V. retains Sidonians), Jos. 13:4, 6, Judg. 3:3, and 1K.5.6. [SIDON.]

Signet. [ORNAMENTS, PERSONAL.]

Si-ho\r, the king of the Amorites who refused Israel a passage through his country to the Promised Land (Num.21.21ff.). Shortly before, he had dispossessed the Moabites, driving them S. of the Arnon (21.26-29). When the Israeliite host appeared, he at once attacked them, but he and all his host were destroyed, and their district from Arnon to Jabbok fell to the conquerors (vv. 24, 25; cf. Deut.2:24ff.; Jos. 12:2; Judg.11.19ff.; Ne.9.22; Ps.135.10-12, 136.18,19; Am.2.9).

Si-hor', accurately Shihor', once as the Shihor' or Shi-hor' of Egypt; when unqualified, a name of the Nile, perhaps signifying the "black" or "turbid." Shihor occurs but thrice in the Bible, and Shihor of Egypt, or Shihor-mizrayim, only once. Shihor is spoken of as one of the "fountains of the Nile," when Joshua was old (Jos.13.2, 3). David is related to have gathered all Israel together from Shihor of Egypt even unto the entering of Hamath" (1Chr.13.5). There is no other evidence that the Israelites ever spread far southwards beyond Gaza. The stream may therefore, when unqualified, though Brugsch may be right in identifying it with the Shi-Hor or "Horus Canal" which passed the city of Zar on the border of Egypt. That the stream intended by Shihor unqualified was a navigable river is evident from Is.23, 3, where it is said of Tyre, "And by great waters, the sowing of Shihor, the name of the river (or her revenue)." In Je.2.18 the identity of Shihor with the Nile seems distinctly stated. [A.H.B.]

Si-las, an eminent member of the early Christian Church; thus named in the Acts, but Silvanus in St. Paul's epistles. He first appears as one of the leaders of the Church at Jerusalem (Acts 15.22), holding the office of an inspired teacher (15.32). He appears to have been a Roman citizen (16.37). He was appointed as a delegate to accompany SS. Paul and Barnabas on their return to Antioch with the decree of the Council of Jerusalem (15.32, 32). Having accomplished this mission, he returned to Jerusalem (15.33) but must have immediately revisited Antioch, for St. Paul took him as the companion of his second missionary journey (15.40-17.15). At Berea he was left behind with Timothy while St. Paul proceeded to Athens (17.14), and we hear nothing more of him until he rejoined the apostle at Corinth (18.5), where his presence is never noticed (2Cor.1.19; 1Th.1:1; 2Th.1.1). Whether he was the Silvanus who conveyed St. Peter's First Ep. to Asia Minor (1Pe.5.12) is doubtful, but the probabilities are in favour of the identity. A tradition of very slight authority makes him bishop of Corinth.

Sìl\k\, the A.V. of the passages thus renders two Heb. words, (1) shesh, "white" (Pr.31.22), rendered "byssus" in LXX., and (correctly) "linen" in 33 passages, but (white) "marble" in A.V. Esth.1.6, Can.5.15. (2) meshi, "drawn out" (Ezk.16.10), referring to some kind of fine, transparent material such as gauze. The Egyptian pictures show the use of transparent Egyptian woman's hair such gauze may have been that made from the bombax of the island of Cos (Pliny, Hist. Nat. xi. 26, 27), which was not the true silkworm. In this second passage the LXX. has τριχατησιων, or "gauze," and Jerome so understands the Heb. word. Silk was known to Vergil (georg. ii. 121), and Pliny speaks of two kinds of gauze (H.N. vi. 20, xi. 21). The silkworm was known in 2nd cent. A.D. (Clement of Alex. Paed. ii. 11), but Chinese silk was obtained by trade through Central Asia, and was very expensive still in 4th cent. A.D., costing £3
(then a far higher value in gold than now) for 1 lb. of silk (Gibbon, ch. xl.); while a sort of silk from the fibres of a shell-fish was in use down to 6th cent. A.D. (Procopius, De Aedific. Justin. in Basili). In art, and in sculpture (De Bel. Pers.) relates how Justinian (c. 532 A.D.) endeavoured to keep open the Chinese trade route, and finally induced two Nestorian monks to fetch the eggs of silkworms from China. The grubs were fed on mulberry leaves in Phoenicia, and the industry so established has been pursued without ceasing down to the present time at Beirut and Sidon. [DRESS.] [c.r.c.]

**Silla** (2 steps; cf. Ne.3.15,12.17). Joash was murdered “at the house of Millo on the way that goeth down to Silla” (R.V. 2.K.12.20). Millo was probably a keep or tower of ancient Jerusalem, and Silla apparently in the valley below, but what or where Silla was is conjectural.

**Siloa** (Ne.3.15, R.V. Shelah; Is.8.6, R.V. Shiloh), a form of the name Siloam, in a form of the name Siloam (Jn.9.7). Σιλωάς, Josephus. Now 'Ain Siloah. [c.w.]

**Siloam; Siloam, Tower in.** [Shiloh.]

**Silvanus.** [Silas.]

**Silver** (Heb. keseph). In very early times, according to the Bible, silver was used for ornaments (Gen.24.53) and for vessels of various kinds. Images for idolatrous worship were made of silver or overlaid with it (Ex.20.23; Ho.13.2; Hab.2.19; Ba.6.39), and the manufacture of silver shrines for Diana was a trade in Ephesus (Ac.19.24). But its chief use was as a medium of exchange, and throughout the O.T. we find *keseph*, "silver, used for money," like the Fr. argent. [METALS.] Vessels and ornaments of gold and silver were common in Egypt in the times of Osiraset I. and Thothmes III., the contemporaries of Joseph and Moses. Silver ornaments are found in Mykenien graves, at least 15 cents. b.c., and silver has been found in Egypt in a tomb of the 14th dynasty (c. 2900 b.c.). In the Hellenistic period gold and silver (1r.26.23) were brought to Solomon from Arabia (2Chr.9.14) and from Tarshish (2Chr.9.21), which supplied the markets of Tyre (Ezk.27.12). From Tarshish it came in the form of plates (Jo.10.6), like those on which the sacred books of the Singhales are written to this day. In Homer (U. II. 527), Xyle is called the birthplace of silver, and was probably celebrated for its mines. But Spain appears to have been the chief source whence silver was obtained by the ancients; though it was known earlier to the Akkadians, by whom it was called *Kuma* (cf. Turkish *Kumud*). Silver ornaments are noticed in the Amarna tablets (Berlin 25, 26) in 15th cent. b.c. Silver-mines occur near Tarsus and Trebizond. For an account of the knowledge of obtaining and refining silver possessed by the ancient Hebrews, see LEAD AND MINES. Silver mixed with alloy is referred to in Ex.3.18, and a finer kind, either purer in itself or more thoroughly purified, is mentioned in Pr.8.19.

**Silverings.** [Piece of Silver.]

**Silversmith.** [Handicrafts, (2).]

**Simace, an Arabian who brought up Antiochus, the young son of Alexander Balas (1Mac.11.39).**

| SIMEON | Simeon(l'hearing). The ethnic name Simeonites occurs in four passages (Num.25.14, 26.14; 1 Jos.21.4; 1 Chr.27.16).—1. The second son of Jacob and of Leah, so named from his father's declaration at his birth (Num.25.14).—2. The son of James, one of the twelve apostles (Luke 6:15). The name of one of the cities of the Levitical priests (Num.35:27).—3. The son of Ishmael, and brother of Judah (Gen.25.14).—4. The son of Antipater, the father of Herod the Great (Matt.2:23). The Simeon of whom Luke refers (Luke 2:34).—5. Simon Peter (Ac.15.14).—A.V. follows the Vulg. in spelling the name Simeon, the Heb. being always Shimeon (cf. Ezr.10.31). [c.r.c.] |
SIMEON NIGER

Simeon Niger, a prophet or teacher in the church of Antioch (Acts 13.1).

Simon (Σιών, late form of Σιμεών, LXX. and N.T.; Heb. sh'môn).—1. Simon Chosa-
mus (Xorapaitos, or Χραπαίτος), given by T. Eisd. 9.1; Ex. 10.31, the patriarchal passage, gives Shimeon. [Annas, 1.]—2. The "great priest" (R.V.) who is the subject of eulogy in Ecles. 50.1—22 is possibly to be identified with Simon I., c. 300 B.C., son of Onias I. He succeeded Onias I, the son of Judaa. The statement of Josephus, that it was he who was crucified as the "Just" (2 Macc. 7.27) is doubtful. This title, and the eulogy in Ecles. 50, may equally well have belonged to Simon II. (c. 220 B.C.), son of Onias II, especially as he was nearer to the son of Sirach's time. [Ecclesiasticus].—3. Simon of the tribe of Benjamin (2 Mac. 8.4), "that impious Simon (3.11), who, being guardian of the temple (ευλογοῦντα τῶν ἄγγελων), quarrelled with the high-priest Onias III. (c. 195 B.C.), and out of spite invaded Seleucus Philopater that the temple-treasury was "full of untold sums of money" (3.6).—4. Simon the Maccabean (or Hasmonean), surnamed Tasshi (1 Mac. 2.3), son of Mattathias. He was high-priest (9.35) when Simon wrote his "Eulogy of Judas" addressed by the Lord Simon (Mt. 17.25; Lk. 22.31; Jn. 21.15 et seq.). [Peters.]—5. Simon the Canaanite (Mt. 10.4; Mk. 3:18), or Zeleos (Lk. 6.15; Act. 1.13), one of the Twelve. [Canaanite].—7. One of the Lord's four brethren (Mt. 13.55; Mk. 6.3); St. Matthew puts him third and St. Mark fourth in the list. [James.]—8. One of the Pharisees," who asked Jesus to eat with him, and in whose house "a woman which was in the city, a sinner," anointed Jesus' feet (Lk. 7.36-50). In addressing His host Jesus replies to thoughts to which Simon had not given utterance.—9. The leper (Mt. 8.6; Mk. 14:3) need not be identified with Numb. 8, as the name was very common (cf. Lightfoot, Galatians, ed. 8, pp. 268 f.); the meal which Jesus took in his house at Bethany may be identical with that recited in Jn. 12.1-8 (cf. Westcott, St. John, ad loc.). [Mary of Bethany]. On ceremonial grounds it must be inferred that he had been healed of his leprosy.—10. Mentioned in the phrase "the Judas of Simon" (J. 8.17; 13.22, 26). In 8.47 and 13.26 the name Ἴκαρματία is applied to him: in 13.2 to Judas himself. Probably Simon was the traitor's father. [Judas Iscariot].—11. Simon of Cyrene (Mt. 27.32; Mk. 15.21; Lk. 23.26), who was impressed to bear the cross of Jesus. St. Mark and St. Luke say he was "coming from the country." He may have been a chance visitor or a member of the synagogue of the Cyrenians in Jerusalem (Ac. 6.9). St. Mark (15.21) calls him "the father of Alexander and Rufus." This may be the Rufus of Ro. 16.13, though it was a familiar slave-name. If so, one of Simon's sons rose to eminence among the Roman Christians (cf. Sunday-Headlam, Romans, ad loc.), and his mother was well known to St. Paul.—12. Simon Magus, the sorcerer of Samaria described in Ac. 8.9-25. He gave out that he was "some great one," and the people proclaimed him as "that power of God which is called Great." He believed, as the result of Philip's preaching, was baptized, and continued with the evangelist, being astonished at the great powers "wrought" (cf. R.V. marg.). When SS. Peter and John were sent from Jerusalem, and the Holy Ghost was given through the laying on of their hands, Simon offered money to obtain the same power, and was severely rebuked by St. Peter (hence our word simony). The story leaves him praying against the consequences of his presumption. The subsequent patristic tradition that apocryphal references to Simon Magus are of great interest, but lie outside the scope of this dictionary. Our chief informant is Justin Martyr, himself a Samaritan, who wrote about 100 years after the event in Acts (cf. Apol. 1. 26, 55; Dial. 126). See Dr. Salmon's article on Simon Magus in Diet. Chr. Biog., iv. 681.—13. The Tanner of Joppa, in whose house by the sea St. Peter stayed (Ac. 9.43, 10.6, 17, 32) [E.H.P.]

Simri (R.V. Shimri), son of Hosah, a Merarite Levite in David's reign (1 Chr. 26.10).

Sin is a concept characteristic of Judaism and Christianity as compared with all other religions; though it was not absent from the moral creed, and the literature, of the principal nations of antiquity. Sin is the special subject of O.T., where forgiveness of sin is the argument of the New. As conceived in the Bible, sin is a wilful straying (Is. 53.6; R. Pe. 2.25) from the path in which God would have us walk, a disobedience to a voice behind us saying, "This is the way, walk ye in." Sin is not mere failure or shortcoming. It is not, as is sometimes alleged, the missing of the mark; though such, in classical Gk., was the first meaning of the verb (ἀμαρτέω), which with its congeners was subsequently employed in the LXX. to represent the Heb. hidda—a use which determines the meaning of the Gk. words ἄμαρτεω, ἀμαρτία, ἄμαρτωλός, in N.T. Here the term "sin" (ἀμαρτία) occurs in every group of writings, and is at length defined briefly but effectually as "lawlessness" (ἁμαρτία, Heb. ἁμαρταίω). It is, in fact, a disregard of the law of God, the only law that has absolute authority; its species being the various "sins" (ἁμαρτίαι) which beset and enslave individual men. The follower of Christ, "abiding in Him," has given up the life of sin; he in this crucial sense "sinneth not" (Jn. 3.6); but still is prone to commit the "sin" (2.1) (see Westcott, ad loc.). Viewed in its effect upon the wrongdoer, sin is regarded both in O.T. and N.T. as spiritual disease: of it bodily disease, especially leprosy, is a standing parable (cf. Is. 5.1). It is normally curable, but by God only. No man, as man, can take away sin. So, too, forgiveness of sins is a divine prerogative. But the Son of Man, as Son of God, had power and authority on earth to forgive sins (Mk. 2.7). And of this power His miracles of bodily healing, whether of lepers or of paralytics or of maimed or of blind, are paralleled "signs." Sin is, in the first instance, the sin by the grace of God is illustrated, and not contradicted, by the recognition of a special case, or exceptional species, of sin which is incurable (Mk. 5.25; Jn. 5.16); the Johannine "sin unto death" being probably, though this
has been questioned, identical with that "blasphemy of the Spirit" which, in words of the Lord recorded by the Synoptists, is marked as "eternal" (alaiwov) and therefore irremissible. Predisposition to sin is throughout Holy Writ assumed to be hereditary, or at least congenital, in mankind, and universal (Gen. 6.5; 12; Deut. 32.5; Ps. 4.3, 14; 51.3; Pr. 20.9; Ec. 9.3; Is. 1.4f. 59.2-5; Je. 2.21f. 5.17f. 24.9; Ezk. 2.3, 38.26f.; Mt. 7.11f. Ro. 5.12f. 13.12-23; Gal. 3.22f. Eph. 2.2f. 4.22; Heb. 4.15.9.21f.; Jas. 4.; 1Pe. 3.21; Jn. 7.19; 1Jn. 3.1f. 5.19). The story of the Fall, whether taken as history or parable, offers an explanation, and the only explanation adequate to the facts, of the origin and of the universality of sin among men; and although until we come to the Pauline epistles (1Co.15.22; Ro.5.12f. 19) a direct connexion of all human sin with that of Adam is seldom, if ever (Ps. 14.1f.; Job 31.33), asserted, it is suggested by the order of events in Genesis, the position of Genesis in the Pentateuch, and in the Hebrew canon, as well as by the tenor of the history of the history of Israel, while in N.T. the Pauline doctrine is powerfully supported by significant references to the murder of Abel (in Genesis so clearly a sequel to the transgression of Adam and Eve) as the type and first example of hatred and malice (Mt.25.35; Heb.12.21; Jn. 3.12). That God's first act of obedience, as also the crime of Cain and all other sinning and falsehood, came by yielding to temptation of "the devil," is plainly declared in N.T. (2Co.11.3; Jn.8.44; 1Jn.3.8f.; Rev.20.2; 3.10). All sins may be viewed as "trespasses" and again as "debts," terms correlative and of the temporal order, while "sin" is absolute, and presupposes God and an eternal order. [SATAN; FALL.] For the O.T. view of sin, see also CRIMES; WITNESS; and for a further discussion of the Pauline doctrine, see PAUL. [J.M.S.]

Sin, a city of Egypt, mentioned only by Ezek. (28.15, 16). It is identified in the Vulg. with Pelusium, hiő̀ωνιος, which is generally supposed to mean "the clayey or muddy" town. The ancient Egyptian name is unknown. Champollion identified it with the Permonu, Peremón, and Baromón of the Copts, El-Fermá of the Arabs. The site of Pelusium is to the S.E. of Fort Said, a mile to the N. of it being the ruins of the little Arab fort of El-Tima. Ezekiel, in one of the prophetic clauses regarding the invasion of Egypt by Nebuchadnezzar, speaks of it as "Sin the stronghold of Egypt" (ver. 15). This description applied to it until the period of the Romans. Herodotus relates that Senacherib advanced against Pelusium, but being near Pelusium Cambyses defeated Sennacherib. The decisive battle in which Oechus defeated the last native king, Nectanebos, was fought near this city. [EXODUS; THE.] [A.H.S.]

Sin, Man of. [Thessalonians, II.; Antichrist.]

Sin, Wilderness of, a tract of the wilderness which the Israelites reached after leaving the encampment by the Red Sea (Num.33.11-12). Their next halting-place (Ex.16.1f. 17.1) was Rephidim, perhaps the Wady Feiran [Refi'm]; in which case Sin must lie between that valley and the coast of the gulf of Suez, and of course W. of Suez. As, however, Sin was the name of the Babylonian Moon-god from whom mount Sinai took its name, we should more probably look for it in the immediate neighbourhood of the mountain of the law. In the wilderness of Sin the manna was first gathered, and those two events show that this was merely the natural product of the 'artā bush and in the abundance of that shrub in Wādy esh-Sheikh, S.E. of Wādy Ghūrūndel, a proof of local identity. [MANNÁ]. [A.H.S.]

Sina, Mount, the Gk. form of Sinai (Jth.5.14.; Ac.7.30,38). [EXODUS, THE.]

Sion, [1. (Deut.4.8); 2. (Sirox;). The Gk. form of the Heb. name Zión (Jerusalem) used in rMac. Heb.12.22, and Rev.14.1.]

Siphmoth, one of the places in the S. of Judah which David frequented during his freebooting life (1Sam.30.28). The site is unknown. [C.R.C.]

Sippal or Saph. [Sibbecl.]]

Sîrāch. [Jesus the Son of SIRACH.]

Sirah, Well of (2Sam.3.26). The word means "withdrawing," "departing"; and the word rendered "well" (Heb. בור) means "pit." It is now called 'āin Sārāk, with the same meaning in Arab, and is a spring well standing back from the main road, in a lane to W., a mile N. of Hermon. [C.R.C.]

Sirion (Deut.3.9; Ps.29.6), the Sidonian name of HERMON. In Heb. Shirvón. The name Sinn (sfôn), or "elevated," applied also to Hermon (Deut.4.8), has been thought to be a clerical error for Sirion. [C.R.C.]

Sisama'i, a descendant of Sheshan in the line of Judah. [1Ch.2.10.]

Sisera, —1. (Judg.4.2.) King of Harosheth. His mother was queen, her ladies princesses (E.V.W. wise ladies, 5.25; cf. ver. 19). He was captain of Jabin's army. Jabin's supremacy was probably hereditary and nominal. Sisera was the tyrant. He was defeated at Megiddo and murdered by Jael. The name reappears among the Nethinim (Ezr. 2.53; Ne.7.55), showing the persistence of the Canaanite stock. [H.M.S.]

Sisines (1Es.8.3) = TATNÁL.

Sithnah (emnity), the second of the two
well dug by Isaac in the valley of Gerar, the possession of which the herdmen of the valley disputed with him (Gen. 26:21).

Sivan. [Month.]

Slave (Heb. ’ebbedh, Gk. δουλος = a slave; A.V. and R.V. translate servant). Slavery in the Bible is due to many causes. (1) In early society the family or clan is everything, the individual has no rights. The clan man therefore either an outlaw or a slave. It is only as a slave that he can obtain protection (Jos. 9:23-27). The mixed multitude that came out of Egypt (Ex. 12:38) probably became slaves and account for subsequent legislation. (2) Poverty made men willing to sell themselves into slavery (Deut. 24:7), (4). (3) Debt caused men to be sold (Lev. 25:39, 2 K. 4:1, Am. 2:6). (4) Enemies spared in war became slaves (2 K. 5:2; Am. 1:9). (5) Piracy and kidnapping led to the slave trade (J i. 3:6). Kidnapping was strictly forbidden to the Israelites (Ex. 21:16) and domestic slavery was also prohibited in Egypt (J i. 3:6). (6) Moral degradation (Gen. 9:25) and crime (Gen. 44:17, 33; Ex. 22:3) led to slavery. (7) The children born of slaves were slaves (Gen. 14:14, 17:23; Lev. 25:46). Sometimes whole nations were enslaved through poverty (Gen. 47) or through treaty (Jos. 6:21) or through conquest (Judg. 1:28f.; 1 Chr. 26). This collective slavery did not necessarily interfere with individual freedom. It meant taxes and public service. After David's victories, a special officer was appointed over the tributaries (2 Sam. 20:24). In Judg. 6:11 and 1 Sam. 11:5 we see a warlike people not ashamed of work in the fields. In 1 Chr. 26:20, 'the overseer of the slaves,' this collective slavery did not necessarily interfere with individual freedom.

The slave is a member of an inferior race, essentially servile. He is therefore "an animated implement" (Aristotle, Pol. 1, 4, Ethics viii. 13). This Greek theory was adopted by planters in W. Indies and America. In no slave-owning country is a man more precious than gold (Is. 15:12), though under the domestic slavery of the Israelites it was probably reckoned disgraceful to sell slaves (J i. 3:3).

-Slavery in O.T. The slave was reckoned as one of the family. In default of offspring he might be the heir (Gen. 15:2, 3), could be married to a daughter (1 Chr. 2:35), or preferred to an unworthy son (Pr. 17:2). He was reckoned as part of the master's wealth, and could be given away or sold, could inherit (Deut. 16:16; Ex. 21:21; J i. 3:3). He was in the religious privileges and ceremonies of the people: circumcision (Gen. 17:12, 13), the Passover (Ex. 12:44), the sabbath (Ex. 20:10; cf. Deut. 5:14). If an Israelite, he might become free in the sabbatical year (Ex. 21:2), and could not be sent empty away (Deut. 15:13, 14). A woman could give her female slave as a concubine to her husband (Gen. 16:2, 30, 3, 9). A man could buy a female slave to be his or his son's concubine (Ex. 21:7-11), when she acquired rights in the family. The children of such concubines were free and legitimate (e.g. the twelve patriarchs are all regarded as on the same footing). The children of such slaves had claims on the inheritance which were not always acknowledged (Gen. 21:10, 25:6, 49; Judg. 9:18, 11:2). Slaves could possess money (1 Sam. 9:8). It was not permissible to rule over them with rigour (Lev. 25:43). They could be bought and sold (Ex. 21:20; Pr. 29:19, Ecclus. 32:23-26), and if he were mutilated he was to go free (Ex. 21:26, 27). [LAW in O.T.; CRIMES; HOMICIDE.] Employments of slaves: Eleazer was Abraham's steward and representative (Gen. 24), Ziza was steward (2 K. 5:1), Phonah to Merari (Num. 3:25), there were singing men and women (Ex. 25:8), labourers in the field (Judg. 6:27, Ru. 2:5), and in the house (Deut. 29:11; Jos. 9:27). The lowest kind of work was grinding at the mill (Ex. 11:5, 16; Judg. 16:21; Job 31:10; Is. 47:2, Lam. 5:13). The price of slaves was constant: an adult man, 30 shekels (Ex. 21:22; Zech. 11:12; 2 Mac. 8:10); a woman, 15 shekels (Hos. 3:3), and a youth, 20 shekels (Lev. 27:5; cf. Gen. 37:28). In early times slaves were probably few; under the monarchy, numerous; with the returning exiles came 7,337, which was one-sixth of the people (Ezr. 2:65). This domestic slavery was far from intolerable. Men even preferred the status (Ex. 21:6). There is only one instance recorded in O.T. of runaway slaves (1 K. 2:39). Runaway slaves could not be given up (Deut. 23:15). Slaves were always regarded as fellow-creatures and worthy of consideration (esp. Deut. 5:14; Job 31:13-15).

-Legislation regarding slaves is to be found in Ex. 21; Deut. 15, 21; Lev. 25. It is assumed that centuries divide Ex. 21 (Book of the Covenant) from Deut., and that Lev. 25 (P) is post-Exilic. Ex. 21, it is said, applied to a purely agricultural community, Deut. to a community engaged also in commerce, and Lev. 25 has land laws that were never observed. But if there is no historical reference to the year of jubilee but the doubtful Ezk. 45:16, the inalienable character of land-ownership is implied in 1 K. 21; and we have instances of land redemption by relatives in Ru. 4 and Je. 31:6-16. In consequence it has to be admitted that Lev. 25 contains elements earlier than the Exile. Secondly, if there be no historical jubilee, the purely reference to the jubilee is a transfiguration into law and custom, which when made law was simultaneously fallow. In consequence it is possible to reconcile Ex. 21 with Lev. 25 by assuming that a man became free in the year of jubilee even if he had not completed six years of service. Thirdly, Ex. 21 as a "new work. [Mech.]," being added to the Exile, was applied to a purely agricultural community, but cannot be-called a transfiguration into law and custom, which when made law was simultaneously fallow. In consequence it is possible to reconcile Ex. 21 with Lev. 25 by assuming that a man became free in the year of jubilee even if he had not completed six years of service. Thirdly, Ex. 21
SLAVE

Deals with purchased Hebrew slaves, Deut.15 with poor men voluntarily submitting to servitude, while Lev.25 is concerned with the land system and only incidentally with slavery. Amraphel, Gen.14, is the earliest known, and its inclusion upon the Peutæan code is a matter of dispute. Laws dealing with the same conditions of life are likely to be much alike, and parallels have been found to this code not only in O.T., but also in the laws of Gortyn, the XII. Tables, in Babylonian contract-tablets, and in Visigothic laws. But if it be interesting to know how early law aggrandized, it is important to know how they differ. This code throws light on Hagar's relations with Sarah (§ 146), and on the conditions of children born of slave concubines (§§ 170, 171). It differs strikingly on the treatment of runaway slaves (§§ 16, 20). But the great difference is a difference of moral standpoint. The Israelite was always instructed to remember his own bondage (Deut.24.18), and in consequence to be considerate. [Law in O.T.—Slavery in N.T. In Palestine there were few slaves. The high-priest possessed slaves (Jn.18.10,18). Our Lord illustrated His teaching from the treatment of slaves (Mt.12.1-3, Mk.12.43-48). But in Rome and in Greece the slaves formed the bulk of the population, and the danger that they were to the state increased the severity of their treatment. Horrible tales of brutality are recorded. The system was demoralizing, enervating the character of slave owners, and tended to render them heartless and cruel. There are, however, many instances of kindly treatment and of real affection between master and slave. The point is that the slave was absolutely at the mercy of the master, who might be good and might be bad. The slaves were of all races from Africa to Asia. They might be philosophers, artists, physicians, schoolmasters, or agents; they might be chained in gangs to labour in the fields. From the time of Nero onwards the law did much to ameliorate their condition and afford them protection. Our blessed Lord did not propose a political revolution. He laid down no laws as to social and economic conditions; but His coming has led to the abolition of slavery. He came to reconcile all men to Himself (Col.1.20); in Him there is no distinction between bond and free (Col.3.11; Gal.3.28). To the poor the Gospel was proclaimed (Lk.4.18). He taught the value of each individual soul to the Father (Mt.10.29-31). He taught also the responsibility of each man for himself (Mt.25). He laid great stress upon the value of work and dignity of labour (Jn.5.17,9,4). Those who were willing to be His servants, He called friends (Jn.15.15). But more than this. He took upon Himself the form of a slave (Ph.2.7; cf. Jn.2.18-21). He showed the value of the virtues needed by the slave (Mt.5.3-5,11,29,30). He gave an example by doing the slave's office (Jn.13.1ff.). He died a slave's death. He said, "Whosoever of you will be the chiefest, shall be servant of all" (Mt.20.28). The apostles rejoiced to call themselves slaves of Jesus (Jn.12.25; 1:1; 2Pe.1:1; Jn.1). They rejoiced, too, in the liberty of the sons of God (Ro.8.21). They knew there was no respect of persons with God (Ro.2.11; 1Pe.2.17). But they did not counsel rebellion. They gave much advice to slaves how they might use their condition for the advancement of the faith and the glory of God (Col.3.17-24; Eph.6.5-8; Col.3.22; Tit.3.9; 1Pe.2.18ff.). But masters are commanded to "forbear threatening" (Eph.6.9), and are reminded that they have a Master in heaven (Col.4.1). In the epistle to Philemon, the runaway Phrygian slave Onesimus is restored to his master, but as "a brother beloved" (ver. 16). Slavery could not be abolished all at once; men had to learn that it was inconsistent with Christian principles. In the early Church converted slaves were recognized as brethren (Aristides, Apol. xv.). They could become clergy or even, like Callistus, bishop of Rome. The same privileges were expected of all believers and same privileges accorded. Manumission was regarded as praise-worthy, and slaves were sometimes ransomed from church collections (St. Ignatius, Ep. to Polycarpon iv.). The Church, however, at first was so concerned with her liberty in Christ that to her the status of her members in the world was of no difference. For Hebrew slavery, see Meilzner, Slaven bei den Hebräern; Goldwin Smith, Does the Bible sanction Slavery? Hastings, D.B. (5 vols. 1904), arts. "Servant," "Sabbatical Year," and "Code of Hammurabi." Smith, D.B. (4 vols. 1893). For domestic slavery: Maine, Early Village Communities; Lane, Modern Egyptians; Burton, Pilgrimage; Doughty, Arabia Deserta; Robertson Smith, Kinship and Marriage. For Greek and Roman slavery: Wallon, L'Hist. de Pessalevage; Boissier, La religion Romaine; Leeky, European Morals; Dill, Roman Slavery. For Egypt: Lane, Foot, Philo; Knight, Colossians and Philemon. For the Early Church and slavery: Harnack, Expansion. [H.M.S.]
which flowed into the Euphrates, and carried down with it lumps of bitumen. This town is without doubt the town of Hit, on the N.W. or right bank of the Euphrates, and four days' journey N.W., or rather W.N.W., of Baghdad. The principal bitumen pit at Hit, says Mr. Rich, has two sources, and is divided by a wall in the centre, on one side of which bitumen bubbles up, and on the other the oil of naphtha. Sir W. M. Petrie observed that bitumen was chiefly confined by the Chaldean builders to the foundations and lower parts of their edifices, for the purpose of preventing the ill effects of water.” The use of bitumen appears to have been restricted to the Babyloni-ans, for at Nineveh, as Sir A. Layard observed, “bitumen and reeds were not employed to cement the layers of bricks, as at Babylon; although both materials are to be found in abundance in the immediate vicinity of the city.” The bitumen of the Dead Sea is described by Strabo, Josephus, and Pliny. It is given out by springs, and hardened lumps of it are washed up on the shores, from which the lake got its classic name of Lacus Asphaltiti and a rock impregnated with it is still used there for making various objects. Strabo says that in Babylonia boats made of wicker-work were covered with bitumen to keep out the water (xvi. p. 743). [Pitch; Salt Sea.]

**Sling.** [Arms, Offensive, (2).]**

**Smith.** [Handicrafts, (1).]

**Smyrna** (Rev. 2.8-11). This city was founded, or at least the design of founding it was entertained, by Alexander the Great soon after the battle of the Granicus. It was situated 20 stadia from the city of the same name which, after a long series of wars with the Lydians, had been sacked by Halynates. Their rich lands in the neighbourhood were cultivated by the peasantry for a period which Strabo, speaking roundly, calls 400 years. The new Smyrna soon became a wealthy and important city. It seems possible that just as St. Paul’s illustrations in 1Cor. are derived from the Isthmian games, so the message to the Smyrna in Rev. 2.8 may contain allusions to the ritual of the pagan mysteries which prevailed there. In the time of Strabo the ruins of the old Smyrna still existed, and were partially inhabited, but the new city was one of the most beautiful in Asia. The streets were laid out nearly at right angles; but the neglect to make underground drains to carry off the storm rains occasioned the flooding of the town with filth and refuse. There was a large public library, and also a handsome building surrounded with porticoes which served as a museum. It was consecrated as a heroine to Homer, whom the Smyrniacs claimed as a countryman. There was also an Odeum, and a temple of the Olympian Zeus, with whose cult that of the Roman emperors was associated. Olympian games were celebrated here, and excited great interest. Smyrna under the Romans was the seat of a conventus juridicus, whither law cases were referred from the Lydian and Morea. It was a great centre of commerce, and was the chief port of Asia Minor, with immense wealth, and a commerce by land and sea, which extended from the Persian Gulf to the Black Sea. It was divided into four quarters, the upper or city quarter, four miles in circumference; the lower or cemetary quarter, two miles; the outer or seaport quarter, five miles, and the country quarter, eight miles. The town was a seat of Christianity as early as A.D. 45, and was an important see from the 3rd century. Its monks were called “Babylonian,” and were noted for their zeal. [Arm. Slings, (2).]

**Snake-charming.** The remarkable power exercised by certain Orientals over poisonous serpents is distinctly mentioned in the Bible, and probably alluded to by St. James (3.7). The species most generally operated upon are the Indian cobra (Naja tripudians),

occurs in Ps. 58.8[9], and is doubtless correctly translated snail (or slug). The slimy track these molluscs leave behind them appears to have given rise to the idea that the creatures waste away as they crawl; but the wasting may refer to their being dried up when exposed to a scorching sun. homel occurs as the name of some unclean animal in Lev. 11.30, and in the LXX. and Vulg. is regarded as representing some kind of Dracaena. The Arab Versions of Erpenius and Saadias it is translated chameleon; but another word probably stands for that reptile. [Chameleon.]

It has been suggested that the reference is to one of the desert-haunting lizards of the skink group (Scincidae).

**Snow** (Heb. sheleq; Arab. thelag, Dan. 7.9; Arab. Tkelz; Jas. 5.6, 21.20, noticed as falling at Jerusalem (1Mac. 13.22), and in winter in Edom (Job 6.16, 24.19), and on mount Salmon or Zalmon (Ps. 89.14). It was probably used for cooling drinks (Pr. 25.13), as it still is in Persia and Media. The Lebanners and Hermon are always white with snow till the autumn, and it remains in patches later. It often falls at Jerusalem, but does not lie long. The mountains of Edom are white.

**INdian Snake-Charmers.**

the African cobra (N. hait), common to N. Africa and Syria, and the horned viper Cerastes cornutus, which has a similar distribution. [Agr.] The charmars generally extract the poison-fangs before the snakes are subjected to their skill; and some have supposed that this is alluded to in Ps. 58.6, “Break their teeth, O God, in their mouth.” The snake-charmers employ a flute and a drum during their performances; and carry the snakes in baskets. They were called by the Hebrews me'nahashim, while the art itself was termed lahash (Je. 8.17; Ec. 10.11), although these terms are not always so restricted.
dynasty of Egypt (c. 716 B.C.). In 720 B.C. Sargon of Assyria defeated, at Raphia, Hanon of Gaza and his ally Sib'i, who was the commander-in-chief of the Egyptian Pharaoh. There seems little doubt that Sab'e is the So of O.T., and that both are to be identified with Shabaka, who at the time of the battle of Raphia had not yet seized the Egyptian throne. According to Manetho, the Egyptian historian, Shabaka reigned for 12 years.

Soap (A.V. sope). The Heb. bôrîth is a general term for any substance of cleansing qualities. As, however, it is distinguished in 1Ez 22:22 from nêther (‘natron’ or mineral alkali), bôrîth probably refers to vegetable alkali, or some kind of potash, a usual ingredient in our soaps. Numerous plants capable of yielding alkaies exist in Palestine and the surrounding countries; one, hubeibeh (the Salsola kali of botanists), is found near the Dead Sea, and its ashes are called el-qali from their strong alkaline properties. In Mal 3:2 the Vulg. renders bôrîth by herba jullommon; fuller’s sope in A.V. There are also several species of Saponaria (soapwort) native in Palestine. [H.C.H.]

Socho, Sochoh, Sooch. [SHOCHO.]

Sodî', father of Gaddiel (Num. 13:10).

Sodom (burning; see Gen. 10:19, 13:10-13, 14:2, 22, 18:10-26, 19:1-28; Deut. 29:23, 32:2; Is. 14:5, 15); Ezek. 26:14, 14:18, 18:30-40; Lam. 4:6; Ezek. 16:4-6; Zech. 14:20; Job 20:15; Is. 5:8; 16:29; Jer. 7; Rev. 11:18) and Sodoma (Rom. 9:29).

[CITIES OF THE PLAIN.]

Sodom, Sea of. [SALT SEA.]

Sodomites (Heb. qôdēšîm). The Eng. word is derived from Sodom, which was infamous for unnatural offences against morality. The Heb. word is found in Gen. 38:21; Deut. 23:17; 1K. 14, 24, 15, 12, 22; 46; 2K. 23:7; Job 36:14. The expression does not refer to ordinary immorality, but religious abominations connected with the worship of a deity and carried on in temple precincts. These barbarities, though prohibited by the Mosaic law (Deut. 23:18), were introduced into Israel from Phoenicia, Syria, Phrygia, Assyria, and Babylonia, and were specially connected with the corrupt worship of Ashtoarth—hence the writers of the Bible speak of them as "the abominations of the nations which the Lord cast out before the children of Israel." [CRIMES.]

Sodontîlsh Sea, The (2Esd. 5, 7) = the Dead Sea, near which was Sodom. [SALT SEA.]

Solomon (Heb. šâlôm, Gr. Σαλωμάς, Salômô, or Sônôm, Arab. Sulamôn) was the second son whom Bathsheba bore to David.

Her first son died in early childhood (2Sam. 12:15). David, or Bathsheba, gave the child when born the name of Solomon, or Peaceful (see 1Rv. 27, 30; 1Sam. 16:14). Nathan the prophet, with prophetic insight, named the child Jedidiah (beloved of Jehovah). It has often been noted that while considerable literary materials are available in the sacred Scriptures for a life of David, there is by no means such extensive material in reference to Solomon and his reign. The book of Nathan the Prophet is spoken of in 2Chr. 9:29 as containing memoirs of Solomon. That book may possibly have been identical with "the Acts of Solomon" noticed in 1K. 11:41. In 2Chr. 9:29 there is also mention made among his biographies of the prophecy of Ahijah the Shilonite and the visions of Iddo the Seer. The Psalms supposed by some to refer to Solomon and his kingdom, such as Ps. 2, 45, 127, may all be otherwise interpreted. Of Ps. 72 alone can it be said that there is anything like a solid basis for considering that it was really composed with reference to his days. Josephus (Ant. xxxvii. 5, 3) gives Solomon a fundamentally enlarged for literary purposes, of the letters which passed between king Hiram and Solomon. Of a few of Solomon's deeds, fragmentary records have been preserved by Alexander Polyhistor and others from Phoenician histories, and some of these have been recorded in Josephus' Ant. xxxvii. 5. Of Solomon's accounts, however, contain very little of real importance, and are disfigured by not a few anachronisms, such as the mixing up of the building of the temple at Jerusalem with the erection of the temple of the Samaritans on mount Gerizim in far later days. None of the legends in the Korân can be accepted as really historical, though mostly derived from Jewish sources. A number of these have been preserved in the later Midrashim, such as that on Kohelêth, and in the first and second Tar-}

...
scarcely consistent with the words of 2 Sam. 12:24. It cannot in all cases be proved that the present order of names in the genealogies is necessarily the historical one. The child could not long have remained ignorant of the awful events in David's family which directly or indirectly had to be traced back to the sin committed by David with Bathsheba. Adonijah, but still the formidable, of the king, might fairly have been regarded as the crown prince and heir to his father's throne. Had the birth of the best-loved nothing to do with his sad rebellion and his terrible doom? Later, Adonijah became a powerful factor in the state, and to his side were drawn Joab, formerly the great captain of the army, then probably out of office, and even Abiathar, the high-priest, who had been faithful to David in his early days of distress and misery. These, with others, banded themselves together, determined to destroy, if possible, all chances of Solomon's succession to the throne. It was then that David, old as he was, acted with a new-born energy, in fulfilment of his oath to Bathsheba, and commanded Zadok the priest, Nathan the prophet, and Benaiah the son of Jehoiada, who was the commander of the royal bodyguard, to anoint Solomon as the lawful successor to the kingdom. The insurrection, which had threatened to become formidable, at once collapsed. Joab was shortly after put to death, as David had recommended, and Abiathar, thrust out from the priesthood, was forced to retire into private life. Adonijah, though forgiven his first offence against Solomon, made a later attempt to secure his succession at some future time, and was then put to death. Shimei, having broken his promise to abide at Jerusalem, was also put to death, as Solomon had solemnly forewarned him, and thus, the natural antagonists of Solomon being removed, he was confirmed in the kingdom. The kingdom over which Solomon now reigned was indeed a mighty one, and seems to have embraced a number of small kingdoms to the N. of Palestine (his conquest of Hamath-zobah secured his empire in that direction), and to the S. it extended to the border of Egypt. On the W. it was bounded by the Great Sea, or Mediterranean, and Tyre and Sidon, though in a measure independent, were almost vassal powers. The Philistines, too, had for a season been crushed in the S. Though pre-eminently "a man of peace," Solomon, whether in person or through his generals, engaged in several small wars. Eastward his kingdom extended to the river Euphrates, and some of the most remarkable cities which he erected were at or near its banks. Jerusalem lay in that direction. His reign lasted for 40 years (1 K. 11:42). It was specially remarkable for the erection of the temple, which was commenced in the fourth (6.1) and brought to an end in the eleventh year of his reign (6.38). [TEMPLE.] Very extensive preparations in and about Jerusalem had been made by David, and treasures of all kinds collected together in Jerusalem; but Solomon was obliged to add largely to these, and to make full arrangements for bringing to Jerusalem the wood and the stone necessary for the construction of that gigantic work. The building of his own palace, known as "the House of the Forest of Lebanon," occupied even more time, thirteen years, possibly because fewer workmen were employed (7.1ff.). The first act of his foreign policy, though apparently wise, proved in the long run to be pernicious. The king of Egypt was Solomon's most powerful neighbour, and the kings of the Hittites and other monarchs around obtained the horses they needed for themselves and their armies from Egypt (1 K. 10:29). Hence it was of great importance to all concerned to maintain a commercial connexion with Egypt. This led to Solomon entering into a close alliance with Pharaoh, cemented by taking the daughter of that king as his wife. This Pharaoh was Pa-seh-chah-nen II., the last king of the 21st dynasty (see A. Wiedemann, Ägypt. Gesch. ii. p. 541). He is called by Josephus Pharaortheus, Pharaoh by Eupolemos, and Uaphres by Clemens Alexandrinus. Whether the daughter of Pharaoh embraced her husband's religion we know not, but there is no mention of any temple having been erected in Jerusalem to any of the gods of Egypt. There appears to have been some "unrest" displayed by the remainder of the Canaanites who still dwelt among the Israelites (1 K. 9:20-22; 2 Chr. 8:7,8), and this may have led to Gezer, then a Canaanite city, showing some disposition to take their side. Pharaoh, in order to provide a suitable dowry
for his daughter, marched against that city, took it, burnt it, and fire slew all its inhabitants, and left a remnant over the country, as Solomon, who rebuilt it as a Hebrew city (1 K. 9.15-17). The city was a most important addition to the general security of Israel. So far all looked well, but the friendship with Egypt proved not to be lasting. Full particulars have not been discovered as to how the twin dynasties of Egypt came to a close, and how a new dynasty was founded; but when Sheshenk (the Biblical Shishak) came to the throne, the friendship with Solomon came to an end. Jeroboam, who was already plotting against Solomon on account of his heavy levies of workmen and exorbitant taxes, fled into the court of the Egyptian monarch, and the plan was devised of weakening the Davidic kingdom by stirring up insurrection among the northern tribes, and forming them into an independent monarchy. Nothing was effected in this direction during the reign of Solomon, but Jeroboam was not surrendered to Solomon as the latter had desired, and Solomon, already weakened in his power, did not venture to attack Egypt. In the reign of his son and successor, Solomon's forgetfulness of God, polygamy, and idolatry brought upon the Davidic family a terrible retribution. Solomon's policy with regard to Tyre stood on a very different footing from his policy with regard to Egypt. Hasty was the aid of the Tyrians for his great architectural works and supplies of wood from Lebanon, and they needed supplies of corn and oil from Palestine. Solomon saw clearly that without commerce it was impossible for Palestine to remain a great nation or to construct or keep up a powerful navy. The Phoenicians were near, and an alliance with them was mutually beneficial. In later days the Assyrian, Babylonian, and Persian empires had to rely upon the fleets of Tyre, which visited all the seas then open. Hiram had been a friend of David (1 K.5.1), for whom he had built a palace (2 Sam. 5.11), and with whom the throne Hiram sent messengers to greet him, and a mutually beneficial treaty was then made. When the building of the temple was accomplished, Solomon gave Hiram of his royal bounty a present of twenty cities in Galilee, which, however, were not to Hiram's taste, for he turned them Cabul, popularly explained as a compound word meaning "as good as nothing," although some scholars conjecture that the land of Galilee ought to be read in that passage (1 K.9.12). If Solomon on that occasion displayed any meanness towards Hiram, that does not seem to have long lessened the friendship between the two monarchs. There is no ground whatever for the conjecture that those cities were won by Hiram in some royal wagers, and that Solomon outwitted the winner in a shabby fashion. The visit of the queen of Sheba (10.1-13) was no doubt only one of such similar visits made by monarchs of various nations, and the wisdom of King Solomon. His wisdom in ordinary events is excellently illustrated by the story of the two women who came before him for judgment (3.16-28). At Gibbon, where the old tabernacle of Moses was still standing—bereft, however, of the ark, which was preserved apart in the tabernacle erected by the Levites, under the direction of Zadok, who had been appointed by King Solomon was bidden by God in a vision to choose a gift, and wisely chose "an understanding heart" rather than riches or long life, which, as a reward for his wise choice, were "added unto him" (3.5-15). A second remarkable vision granted to Solomon is recorded in 9.1-6. But the opening tryst of Solomon was the dedication of the temple with the magnificent prayer offered up on that occasion (8.22-61). The apostasy of Solomon was of gradual growth. When the "strange women" of various countries were admitted to the royal harem, temples were erected to the, (1) The first time God opened his hand (iChr.11.24-25); and (2) Jeroboam, son of Nebat, who was encouraged in his rebellion by the prophecies of Abijah the Shilohite (11.26-40). [Ch.11.]

Solomon's Porch. [Temple; Jerusalem; Palace.]

Solomon's servants, Children of, (Ezr.2.55-58; Ne.7.57, 60, 11.3). The persons of this order were formerly those who had returned from the Captivity. They occupy all but the lowest places in those lists, and their position indicates some connexion with the services of the temple. (1) The name, as well as the order, implies inferiority even to the Nethinim. (2) Their origin is probably to be found in 1 K.5.13, 9.20, 21, 2 Chr.8.7, 8. Canaanites were reduced by Solomon to the helot state, and compelled to labour in the king's stone-quarries, and in building his palaces and cities. (3) (Ch.22.2 throws some light on their special office. The Nethinim, as in the case of the Gibeonites, were appointed to be holders of wood (Jos.8.23), and this was enough for the services of the tabernacle. For the construction and repairs of the temple another kind of labour was required, and the new slaves were set to the work of hewing and squaring stones (1 K.5.17, 18). Their descendants appear to have formed a distinct order holding probably the same functions and the same skill.

Solomon's Song. [Canticles.]

Son. The Heb. ben, a son, in O.T. [Family], and its Aram. equivalent bar in N.T., are of frequent occurrence in composition with names
of persons. [SEMITE LANGUAGES.] In N.T., as often in O.T., the word is used also for a descendant, Mt.1.1,20,12.23,21.24,45, Lu.19.6. Sons of God, (Ro.1.28), the Israelites in Gen.1.16: Ac.7.5, 21, etc. An adopted son, Ac.7.21, Heb.11.24; or one in the place of a son, Jn.19.26. Term of endearment, iSam.3.6,16, Heb.12.5,6, 1Pe.5.13, etc. Member of a guild, 1K.20.35; class or order, Mt.12.27. Followed by words denoting characteristic, quality, etc., e.g. the sons of light or of light day, Jn.12.26. Ti.5.13. Disobedience, Eph.2.5,6, Col.3.5. Connected with or partaking of a thing, e.g. the kingdom, Mt.8.12,13, and its opposite, this world, Lu.16.8,20,34; the resurrection, Lu.20.36; perdition, Jn.17.12, 2Th.3.3. Gehenna, Mt.25.15. Son of pledges (i.e. hostages), 2K.14.14; a horn of the son of oil (i.e. a fertile hill), Is.5.1; son of the bridal chamber (i.e. bridesmen), Mt.9.15 and parallels. Also of the young of animals, Lev.9.2, Mt.21.5. Used also to express relation to God—of the Israelites, Ex.4.22, Ho.11.1; of believers, Ro.8.14,15; of God, Mt.13.30, 2Th.2.3, 2K.26; 26.63, Mt.3,12; Jn.1.49,20, 31. [II.]

SON OF GOD. [GOD; JESUS CHRIST; INCARNATION.]

Son of Man. (1) Generally, of all the descendants of Adam (Job 55.6; Ps.144.3,146.3; Is.51.12,56.2), and especially applied in this sense to Messiah, who is thus addressed by the prophets, 5 times, and in the New Testament, 38 times. (2) Pre-eminently to the Messiah (Dan.7.13, and cf. Ps.8.4ff. with Heb.2.6-8 and Heb.10.13-25), and in N.T. applied to Christ by Himself but only besides by St. Stephen (Ac.7.56) and in the Apocalypse (Rev.1.5,13,14.4), if we omit the question of the people in Jn.12.34. For the doctrinal significance, see INCARNATION; JESUS CHRIST, (2); God; KENOSIS; and the treatment of the Logos in John, GOSPEL OF, and PHILOSOPHY.

Song of Songs. [CANTICLES.]

SONS OF GOD. There are few passages upon which more strange and curious theories have been erected than upon Gen.3.4. Not a few commentators of ancient and modern times have maintained that the sons of God (brévé hâle'lohim, mentioned twice, vv. 2,4, and on two other occasions, Job 1.6,2.1) signify in those four passages "the angels." The phrase "sons of God" without the article is found in Job 38.7, and might (possibly, though not necessarily) be regarded as identical with the same phrase with the article. Another similar expression, brêv'elîm (Heb. 'îlî, Assyr. ilû) God occurs in Ps.29.1,89.6. That phrase is translated in both A.V. and the text of R.V. (after the majority of ancient expositors) by "the mighty" and "the sons of the mighty." The Psalmist uses that expression to denote the kings and to, as in Ps.29.1, 89.6. The name of Ps.97.7 with Ps.29.1 confirms this. Some commentators, however, consider that angels are there meant. In the marginal rendering of R.V. in Ps.29.1 the phrase is rendered "sons of God." Whether that rendering be correct or not, the phrase is not identical with that used in Gen.3.24 and Job 1.6,2.1. It may be referred to a "son of God" (brêv'elîm). For, in vers. 28 of that chapter, God is figuratively referred to as the Father of the rain and of the dewdrops. "The sons of God" whose intermarriages with the "daughters of men" are narrated in Gen.6 cannot have been angels, for the idea of angels intermarrying between angels and earthly women is opposed to the sobriety of the O.T. narrations, though the idea occurs in heathen mythology. Our Lord's words (Mt.22.30, etc.) ought to be decisive on the point. Such acts on the part of angels would imply procreative power. If, however, the idea of God in Gen.6 were not of angels being, the phrase must indicate the professors of religion in that early time who chiefly belonged to the family of Seth, while the daughters of men were women of the family of Cain. The two families had long been separated from one another, probably owing to the murder of Abel by Cain, but in the days of Enos they became united before one common altar. This may be the meaning of the statement, "Then it was begun to call upon the name of Jehovah" (Gen.4.26). As professors of true religion the Israelites are similarly termed in Ho.1.16, "the sons of the living God." Similarly in Gen.6.18, ch. 73.15, Pr.14.26, Is.1.4,45.6, Je.3.19. The analogy of all such passages and of many others tends to prove that the phrase "sons of God," both in Gen.6 and Job 1 and 2, simply signifies the professors of religion at those several periods. Inasmuch as Gen.6.1-4 is an introduction to the history in Gen.6.5-7, it is afterwards described as a judgment upon the ungodly world, the expression hâwphîlîm (Gen.6.4) probably indicates "the apostates" or the "fallen away from God. It is perfectly true that these apostates are also styled the kagbiborîn, the mighty ones or the giants. It was, however, the magnitude of their transgression, and not the size of their bodily frames, that is alluded to in Gen.6. The wâphîlîm (A.V. sons of Anak) spoken of in Num.13.33 appear to have been men of great stature, but they are not to be identified with those of Gen.6, who all perished in the waters of the deluge. [C.H.H.-W.]

SOOTHSAYER. [DIVINATION; MAGIC.]

Sop (pavved). The name of a son of Anak, of the sons of Caleb (Num.13.30). [W.O.E.-O.]

Sop' er of (Berea accompanied St. Paul on his return from Greece into Asia on the third missionary journey (Ac.20.4). [SOSIPATER.]

Sop' er. [SOUP.]

Sophereth, a family of descendants of Solomon's servants who returned with Zerubbabel (Ezr.2.55, R.V. Hassophereth; Ne.7.57).

Sophoni'as (2Esd.1.40)=ZEPHANIAH, 1.

Sore' erer. [DIVINATION; MAGIC.]

Sorek, Valley of (Judg.16.4), the valley of the "valley of the sons of Heman, " the Philistine country, but probably also near hills, since the vine is not "choice" in the plains. Eusebius (Onomasticon) mentions it as connected with a village which Jerome renders Caphar-Sorek, adding that it was near Zorah. The ruin Surîk still exists 2 miles of Surâb (Zorah), on the side of a great valley of pebbles, the boundary of Judah and Dan. The site is that of a village, with springs, a cave, and a sacred tree; and a rock-
cut wine-press proves former cultivation of the vine (Suart. W. Pal. iii. p. 126). [c.r.c.]

So sthenes.—1. Ruler of the synagogue in Corinth (Acts 18. 17), in which office he was probably the successor of Crispus, who had become a convert to Christianity and had been baptized by St. Paul (Acts 18. 8; 1 Cor. 1. 14). This event exasperated the Jews, and Sosthenes doubtless was chosen as their leader by reason of his strong anti-Christian animus. With the arrival of a new proconsul, Gallio, it seemed to the Jews that the opportunity of avenging Crispus' defection had come, for the proconsul would be anxious to gain their favour, and would not be over-scrupulous as to the means employed. Accordingly, under Sosthenes' leadership, they seized St. Paul and brought him to the proconsular court (Acts 18. 12). But Gallio refused to be their tool, cut short their case, and drave them from the judgment-seat. Thereupon the bystanders, indited by his indignation, seized Sosthenes and beat him, and Gallio did not check this summary retribution.—2. Sosthenes, the name of his son, is associated with St. Paul in 1 Cor. 1.11. There is little ground for identifying him with the ruler of the synagogue, thereby presupposing the latter's conversion. The name was common, and the person here mentioned was not at Corinth but at Ephesus, where 1 Cor. was written. [a.c.b.]

Sotar, a family of the descendants of Solomon's servants who returned with Zerubbabel (Ezra 2. 55; Ne. 7. 57).

Soul, i.e. the self-conscious centre of human personality, is generally nephesk or wshimi (lit. breath). Gk. ψυχή (soul); very often ἐναίθ (lit. wind or breath), Gk. πνεῦμα (spirit); frequently also λῆθ or λῆθαθ, Gk. καρδία (heart). It is implied already in Gen. 2.7 that the human soul is an immaterial principle, distinct from the body, and analogous in nature to the divine essence. It is regarded, if not as inherently immortal, at least as potentially so, for to eat of the tree of life is evidently the appointed reward of faithfulness under probation (Gen. 2. 3). These great truths do not again become prominent till towards the close of the O.T. revelation. nephesk often stands simply for physical life; whether of individual souls (Ps. 44. 2, Pr. 12. 10), or for a living being of any kind (Gen. 1.20, 24.39; Ezek. 47.9, etc.), or for the seat of the appetites (Ps. 63. 5, 107.9; Pr. 25.24), or of the emotions and passions (Deut. 12.20, 21.11, etc.). At other times it means a "person," whether living (Pr. 11. 15, etc.) or dead (Num. 6.6; Lev. 21. 11; Deut. 12.22), or in substitution for a personal pronoun (Gen. 49.6; Num. 23.10; Is. 43.4, etc.). The main seat of the soul was supposed to be the blood, with which at times it was apparently identified (Gen. 9.1, 5; Lev. 17.10-14; Deut. 12.23, 24). But the soul had other organs, the kidneys, as the seat of affection and emotion (Job. 19.27; Pr. 18.4); 11.15, as the seat of compulsion (Is. 16.11, 63.15; Je. 31.20, etc.); the liver as the seat of sorrow (Lam. 2.11); but especially the heart, which, as the supposed centre of numerous psychical activities, was a recognized term for the soul. In Daniel only is there a hint of the modern doctrine that the brain is the sole or principal organ of mind (Dan. 2.28, 4.10, 17, 11). The soul was always regarded as separable from the body. For the gradual growth of the teaching as to the persistence of the soul after the death of the body, see Future Life. During the interval between the two Testaments, the Jews came into contact with Gentile philosophy, and the result was considerable speculation upon the mysterious subjects of the soul's nature, origin, and destiny. The opinion of Plato that the soul is an immaterial and indestructible substance was generally adopted, e.g. by the author of Wisdom (2.22, 23). The Essenes—in fact, by all Jews except perhaps the Sadducees (Josephus, 18. Ant. i. 3, etc.; cf. Mt. 10.28, 25.41, 46). It was also generally held that every human soul owes its origin to a special creative act of God (Creationism). The opposite view, that it is derived from the parents' souls, was adopted by the Gnostics. This apparently unknown until the time of Tertullian (200 a.d.). On other points there was less agreement. Some, following Plato and Philo, believed in the soul's eternal preexistence (cf. Wis. 8.19, R.V.); others (mainly orthodox Rabbin) in its creation at the creation of the world (cf. 2 Esdr. 3.58, etc.); others in its pre-mundane creation (Sclavonic Enoch, xxi. 5); others (perhaps the majority) in its concreation with the body, which is apparently the doctrine of O.T. (Gen. 2. 7; Is. 44.22, 49.1-5; Job 33.13). A few supported the Platonic speculation of metempsychosis so characteristic of Josephus, 3.3.5 (c). The disciples of Jesus were aware of these discussions, and on one occasion asked Him whether a certain man had been born blind as a penalty for sins committed in a former state of existence (John 9.2). The N.T., as distinguished from the Old, regards the soul primarily as an object of salvation (Heb. 13. 17; 1 Cor. 2. 11, 22; Jas. 4.1.5, 20; 3.13, etc.). According to our Lord's teaching, the soul being a man's inmost self, and inherently immortal (Mt. 10. 28), is precious beyond all price. Nothing can be accepted in exchange for it, and the gain of the whole world will not compensate for its loss (18.26). This truth is driven home in the awful parable of the Rich Fool (Lu. 12.16). The gospels contain much about the gain and loss of the soul, generally with a play upon the double meaning of ψυχή (life or soul). Most of these passages take the form of exhortations to martyrdom, literal or metaphorical (e.g. Mt. 10.30; see also 16.25; Lu. 9.25; Jas. 4.12; 1 Cor. 6.12-13). In most of the epistles, there is practically no distinction of meaning between "soul" and "spirit," [Saviss.] Jesus, as perfect man, possessed both "soul" and "spirit." His "soul"
became an atoning sacrifice for sin (Mt. 30.28), was troubled (Jn.12-27), and was exceeding sorrowful (Mt. 26.38). His human "spirit" groaned or was angry (Jn.11.33), was troubled (Is. 63.10, 11), was wounded (Ps. 22.15), and was yielded up (Mt. 27.50; Jn. 19.30). [INCARNATION.] After death it descended to Hades, and there preached to the disobedient spirits in prison (1Pe.3.18,19; cf. Eph. 4.9), visiting also, we infer from Lu.23.43, that compartment of Hades which is reserved for the spirits of all who are dead, viz. Our Lord's teaching recognized an intermediate state of the soul between death and final judgment—of bliss in the case of the righteous, and of misery in the case of the unrighteous (Lu.16.22ff.). Whether the punishments of this state are remedial, or vindictive only, has been by many debated. The present tendency of criticism is to regard them as remedial, and to postulate change and spiritual development in the intermediate state as at least possible. Scripture regards the disembodied state of the soul as imperfect and provisional. At the last day the unclouded soul will be "clothed upon with a spiritual body" (2Co.5.1ff.), and will then enter upon its eternal reward. [FUTURE LIFE; ESCHATOLOGY.] F. Delitzsch, Syst. d. bibl. South Ramoth', a place frequented by David and his outlaws during the latter part of Saul's life (1Sam.30.27). [BAAL, geogr. 1-]

Saw. [SWINE.]

Sower, Sowing. The Egyptian paintings furnish many illustrations of the mode in which sowing was conducted. The sower held the vessel or basket containing the seed in his left hand, while with his right he scattered the seed broadcast. The "drawing out" (or "bearing forth," R.V.) of the seed is noticed in Ps.126.6 (cf. A.V. marg.) and "sowing" in Am.9.13. In wet soil the seeds were trodden in by the feet of animals (15.22.20). The season commenced with the fall and continued to the end of February. The Mosaic law prohibited the sowing of mixed seed (Lev.19.19; Deut.22.9). The ancient method of hand-sowing remains unchanged in Palestine to-day (Mt.13.3). [c.r.c.]

Spain. The Lat. form of this name is represented by the ισπανία of 1Mac.8.3 (where, however, some copies exhibit the Gk. form), and the Gk. by the Σπανία of Ro.15.24.8. These passages contain all the Biblical notices of Spain. The mere mention of St. Paul to visit Spain implies the establishment of a Christian community there, possibly by means of Hellenistic Jewish residents, and this early introduction of Christianity is attested by Irenaeus (1.3.1), Lactantius (A.V. sparrow. The Gk. σπαργαλωμα (A.V. sparrow) occurs twice in N.T., Mt.10.29 and Lu.12.6, where

SPARTA 843

the Vulg. has passer. zippor, from a root signifying to "chirp" or "twitter," appears to be an onomatopoeic title for small birds in general, especially those of the perching order (Passeres). The house-sparrow (Passer domesticus) has been introduced into the Holy Land, where there also occur the allied P. cidalpinus and P. salicarius, while the tree-sparrow (P. montanus) is also common; but it is not to be assumed that any one of these is specially alluded to in Scripture. Palestine abounds in small perching birds, many of which are now, as in Jewish times, sold as food in the markets. One species only may be identified with probability—viz. that alluded to in Ps.102.7 as "the sparrow that sitteth alone upon the housetop," which may be the blue rock-thrush (Monticola cyaneus). This is a solitary bird, eschewing the society of its own species, of which rarely more than a pair are seen together. There are but two allusions to the singing of birds in Scripture, viz. Ec.12.4 and Ps.104.22. As the passage is referring to the sides of streams and rivers, he may have had in his mind the Palestine bulbul (Pycnonotus xanthopygias). The "bulbul" of the Persian and Arabian poets is probably the eastern nightingale (Daulites hafzi). [R.L.]

SPARTA (1Mac.14.15; but in 2Mac.6.9, LACEDAIMONIANS). In the history of the Hasmonaean monarchs mention is made of a remarkable correspondence between the Jews and the Spartans, which has been the subject of much discussion. When Jonathan endeavoured to strengthen his government by foreign alliances (c. 144 B.C.), he sent to Sparta to renew a friendly intercourse which had been begun at an earlier time between Aratus and Onias, on the ground of their common descent from Abraham (1Mac.12.5-23). The embassy was favourably received, and after the death of Jonathan "the friendship and league" was renewed with Simon (1Mac.14.16-23). Several questions arise out of these statements as to (1) the people described under the name Spartans, (2) the relationship of the Jews

THE BLUE THRUSH (Monticola cyaneus).
and Spartans, (3) the historic character of the events, and (4) the persons referred to may be either Osians and Areus. (1) The whole context of the passage, as well as the independent reference to the connexion of the "Lacedemonians" and Jews in 2 Mac.5.9, seem to prove clearly that the reference is to the Spartans, properly so-called. (2) The actual relationship of the Jews and Spartans (2 Mac.5.9) is an ethnological error, the origin of which is difficult to trace. Possibly the Jews regarded the Spartans as the representatives of the Pelasgi, the supposed descendants of Peleg the son of Eber. It is certain, from an independent passage, that a Jewish colony existed at Sparta at an early time (1 Mac.15.23). (3) The incorrectness of the opinion on which the intercourse was based is obviously no objection to the fact of the intercourse itself. But it is further urged that the letters betray their fictitious origin negatively by the absence of characteristic forms of expression, and positively by actual inaccuracies. To this it may be replied that the Spartan letters (1 Mac.12.20-23,14.20-23) are extremely brief and exist only in a translation of a translation, so that it is unreasonable to expect that any Doric peculiarities should have been preserved; and the absence of the name of the second king of Sparta in the first letter (1 Mac.12.20), and of both kings in the second (1 Mac.14.20), is probably to be explained by the political circumstances under which the letters were written. (4) The difficulty of fixing the date of the first correspondence is increased by the recurrence of the names involved. Two kings bore the name Areus, one of whom reigned 309-265 B.C., and the other, his grandson, reigned 257 B.C., being only eight years old. The same name was also borne by an adventurer, who occupied a prominent position at Sparta, c. 184 B.C. In Judaea, again, three high-priests bore the name Onias, the first of whom held office 330-300 B.C. (or 301); the second 240-226 B.C.; and the third c.2 Mac.5.9. Josephus is probably correct in fixing the event in the time of Onias III.

Spear. [Arms, Offensive, (3).]

Spearman. The word thus rendered in A.V. (Ac.25.23) is of very rare occurrence, and its meaning is extremely obscure. Two hundred δετολαζαι formed part of the escort of St. Paul in the night-march from Jerusalem to Caesarea. They are clearly distinguished both from the heavy-armed legionaries, who only went as far as Antipatris, and from the cavalry, who continued the journey to Caesarea. As nothing is said of the return of the δετολαζαι to Jerusalem after their arrival at Antipatris, we may infer that they accompanied the cavalry to Caesarea, and the supposition that they were irregular light-armed troops able to keep pace with mounted soldiers.

Speckled bird (He.12.6). [HvYmEA.]

Spelt. [K£; Bread.]

Spice, Spices. Under this head we shall notice the Heb. words בָּשָׁם, wkhthd, and Samar. spicery, besem, or besem, which occurs only in Can.5.1, "I have gathered my myrrh with my spice," points apparently to some definite substance. Elsewhere, including 1.13.6.2 (besem), the words refer more generally to sweet aromatic odours, the principal being that of the balsam, or balm of Gilead; the tree which yields this is now generally admitted to be the (i.e. Balsamodendron) opobalsamum; though it is probable that other species of Amyridaceae are included. The

**SPIRIT, HOLY**

845

**Spirit, Holy.** Belief in the Holy Spirit ultimately depends on Jesus Christ. (1) *The Revelation as to His Person.* Our Lord filled the doctrine of the Fatherhood of God with new contents, by revealing that beside the Father existed the Son. The magnitude of this conception required the central place in His teaching of the Twelve. He also proclaimed, chiefly toward the close of His ministry, the Spirit. The term, like that of Fatherhood, was not new, but derived from O.T. (cf. Gen.1.2; Job 33.4; Ps.51.11: Is.11.2, 63.10), and was quite familiar to our Lord’s contemporaries (Lu.1.15, 35, 41.67.2.25; Mt.4.1), but was filled by Him with vastly deeper meaning. He spoke occasionally of the Spirit in the earlier part of His ministry (Mt.10.20; Mk.3.29 and parallels, 13.2; Lu.4.16[Is.61.1], 11.13,12.12; but in the last instructions to the Twelve, precisely where it must have come if it was to come at all, He gave the plainest explicit teaching on the subject (Jn.14.15,26; 16.16,7,13). This revelation describes the personality of the Holy Spirit and His relationship to the Father and the Son. The Spirit proceeds from the Father (Jn.15.26); He is also from the Son (14.26). We now hear for the first time the triple phraseology, thenceforward familiar in Christendom (Jn.14.26,15.26). After the Resurrection these instructions were resumed and completed (Jn.20.22; Ac.1.5; Mt.28.19, Baptismal formula). On the basis of this Revelation the apostles developed a doctrine of the personality of the Spirit. We find in the epistles two divine names rather than three (e.g. 1Cor.1.3). This is not “a matter of ‘trinitarian’ doctrine,” as has been truly said (Moberly, *Atone ment and Personality*, p. 102), the apostle is not concerned with speculation on God in Himself, but rather with God as revealed in Incarnation. But the epistles also constantly name the Holy Spirit (e.g. 1Cor.15.1-3), eleven times in the thirteen verses of 1Cor.6.9-11. He also prays for the Father and the Son. Sometimes the Spirit is described as an influence, sometimes as a Person. The two are in no sense contradictory, but supplementary. Regarded in His gifts and manifold effect, the impersonal is a
SPIRIT, HOLY

quite natural expression; regarded in Himself, the other is. He is to St. Paul essentially a personal actin of God's manifestation of Himself, but without account for 1 Cor. 12.11. The analogy between the spirit of man and the Spirit of God (2.10 ff.) involves the personality of each, and the divinity of the latter, although it would not necessarily imply distinction from the Father, which is, however, given in the phrase "God hath revealed them unto us by His Spirit" (cf. Heb. 1.1, 2. God... spoken... by His Son.") The separation of the Persons in both instances is manifest. For the distinctness, yet inseparable union, see 2 Cor. 13.14: "Love which is the cause of redemption, Grace which is the means, Communion which is the effect; and these ascribed to the distinct yet united Three (cf. Pfleiderer, Paulinism, i 202). How St. Paul co-ordinated this with his hereditary monotheism is a matter of modern inquiry. That he did is certain. It is explicable by the overwhelming force of the New Revelation. The doctrine of the Three Persons, 2 Cor. 13.14, to a solitary Deity, a Man, and a Metaphor, is utterly alien to apostolic thought, and reads into the language the notions of a different religion. Cf. also Ac. 16.6, 7, 10, "Having been forbidden of the Holy Ghost to speak the word in Asia... the Spirit of Jesus forbade." (a) Interchangeable use of the words Holy, Holy Ghost, Holy Spirit (Jn. 1.1, 2.18; and Armitage-Robinson on Ephesians.) He is interchangeably the Spirit of God and the Spirit of Christ (Ro. 8.9). This association of the Spirit with the Father and Son is due to the Christian experience (cf. Eph. 2.18; 1 Cor. 6.11; and Dorner, Person of Christ, app. to Eng. transl.).

SPIRIT, HOLY

(b) The Work of the Holy Spirit. Our Lord, while revealing the Spirit's personality and relation to the Father, at the same time indicated His work. And from these data are derived the fuller apostolic teachings. That work is to be found (i) In the Incarnation. It is the Spirit Who bestows the nature of humanity upon Christ (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.21), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or effected by the Holy Spirit (cf. Lk. 24.49). He is the Founder, the Spirit of Grace and Truth (Jn. 15.5). Christ is constituted (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.22), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or effected by the Holy Spirit (cf. Lk. 24.49). He is the Founder, the Spirit of Grace and Truth (Jn. 15.5). Christ is constituted (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.22), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or effected by the Holy Spirit (cf. Lk. 24.49). He is the Founder, the Spirit of Grace and Truth (Jn. 15.5). Christ is constituted (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.22), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or effected by the Holy Spirit (cf. Lk. 24.49). He is the Founder, the Spirit of Grace and Truth (Jn. 15.5). Christ is constituted (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.22), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or effected by the Holy Spirit (cf. Lk. 24.49). He is the Founder, the Spirit of Grace and Truth (Jn. 15.5). Christ is constituted (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.22), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or effected by the Holy Spirit (cf. Lk. 24.49). He is the Founder, the Spirit of Grace and Truth (Jn. 15.5). Christ is constituted (Mt. 1.18, 20; Lk. 1.35). His Baptism (Lk. 3.22), Temptation (4.1), miracles (4.18), mission in general (ib.), sacrifice (Heb. 9.14), resurrection (Ro. 8.11), are all guided, controlled, or e
plaining the action of Grace are inconsistent with belief in the reality of such action; more especially where the necessity for some higher invigorating power to secure man's moral uplifting is frankly acknowledged. (iv) In the Scriptures. Whether the N.T. writers consciously set their writings on a level with the older " Scriptures inspired of God. (2 Tim. 3. 16) or anticipated the position to be accorded to them in Christendom, at any rate the writings are products of the Spirit, within the Church, and for the Church. Consciousness of His guidance is expressed in 1 Cor. 7. 20, where the humility of the phrase should not conceal the grandeur of the implication. Local choleric invigorating especially to older churches His tolic (e.g. This shows of the apostolic Church. It is in the ledge of the apostolic Church. To be without a knowledge of the Holy Spirit was to be destitute of one of the first essentials of Christianity (cf. Ac. 19. 2-6). To experience His grace was their eager expectation (11. 16), and then their indescribable blessing (11 Jn. 3. 24, 4. 13). (3) The idea of the Spirit in the consciousness of the apostolic Church. To be without a knowledge of the Holy Spirit was to be destitute of one of the first essentials of Christianity (cf. Ac. 19. 2-6). To experience His grace was their eager expectation (11. 16), and then their indescribable blessing (11 Jn. 3. 24, 4. 13). (3) The idea of the Spirit in the consciousness of the apostolic Church. To be without a knowledge of the Holy Spirit was to be destitute of one of the first essentials of Christianity (cf. Ac. 19. 2-6). To experience His grace was their eager expectation (11. 16), and then their indescribable blessing (11 Jn. 3. 24, 4. 13). (3) The idea of the Spirit in the consciousness of the apostolic Church. To be without a knowledge of the Holy Spirit was to be destitute of one of the first essentials of Christianity (cf. Ac. 19. 2-6). To experience His grace was their eager expectation (11. 16), and then their indescribable blessing (11 Jn. 3. 24, 4. 13).
would naturally set out immediately for the village where they had been led by their inquiries to expect the Messiah. As this conjunction rose in an easterly direction, the Magi would have it on their left at the time of their departure from Jerusalem. Some little distance outside Bethlehem, however, the road takes a turn to the left: and consequently, as the Magi mounted the hill leading to Bethlehem, they would see the conjunction before them apparently leading the way and seeming, perhaps, to rest over some particular house on the crest of the hill. (4) It will be seen that these facts fit in very well with details of the narrative in Mt.2. It is plain from the language of that chapter (esp. vv. 2, 7, 10) that the Magi did lose sight of the star before reaching Jerusalem, but were greeted with a reappearance of it about the time that they quitted the Holy City. Further, they travelled by night (and this is most naturally explained by the fact that the Magi arrived at the presence of the star, and it seemed to them that the star was leading the way to Bethlehem (Mt.2,9,10). (5) Moreover, there is evidence from another quarter. According to Ramsay (op. cit. p. 193), the enrolment which drew Joseph and Mary to Bethlehem must be placed at some point during the months Antipas, although there is some question of the phenomenon which the Magi saw between Jerusalem and Bethlehem was the second conjunction of 7 B.C., and consequently that the phenomenon which they saw before setting out from their own country was the first conjunction of that year.—II. (1) At first sight Mt.2,16 seems to conflict with the road that the Magi took. The ἀνάφασθαι of verse 2, taken in connection with the ἀνεφράστων ἐκ αἰτίας of ver. 13, might perhaps naturally seem to suggest that the massacre of the Innocents took place very soon after the departure of the Magi, and consequently that the Magi did not arrive at Jerusalem until about two years after the appearance of the conjunction. This is the view taken by Keil, who holds that the first conjunction must have been accompanied by an evanescent star, that this was the phenomenon to which the Magi attached the chief importance, and that they waited for this star to decline before they set out from their home. But there are grave objections to this theory. (i) In Mt.2,2-9 we get the phrase ἐν τῇ ἀνασκαλω. This probably does not mean, "in the east," which would naturally be ἐν ἀνασκαλω. And this distinction appears to be emphasized in the present passage: for in v. 1,2 we find both ἀνασκαλω with the article and ἀνασκαλω without the article side by side (μέγας ἄνω ἀνασκαλω ... ἐν τῇ ἀνασκαλω). Hence we shall probably be given in giving the latter phrase its more normal meaning of "in its ascent," which seems to be an indication that the Magi did not wait for the star to decline before starting from their home. (ii) On Keil's hypothesis the Magi must have taken about a year for their journey. Now, if we allow them the very moderate distance of 100 miles a week—Herodotus (iv. 101) reckons a day's journey in difficult country at about 23 miles—they must have come at least 5,000 miles. But this would mean that they came from India or from some other part beyond the range of Jewish influence. (iii) If the Magi did not reach Jerusalem till 5 B.C., we have no satisfactory explanation of the star in Mt.2,9,10. It has been suggested that this star might be identified with an evanescent star mentioned by certain Chinese tables as appearing in Feb., 3 B.C. But, apart from the fact that this would give about two years for the journey, it would seem from the language of Mt.2,9,10 that the phenomenon which the Magisaw on quitting Jerusalem was similar to that which they saw in their own country. Hence, if the second phenomenon was an evanescent star, the first one must have been a similar evanescent star (such as Kepler conjectures). But the Chinese tables (which are the sole authority for the star of Feb., 4 B.C.) say nothing about a similar star in the preceding years. Hence their evidence, so far as it seems to support Kepler's theory in one direction, tends against it in another. (iv) If the Magi did reach Jerusalem in 5 B.C., their survival as recorded in Mt.2,11, it must have been at Bethlehem, as there was an expectation that the Messiah would be born there (Mt.2,5; cf. Jn.7,2), whereas there was no such expectation to lead them to Nazareth, which was, in fact, the last place to which their thoughts would naturally turn. Hence, if we take this view, it is illustrated by Mt.2,13, where, in order to give any O.T. authority for the Messiah's dwelling at Nazareth, St. Matthew is obliged to use a text in a very strained sense. Now, Ramsay (see above) has shown that 7 B.C. is the year in which Joseph and Mary must have been present in that place if there arrived in Jerusalem about the time that the tρώγε of Mt.2,16 must be taken in a very vague sense. In the Gk. Test. we find the word τρώγη occurring about a score of times in St. Matthew at the beginning of a paragraph, and in most cases it seems to be without any very definite chronological signification, like St. Luke's favourite έτος ἀνασκαλω (cf. Mt.9,14,12,38, 16,21,18,21, etc.). It is, in fact, a favourite word with St. Matthew for introducing a fresh account, or something occurred after the account of which he has just been dealing. Thus our interpretation of the word in Mt.2,16 is in accordance with St. Matthew's usage. (3) We learn from Josephus (Ant. vi. 5) that on his death-bed Herod gave orders that a large number of Jewish princes should be slaughtered as soon as the Messiah was dead. Now, Herod's death took place (according to the reckoning here adopted) in March, 4 B.C., and the order for the slaughter of the Jewish princes would come about two years and six months after the appearance of the conjunction at the end of May, 7 B.C. Such a slaughter would not be the event Messiah came within its scope, and hence it seems probable that Herod should have determined on the massacre recorded by St. Matthew. The age limit would thus be two years and six months; but the words ἄνω ἀνασκαλω could without any great violence be applied, in an account which does not give minute details, to anything under
STAR OF THE WISE MEN

Stephen 849

three years—just as a person naturally gives his age as that on his last birthday. (4) It may be asked: Why, since the Magi apparently took it for granted at the end of 7 B.C. that the Messiah is already born (Mt.2:2, τετελείωται), was not Herod content with the slaughter of those infants only who were born about that time? To this it may be answered: (i) That this is perhaps unduly pressing the temporal force of τετελείωται. A celestial phenomenon portended a future event, and the aorist participle might very well be used in a non-temporal sense of one either already born or else about to be born (cf. the “gnomic” use of the aorist in class. Gk.). If there had been a distinct reference to past time, we should probably have had γένετον. (ii) The fact that there were altogether three conjunctions, extending until the beginning of 6 B.C., may have further influenced Herod. (iii) It is too much to expect discrimination in a madman. Herod would wish to make quite certain, and would not draw nice distinctions. Thus Mt.2:16, instead of conflicting with the chronology here adopted, seems rather (so far as it goes) to tend in the other direction. —III. The silence of St. Luke on the subject of the Magi and the star is sometimes urged as an argument against the truth of the whole story. But it may be answered: (1) That the argument from silence is proverbially unsafe. (2) The account in St. Luke does make it plain that the shepherds were in a state which made them capable of receiving the message of the Messiah’s birth; and this fact falls naturally into its place if we suppose that the Magi had told of their expectations of a birth at Bethlehem under exceptional circumstances. The chief objection to this having influenced the minds of the shepherds is that the tradition (enshrined in the Epiphany season) makes the visit of the Magi occur a fortnight after the Birth, while the visit of the shepherds occurred on the night of the Nativity (Lk.2:11). Hence we must either suppose that the tradition is wrong and that the visit of the Magi occurred on the same night as the Birth, or we must suppose that the Magi preceded them and had reached the Bethlehem shepherds. (3) It seems that the message to the shepherds was accompanied by some celestial phenomenon (Lk.2:9, esp. Δήμητριου, Κυπριανοῦ). Is it fanciful to suppose that we have here an allusion to the star of the Magi? —IV. Once more, it is urged against the identification of the star of the Magi with the conjunction of 7 B.C.: Why, if this conjunction of Jupiter and Saturn caused some of the Magi to set out in search of the Messiah, had not the much brighter conjunction of the same planets in 66 B.C. produced the same result? To this it is only necessary to answer that not all men are bound to act in the same way under similar circumstances, and that if the Magi of 7 B.C. had been capable of setting out for Jerusalem in 66 B.C., they might perhaps have done so; but that does not prove anything as to the probable movements of their fathers or their fathers’ fathers. Moreover, there is no doubt that the traditions of the conjunction which had occurred 59 years previously may have caused the conjunction of 7 B.C. to create a greater impression as a republication of a neglected message. Nor should the fact that these astrologers were thus led by this strange means to the birthplace of their Redeemer be a difficulty to those who reflect that the whole course of history shows how God does, by what appear to be coincidences, make even the follies of men subservient to His divine purpose. [C.E.R.]

Stater. [Money.] Steel. In all cases where the word “steel” occurs in A.V. the true rendering of the Heb. is “copper.” Whether the ancient Hebrews were acquainted with steel is not perfectly certain. It has been inferred from a passage in Jeremiah (15.12), that the “iron from the north” there spoken of denoted a superior kind of metal, hardened in an unusual manner, like the steel obtained from the Chalyses of the Pontus, the ironsmiths of the ancient world. The hardening of iron for cutting instruments was practised in Pontus, Lydia, and Laconia. Justin mentions two rivers in Spain, the Bilbilis and Chalyses, the water of which was used for hardening iron (cf. Plin. xxxiv. 41). There is, however, a Heb. word, pāläḏ, which occurs only in Jer. 4(4) and is translated “torches,” but which most probably denotes steel or hardened iron. Steel appears to have been known to the Egyptians. The steel weapons in the tomb of Ramses III., says Wilkinson, are painted blue, the bronze (or copper) red.

Stephanas, a Christian convert of Corinth, whose household St. Paul baptized as the “first-fruits of Achaia” (1 Cor.1.16.16.15).

Stephen, the first martyr (Ac.6.7). The Christian Church, in spite of the opposition of the Sadducees and the priestly party, had prospered greatly in its early days in Jerusalem (2.47.5.14.6.7). Hellenistic Jews as well as Hebrews had joined it. A murmuring arose because the former considered that the “widows” of their class were neglected in the daily ministration. Seven men were chosen by the Church and ordained by the apostles to attend to this. Though they are only called “seven” in the Acts, they had been regarded from the time of Irenaeus as deacons. But Chrysostom says that their office was quite as much that of elders, and that their title was neither deacons nor elders. [Deacon; Church; (6).]. Of these, the chief was St. Stephen. He was “a man full of faith and of the Holy Spirit” (6.3), “full of grace and power,” and “did wonders and great signs among the people” (6.8). He distinguished himself chiefly by disputing in the synagogues with Hellenistic Jews, so that “they were not able to withstand the wisdom and the spirit by which he spake” (6.10). St. Stephen was falsely accused (6.11.13) by the Hellenistic Jews (who manifested an intolerant zeal of converts of) “speaking blasphemous words against Moses and against God,” the half-truth upon which they based their accusation being the Lord’s own reference to the destruction of the temple. St. Stephen was arrested and brought before the Sanhedrin. His defense is that we have in the Acts. It was probably, as Dean Farrar argues, delivered in Greek, and
its quotations of O.T. are from the LXX. Its genuineness is well substantiated. "The Haggadoth in which it abounds, the variations from historical accuracy, the free citation of passages from the O.T., the roughness of style, above all the concentrated force which makes it lend itself so readily to different interpretations, are characteristics which leave on our minds no shadow of doubt that, whoever may have been the reporter, we have here at least an outline of Stephen's speech" (Farrar). It is not a repetition of the particular charge brought against him, but probably a restatement of what he had preached in the synagogues, and a powerful witness of the real value which he attached to the Mosaic records of God's leading of the chosen people. Though it comes to an abrupt conclusion, the anger of his judges (7:54). Stephen, unmoved by the uproar, saw the heavens opened and the Son of Man standing on the right hand of God. The judges broke into cries of execution, clapped their hands to their ears, as with one impulse upon him, and dragged him out of the city to the place of execution. What had begun as an orderly trial ended in a wild tumult. There was no formal condemnation, nor sentence of death. The place of St. Stephen's martyrdom was said as far back as the 4th cent. to have been outside the Damascus Gate to the N. of Jerusalem; but, for some unexplained reason, the site was altered in the 15th cent. to the descent outside St. Stephen's Gate, E. of the city. As the first volley of stones burst upon him, he prayed, "Lord Jesus, receive my spirit" (cf. 

![E. Gate of Jerusalem, or "St. Stephen's Gate." (W.D.A., from a photo.)](image)

(In 7th cent. the N. Gate, now called the "Damascus Gate," was called "St. Stephen's Gate.")

argument is complete. Its purpose is to show, by a spiritual interpretation of the history of Israel, that God is not confined to one building or one country, but reveals Himself in various places, in Haran, in Egypt, in the wilderness of Mount Sinai; the tabernacle of testimony was not made till Moses, the temple till the reign of Solomon. Secondly, their fathers had been obstinate, and had rejected the revelation of God again and again; they understood not that God was giving them deliverance by the hand of Moses, they turned back in their hearts into Egypt, they took up the tabernacle of Moloch and the star of the god Rimphan. The conclusion of like blindness and obstinacy in their own case is supported till the close of the speech (7:51-53). This forcible application of lessons (of which their reverence for the name of Moses must have made them feel the force) aroused the deep piety of his judges (7:54). Stephen, unmoved by the uproar, saw the heavens opened and the Son of Man standing on the right hand of God. The judges broke into cries of execution, clapped their hands to their ears, as with one impulse upon him, and dragged him out of the city to the place of execution. stoning, has been often pointed out. He has been called "the teacher of Paul," but see art. Paul. Stanley in Smith, D.B. (4 vols. 1893); Grieve in Hastings, D.B. (5 vols. 1904); Renn in Schaff-Herzog, Encyc.; Conybeare and Howson, St. Paul; Millman, Hist. Christianity; Neander, Planting of Christianity; Weizsäcker, Apost., 1ge; Plumptre, Bible Studies: Rome. St. used the Traveller; Rackham, and other Comm., ad loc. [G.M.Y.]

Steward. In O.T. this represents "he who was over the house," Gen.43:19,54:4, etc. (in 15.2 probably heir, eis. R.V.); in N.T. ἐπιτρόπος, Mt.20:8; Lk.8:3; ἀσιώματος, Lk.12.42,16:11; Gal.4.2. R.V. It denotes the manager of a household or estate, steward, bailiff, agent, usually a free man, Lk.8:3-16:1, sometimes a slave, 12.42-13. Used spiritually of dispensers of God's truth, τὸ Cor.4.1,2.9.17 (R.V.); Tit.1:7: 1Pe.4.10. [U.S.]

Stocks. This term is applied in A.V. to two different articles, one of which (Heb. mah-βekehol) answers rather to our pillory, the other (Heb. μονα-κεσις) describes the chain or fetters confined in it (Job 13.27,33:11; Ac.16:24). The prophet Jeremiah was confined in the first sort (Je.20.2), which appears to have been then a common mode of punishment (29.26), as the prisons contained a special chamber, called "the house of the pillory" (2Chr.16:1; see R.V. margin). The term used in the N.T. is more properly, translated "fetters" in R.V. [CRIMES.]

Stoics and Epicureans. We have no direct, or certain, reference to the Stoics or Epicureans in O.T. or in the Apoc. [PHILOSOPHY.] In N.T. we have only one direct reference to the adherents of these two philosophical schools, viz. Ac.17.17,18, where St. Paul, reasoning daily in the Agora with all chance comers, encountered also certain of the Epicurean and Stoic philosophers. In the speech which follows, delivered before the Areopagus, we seem to have, as we should expect, reference to and enumeration of various schools which may not improperly be described as characteristically Stoical. The assertion, e.g.—that God, being the Maker of the orderly world and all things in it, and Lord of heaven and earth, dwells not in temples made with hands—though couched in terms not quite identical with those that they would have used, would still be accepted by the Stoics as representative of their teaching as against the materialism of the Epicureans, while the further assertion that God needs not the service of men, inasmuch as He is self-contained and self-sufficing, would be common ground to the two schools. That God has made of one, out of every nation to dwell on every face of the earth, and has determined beforehand their seasons and the boundaries of their habitation, might be regarded as an integral and even distinctive part of the Stoical creed. Lastly, to confirm the statements that in Him, i.e. in God, we live and move and are, the apostle引用s the saying of the Cynic, Cophon, in the great hymn of Cleaneles and repeated in the poem of the Stoical poet Aratus, that "we are also his offspring" (17.22-29). The general impression, then, to be gathered from the speech as thus summarized by St. Luke is that St. Paul showed himself sufficiently well acquainted with the main tenets of Stoicism to be able to select and give his approbation to such as he considered suitable to his purpose in addressing an Athenian audience. For other evidences that he had such an acquaintance, see PHILOSOPHY. So many ideas, phrases, and turns of expression of St. Paul can be paralleled from the writings of Seneca in particular, that there was a widely spread, though unfounded, belief in early times that Seneca was actually a Christian and had derived part of his doctrines from St. Paul's epistles or from his personal teaching. That this was actually the case seems unlikely, though Lightfoot is so much impressed by the resemblances as to consider it at least possible that a certain amount of acquaintance with the main moral doctrines of Christianity may have filtered through to Seneca. Though the contact between Christianity and Stoicism is at some few points real, and even important, it is easy to see that the two systems, in many points of view their relation is rather one of contrast than of similarity. Bishop Lightfoot has singled out four such points in particular: (i) Stoicism as a philosophic creed, though not always in its more popular aspects and forms of expression, is essentially anti-monic and anti-christian. (ii) The moral doctrine of Christianity is the Personality and the Fatherhood of God. (iii) The Stoical moral code is harsh, ascetic, unsympathetic, inclined to overbear and crush out every human and kindly emotion: the glow of enthusiasm and self-appreciation which virtue can excite no less than the pity which leads us to relieve, and the sympathy which enables us voluntarily to share, or take upon ourselves, the burdens of others. (iv) Stoicism, though it does not altogether deny, makes light of, or is sceptical about, the hope of a personal immortality. For a Christian, the resurrection of Christ enlarges this hope, and relates it to a Christian teaching which, outside of Christianity, it has never attained. (iv) Stoicism entirely lacks any central object of faith, love, worship, and inspiration, such as has been found among all Christians, however much sundered in other respects, in the Person of Christ Himself. Epicureanism has far less affinity with the teaching either of O. or N.T. than has Stoicism. Its doctrines, where mentioned or alluded to, are always reprobated. Though the doctrines of Epicureanism, as inculcated by its best teachers, are not as positively harmful as on first hearing they sound, they have nothing commending them, and the teaching which, outside of Christianity, it has never attained.

Stomach. [Dress.]

Stones. The uses to which stones were applied in ancient Palestine were very various. (1) They were used for the ordinary purposes of building. [HOUSE; PALACE.] Altars (Ex. 20.25; Deut.27.5; Jos.8.31) were not of
hewn stones. The Phoenicians were particularly famous for their skill in hewing stone (2Sam.5.11; 1K.5.18). Stones were selected of certain colours to form ornamental courses (1Chr.29.2). They were also employed for pavements (2K.16.17; cf. Esth.1.6). (2) Large stones were used for closing the entrances of caves (Jos.10.18; Dan.6.17), sepulchres (Mt.27.60; Jn.11.38,20.1), and wells (Gen.29.2). (3) Flint-stones occasionally served as knives, particularly for circumcision and similar purposes (Ex.4.25; Jos.5.2,3, see marg.). (4) Stones were used for slings (1Sam.17.40,49), catapults (2Chr.26.14), and bows (Wisd.5.22; cf. 1Mac.6.51); as boundary marks (Deut.19.14,27.17; Job 24.2; Prov.22.28,23.10); as weights for scales (Deut.25.13, see marg.; Is.16.11, marg.); and for mills (2Sam.11.21). (5) Large stones were set up to commemorate any remarkable events (Gen.28.18,31.45,35.14; Jos.4.9; 1Sam.7.12). Such stones were occasionally consecrated by anointing (Gen.28.18). A similar practice existed in other countries, and these stones were described in Phoenicia by a name very similar to Bethel, viz. bauditit. The chief point of resemblance between the two consists in the custom of anointing. [PILLARS; WITNESS.] (6) The worship of stones prevailed among the heathen nations surrounding Palestine, and was borrowed from them by apostate Israelites (Is.57.6). (7) Heaps of stones were sometimes piled up in token of a treaty (Gen.31.46); or over the grave of some notorious offender (Jos.7.26,8.29; 2Sam.18.17). (8) The "white stone" of Rev.2.17 has been variously regarded as referring to the pebble of aquitual used in the Greek courts; to the lot cast in elections in Greece; to both these combined; to the stones in the high-priest's breast-plate; to the tickets presented to the victors at the public games; or gems inscribed with holy names. (9) The use of stones for tablets is alluded to in Ex.24.12 and Jos.8.32. (10) Stones for striking fire are mentioned in Num.10.8. (11) These stones were a hindrance to the operations of husbandry: hence the custom of spoiling an enemy's field by throwing quantities of stones upon it (2K.3.19,25), and the necessity of gathering stones previous to cultivation (Ex.3.5; Is.5.2). (12) The "burdensome stone" (Zech.12.3) is connected by Jerome with the custom of lifting stones as an exercise of strength (cf. Ecles.6.21); but may mean a "crushing weight" (as in LXX.), or a corner-stone as a symbol of strength (Is.28.16). Metaphorically, stones denote hardness or insensibility (1Sam.25.37; Ezek.11.19,36.26), and firmness or strength (Gen.49.24). The members of the Church are called "living stones," as contributing to rear that living temple in which Christ, Himself "a living stone," is the chief or head of the corner (Eph.2.20-22; 1Pet.2.4,5).

**STONING.** [CRIMES.]

**Stork.** [Stacta.]

Stork (Heb. hâisîdha). It is singular that a bird so conspicuous and familiar as this is in Egypt and Palestine should have escaped notice by the LXX., but there is no doubt of the correctness of the rendering of A.V. The white-stork (Ciconia alba) stands nearly 1 ft. high, and the jet black of its wings and the bright red beak and legs present a bold contrast with the white of the plumage generally (Zech.5.9). In the neighbourhood of cities storks devour all kinds of offal and garbage; and it is doubtless for this reason that they are placed in the list of unclean birds by the Mosaic law (Lev.11.19; Deut.14.18). The white stork ranges over the greater part of Europe, N. Africa, and temperate Asia, visiting S. Africa, India, and Burma in winter. The black stork (Ciconia nigra), though less abundant in some countries, is scarcely less widely distributed. Both are numerous in Palestine. While the black stork frequents marshy places in forests and breeds on tall trees or in ravines, the white stork attaches itself to man, and for the service it renders in the destruction of reptiles and the removal of offal has been repaid from the earliest times by protection and reverence. The derivation of hâisîdha (from hâsîd, "kindness") points to the paternal love of which the stork seems to have been a type among the Hebrews no less than among the Greeks and Romans. These birds return year after year to the same spot; and few migratory species are more punctual in their appearance. The ordinary date of the arrival of the stork in Holland is the second week in April, and it remains until October; in Palestine it has been observed to arrive on March 22. Some difficulty had been raised respecting the expression in Ps.104.17; "As for the stork, the fir-trees are her house," but these birds still occasionally nest in trees, and in prehistoric times doubtless did so invariably, while in the old Jewish days they may have retained to some extent the original habit. [R.L.]

**Stranger.** The word rendered "stranger" in A.V. and frequently in R.V. is employed to translate four Heb. nouns which are distinct
STRANGER

in meaning—i.e. zîr (Arab. zâîr), a visitor; nâkhberi, a foreigner; toshâbb, a dweller; and gêr (Arab. jîr), a "sojourner with another tribe that protects him as a guest (Genesis). It is, moreover, rarely used in the Bible in the modern sense, "strange," i.e. denoting what is unknown or unexpected, but with the meaning attached to the kindred Fr. and Lat. words, étrange and extraneus, namely, "foreign" or "alien." To a Hebrew a stranger meant a "foreigner," and a "strange god" was the equivalent of a "foreign god." The words "foreigner," "foreign," are, however, extremely rare in the Bible, and unfortunately have not been generally adopted in R.V. In the present article only one aspect of the word will be treated—namely, that of the gêr or "foreigner," who incorporated himself with Israel by residence. The LXX renders this word by πρόσκληρον (propôsken), but he was not completely embraced Judaism as a religion from conviction without becoming dependents of an Israelite family, see PROSYLTE, whilst the subject of Israel's relations with other peoples is dealt with in the article FOREIGNER. In the ancient world the position of a stranger among an alien race was a painful one. He had no natural rights, family, civil, or even religious; for a man was expected to worship the gods of the country in which he found himself (1Sam.26.19). Even a great prince like Abra- ham, with his wealth and retinue, had to assume a position of humility before the people of the land. As long as the gêr was a fugitive, or outcast. One of the most amiable features of the Israelitish law was the compassion with which the "stranger" was to be treated. God's people had been themselves strangers in Egypt, and, as they were reminded, they knew "the heart of a stranger" (Ex.23.9). An ordinary Israelite household consisted of a man's wife or wives, children, servants, and the stranger within the gates" (Ex.20.10), besides which "the Levite, the stranger, and the fatherless and the widow which are within thy gates" are mentioned together in Deut.16.14. The religious position of the "stranger" in an Israelitish house was a difficult one. He was to partake of its meat and drink (Ex.12.12), but he was not committed to take the final step in religious conformity by submitting to circumcision. God, however, even in the offering of the first-fruits (Deut.26.11). He was to abstain from leaven during the paschal season (Ex.12.19). But he was expected to eat the Passover, he must be circumcised, but there is no compulsion even in the "latest" code of law (Ex.12.48). The relations of the gêr to his patron differed in various cases. David, a chieftain at the head of a clan, was a gêr to Achish, king of Gath (1Sam.27). The family of Rahab became the guests of the nation of Israel (Jos.6.25). In both cases, however, yâshâbbâh, to dwell, not gêr, to sojourn, is used in the Heb. Israel was a gêr in Egypt. The employment of προσκλήρον to translate gêr may be due to the lateness of the word; but, as has been shown, the word in O.T. means not so much "a religious convert" as a non-Israelite dependent in a household, or a foreigner residing in Palestine. The classical equivalent is πυθλός or πυθλήγη; but the technical name of such a foreign resident is μετακός, found in the LXX. of Jer.20.3 only, see Hastings, D.B. vol. iv. Perhaps this is all that is meant by προσκλήρον in the LXX. For, the Israelites are called προσκλήρον in Egypt (Ex.22.21,23.9; Lev.19.34; Deut.10.19). [Law in O.T.; Poor.] [F.J.F.-J.]

Straw (teben, Assyr. tibnu, Arab. tibn). Both wheat and barley straw, threshed fine, were used by the ancient Hebrews, chiefly as fodder for their cattle (Is.11.7,65.28), horses (1K.4.28), asses (1Indg.19.10), and camels (Gen.24.25). There is no indication that straw was used for litter. It was employed by the Egyptians (Ex.5.7,16) and Babylonians in making bricks, being chopped up and mixed with the clay (Ex.2.9-10). There are several other usages. A mixture of straw is visible in one of our illustrations in Plate VI., taken from a brick in the Brit. Museum. The ancient Egyptians reaped their corn close to the ear, and afterwards cut the straw close to the ground and laid it by. This was the straw which Pharaoh refused to give to the Israelites. [T.G.P.]

Stream of Egypt (Is.27.12 only; R.V. brook). [RIVER OF EGYPT.]

Street. The streets of a modern Oriental city are generally narrow, tortuous, and gloomy, even in the best towns, the narrowness being a protection against the sun and the gloominess due to the circumstance of the windows looking for the most part into the inner court. Doubtless in ancient times the streets were much of the same character. The street called "straight," in Damascus (Ac.9.11), was an exception: it was a noble thoroughfare, 100 ft. wide, divided in the Roman age by colonnades into three avenues, the central one for foot passengers, the side passages for vehicles and horsemen going in different directions. The shops and warehouses were probably collected together into bazârs in ancient as in modern times (Je.37.21), like the wood, bazaar, and market (Josephus, 5 Wars viii. 1), and perhaps the agreement between Benhadad and Ahab that the latter should "make streets in Damascus" (1K.20.34) referred to bazârs, and thus amounted to the establishment of a jus commercii; for another suggestion as to the meaning of the phrase, see Ahab. That streets occasionally had names appears from Je.37.21, Ac.8.11. That they were generally unpaved may be inferred from the notices of the pavement laid by Herod the Great at Antioch, and by Herod Agrippa II. at Jerusalem. Hence pavement forms one of the peculiar features of the ideal Jerusalem (Tob.13.17; Rev.21.21).

Stripes. [CRIMES.]

Su'ah, son of Zophah, an Asherite (1Chr.7.36).

Su'ba, a family of the sons of Solomon's servants who returned with Zerubbabel (1Esd.5.34 only).

Suba'î (1Esd.5.30) = Shalmal.

Succoth' (booths, Gen.33.17), where Jacob made booths for cattle. It was in the Jordan Valley, in the lot of Gad (Jos.13.27), on
SUCCOH

the road to Jocberah (Judg.8.5,15.16), and near the clay lands extending to Zarthan (1 K.7.4). The "valley of Succoth" is mentioned in the Psalms (60.6). See 2Chr.4.17, where it is placed in the kikhr of Jordan. In the Talmud (Tal. Jer. Hagiga 1.1) the latter name is said to be Tarul (Neubauer, Géog. du Tal. p. 248), evidently the present Tell Durala in the Jordan Valley, just N. of the Jambok. If this be accepted, Jacob retired N. over the latter stream on the approach of Esau (Gen.32.22.23). [MAHAJNIM]. In 1K.20.16, the LXX. reads "in Succoth," as the place where Benhadad I. was caught "drinking himself drunk." The easiest route for advance on Samaria would be up the valley of Azenon, W. of Succoth. In ver. 12 the LXX. reads "tents." [C.R.C.]

Succoth'. Here the Israelites first halted after leaving Rameses, during the early stage of the Exodus (Ex.12.37.13.20). Thence they went on to encamp "in Etham, in the edge of the wilderness." The name signifies tents or booths. It corresponds with Thukut, the name of a district of which Pithom (Pi-Tum or Pa-Tum) was the capital. Naville, indeed, identifies Succoth with Pithom. The locality of Succoth lies by the line of railway running from Zagazig to Suez, by the Tell el-Maskhuta to the Mediterranean. The Arabic name Succoth-benoth occurs only in 2K.17.30, apparently as the name of a deity made by the Babylonians transported to Samaria. Regarded as Heb., it means "booths of girls," and has been explained as the booths in which Babylonian women prostituted themselves in honour of the female gods or as small tabernacles containing images of goddesses. Sir H. Rawlinson compared Succoth-benoth with Zir-banith, Merodach's spouse, who was specially worshipped at Babylon, but one of the other explanations is preferable.

Sucha thytes, one of the families of the scot (2Ch.12.5-9).

Sud, a river close to Babylon, on the banks of which Jewish exiles lived (Ba.1.4). It is otherwise unknown, but the original text may have had Sun, as the Syriac (with sade). Possibly, however, the name was written with samech, in which case the river or canal of Sun in the neighbourhood of Babylon may be intended. Its position is doubtful. [T.C.R.]

Sud (1Em.5.29) = Sta.

Sudias. [BANANAS.]

Sukkilms, a nation mentioned (2Chr.12.3) with the Lubim and Cushim as supplying part of the army which came to Shishak out of Egypt when he invaded Judah. The LXX. makes them "Traglydotes" from the Sudam. [A.H.S.]

Sun. In the history of the Creation the sun is described as the "greater light," serving (in conjunction with the moon, or "lesser light") for signs, and for seasons, and for days, and years," while its special office was "to rule the day." (Gen.1.14-16). [L.J.A.B.] The "signs" were perhaps such phenomena as eclipses, which were regarded by the ancient world as premonitory of future events (Le.10.2; Lu.21.25); but as the use of this sort of orien is generally discouraged in the Bible, the "signs" should be understood as geographical, and for the guidance of travellers. The "seasons" and "days" referred to were of course the fixed times important for agricultural operations and religious festivals: while the "years" included both the solar and lunar years, which were used in combination by the Hebrews. The sun "ruled the day" not only by his light and heat, but as deciding its length. Sunrise and sunset are the only natural fixed points of time, in the absence of artificial contrivances. Between these two points the Hebrews recognized three periods—viz. when the sun became hot (tSam.11.6; Ne.7.3), the zenith light or moon (Gen.43.16; 2Sam.4.5), and the cool of the day," shortly before sunset (Gen.3.8). The four points of the compass are also roughly indicated by the sun, rising and setting (Is.45.6; Ps.50.1), the dark (N.) quarter (Gen.13.14; Jl.2.20) and the bright (S.) quarter (Deut.33.33; Job 37.17; Ezk.40.24): or by their position relative to a person facing the rising sun: E. before, W. behind, N. left, and S. right hand. "Standing still" of the sun and moon in Jos.10.13 is a poetical way of describing a miraculously prolongation of the daylight. [JOSUA, Book of.] The worship of the sun, as the most prominent and powerful agent in the kingdom of nature, was widely diffused through the East. The Arabs appear to have paid direct worship to it without any statue or symbol (Job 31.26.27), and this simple style of worship was probably familiar to the ancestors of the Hebrews in Chaldea and Mesopotamia. The Hebrews in Egypt must have been well acquainted with it, and with the various deities of the sun-god, the principal Egyptian divinity (cf. Os = the Heb. Beth-shemesh or "house of the sun," Je.43.13, and Potipherah = "he who belongs to Ra," Gen.41.15). After the entrance into Canaan the Hebrews came into contact with various forms of idolatry originating in the worship of the Sun—the Pharaohs, the Ammonites, the Syrian Hadad, and probably both the Canaanite and the Tyrian Baal (sometimes represented with a crown of rays). That it was a constant peril may be seen in such allusions as the "sun-images" (hammānim, Lev.26.30; Is.17.8, etc.), and the "horses of the sun," perhaps those connected with Baal Thariq in processions (2K.23.11): and that it was regarded by the prophets as one of the worst of heathen corruptions is seen in Ezk.8.16, where it forms the climax of the visionary "abominations." In the metaphorical language of Scripture the sun is emblematic of the law of God (Ps.19.1), of the glorious presence of God (Ps.84.1), of the promised Messiah (Mal.4.2), of the divinity of Christ manifested in His transfiguration (Mt.17.2), and of His work in the world generally (In.1:1): also of the glory and purity of the Church (Rev.12.1) and of the angels (10.1). The darkening of the sun which accompanied the Crucifixion is also referred to as a sign of the Second Advent (Mt.24.29; Rev.6.12). Sayce, Hibbert Lectures (1887). [A.R.W.]

Sunstroke. [MEDICINE.]

Sur (Jrth.2.28). Perhaps for Palae-Tyrus, [OCINA; TVRE.]

[CR.C.]

Sun, Gate of (gate of the wall of going forth). 2K.11.16. It was probably one of the gates of the temple, the gate "west of the guard"
being opposite, and the third station being on S., near the Horse Gate and palace. There seems to have been no need to guard on N. side against Athaliah's flight. [c.r.c.]

**Suretiship.** the contract by which one renders himself liable for the debt or default of another; originally entered into by Hophni and Phinehas (1Sm.17.8, etc.). Apparently it rendered the surety liable to execution on his goods in default of payment (2Sm.22.27), and, according to one rendering of 2Sm.16, to personal execution (cf. Job 24.6). [poor.] [h.m.w.]

In N.T., Heb.7.22, "Jesus hath become the surety for us, both to die and to live." The word occurs only here in N.T. Cf. Ph.18.3.

**Su'an (Est. Apoc.11.3,16.18).** [shushan.]

**Susanchites** (Ezr.4.9), better Shushan-chites, were inhabitants of Susa or Shushan (Dan.8.2); the ancient capital of Elam. [asnapper; elam.] [r.g.p.]

**Sünnah.**—1. [DANIEL, Apoc. Additions to.]*2.*—A. list of the women who ministered to our Lord (Lk.8.3).

**Susí, father of Gaddi (Num.13.11).**

**Swaddling-clothes** (Lk.2.7,12). The Eng. "swaddle" or "swathe" comes from the A.S. "swelthe" or "swathian"—the former being a band or strip of cloth used for wrapping a child or for any kind of bandage. During the present day, the Jews at the present day, the newly born child is at once enwrapped in a square cloth, which is bound round it with bands, varying in material according to the circumstances of the parents. This simple method of dressing the child is probably a relic from the time of the wandering, and is retained for about twelve months. For the Eng. word a different Hebrew, by "swaddle"; but R.V. rightly corrects to "dandle." [s.n.s.]

**Swallow** (Heb. d'ro'or and ã'ghûr). The first word, which occurs in Ps.84.3 and Pr.26.2, and means "the bird of freedom," is correctly translated swallow in A.V.; although it probably includes other swift-flying birds, such as martins, sand-martins and even bee-eaters. In regard to ã'ghûr, the translators of A.V. have been singularly unfortunate, for while they have given this word (e.g. Is.38.14) as "swallow," they have rendered the associated sîs as "crane." [crane.]

As a matter of fact, the term swallow should be transposed, while even then one of them would not be quite correct, as sîs is the equivalent of the Arab. sîs, which denotes the swift, and refers to the rushing "swish" of its flight. Confirmation of this is afforded by the fact that while the swallow is only a partial migrant in Palestine, all the typical swifts depart for Africa in the winter. Besides the common swift (Cysigulus apus), the larger Alpine swift (C. melba) is common during the summer in Palestine, where there is also the Galilean swift (C. affinis), a more martin-like species, resident in the Jordan valley throughout the year. [R.L.]

**Swine** (Heb. ḥāzîr, 1) The flesh of swine was forbidden as food by the Levitical law (Lev.11.7; Deut.14.8); and the abhorrence in which it was held by the Jews may be inferred from Is.65.4 and 2Mac.6.18.19. Swine's flesh was forbidden to the Egyptian priests and also to the Egyptians during the command to abstain from swine's flesh is given in the law of Moses beyond the general one forbidding any mammals as food which do not come under the definition of a "clean animal." [vîz. a cloven-footed ruminant. It is, however, probable that dietary considerations may have been connected with the prohibition of swine's flesh, as it is generally believed that its use in hot countries is liable to induce cutaneous disorders, so that in a people subject to leprosy the necessity for the observance of a strict rule in this respect is obvious. Although during the greater part of their existence as a nation the Jews did not breed swine, whether this is due to the fact that the heathen nations of Palestine used the flesh as food; and at the time of our Lord's ministry it would appear that the Jews occasionally violated the law with respect to swine's flesh. Whether the herd of swine into which the devils were allowed to enter (Mt.8.28, Mk.5.12-13) was the property of the Jewish or Gentile inhabitants of Gadara is not apparent; but that the practice of keeping swine existed among the Jews seems clear from the enactment of the law of Hyrcanus "ne can porcum alere liceret." (2) "The wild boar of the wood" (Ps.80.13) is Sus
SWORD

Sword. [Arms, Offensive, (4)]

**Sycamone-tree** (Lk.17.6 only). The sycamone is distinct from the sycamore of the same evangelist (19.4). The former, as expressly stated by Dioscorides, is the mulberry-tree (Morus), and so rendered by Coverdale. Both black and white mulberry-trees are common in Syria and Palestine. The confusion between the sycamore-fig. and the mulberry, from the almost identical Gk. names, was not a serious botanical error, since they are closely allied. [Sycamore.] [b.c.n.]

**Sycamore** (Heb. *shiqmim*; Gk. *σκαμόνιον*, Lk.17.6, *σκομονέλη*, 19.4). The Heb. word occurs in O.T. only in the phr. *forma masc. and once fem.* Ps.78.47. Although the sycamone is properly, and in Lk.17.6, the mulberry, and the sycamore is the fig-mulberry, or sycamore-fig (*Ficus sycomorus*), yet the latter is the tree generally referred to in O.T., as in 1K.10.27, 1Ch.27.28, Ps.78.47, Am.7.14, though always translated by *σκαμάνιον* in LXX. The sycamore, or fig-mulberry, abounds in Egypt and Palestine. It attains the size of a walnut-tree, has wide-spread branches, and affords a delightful shade. For this reason it is frequently planted by the waysides. Its leaves are heart-shaped, downy on the under side, and fragrant. The fruit grows directly from the trunk itself on little spires, and in clusters like the grape. To make edible, each fruit, three or four days before it is ripe, must be punctured with a sharp instrument or the finger-nail in order to liberate certain grubs or insects which infest it. This was the original employment of the prophet Amos (7.14). So greatly were these trees valued, that David appointed a special overseer for them, as for the olives (1Ch.27.28); and it is mentioned as one of the heaviest Egypt's calamities that her sycamores were destroyed by hailstones (Ps.78.47). [Gmmzo.]

**Sycchar** (Σχεχάρ). "A city of Samaria" (Jn.1.15) "near to the pared of ground that Jacob gave to his son Joseph. Now Jacob's well was there." In 4th cent. A.D. it was known as lying a mile from Shechem (Bordeaux Pilgrim, 335 A.D.). Eusebius (Onomasticion) calls it Sychar; Jerome renders it Sichar, and says that "a church is now built" over the well. In the Middle Ages, however, it was confounded with Shechem, probably because the disciples are said to have "gone away into the city (πόλις) to buy food" (ver. 8). The true site is probably the village 'Askar, on the slope of the hill half a mile N. of Jacob's well (Nurv., 1868, *Pal.* ii, p. 168). It has a spring below it on W., and ancient rock tombs. The word 'Askar means an "army," and the initial guttural has been thought an objection. But in the Samaritan Chronicle (as given by Neubauer, *Journal ofASOR*; Dec.1880, pp. 306, 154) the town is called *Ischār* (ισχαρ) in Syriac, and rendered *Aschar* in the Arabic translation. The name Ischar or Sichar would mean "shut up," or "fortified," whence perhaps 'Askar, "army." It lay just inside the border of Samaria. Possibly 'Judah the Iscariot' was among the converts on the occasion of our Lord's visit (ver. 41). It is true that his title is spelt

SYNAGOGUE

*Ἰσκαριώτης*, which answers to Heb. נָשִׁי, but the Samaritans and Galileans were notorious for confusing the guttural, etc. (Tal. Bab. Megilla, 23b), as they still are. [c.r.c.]

**Sychem** (Ac.7.16). [Shechem.]

**Sy'chemite, The** (Jth.5.16), aboriginal inhabitants of Shechem dispossessed at the conquest.

**Sy'elus** (1Esd.1.8) = Jehiel, 3.

**Syene** (σύνηνη, Σωξην, the present Aswān), a city on the southern frontier of Egypt, below the most northern of the cataracts. It lay long in ruins; the name of Nubia, the hydronymic name, *Sun*, is found only in late inscriptions; in the older ones the capital of the name is Elephantine, the city built on the island in front of Syene. Elephantine gained importance from the temple of the god Khnum. Syene is mentioned twice by Ezekiel (29.10, 30.6) in connexion with Migdol; they are the two frontier-towns, one in the N., the other in the S. Quite lately it has been discovered that there was an important settlement of Jews at Syene; they had even built a temple at Elephantine. As we know from Jn.4.1 that Migdol also was inhabited by Jews, the threats of Ezekiel (29.10, 30.6) are the more striking. It appears from 2K.4.23 that it was usual to resort to the prophet's house on sabbath and new moon. During the Exile the people would probably meet together for reading the Scriptures, prayer and instruction being added. Such assemblies would be necessary to the maintenance of the religious life (cf. Jer.5.5). After the Return these assemblies became general, and in the later period the building erected for the purpose was called a *beth happeeseth*, or synagogue. It was also customary to resort to pray for places outside the town, near running water (Ac.16.14). These were called *proesegreia*, the term being afterwards applied to the house of prayer put up on the spot (Josephus, *Ant.* 5, 23; *Lit. liv.*). In N.T. times the synagogue as an institution was fully established, and evidently of long standing. There were synagogues wherever Jews resided, both in Palestine and other lands—e.g. Nazareth (Lk.4.14), Caper- nua (Matt.4.23, 14.34), etc. The synagogues were 480 in Jerusalem (*Jer. Misc. iii.*). The apostles frequented the synagogues in Damascus (Ac.9.20), Antioch (13.14), Iconium (13.1), Thessalonica (17.1). Beraea (ver. 10), Athens (ver. 17), Corinth (18.1). Ephesus (ver. 19), etc., see also 6:9—11. *Structure, etc.*

The synagogue was generally regarded as the centre of the community, sometimes by wealthy members, or even by a Gentile (Lk.7.5). The principle that the synagogue should occupy the highest situation in the town so as not to be over-topped by other buildings was not generally observed in our Lord's time. In any case it did not apply to those in
SYNAGOGUE

Galilee. Some think that the synagogues discovered there date from the middle of the 2nd cent. (Mem. Surv. W. Pal. i. 206-208; Syrian Stone Lore, 3rd ed. pp. 262-264; cf. P. E. F. Olby. Stat., July, 1878, 123-129). It used to be generally understood that the entrance was on the E., in imitation of the temple (cf. Surv, Stone Lore, 3rd ed. p. 264 note), but in ten of eleven instances in this country the exception was owing to the nature of the site. There seems to have been usually four colonnades, running N. and S., the two side aisles probably being passages. The women's gallery was at the N. end. If the general direction to turn towards Jerusalem in prayer was observed in our Lord's time, we must assume that the worshippers, on entering, took the S. door, made a detour to the middle of the E. side before turning into the nave. Many of the Rabbinical references to synagogue construction probably apply only to later times and foreign lands. The stone of the country was used—e.g. the black basalt of Chorazin—and the floor was of lime. The two doors by which the doors were carved representations of the Paschal lamb, vine-leaves and grapes, the seven-branched candlestick, or a pot of manna with Aaron's Rod. (Palestine.)—III. Furniture. (1) A movable wooden chest, called the Holy Ark, containing the scrolls of the law and the book of prayers, was in the middle of the synagogue, was usually raised a little above the floor, and approached by one or more steps. In front of it was the perpetual lamp, (Ex. 27:20), the symbol of God's Presence in Israel. There was also a Candelstick, sometimes two, for use on sabbath and festival. (2) The rostrum (bimah) with, in somewhat later times, a desk on which to place the scroll during the reading. The desk was covered with a cloth, sometimes of great value and beauty (Meg. 26b). The bimah, called "the seat of Moses" (Mt. 23:2; Pesik. 79b, ed. Buber) stood in the centre of a large synagogue (Succa 52b). (3) Chairs. Where the walls of the synagogue were devolved on persons, they were assigned to the elders and other honourable men being in front of the ark and facing the people (Tos. Meg. iii.; Mt. 23:6; Lu. 11:43).—IV. The Officers. (1) The elders constituted the local Sanhedrin, and were called shepherds (yarnassim, pouterei) (Jer. Pev. viii. 6; cf. Ac. 20:28; Eph. 4:11), or rulers (archontes). The chief of the elders, probably primus inter pares, was the apxj6nevar'ogos (Mt. 9:18, etc.). These rulers were all examined as to their knowledge by delegates from the Great Sanhedrin, but they were elected by the congregation (Berach. 55a). Upon the ruler devolved the care of the synagogue, and the ordering of the services, especially the whole congregation, those for the elders and other honourable men being in front of the ark and facing the people (Tos. Meg. iii.; Mt. 23:6; Lu. 11:43).—V. The Powers. The higher officials of the synagogues had the power to administer justice in religious and civil matters in their own community. They issued marriage contracts, letters of divorce, and similar legal instruments. They also dealt with religious offenders (cf. Mt. 18:15-17; Mk. 13:9; Jn. 9:22, 12:42; Ac. 22:19, 26:11).—VII. Worship. There can be no question that a fixed order of service was followed in the synagogue in our Lord's time, and that the benedictions then used still constitute the central portion of the synagogue service. (1) The recital of the Shema, a kind of creed consisting of Deut. 6:4-9, 11:13-21, Num. 15:37-41, was preceded by two benedictions and followed by a third. It derived its name from the opening word, 'sh'ma', "hear," and is referred to by our Lord in His reply to the lawyer (Lu. 10:26). The introductory benedictions were, "Blessed be Thou, O Lord, King of the world, Who forniest light and greatest darkness. . . Blessing be the Lord our God, Who has formed the luminaries." 2. "With great love hast Thou loved us. . . Blessed be the Lord, Who in love has made Thee; Thou, O Lord, Who art most merciful. . . . Blessing be the Lord, Who sceivh Israel" (Berach. i. 4 and Josephus, Antiq. 1.7.4). (2) This was followed by the Shema and the Ten Commandments (Tamid v. 1; Berach. 14b) and the third benediction: "True it is that Thou art Jehovah, our God, and the God of our fathers; there is no God besides Thee. Blessed be the Lord, Who savvih Israel" (Berach. i. 4 and Josephus, Antiq. 1.7.4). (3) This was followed by the eighteen (now nineteen) benedictions, distinguished as The Prayer. Of these the first and last three are the most ancient: 1. "Blessed be the Lord our God,
SYRACUSE, The Great. The Synod known as the Great Synagogue came into existence during the earlier period of the second temple. Its members numbered 120 (Meg. 17b), or, according to another account 85 (Jer. Mon. 16d) and second generation, 19,000, in existence at an earlier period. These prophets flourished at the time of that temple. Ezra, and the assembly under Ezra was nearly one hundred years later. Some (e.g. Krauss) maintain that the Synod was established about 520 B.C., and then consisted of 120 members, but number being afterwards reduced to 85. The work of the Men was to define, teach, and develop the law. They settled the Canon. (2) Introduced the Feast of Purim. (3) Laid the foundation of the Liturgy, and compiled, among other works, the Shemone Esere (Berench. 136), the most important of the synagogue prayers. The Great Synod probably became merged in the Assembly of Elders. [Sahneder. ] Krauss, in the Jew. Qlty. Rev. x. 347 ff.; Bacher, Jew. Encycl. xi. 640 ff.; Kuenen, "Uber die Männer der Gros. Syn." in Gesam. Abhand. 125-160; Low, in "Die Grosse Synode," in Gesam. Schriften, i. 399 ff. [H.H.]

SYRACUSE. Synoptics. A female member of the church of Philippus (Ph. 4.2), whom St. Paul besought, to live in harmony with Eunodia; perhaps these two are the "women" of ver. 3, who had "laboured with." St. Paul, and the help which he besought his "true yoke-fellow" (see Lightfoot, Phil. ii. 2, for the possible meanings of this phrase) to render would then be the reconciling of the twain.

SYRIA, the celebrated city on the E. coast of Sicily. St. Paul arrived there in an Alexandrian ship from Malta, on his voyage to Rome (Ar. 28.12). The magnificence which Cicerio describes as still remaining in his time is probably exaggerated. But the site of Syracuse rendered it a convenient place of call for the African corn-ships, the harbour being an excellent one, and the mountain Arethusa in the island furnishing an unfailing supply of excellent water. At the time of St. Paul's voyage, Sicily did not supply the Romans with corn to the extent it had done in the time of King Hiero and, in a less degree, as late as the time of Cicerio. It is an error, however, to suppose that the soil was exhausted: for Strabo expressly says that for corn. and some other productions, Sicily even surpassed Italy. At this period there were only five Roman colonies in Sicily, of which Syracuse was one. The others were Catana, Taurumenum, Thermae, and Tyndaris. Messana, although not a colony, was inhabited by a Roman population.

Syria, the region X. of Palestine, and three times as large, the history of which is important. It is bounded on the E. by the Anti-Lebanon (Lebanon), and by the Syrian Desert. It included three regions: one running 100 miles N. to Kadesh on Orontes and to the Elburrus; the second including mount Baryshiy—a continuation of the Lebanon chain—as far N. as the lower valley of the Orontes near Antioch, this being the land of Amathus, and extending also 100 miles N.; the third, reaching yet another 100 miles to Meriash at the foot of the Taurus, included the Amansus [AMANA], a continuation of the Baryshiy range, with the plains draining S. into the Orontes, and W. to the Pyramus, or farther E. into the Euphrates. The total area of Syria is thus about 70,000 square miles. On the E. it included Damascus, Hermos, and Shenir,
SYRIA

with towns on E. slope of Anti-Lebanon towards Tadmor, this being the kingdom of Damascus. The Orontes runs N. and the Leontes S. The latter bounds Galilee, and, turning W., reaches the sea, a mile N. of Tyre. The Orontes is fed by other springs at Lebaech (Lybo), N. of Baalbek, and becomes a flowing stream, which passes just E. of the great mound of Tell Nebi Mendeh—the site of Kadesh (Qades), called in later times Laodicea ad Libanum. [TAHRIMNOS] It then passes through a lake 6 miles long (Rhabroeb Nebi), with a dam which, according to the Talmud (Neubauer, *Geog. da Tal.* p. 29), was made by Diodotian. The Orontes then passes Homus (Emesa) and runs in a narrow gorge near Hamath, which city is remarkable for the great water-wheels on the river. By Amaica it flows to the “Iron Bridge,” where it turns W., entering the valley of Antioch, and is fed by the waters of the lake of Antioch, and by the Afrin River from N. It reaches the sea after a course of more than 500 miles. East of the river, and of Antioch, Aleppo—the present capital of N. Syria—stands on the Quweiq stream, which flows S. and ends in a swamp: it rises near the Syrian town of Kilis, an affluent of the Euphrates, which flows S.E. past Carchemish. The sixth Syrian river, flowing W. under the Taurus, is the Ag'shayi (Turkish) or “white stream.” These plans are bounded on W. by the range which to S. in Lebanon, rises 10,000 ft. above the sea, and 5,000 ft. to N. in the Ammanus. The Antiochus of the Tadmor (on the Roman road from Damascus to Qurna), is on the slope of Anti-Lebanon. Anuab (Robinson, *Later Bib.* Res. p. 225) says it was once the chief place of this region. Baalbek is noticed under its Gk. name Helopolis (*city of the sun*) by Josephus (14 Ant. iii. 2) as existing in 63 B.C.; but its famous temple first appears on coins of Septimius Severus (193-211 A.D.), whose empress was the Syrian princess Julia Domna, and whose temple was consecrated by Commodus (212), who raised a temple over it with large dimensions (Waddington, *Ant.* No. 1881) in the reign of her grand-nephew Elagabalus (218-222 A.D.); and recent explorers all agree that none of the work is older than about this time, when Syria played so important a part in Roman history. In N. Syria, Chateis S. of Aleppo was an important town, and N. of Aleppo Arpad and Tuneb (Teneb) were capitals in early times. Pethor lay between the Sijur and the Euphrates; and, in Commagene, Taruma (*Dereca*) appears to have been a large town. Strabo divides Syria into five provinces, including Commagene, Coelosoria, and those of which the capitals were Cyrrhus, Seleucia, and Damascus,—Inhabitants. The earliest inhabitants were probably of both the Akkadian and the Semitic races. In 15th cent. B.C. we find the Hittites powerful both in the far N. at Mer'ash, and in central Syria at Kadesh. They are represented as a yellow people, with hairless faces, slanting eyes, and black pigtails (on Egyptian coloured relics), and the only Hittite letter in the Amarna collection (Berlin 10) is in an agglutinative dialect like the Akkadian. The names of their princes are also Akkadian. The Amorites, on the other hand, were “highlanders,” represented as dark brown, with black eyes, beards, and hair, and Semitic features. They dwelt at Tuneb and in Lebanon, and the letters of Aziru the Amorite are in Semitic Babylonian. These two races have always existed together, and still so exist, in Syria: and it is notable that many of the town names of the list of Thothmes III. in Syria are still preserved, not in Arabic, but in the Turkish nomenclature of to-day. The Assyrians deported both Hittites and other Syrians, and filled their towns with colonists from E.; but these also were of Semitic race. After the time of Tigranes, there seems to have been a Persian—or Grco-Persian—element in the population of Commagene at least, and there was a Gk. element in Syria after c. 300 B.C., which is still represented in the Christian population. The Romans and the Crusaders did not furnish more than a governing class; and the present population of Arabs, Turks, and Kurds (with a few Jews, Armenians, and Turks) substantially represents that of the earliest known age. The Assyrians, was known from the dawn of history to the Akkadians of Chaldea, who called it Mar-tu, “the way of sunset” (*Akbar* or “west,” in Semitic translation); and Sargina, “the founder king” of Chaldea, conquered Martu as far as the Medi
SYRIA

The Babylonians of the 6th cent. B.C. asserted that he lived at a date representing 3800 B.C., but this may be an exaggeration of 1000 years, judging from astronomical data as to the zodiac. Gudea, the prince of Zinjirîl (Zargash), close to Tell-Labi, is said, on the same authority, to have lived c. 2800 B.C.; and the Akkadian texts on his statues tell us that he cut cedars, to roof his temple, in Amanum (Amanus), and brought other materials from Martu. The kings of the first dynasty of Babylon (after 2250 B.C.) invaded the W., S'umuabî the first king conquering Kazalla (probably the Kizzil range in Commagene), and advancing to Halibû or Aleppo. Kazalla had already been invaded by Sargina. Hammurabi, the first Babylonian king who founded an extensive empire, was the sixth of the first dynasty (2139 to 2094 B.C.), and he appears to have dominated the whole of Syria and Palestine, though his chronicle unfortunately is broken after his 20th year. In the 30th and 31st years he was fighting in Elam, where he conquered Susa; but in the 23rd and 24th years, before he thus became supreme, he apparently fought against Gubla, where a monument (c. 2050 B.C.) represents the king at Tell Phûl in Phoenicia. He thrice (in 22nd, 30th, and 31st years) attacked a place called Emar, which might be Gomorrah; but it must be noted that the text which gives these references to Gubla and Emar has been ascribed to a time yet earlier, the king's name being almost identical. He was, however, the equal of all those of the Babylonian chronicle of Hammurabi's reign. His successor, Samsu-iluna (2094-2080 B.C.), also speaks of "the army of the west"; but the second dynasty of Babylon (1851-1589 B.C.) was less powerful; and, just at the time of its close, Thothmes III. of Egypt appears as the conqueror of all Syria and part at least of Palestine. His ancestor Thothmes I. had already penetrated to the Euphrates, where he set up a record; but a formidable league of Hittites, Syrians, and Phoenicians met Thothmes III. at Megiddo, on his first campaign. After their defeat he pursued his victors to the River Orontes, and thence to Arpad and Phoenicia (Phœnès). His list of 230 cities in Syria includes such places as Hamath, Teneb, Chaleis, Carchemish, Pethor, Aleppo, and Rezerph, with others even in Padan-aram; and he received offerings from Assyria and Babylon. Amennopis III. (c. 1500 B.C.) also ruled Syria, and travelled through it into Armenia. In his time a revolt of the N. Hittites was quelled by Dusratta, the Mongol king of Matiene, allied by marriage with Amennopis III. and accepting his suzerainty in Syria. He also speaks of the city of Chaleis. The great revolt which began in the closing years of Amennopis III. was caused by a fresh outbreak of the Hittites of Mar-base (or Nus-base) probably Mer'ash—and soon involved the Amorites of Teneb (Tennih) and the Hittites of Kadesh. The united forces overthrew the Egyptians, and conquered the cities of Phœnica and Bashan. The Hittites of Kadesh remained abandoned until 1350 B.C., when Raamess H. took their fortress and marched N. to Teneb; but even after this they made a treaty on equal terms with Egypt. One of the latest of the Amarna letters—perhaps c. 1400 B.C.—is from Assur-ulallil of Assyria (Berlin 9), who attacked Syria and reached Behir. Another (Berlin 30) is from a certain Rimmun-nari, who may have been an Assyrian, and who asks a league from Egypt against the Hittites of Mer'ash, which he claims to have been included in his kingdom by Thothmes IV. After this there is a blank of more than two centuries, until Nabu-kudur-usur I. of Babylon (1154-1128 B.C.) invaded Syria, as did Assur-issilim about the same time. The Babylonian king was defeated by Tiglath-pileser I. of Assyria, who conquered N. Syria, but was finally defeated by Marduk-nadin-ahhi, son of Nabu-kudur-usur (1128-1111 B.C.). Tiglath-pileser, c. 1130 B.C., began by spoiling Kumukh (Commagene) and Sumastri (probably Samosata), and afterwards crossed the Euphrates near Carchemish, and occupied Birsî (Tell Bishar) farther W. He fought later at Kasiyari in Aram (or Syria); and, crossing the Euphrates on rafts, he reached Pethor, Lebanon (where he hunted the rim or wild bull; A.V. unicorn), and Arpad in Phœnicia. These conquests were not permanent; for, c. 1000 B.C., a new dynasty of Amans, though founded by Amans, yet later in his reign the "king of Aram" occupied towns near Pethor, after which there is a break in Assyrian history till the accession of Assur-naizar-pal in 885 B.C. During the time of Solomon (after 1000 B.C.) the Hittite princes of the N. appear to have been in the Dependencies of Assyria. Though Semiramis' kingdom included Lebanon and adjoined Hamath (2 Chr. x. 9), N. of Tadmor. In 884 B.C. Assur-naizar-pal began the conquest of Syria, which cost the Assyrians a century and a half of repeated efforts, till Damascus fell in 732 B.C. He first secured Commagene. In 870 he went from Carchemish to Azûz, crossed the Afrî (Afrîch), and reached the sea, returning by Amans, where he cut cedars. In 856 B.C. his successor, Shalmaneser II., defeated the kings of Carchemish and of Samala (on the plateau E. of Issos), and went on by Yazbuk (now Yazibagh) to the sea, and yet farther W. He made 24 expeditions to the W.; in 854 he received the submission of the kings of Carchemish and Commagene at Pethor, and proceeded by Halcan (Chalybon or Aleppo) to Hamath and to Ariga (now Arîn, close to Kadesh—now Qadeh—on the Orontes), S. of which he encountered the league of Syrian princes under Hadadezer of Damascus, including the forces of Hamath and of "Ahab" (1 K. xii. 1) with those of Arqa and Arvad, and others, among whom were 1,000 Egyptians. The total Syrian force is said to have been about 60,000 men and 4,000 chariots, and 14,000 at least were slain. In 854 B.C. Shalmaneser II. re-entered "Arâm," and cut trees in Amanus; two years later his 16th expedition was with a force of 120,000 men, and all opposition was broken down. Hazael (II.) of Damascus was defeated at Shenir, with the loss of 16,000 men and 1,422 chariots, and afterwards the place of Dushshar (Tell el Fara'ah) was taken. A further expedition was undertaken against Hazael and the Phœnicians; and Amanus was crossed in 834 in return from Tarsus.
SYRIA

After the death of Shalmaneser II. in 825 B.C., Syria seems to have remained subject, with little or no occasions of war, to Assyria. In 814, Tiglath-pileser III. in 806 subdued Arpad, and next year was at 'Azzâ, while in 803 he reached the sea. Shalmaneser III. in 775 was in Syria; but under Assur-dan in 759 the whole country revolted, even to Gozan. Assur-nirari II. had to reduce Arpad once more; but the final conquest was made by Tiglath-pileser III. (or II.) between 745 and 732 B.C. In 742 he received a tribute, at Arpad, from kings of Commagene, Damascus, Tyre, Gebal, Carchemish, and others such as Panammu II. of Samala, whose son's inscriptions have been found. Azariah of Judah had been leagued with Hamath, but the fall of Arpad, in 740, was followed by the annexation of 19 districts in the kingdom of Hamath, and by general submission of all the Syrian princes, with tribute even from Menahem of Samaria in 738 B.C. But though the Assyrian storm-cloud thus rolled ever nearer to Israel after Damascus fell, rebellions continued, while the league of Hamath, Arpad, Simyra, Damascus, Samaria, and Egypt, was renewed. He then placed 4,300 Assyrians under an Assyrian governor in Hamath, and went on to defeat Egypt at Raphia, S. of Gaza. Carchemish was still rebellious till 717 B.C., when Sargon took the city by a peaceable method, not by siege. He had to get 113 talents of gold and 2,100 talents of silver as spoil. A Syrian revolt was also put down in 711 B.C., when Sargon went on to Ashdod, but Sennacherib was apparently only troubled by resistance in Phoenicia. Carchemish was the scene (c. 607 B.C.) of the battle between Nebuchadnezzar and Pharaoh Necho, which resulted in extending Babylonian sway over all Syria and Palestine, and these regions passed without a struggle to Persia after 538 B.C., and to Greece in 333 B.C., after Alexander had taken Tyre and Damascus. Syria was often a battleground for the Ptolemies and Seleucidae, after Alexander had built his new city at Antioch in 300 B.C.; but finally it fell to his successors, after the battle of Bânias in 198 B.C., and so remained until it was seized by Tigranes, king of Armenia, in 83 B.C. The extraordinary statues erected by Antiochus of Commagene c. 38 B.C. witness the mixture of Gk. and Persian religion in his kingdom. He was related to the Seleucidae and to the Parthians, and his tomb is on Nimrûd Dagh, N. of Samosata. Pompey entered Commagene and conquered Syria in 64 B.C., and it remained a part of the Roman empire till the Moslem invasion of 637 A.D.; while, after the Crusaders took Antioch in 1098, W. Syria and N. Syria (at first with Edessa and until 1144 the Franks for a century, but E. Syria under Turks and Egyptians, till, in 1291, the fall of Acre gave the whole country to Egypt until 1518 A.D., when it was conquered by the Turks. The succession of Roman governors after 62 B.C. is well known, but the only one mentioned by the beautiful inscriptions of Antiochus (us), who succeeded L. Volusius Saturninus in 5 A.D., and under whom Coponius was the first Procurator of Judaea a year later. Cyrenians had no authority in Palestine till the deposition of Archelaus in that year. The prosperity of Syria under the Antonines, and especially under the Syrian emperors succeeding Septimius Severus, appears to have been great, and Elagabalus (218-222 A.D.) was the high-priest of the sun at Emesa, and the child of another high-priest Bassianus. From 267 to 272 A.D. Syria was also part of the empire of Zenobia, ruling from Tadmor, and her defeat by Aurelian occurred near Emesa —Religion. The Syrians were the same as that of the Phoenicians, and their gods included El or Baal, Baalath, Hadad, Ashtoreth, and others noticed in the texts of Samala, and in later inscriptions. One of the most remarkable, in Lat. and Gk. (Waddington No. 2720 a), was found at Hosn Saladin, in mount Barylys, a place in the scarp of Apamea, which bore the native name Baito-kaika. The ruins are important, but not older than Roman times. The Latin preface states that Valerian and Gallienus (in 253 A.D.) renewed the ancient privileges of a shrine consecrated to Zeus; the Gk. texts include a copy of a letter by a certain Antiochus, the Praefect of Syria, to a High Priest at Edessa, and a letter by an Antiochus, called perhaps Antiochus the Patriarch, to a High Priest of a Zeus, and a decree of the city of Apamea, addressed to Augustus, whose god Zeus they adopted, and decreed that men or beasts straying into the temple enclosure should incur fines. This instance, and others, show that the religion of Syria, before 326 A.D., was a mixture of earlier native worship with that of Gk. and Roman gods. Elagabalus also adored the "black stone" of Emesa even in Rome.—Antiquities. The oldest Syrian antiquities are those inscribed with the characters called "Hittite" [Writing], including those of Carchemish, Mer'ash, Izghin (near Samala), Samosata, Aleppo, and Hamath. The inscriptions of Samala, in Phoenician and in Assyrian, come next, and are of peculiar interest. [Semitic Languages.] The style of art in the bas-reliefs (800 to 730 B.C.) resembles that of Baby- lonia, and a sphinx, a female sphinx, and a lion-headed god (probably Nergal) are represented. The figures are normally represented as a pig-tailed captive (probably a Hittite). The succession of kings of Samala, mentioned in the texts, includes Bar Karal, Panammu I. (who was tributary to Assyria in 806 B.C.), Bar Qur, Panammu II. (who fled to Damascus), and Barrakab (who boasts the favour of Tiglath-pileser III. c. 730 B.C., and who built the palace). The statue of Panammu I. was found at his burial-place Takhkalti-bunar, near the ruin Sinjîrs and the village of Keller (Humann and Puchstein, Reisen, 1896). At Samala was also found the fine bas-relief of Esar-haddon (after 670 B.C.): he holds Tirhakah, the Ethiopian, captive by a cord attached to a ring passing through the upper part of the captive (Is. 37-29). The gods are represented standing on animals, as at Bavian; the cuneiform text describes the conquest of Egypt. Early in Esar-haddon's reign the native dynasty was deposed, and an Assyrian governor replaced them in Samala. The age of the Seleucidae is only represented by the beautiful inscriptions of Antiochus the Us; but the art of Commagene, under Antiochus (at Nimrûd Dagh), presents a mixture of Gk. and Persian styles; and the Gk. texts render the names of Persian gods by Gk. equivalents coupled with each. Antiochus himself was a
Mazdean by religion. Syria is also remarkable for its Christian architecture and inscriptions of 4th and 5th cents. A.D. The peculiar monogram in Gk., X.M.F. ("Christ born of Mary"), occurs in texts dated 399, 420, and 479 A.D.; and over the doors of houses verses from the Psalms (4, 8, 24, 1, 34, 6, 91, 1, 2, 118, 21, 121) occur. Lu.2:14 and Mt.22, 31, 32 are inscribed at Salamina and at Barra. The oldest known of these Christian inscriptions (at Khabara; Waddington No. 2704) dates from 334 A.D., with the invocation "Come, O Christ." At Refid, in 516 A.D. (No. 2625), is the curious text "Jesus the Nazarene, born of Mary, the Son of God, dwells here." At Kokana (No. 2681) the Trinitarian Gloria is inscribed as early as 369 A.D. On the other hand, a Gk. psalm canopt, found in the mosque at Emesa, dates from 78 A.D., and belonged to a temple on this site. The finest architecture of the 2nd cent. is represented by the huge structures at Ba'albek and at Palmyra. Among the most useful modern books may be noted: Humann und Puchstein's "Reise in Kleinasien und Nordsyrien, and the Mitthteilungen aus den Orientalischen Sammlungen, Heft. xi., with Waddington's Inscriptions grecques et latines de la Syrie."

**Syriac versions. [Versions.]**

**Syriac-Phoenician** occurs only in Mk. 7:26 as the description of the race of the Gentile ("Greek") woman from whose daughter our Lord cast forth a devil at the mother's persistent request. The emperor Hadrian divided Syria into three parts: Syriac Proper, Syro-Phoenician, and Syria Palatina; and henceforth a Syro-Phoenician meant a native of this sub-province, which included Phoenicia Proper, Damascus, and Palmyra. It is perhaps most probable that *Siqat Firatana* ("Phoenician Syria") found in some copies, is a better reading. The term denotes a Greek (E.V. marg. gentile) of Phoenicia in Syria, as distinguished from African natives - the Punic race of Carthage.

**Taanach** (sandy soil), a town on W. of the plain of Esdraelon; probably so called from the rich basaltic soil of the plain near it. It was a royal Canaanite city (Jos.12:21), on the border of Manasseh and Issachar, held by the former tribe (17:11), and given to the Levites (21:25, A.V. Tamah). In 1 Chr.7:29 it is given to Issachar (ch. 5:1) on the borders of Manasseh, referring perhaps to a later age; for Manasseh failed to drive out the Canaanites of Taanach (Judg.1:27), whose kings fought at Tabor in 14th cent. B.C. (5:19). [Manetho.] It was included in Solomon's 5th district, answering to Issachar (1 K.4:12). It is noticed in the list of Thothmes III. (No. 42), in 16th cent. B.C., and in the account of his advance on Megiddo. It also appears in 10th cent. B.C. in Shishak's list (No. 14). It is now a small village called Tannak, on S.E. side of a large mound at the edge of the plain, with wells on S., olives on S., and cactus hedges: rock-cut tombs occur at the foot of the mound on N. (Surr. W. Pal. ii. p. 46). Recent German excavations have resulted in the discovery of fragments of euneiform tablets, and of an altar with a sphinx in relief, resembling the later remains in Phoenicia. The bodies of infants buried in pottery urns also occur here. [G.A.Z.]

**Taanath-shiloh** (approach to Shiloh; Jos.16:9), a place on E. border of Ephraim mentioned before Jezreel (Yamin). Vandervelde places it at Panna, a run 14 miles N.E. of Yamin; and the border valley runs by it (Wadi el Kerid) "E. of Lamesh." It is 10 miles from Shiloh: but in this instance Shalem (Salim) may be the place intended, for the high-road to that town leads past Panna, which is 3 miles S.E. of Salim. The ruin, with stumps, cisterns, and rock-cut tombs, is evidently ancient (Surr. W. Pal. ii. p. 245).

**Tabna** (1 K.21:20) or **Tabbna** (Ex.23:43; Num.34:10), a family of Nethinem who returned with Zerubbabel.

**MONUMENT AT SAMALA.**
TABBATH

TABBATH, probably a long tract of land (Arab. tabbath); apparently S. of ABEL-METHAOL. No site so named is known, and the words "unto (cadh) Tabbath" might only mean "a long way.

Tabeal' (R.V. Tabel). The son of Tabeal was apparently an Ephraimite in the army of Pekah, or a Syrian in the army of Rezin, when they besieged Jerusalem in the reign of Ahaz (15.7.6).

Tabeal' (Ezr.4:7) or Tabellius (1Esd.2.16), a Persian official in Samaria in the reign of Artaxerxes.

Taberah', a place in the wilderness of Paran (Num.11.3; Deut.9.22). It has not been identified, but was probably about 20 miles S.W. of Hazeroth.

Tabering, an obsolete word in A.V. of Na.2.7. The Heb. word connects itself with 𐤊𐤇𐤃𐤋, "a timbrel." The A.V. reproduces the original idea. The "tabour," or "tabor," was a musical instrument of the drum type, which with the pipe formed the band of a country village. To "tabour," accordingly, is to beat with loud strokes as men beat upon such an instrument. [Timbrel.]

Tabernacle. The description of the tabernacle is given in a twofold form—the instructions to Moses (Ex.26.27-9.19), and the account of the actual construction (38.8-38). It consisted of two distinct parts: the tabernacle proper, and the tent.—I. The Tabernacle, or Dwelling-place (Heb. mishkān, 26.1-6; 15.37). (1) The Framework. This was formed of boards of acacia wood, overlaid on both sides with thin plates of gold (vv. 16.29). The word qeresh, translated boards, occurs only in connexion with the tabernacle, with the exception of Ezk.27.6, where it probably refers to the boards forming the deck of a ship (R.V. marg.). It is derived from a root meaning "to become firm, solid." Kennedy (Hastings, D.B. 5 vols. 1904, s.v.) suggests hollow panels instead of solid boards. Each board was 10 cubits long and 1⁄2 broad; the thickness is not specified (Ex.25.16). There were 20 on each of the two long sides, the N. and the S., and 6 at the W. end. There were also 2 other boards on the W., one at each corner (vv. 23-25), making 8 in all. It has been assumed that these two were the same width as the others, 11⁄2 cubits, in which case the external measurement of the W. wall must have been 12 cubits. Since the inside measurement was not more than 10 cubits the boards forming the sides must, on this assumption, have been one cubit in thickness. This is the view held by Ewald, Bahr, Riggenbach, Kamphausen, Diezel, and, among later writers, by König (in the Jew. Encycl. s.v.), but it suggests grave difficulties. (i) In ancient times acacia trees capable of yielding boards 10 by 1½ cubits were probably to be found in the Sinaitic Peninsula (Theophrastus, Hist. Plant. iv. 3), but not trees from which could be cut massive beams measuring at least 15 ft. long, 27 in. wide, and 18 in. thick. (ii) The boards stood upright, fitting close together, each having two tenons at its lower end which fitted into two silver sockets let into the ground. These bases weighed only a talent, or about 95 lb. each, and it is doubtful whether they would have been of any use in supporting beams of this size. (iii) Transport, though not impossible, would have been difficult, and the only provision mentioned utterly inadequate (Num. 7.8; cf. 3.36,37). There may of course have been many more than four wagons and eight oxen, these only being mentioned because given by the princes (1.2,3). Josephus says the boards were four fingers, or 3 in. thick (3 Ant. vi. 3). The language used in describing the corner boards is ambiguous and obscure (Ex.26.24), and none of the numerous interpretations that have been attempted are entirely satisfactory. Keil (Bib. Arch. i. 193) thinks they were made up of two boards joined together at right angles to form the corner pieces, and having one ring only, set in the corner, instead of one on each side. Kennedy suggests sloping bastions made of two boards braced together. The important point is that these two were different to the other 46 boards, and in the absence of any statement to
the contrary it need not be assumed that they were the same width as the rest. Their purpose seems to have been to give stability to the corners, as well as to fill up the space of \( \frac{2}{3} \) cubit at each corner of the W. end. They had each two silver sockets like the other boards (ver. 25). The boards were kept in position by means of cross-bars of acacia wood overlaid with gold, which passed through rings of gold affixed to the outside of each board. According to ver. 26,27 there were five bars on each of the three sides, but since only the middle one ran the whole length of the wall (ver. 28), it is probable that the other four on each side were only half the length, two being joined together and so making three bars on each side. This is Rashi's opinion, and it has been adopted by many later writers. Rashi says the middle bar of the three passed through the heart of the boards, but if they were only \( \frac{1}{2} \) in. thick either the bar was very slender or the bore of the hole must have been so large as to weaken the boards in their centre. According to Josephus (loc. cit.), the bars were made up of lengths of \( \frac{2}{3} \) cubits each, the end of one section fitting securely into the next. The dimensions of this framework were 30 cubits long by 10 wide. It is disputed whether these are to be taken as the external or internal measurements. The question is not without importance. If external, then the whole length of the interior was 30 cubits, less the thickness of the W. wall, and the breadth 10 cubits, less the combined thickness of the two side walls. If the boards were only \( \frac{1}{2} \) in. thick, this small reduction of the internal dimensions would not seriously interfere with that internal symmetry of the Most Holy and Holy Place upon which so much stress is laid; but if they were much more than this thickness the measurements must have been those of the interior (cf. Josephus, ; Ant. vi. 4). (2) The Curtains. The ceiling of the tabernacle was formed of ten curtains of fine twined linen, each 28 cubits long and 4 wide, fastened together in two

fives. It is not stated how the separate curtains were joined, but the two large ones had each 50 loops of blue along the inner edge and were coupled together by means of 50 golden clasps (28,14-16). Pictures of cherubim were woven into them, possibly in blue, purple, and scarlet on a white ground (ver. 1). Some think these curtains covered the inside of the walls, from analogy with Solomon's temple (1K.6.25; cf. Ezk.41.18). There is, however, no mention of any means of suspending them on the inside. They were 28 cubits long, and would therefore cover the top, 10 cubits, and hang down 9 cubits over the sides, thus leaving about 1 cubit at the bottom uncovered. The clasps connecting the two curtains were to be directly over the division between the Most Holy and the Holy Place (cf. Ex.25,13). Hence the one large curtain of 20 cubits would cover the Holy place, and of the other, 10 cubits would cover the Most
TABERNACLE

preceding, but with stripes or cubes woven into it instead of cherubim (Ex. 26:36, 37). It was suspended by golden hooks from five pillars of acacia wood overlaid with gold and fixed into sockets of brass. This curtain is described as "a screen for the door of the tent" (ver. 36, R.V.). [HANGINGS.] The Holy Place contained (a) the Altar of Incense, in the middle at the W. end (30.6); (b) the golden Candlestick, on the S.; and (c) the table of Shewbread, on the N. side of the tabernacle (26:35).—II. The Tent. This screen is the tent of the dwelling. Its shape is disputed, some holding that it was placed upon the dwelling, the whole retaining the shape of a parallelogram; others that it was tent-shaped, or ridged. It consisted of (1) a covering of goats'-hair, made of eleven curtains, each 30 cubits long and 4 wide. These were sewn together to form two large curtains, six of the small ones in the one and five in the other. The two parts were joined together by loops—colour and material not specified—and 50 clasps of "brass" (26:7-11). If the tent was a covering resting on the tabernacle, the arrangement of the goats'-hair curtain would presumably be different. One half, consisting of six curtains and therefore 24 cubits wide, 20 cubits covered the Holy Place, and 4 cubits, the sixth curtain, was folded over the forefront of the tent, forming a sort of eaves (ver. 9). Of the lesser half, formed of five curtains and so 20 cubits wide, 10 cubits covered the Most Holy Place, the other half hanging down over the W. wall and covering it (ver. 12). According to this arrangement the division in the goats'-hair curtain coincided with that in the linen curtain, and both were directly over the veil which divided the Tabernacle into two parts, the Holy and the Most Holy Place. This curtain was 30 cubits long, from the altar of incense to the bottom of the boards not covered by the latter (ver. 13), which was only 28 cubits long. If the tent were ridge-shaped, either the linen curtain covered the inside of the walls or it was exposed to a certain extent to moisture, wind, and dust, and was perhaps the goats' hair curtain in that case was 4 cubits above the ground and 5 from the walls. There is no mention of a ridge-pole, and the only possible hint of supporting pillars is the statement that there were five at the E. end of the tabernacle and only four in the Holy Place (ver. 32, 37). Over this tent were two other coverings, of which the dimensions are not given, (2) one of rams' skins dyed red, and (3) over this one of skins (ver. 14), probably of the dugong, a marine animal 12 to 30 ft. long, and said to be plentiful in the Red Sea. The pins and cords (27:19, 35, r.v. 38:20, 37, 38:40) may have been for use with either of the coverings, but not with the last. If the tent were ridge-shaped, the third covering may have been merely a coping along the top. The great weight of these coverings, and the probability that during heavy rains the water would collect on a flat roof, are strong arguments in favour of the ridge-shaped form. The court was in a sense a part of the tabernacle. It was an oblong space, 100 cubits on N. and S., and 50 on E. and W. (27:9-13). The tabernacle stood more towards the W. end, with its entrance facing E. The N. and S. sides had each twenty pillars, the W. and E. ten altogether. The pillars were 5 cubits in height, fixed into sockets of "brass" and 5 cubits' distance from each other (27:18). They were furnished with hooks and fillets of silver, by means of which the linen hangings were suspended (ver. 10). These fillets were either rings under the capitals, or bars resting on hooks and extending from pillar to pillar, and to which the hangings were attached probably by rings. The four central pillars on the E. side supported the screen of 20 cubits which formed the entrance to the court. This was a variegated curtain, like the screen covering the E. side of the tent (ver. 16, 26:36). There is some ambiguity in the account of the number of pillars on the E. side of the court (27:13-16). The entrance had four pillars, but if they were only 5 cubits apart five pillars would be required for the screen of 20 cubits. It is, of course, possible that there were only two in the middle, the entrance being distinguished by distance between the pillars as well as by difference in colour. Of the four pointed pillars, including the two corner ones. The hangings N. and S. of the entrance must each have been attached to four pillars. If the one at the N.E. corner be counted as belonging to the N. side, and the inner one of the four on the S. of the entrance as belonging to the entrance, the difficulty would be removed. This is the system adopted in reckoning the other pillars of the court, i.e. though each corner pillar supported the hangings of two sides it was counted to one only. Some count the two outer pillars of the entrance as only half-pillars —e.g. Keil (op. cit.). In the E. part of the court, called the Outer Court, there stood (1) the Altar of Burnt-offerings, (2) the Laver of brass", and (2) the Laver of brass," between the altar and the tabernacle (30:18).—IV. NAMES. (1) Tabernacle (mishkān, "the dwelling-place," Ex. 25:9, see R.V. marg.), specially applied to the inner structure as distinct from the tent which covered it. The name expresses the purpose of the tabernacle. "I will pitch a place for Me a sanctuary; that I may dwell among them" (ver. 8, 29:45); "I will set My tabernacle among you. And I will walk among you, and will be your God, and ye shall be My people" (Lev. 26:11, 12). (2) The Tent, 'ophel,
which served as a covering to the former (Ex. 26-7, etc.). Also the tent, with reference to or including the mishkān (33.8, 11; Num. 12.5, 10; Deut. 31.15; cf. Num. 11.24); Jer. 1.39, all in R.V. (See Porch of ‘Tabernacle’). Tent of meeting (Ex. 27.21, etc.; see R.V. marg.), the appointed place where God would meet with Moses (29. 42, 30, 36), and there reveal to him His will (Lev. 1.1; Num. 7.89; cf. Ex. 25.22-30.6). (4) Tent of the testimony (‘ḥōd hāʾedith’), as containing the ark and tables of the testimony (25.21, Num. 1.50, 53; 10.11). Also tabernacle of the testimony (mishkān hāʾedith, Ex. 33.21; Num. 1.50, 53, 10.11). (5) Tabernacle of the tent of meeting (Ex. 39.32, 40.2, 6, 29; 1 Chr. 6.32-17). (6) House (beth) of God (Ex. 23.19, etc.). (7) Tabernacle of the house of God (1 Chr. 6.48[39]). (8) Temple (khelq), 1 Sam. 1.3. (9) Sanctuary (miṣāḏ, Ex. 25.8; Lev. 12.4). — V. HISTORY. The plan of the tabernacle was of divine origin and was revealed to Moses in the mount (Ex. 26.30). Its construction was entrusted to Bezalel and Ahliob, and they with the workmen were specially endowed by God with knowledge and skill in the work (Ex. 36.1). All materials were provided by the people as free-will-offerings (35.4-29), and their liberality was such that more material was provided than was necessary, and they had to be restrained from giving (36.6, 7). When the work of preparation was finished, Moses, seeing that all had worked together in obedience to divine command, blessed the people (39.43). The tabernacle was erected on the first day of the first month of the second year after the Exodus (40.2, 17). It was anointed with holy oil (40.9; Lev. 8.10), and then the cloud covered the tent, and the glory of the Lord filled the dwelling (Ex. 40.34). The tabernacle occupied a central position in the camp (Num. 2.2, 17.5, 3), surrounded by the camp of the Levites (1.50, 53; cf. Ex. 33.7, where it is said “Moses used to take the tent and to pitch it without the camp, afar off from the camp” (see also Num. 12.6, 30, 12.4). The LXX. calls this ἰματία στήλη αὐτοῦ, his own tent). It is supposed that it was a temporary tent put up pending the erection of the tabernacle. The tabernacle accompanied the Israelites in their wanderings until, after the conquest of Canaan, it was set up in Shiloh (Jos. 18.1). It remained there during the period of the Judges (Judg. 18.31; 1 Sam. 2.22; cf. Ps. 78.68). Solomon built it later, it was at Non (1 Sam. 21.1-6). David pitched a new tent on Mt. Zion for the ark (2 Sam. 6.17; 1 Chr. 15.1, 16.1; 2 Chr. 1, 4), but the Mosaic tabernacle, with its altar, was still an object of veneration and a sanctuary at Gibeon (1 Chr. 16.39, 40.21, 29). When the Temple was finished the tabernacle was taken to Jerusalem and probably preserved, as a sacred relic, in one of the chambers of the temple (1 K.8.4, 2 Chr. 5.5). Its later history is unknown. Riggenbach, Die Mos. Stiftshütte; Diel, in Schenkel’s Bibellex.; Kielm., Handwörterbuch des Bibl. Alterthums; Ewald, Alterthumer; Kennedy, in Hastings, D.I.B. 1893; Shaw, Caldecott, Tabernacle. [lit.]

**Tabernacles, Feast of.** The last of the three pilgrimage festivals, ordained by Moses, when all Heb. males were obliged to appear at the sanctuary (Ex. 23.17; Lev. 23.34-36, 39-43; Num. 28.12-38; Deut. 16.13-16). It is commonly called hagī ḥassākkolū (“the Feast of Boothes” or ḥabba ḥāʾasiph (“the Feast of Ingathering”), or simply kehāgh = “the Feast” (1 K.8.2; Ezek. 45.23; 2 Chr. 7.5). The celebration of this feast lasted seven days: 15-22 of the seventh month (Tishri). The day following—i.e. the eighth day—was observed as an appended holiday, and was called or “booth consecration” (Lev. 23.36), or “solemn assembly” (Ne. 8.18). The observance of the festival had a double significance: (1) As general thanksgiving days for the bounty of the autumn grape crop which completed the year’s harvest—At the end of the year, when thou gatherest in thy labours out of the field (Ex. 23.16). (2) As a commemoration of the time when the Israelites dwelt in booths or tents during their passage through the wilderness after their Exodus from Egypt. As all principal festivals are, more or less, memorials of the deliverance from the Egyptian slavery into which they were led by Moses (Ex. 12.40-41), people took place at the end of every sabbatical year on this feast, when the law was read in their presence (Deut. 31.10-12). Solomon dedicated the temple on this festival, and, in order to facilitate the special dedication festivities, extended the period of rejoicing seven days, by adding two days, which was called sometimes “booth consecration” (1 K.8.2, 65), King Jeroboam I., whose object was to separate the ten tribes under his command from the influence of the Jerusalem pilgrimage under the Judaean kingdom, substituted a feast just a month later (12.32). The peculiar features of the feast were: (1) The abandoning of the permanent habitation in houses for the temporary dwelling, eating and sleeping in booths during the seven days, which, aside from its symbolic meaning as a memorial of the Exodus, is a symbol of democracy, for all men, rich and poor alike, are to dwell in a simple booth. This feature had been neglected from the time of Joshua till the Maccabees, but is observed in the small booths called sikkim (lit. sitting) in the West Bank in the Sukkot (Ne. 8.17), but ever since it has been a regular custom in Israel. The Feast of Booths was observed by Judas Maccabeus (2 Mac. 10.6, 7). The Talmudists have compiled a tractate called Sukk. in five chapters, mostly taken up with explaining the construction of the booth and details in connexion with this festival. According to it, three walls, and a sign of a door at the fourth side, with a covering on top, constitute a booth. The walls may be of any material, but the “covering” (lit. sikkah), which is the main part of the booth, is permitted only to be of foliage and boughs cut from trees (8.15, 16); or reed, sticks, and laths loosely arranged so that the stars may be visible through them. The covering must not be above 20 cubits from the ground, in order not to lose sight of it when sitting in the booth. (2) Another feature is the ceremony of carrying and waving the palm-branch. The palm-branch was tied together with boughs of thick trees (myrtles) and willows of the brook, made into a bunch.
and held in the right hand, with the citron in the left, while reciting hallel at the morning service. This was observed on the first day of the festival everywhere, but in the temple ("hallel in the court") the custom was formed for seven days (Lev. 23:10). After the destruction of the temple the Rabbis ordained the observance of this custom for seven days everywhere, which is still kept up, except on the sabbath day. Neither the dwelling in the booth nor the ceremony of the lulabh is called the festival, but "the first and seventh days, in memory of the going out of water at the temple. The water libation is not mentioned in the Mosaic law. There is only a symbolic reference to it by the prophet: "Therefore with joy shall ye draw water out of the wells of salvation" (Is. 12:3). The Gospel, no doubt, alluded to this event by saying, "No night nor darkness since the feast [the seventh day]. Jesus stood and cried, saying, If any man thirst, let him come unto Me and drink" (Jn. 7:37). Jesus also said, "I am the Light of the world, . . . the Light of life" (8:12), referring to the illumination of the festival. In this respect Jesus echoed the sentiments of the Sadducees, who were opposed to this Pharisaic ordinance, which was based only on Rabbinical tradition. Indeed, it is difficult to account for all the adoption of this ordinance by the Rabbis, unless it was to modify the wine libation, which was a common practice among the Gentiles in their idol-worship. Or, perhaps, the water libation was intended as a lesson on temperance. Cf. Jev. Encycl., arts. "Tabernacles, Feast of"; "Water-drawing." [J.D.E.]

Tabitha, "which is by interpretation called Dorcas" (Ac. 9:36), a female disciple (μαθητρά), this fem. form occurs here only in N.T., of Joppa, full of good works, among which that of caring for the poor (evidently a recognized class, see 6:1) is specifically mentioned. She must have been a person of some means. While St. Peter is in the neighbouring town of Lydda she dies, whereupon the disciples send him messages, urging him to come without delay. He arrives, finds her already laid out for burial, and restores her to life under circumstances which bear a close resemblance to the raising of Jairus’s daughter (Mt. 9:25, etc.). The miracle results in a number of conversions in the neighbourhood. The Aram. word Tabitha (ταβιθά), with its equivalent Dorcas, in Gk., means "roebuck," or "gazelle," and is fairly common among the flat-topped and generally round stand about 12 in. high, round which people reclined for meals. The prophet’s table (2K. 4:10) was probably of this shape. The Gk. word signifies a four-legged table; and those used in a guest-chamber were long enough for a number of guests to eat from them (Lu. 22:21). [MEALS.] In Mal. 1:7,2 the "table of the Lord" is the altar. Hence its contrast in 1 Cor. 10:21 with "the table of devils," where the Lord’s Supper is compared with idol-feasts. [ECHONARIST.] Table in Ex. 25:23, the "table of the testimony," on which was written with the finger of God (31:18), on both their sides (32:15), the
Ten Words or Commandments (34.28). The tables and the writing were the work of God (32.16). On descending the mount, Moses saw the idolatry of the people, and in an outburst of anger he broke the tables and the ark (32.19). Later on Moses was commanded to hew two other tables like the first, and to ascend the mount with them; when God wrote on them the same words as on the first (34.1). These were placed in the "ark of the Testimony" (40.20). According to R. K. 8, these were the only contents of the ark at the dedication of Solomon’s temple. [ARK of the COVENANT.] What finally became of them is not known, but they were not in Herod’s temple (5 Wars, v. 5). [MOSES; LAW IN O.T.; TABLE; WRITING. [R.R.]

Tabor, apparently an Aram. word, from a root meaning "break off," and thus applying to the isolated position of Mt. Tabor, which is an outlier of the Nazareth mountains. It is now called Jebel D Tbr, or "mountain of the isolated summit." It is a rounded mountain like a molehill, rising 1,840 ft. above the sea, and about 1,550 above the plains at its foot. One of the low places is isolated on a small open wood of oaks, in which fowls do not appear to have been found. A mediaeval church and fortress crown the summit, which mediaeval tradition made the scene of the Transfiguration, following the apocryphal "Gospel of the Hebrews." The border of Issachar reached to Tabor (Jos. 19.22) and to the south of N.W. side of Mt. Tabor Barak came down from Tabor to meet Sisera near Endor (Judg. 4.6, 12, 14, 8, 18). [KISHON, RIVER.] The mountain appears to have been a centre of worship which became idolatrous (Ps. 89.12; Hos. 5.1). In J.e. 46.18, "as Tabor," might be a clerical error for "by Tabor," in describing the Babylonian advance on Egypt. In 1Ch. 6.77, a town Tabor in Zebulun seems to be noticed, but in Jos. 21.35 we find Nahalah instead. In the Song of Deborah (Judg. 5.2) the literal wording of the Heb. rendered in A.V. "for the averaging of Israel," appears to be "in the oppression by Pharaohs"; and it is notable that Ramah, H. Ram, in Judg. 19.21, is a great town of the Shechemites in Lower Galilee (Brunner, Hist. Egd. ii, p. 64), which included Shaluma (Salim, 2 miles N.W. of Tannah), Maroma (Morm), Beth-nanin (perhaps Hannahoth), and Dabur—either Tabor or the village of Debathath at its foot to W. Dapur is also noticed later in his reign, in connexion with towns of Galilee (p. 160). The revolt of Barak would thus seem to have been directed against Canaanite kings allied to Hazor, among whom Sisera was perhaps the Egyptian resident (Simon being in Egyptian "the servant of Ra"); and in the later years of Ramses this defeat followed the victories of his youth. The Plain of Tabor (Selin tabhbor, 2Sam. 10.3) was between Rachel’s tomb and Gilgal, and here Saul met "three men going up to God to Bethel." More probably (see R.V.) we should read "the oak of Tabor," or possibly "a broken oak" (or "terebinth"), which would be a point on the road. Tabor is also near to Bethel and Ramah, but solitary trees - oaks or terebinth - are not uncommon in the mountains of Benjamin. [C.R.C.]

Tabret [Timrel.]

Tabrimon (better, Tab-Rimmon, i.e. "good is Rimmon," the Syrian Jupiter Ionians), the father of Benhadad I, king of Syria in the reign of Solomon (2 K. 15.19), a town in Galilee.

Tache [Heb. gerek, R.V. clasp]. Only used in connexion with the tabernacle curtains. (1) Hooks to fit into the corresponding loops on the edge of two curtains to join the latter: of gold, Ex. 26.6, 36.13; of brass, 26.11, 38.18. (2) The clasps by which the screen between the Holy Place and the Holy of Holies was suspended, 26.33. [C. 15.11, 39.33. [R.I.]

Tachmonite, The (R.V. Tahchmonite). "The Tachmonite that sat in the seat," chief among David’s captains (2Sam. 23.8), is in 1 Chr. 11.11 called "Jashobeam an Hachmonite" or (marg.) "son of Hachmoni" (see R.V.). Kennicott showed that the words translated "be that sat in the seat" are a corruption of Jashobeam, and that the "Tachmonite" is a corruption of the "son of Hachmoni," which was the family or local name of Jashobeam. He concludes "Jashobeam the Hachmonite" to have been the true reading.

Tadmor. Hebrew for the famous town noted in the Bible. The Heb. reads TAMAR, or otherwise Tadmor (see R.V. marg.). It was a city built by Solomon in the desert, and noticed with Lebanon and Hamath. The name is usually connected with Tamar, "palm"; but might be the Syr. Tedmara, "admirable." Josephus says (Ant. vi. 1) that in his time it was Syr. Tedomar (or Thodamar) but the Gks. Palmyra. The name Tadmor is so rendered in a text at the city (De Vogüé, Inscription. Palmyre. No. 22; Waddington, No. 2060), where the Aram. Rosh Tadmor is rendered "exarch of the Palmyrenes" in Gk. The trade-route from Damascus passed this desert station, which lies E.E. of Elmesa; and it went on to Tiphsar on the Euphrates. The city lies E. of a narrow pass leading towards Riblah, and has a spring (Ain Afqa, noticed in a text as Ephka; Waddington, No. 2,571) at E. end of the gorge; but the water is sulphurous, and the main supply was by an aqueduct, 25 miles to W. The ruins resemble those of Borsippa, some pillars being 70 ft. high, and they belong to 1st, 2nd, 3rd, 4th, and 6th centuries a.d. The wall of Diocletian (284-305 A.D.) enclosed a larger area than that of Justinian, which enclosed the great sun temple and the gardens to the E. Aurelian rebuilt this temple after defeating Zenobia in 273 A.D. There are also remains of a church, and Palmyra was still inhabited in 12th cent. a.d. The gorge is called the "Valley of Tombs," remarkable for its tomb towers (one over 100 ft. high), which contained mumified corpses in pottery coffins. One of these towers has a text of a A.D. The Palmyrene texts (mostly bilinguals in Aram. and Gk.) [SEMITIC LANGUAGES: WRITING] continue down to 263 A.D., the dates 70 and 83 a.d. being among the earliest. The era is that of the Seleucidae, and the native month are rendered in Gk. by those of the Macedonians (Gen. 35.8). It was the inhabitants (Waddington, No. 2060) in 212 a.d. Late texts of the time of Diocletian also occur. In the long street of columns, running E. and W., the Palmyrenes used to set up statues of citizens,
TAHAN

who were "caravan rulers," in some cases on the route to Vologesia, etc. Palmyra was known to Pliny the Elder who described Palmyra in his "Natural History" by Mark Antony in 34 A.D. It was beautified by Hadrian in 130 A.D., and made a colonia by Caracalla (211-217 A.D.). The Palmyrenes aided Alexander Severus against Persia in 230 A.D., and saved the Roman empire in 260 A.D., being led by Odenathus II. (Adnaih), who was then recognized as the "Imperial of Palmyra" by the Persian Government. He was murdered by a nephew in 267 A.D.; but, during the troubles in Rome, his widow Zenobia (or Bath Zabinah) became independent—ruling from Bithynia to Egypt—till crushed by Aurelian in 272 A.D. A coin of her son as Emperor, under Aurelian as Augustus, has been found in Egypt; and texts of Odenathus and Zenobia occur at Palmyra (Waddington, Nos. 2602, 2611). Odenathus is called Maran, or in the Gk. "despot," and afterwards "king of kings." The only link between Solomon's Tadmor and that of Zenobia is the occurrence of a scarab of Tirhakah (702-670 B.C.), discovered and identified by Rev. W. Wright (Palmyra and Zenobia, 1895); but the leading work still is The Ruins of Palmyra, by Wood and Dawkins, 1753. [C.R.C.]

Ta-ha-n.—1. Son of Telah and ancestor of Joshua (1 Chr. 7.25).—2. Son of Ephraim and ancestor of the Tahhanites (Num. 26.35) = Tahath (1 Chr. 7.20), repeated by a clerical error. [SHUTHIELAH.]

Tahpanes. [Tahpanes.] Ta-ha-th. —1. A Kohathite Levite, ancestor of Samuel and Heman (1 Chr. 6.24, 37 [9.22]).—2. According to the present text, son of Berek and great-grandson of Ephrath (7.20).—3. Grandson of the preceding, as the text now stands (7.20).

Ta-ha-th.—1. A desert-station of the Israelites between Makeloth and Tarah (Num. 33.26).—2. [Tahath, 2].

Tahpanhes or Taphhnehes (LXX. Tapheus; Taphynis), an Egyptian city of importance in the time of Jeremiah, mentioned once (Ezk. 30.18; the Δαφνα of Herodotus, now Tel-Defneh, about 15 miles W. of the station of Cantaraht, on the Suez Canal. The hieroglyphical name is probably Ta-Bennu. It was on the Pelusiac, the Eastern branch of the Nile, and on one of the principal army roads, and was known already before the time of Asar-Ur I. It was probably established under Ramses II., it became important under Psammethichus II. (c. 664 B.C.), who, as we know from Herodotus, established there a garrison of Ionian and Carian mercenaries to guard the kingdom against the Egyptians and Syrians. The correctness of this statement has been confirmed by the excavations made on the spot by Prof. F. Petrie, who explored there the remains of a fort which must have been the residence of the king, and which is still known under the name of the "Palace of the Jew's daughter." We know from Josephus (44.1) that it was a settlement of Jews. The prophet himself (45.7) was brought there, and there also took place the episode of his burying stones in the platform of the palace. [E.N.]

Tahpenes (1 K.11.19,20; Οθερφένη, Θερφινη, Tahpanes). An Egyptian princess mentioned in connexion with the Edronites. Whether she was a queen or the wife of Hadad is doubtful; the text is not clear, and the discrepancy between the Heb. and the LXX. is considerable. [E.N.]

Tahre'a, son of Micah, and grandson of Mephibosheth (1 Chr. 9.41).

Tahlin.—The name of the tribe of the N. border of David's kingdom (2 Sam. 24.6). The rendering in four Gk. MSS. shows that this is a clerical error for the "land of the Hittites at Kadesh" (hāḥ̄ilīm qāḏēšāh), due to the similarity of the letters ḫ and ḡ and ḫ, and probably ḡ for ḫ, which made the difference of the two readings. The place mentioned by Josephus on the Egyptian border of the famous Hittite city, just N. of the N. border of Israel when Lebanon and Damascus had been conquered. The site of Kadesh retains its name as Qades, applying to ruins just S. of Tell Nebiy Mendeh, which (in later times) was called Laodice ad Libanum. This site is immediately W. of a small lake or pool formed by damming the Orontes; while W. of the city a stream runs N., and joins the Orontes under the Tell. On S. a ditch is traceable, once connecting the two streams. The site thus answers, not only in name and in its position, but also in its topography, to the Kadesh taken by Ramses II., and represented as surrounded by streams, with a little lake on E. The city has bridges in the Egyptian picture, and a small bridge still leads to Qades, over the Orontes. The place was known to Herodotus as Cadytis, where Necho fought the Syrians (ii. 150), and as being equal to Sardis in size (iii. 5). It was taken by Thothmes III., and the name then became Karnak, the residence of Amon (Amarna Tablets, Brit. Mus. 30, Berlin 92 and 180) as the capital of the Hittite Aiauguna. The "Orontes" is named upon the picture of the city (as Arunta) in 14th cent. B.C., and in the account of its capture by Ramses II. (Surv. W. Pal. Special Papers, pp. 140-150). [C.R.C.]

Talent.—[Weighs and Measures.]

Ta-litha cumi, two Aram. words (Mark 5.41), signifying "Damsel, arise!"; used by our Lord in the raising of the daughter of Jairus.

Talma'1.—1. One of three sons of "the Anak," slain by the men of Judah (Num. 13.22; Jos. 15.14; Judg. 1.10).—2. Son of Ammi-hud, king of Geshur. His daughter Maacah was one of David's wives (2 Sam. 3.18, 37; 1 Chr. 3.2).

Talmon, head of a family of doorknappers in the temple, "porters for the camp of the children of Levi" (1 Chr. 9.17; Ne. 11.19). Some of his descendants returned with Zerubbabel (Ezra 2.12; Ne. 7.45; 1 Esd. 2.28), and were still employed as "porters at the palace" (Ne. 11.19). [C.R.C.]

Talmud. The word comes from a root meaning "to learn," and the Talmud is the name given to the great mass of the learning of Israel's sages, collected from age to age, and at
length reduced to writing in a final form. But the Talmud represents the final stage in the development of Jewish learning, at least in so far as this is presented in an authoritative and official form. In order, therefore, to realize of what the Talmud consists, it is necessary to understand the earlier documents which later on became incorporated in it. The foundation of the whole was the Law or Torah, i.e., the five books of Moses, concerning which the eighth "Principle" of the Jewish Creed says: "I firmly believe that the Law which we possess now is the same which has been given to Moses on Sinai." (The "Thirteen Principles of Faith" were drawn up by Maimonides, the great religious philosopher (d. 1204 A.D.), and are accepted by all orthodox Jews, having been incorporated in the Jewish Liturgy.) But the Law (Torah) consisted of two parts: the Written Law, as now found in the Pentateuch, and the Oral Law. The latter was committed to writing by the rabbis; but they have been committed from the beginning; the latter was believed to have been revealed to Moses on Mount Sinai, together with the former. This Oral Law was handed down from age to age side by side with the Written Law, which explained it. This is stated in the opening words of the tractate Pirkei Avoth ("Sayings of the Fathers"): "Moses received the (oral) law from Sinai, and delivered it to Joshua, and Joshua to the elders, and the elders to the prophets, and the prophets to the men of the Great Synagogue." Although this cannot be accepted as historically true, it has some basis; it was natural that the law, as was done in the case of the Bible, should be handed down from teacher to pupil; and thus very many became stereotyped. They were, generally speaking, of twokinds: Expositions in narrative form, which explained and expanded the Biblical text. These were called Haggadot, the plural form of Haggadah, which comes from a root meaning "to go." These, therefore, taught people the "way," how they ought to walk in the sight of God; i.e., Halakoth means a legal requirement. In course of time the quantity of Haggadic and Halakic matter which had accumulated was immense, and it became necessary to formulate some kind of official compilation which could be regarded as a guide and a book of reference for teachers. This was first undertaken by the pupils of Shammai and Hillel. They collected many Halakoth and compiled what became known as the "Former Mishna." The Mishna means "Second": i.e., Second Law. But the immense amount of floating material could not be incorporated into one work, and many teachers found it necessary to compile their own smaller "Mishna." Hence it was not long before it became necessary to put forth some authoritative, officially recognized form of the Mishna. This was done (c. 150-200 A.D.) by Jehudah ha-Nasi ("Judah the Prince"), who undertook his great redaction of the Mishna, which (with some alterations) has survived to the present day. The Mishna, therefore, is an immense collection of comments, explanations, and expansions of the Biblical text. Now it is the Mishna which forms the basis of the Talmud; for there was very much in the Mishna which was obscure and ambiguous; and there was, moreover, in other works a great deal of valuable Haggadic material thought worthy of preservation. The Talmud therefore explained the Mishna, and incorporated much other matter. Thus the history of the origin of the Talmud really repeats that of the Mishna—tradition transmitted orally for centuries, finally cast into definite literary form. Another term, Gemara, is often used as a synonym for the Talmud. This is an Aram. word, from a root meaning "to chew", and denotes a series of expositions of learning which has been handed down by tradition. (Bacher, in Jewish Encyclopaedia, art. "Talmud." But it means also "completion.") The Talmud has come down in two forms: the "Jerusalem Talmud" (Yerushalmi) and the "Babylonian Talmud" (Babli). The material which is contained in the Yerushalmi had been prepared in the academies (i.e., centres of learning) of Palestine, chief among which was that of Tiberias, whence Rabbi Johanan issued the Yerushalmi, in its earliest form, in the middle of the 3rd cent. A.D. The first compiler of the Babli was Rabbi Ashi (d. 430 A.D.), who presided over the academy of Sura, in Babylonia. Both Talmuds were constantly being added to, and the Yerushalmi was not finally closed until the end of the 4th cent., the Babli not until the beginning of the sixth. Haggadot flourish, as regards quality, more in the Babli than in the Yerushalmi, the Babylonian schools intellectual men, reigned supreme, leaving little room for the play of the emotions or the development of poetical fancy which were more at home on Palestinian soil. Therefore, although the Haggadic element is, in quantity, much fuller in the Babli than in the Yerushalmi, a reading (or speaking) of a far less attractive character. To give some concrete idea of what a Haggadah is, the following instance may be cited: "R. Jehoshua ben Hananiah said, "I can take cucumbers and melons and make them into kids and goats." R. Lazar said, "I was walking in a certain street in Sephoria, and I saw a certain Min[neret] take a bird, and he cast it up, and it fell down and was made into a calf." But it is not so. R. Lazar said, in the name of R. Jose ben Zusma. If all who come into the world were assembled together, they would not be able to create a gastr and put breath in it." . . . (Sanhedrin, 25 a; quoted by Heford, Christianity in Talmud and Midrash, p. 115). But the Haggadic element occupies in reality a subordinate place in both; for in its origin, as we have seen, the Talmud was a commentary on the Mishna, which was a collection of Halakoth. "It was in regard to Halakoth that the principle of Tradition was most
rigorously upheld; because it was above all things essential that Halakah, the law of right conduct binding on every Israelite, should be accurately defined and based upon ample authority." (Horford, p. 132). Although the Haggadic portions of the Talmud—which include history, fable, legend, and speculations in astrology, astronomy, philosophy, and almost every imaginable science—are of much greater human interest, it is the Halakic portions which form the bulk, and almost deserve its importance as the final authority for Jewish belief and theology. W. Surenhus, "Mishna" (3 vols. 1698); Abbé L. Chiriani, "Talmud de Bab." (1831), introduction valuable; "Der Babylonische Talmud, Hebraisch und Deutsch," ed. by Goldschmidt; F. Weber, "Jüdische Theologie auf Grund des Talmud und des Midrash" (1857); Bernfeld, "Der Talmud" (1900); Emil Deutsch's art. in O. Review (1867); the articles "Mishna" and "Talmud" in the Jewish Encyclopedia, where much bibliography will be found, though it omits some important works. [W.O.E.O.]

**Talssas** (I Esl. 3.22) = Elasah, i.

**Tamar** (N. T. 7.5 = Tamar).—A Canaanite woman, the wife successively of the two sons of Judah, Er and Onan. On the death of these two sons Judah hesitated to give to the widow (in accordance with the Levirate Law) his surviving son Shelah, lest he should meet with the same fate as his brothers. Thereupon Tamar disguised herself as a harlot, and became by her father-in-law the mother of twins, Pharez and Zarah (Gen. 38; Ru. 4.12; 1 Ch. 2.4; Mt. 1.3).—2. The sister of Absalom, violated by her half-brother Amnon, David's eldest son, for which crime Amnon was murdered at the instigation of Absalom (2 Sam. 13.1-32; 1 Ch. 3.9). In Tamar's touching remonstrance two points are remarkable: first, the expression of the infamy of such a crime "in Israel," implying the loftier standard of morals that prevailed, as compared with other countries at that time; and, secondly, the belief that even this standard might be overborne lawfully by royal authority, which "the king will not withhold from thee." The brutal hatred of Amnon succeeding to his brutal passion, and the indignation of Tamar at his barbarous insult, even surpassing her indignation at his shameful outrage, are pathetically and graphically told.—3. Daughter of Absalom (2 Sam. 14.22).

**Tamar** (pl. Tamarim)—1. In I K. 9.18, a Heb. reading for *Tadmor*.—2. In Ezr. 4.7, 19, 48, 28 the S. border of the Holy Land is defined as extending "from Tamar to the waters of strife [Meribah] in Kadesh." The latter being at S.E. corner, Tamar would be the S.W. boundary town, evidently at Tamar, a village 6 miles N.E. of Gaza. The Talmud agrees with this passage when it excludes even Ashkelon from the Holy Land. [Judea] [C.R.C.]

**Tamarisk** is substituted for the grove (of Beersheba) in Gen. 21.33, by Celsius and others. (Grove.) This has been adopted by R.V. The demand for mangoes exterminated all the mangoes at Bireseb'a. The *Tamarisk* (var. *marx callita*, var. *nitotica*) is found frequently from the Jordan Valley to the Dead Sea and through Sinai, where moisture allows its growth. Other species occur sparingly, chiefly on the Mediterranean seaboard, as *T. articulata* (a handsome tree; probably a modern introduction) and *T. Tammuz*. [H. C. H.]

**Tammuz**. This heathen deity is mentioned but once in O.T. (Ezk. 8.14, "Behold, there sat the women weeping for Tammuz"). The prophet is, however, referring here to Jewish women practising an alien cult, and for this reason the subject is of interest to Biblical students. The name Tammuz comes from the ancient Babylonian *Du-ru-zi*, meaning "son of life," which is not, however, a Semitic name (Jensen and Jeremias). He was worshipped by Phoenicians under the name of Adonis (*'adôn = lord), by the Egyptians under that of Osiris, and by the Greeks under that of Dionysus. In each case his cult was connected with the decay and revival of vegetation. For this reason there was probably more than one festival in the year held in his honour (probably originally in spring and late summer). The mythological story tells us that he was a very beautiful youth, beloved of Astarte (the Istar of the Babylonians, and the Phoenician Astarte or Ashtoreth), and was murdered by a boar while still in the full bloom of youth. As is always the case when a cult is taken over by different peoples, the worship of Adonis varied considerably in different parts of the world. The form which is of chief importance in the present connexion is that which obtained in Syria, as described by Pliny (H.N. vi. 14). In Syria, the death of Adonis was mourned in Byblos once a year. Women wailed and wept, and beat upon their bare breasts, in memory of his tragic death, which was believed to have taken place on mount Lebanon; but on the next day his resurrection and ascension into heaven were celebrated. It is from the conceptions of the Babylonians concerning him that we gather that Tammuz was a vegetation god. In a Babylonian dirge annually chanted in honour of Tammuz in late summer, when the vegetation was beginning to decay, the following words occur: "Thou shepherd of the field, lord, mighty and strong, king of the nether-world, king of the place of waterfowl, thou art a corn-seed, which drank no water in the furrow, whose germ brings forth no fruit upon the field; a young tree, that was planted in a waterless spot; a plant whose root was cut off; a plant which drank no water in the furrow." Another Tammuz-dirge says:... . The sun god caused him to disappear in the land of the dead. Full of wailing was he on the day in which he fell into great anguish, in that month in which his life was cut off from completion..." (Jeremias, *Hölle und Paradies bei den Babylonier*, p. 9; 1900). It will be seen that these ideas are expressed mystically in the Theban myth, and the story referred to above. "The young tree" is the beautiful youth; he was killed when still quite young, or, as the song expresses it, "his life was cut off from completion." The wild boar which killed him is the scorching sun—i.e. the sun-god who caused him to disappear in the land of the dead." The whole mythological conception probably arose in the first instance as follows:
Men saw that every spring the vegetation was renewed, and that in midsummer the scorching sun dried it up. According to the invariable rule among men in a low stage of civilization, natural phenomena were personified to make them comprehensible. Moreover, the belief that what was above the earth was mirrored on the celestial spheres above is reflected on earth was axiomatic. The problem of the renewal and decay of vegetation was, therefore, explained by saying: "The fresh vegetation is Taxmunz—that is the way in which he shows himself to men on earth; the scorching sun is only the way in which the wild boar appears; the drying vegetation is the way we see Tammuz dying"—the more actual reality being considered as going on somewhere else at the same time. To modern ears this sounds extremely quaint; but it was a matter of great seriousness to men of old, for they believed that the renewal of the vegetation depended on the right performance of the ritual. There are many other elements which come into consideration in connexion with the subject of Tammuz, which cannot be touched upon here. It must suffice to add merely that the weeping was to do honour to the god; and mourning was more specifically the duty of women for reasons which are likewise outside the scope of this article. [W.O.E.O.]

**Tanach.** [TAANACH.]

**Tanhu'meth,** father of Serah, 3. The omission of some words in 2 K. 25.23 makes him wrongly appear as a Netephathite (cf. J. 40.8).

**Tanis** (Jth.1.10). [Zoa.]

**Tanneh** or the word was (7.).

**Ta'phon,** one of the cities in Judaea fortified by Bachidic (1 Mac.9.50). Probably the Beth-tappua of O.T. [TAPPUAH.]

**Tappu'ah,** a son of Hebron (1 Chr.2.43).

**Tarrabah,** one of the towns in the allotment of Benjamin (1 Jos.18.27).

**Tare'a** (1 Chr.8.5).—TAHREE.

**Taras.** Undoubtedly the Ζώον of the porallic (Mt.13.25) denotes the weed called "darnel" (Lolium temulentum). [Cocke.]

The word used by the Evangelist is an Oriental, not a gk. term. The darnel before it comes into ears looks very like wheat; hence the command that the sizenia should be left to the harvest, lest while men plucked up the tares "they should root up also the wheat with them." Dr. Stanley, however, speaks of women and children picking up from the wheat in the fields of Canaan. Ty tall green stalks, still called by the Arabs zayyin.

"These stalks," he continues, "if sown designedly throughout the fields, would be inseparable from the wheat, from which, even when growing naturally and by chance, they are at first sight hardly distinguishable." The grain-growers in Palestine believe that the zayyin is merely a degenerate wheat, and that in wet seasons the wheat turns to tares. Play speaks of "Uranie or Damar" as "useful in Physicke."

**Target.** [Arms.]

**Targums.** [Versions.]

**Tar pelites, The**, a race of colonists who were planted in the cities of Samaria after the captivity of Israel (Ezr 4.9). They have not been identified with any certainty.

**Tarshish,** an important seaport, mentioned (Gen.10.4) with countries in and near Asia Minor (see 1 Chr.7). The navy of Tarshish visited Palestine every third year in Solomon's time (1 K.10.22). In another passage (Ezk.27.14) Tarshish is called Tytall. An attempt is thus made to harmonize the parallel passage (2 Chr.20.36, 37), which would place Tarshish not in the Mediterranean, but in the Red Sea. Probably, however, "ships to go to Tarshish" (from Ezion-gaber) is an ancient copyist's error, the corresponding passage reading "ships of Tarshish to go to Ophir." In Arabia. The later Jewish commentators—perhaps puzzled by this slip—rendered Tarshish "the sea," as if from a root meaning "to foam"; and the LXX also has this reading in one passage (Is.2.16). But Josephus (1 Ant. vi. 1) places Tarshish at Tarusa in Cilicia, and the name "Tarshish" would apply to the cataracts of the Cydnus, on which river Tarsus stands. The city was reached in ships, up the river, as late as Antony's age (Plutarch, Life of Antony), and was always an important trading place. The Jerusalem Talmud (Megilla i. 11), the Targums (as a rule), the Midrash, and Jerome (who was a Ephraimite, probably at Yavzif. [C.r.c.]

**Tarshish,** a desert-station of the Israelites between Taath and Mithcah (Num.33.27). Tarshish, one of the towns in the allotment of Benjamin (1 Jos.18.27).

**Tare'a** (1 Chr.8.5) — TAREHA.

**Tares.** Undoubtedly the τάραθος of the porallic (Mt.13.25) denotes the weed called "darnel" (Lolium temulentum). [Cocke.]

The word used by the Evangelist is an Oriental, not a gk. term. The darnel before it comes into ears looks very like wheat; hence the command that the sizenia should be left to the harvest, lest while men plucked up the tares "they should root up also the wheat with them." Dr. Stanley, however, speaks of women and children picking up from the wheat in the fields of Canaan. Tary tall green stalks, still called by the Arabs zayyin.
TARSUS

Heb.). Silver, gold, iron, tin, and lead were all in use before 1500 B.C. in Babylonia, Mattiue, and elsewhere. The gold appears, as well as the tin (used early—see LACHISH), to have come from the Caucasus, and from E. of the Caspian Sea. The Akkadians brought it very early, and a text speaks of "mingling the copper with the tin." There still are silver-mines near Tarsus, and at Gunmesh Khana, W. of Trebizond. There are iron-mines at Unieh (Oenoe) in the same region, and the Chalybes were iron miners (Hamilton, *Researches in Asia Minor*, 1842, I, pp. 169, 259, 274). Lead was also commonly found in Asia Minor and Syria. The word for "ivory" (shen-habbim), or "teeth of elephants," recalls the Tamil word hab dhab for "elephant"; but the Assyrians called it habba, and the Egyptians eb, and elephants were found wild on the Ephruses in 16th cent. B.C. The Heb. *goph* for "ape,” is the Skt. and Tamil kapi. They called the Bactrian *kapi*. It is also the Egyptian *kaft*. The A.V. rendering of *tukkiyim* as "peacocks" is due to late translations—Syr. and Arab.—and the word appears to puzzle Josephus and the LXX. translators. The bird was probably known early—perhaps before 1000 B.C.—to the Greeks, since it appears in the *Iliad*. But they called it *taos*—the Arab. *tawwus*. We might quite as well compare the Egyptian *tekh* for the "ibis." But in Tamil *toog* is the "peacock." The Black Obelisk of Shalmaneser II. (c. 810 B.C.) represents Asiatic bringing apes as tribute, and an elephant is also represented, while the king and a male elephant are shown in trade with N. India—overland to Assyria—which brought these objects, may well have been as old as Solomon’s time; and they might easily have been carried farther W. on the trade route, to the important port of Tarsus, which was a Phoenician city adorning Baal-Tars, who is also represented (on the Gk. coins bearing the legend *Metrópoléos Tarzénes*, standing on a monster, like the old gods of Syria and Assyria. There is no difficulty therefore in accepting the Jewish opinion that Tarsus was Tarshish. In *Ps.* 48:7 the ships of Tarshish are broken by the “east wind,” which—blowing down the gorges of the Taurus—caused famine and economic retteta dangerous. See also *Ps.* 72:20; Est. 1:4 (a man’s name, as in 1 Chr. 7:10, R.V.): Is. 60:9, 66:19; and Tarsus. [C.R.C.]

Tarsus, the chief town of Cilicia, "no mean city," the birthplace and early residence of the apostle Paul (Ac. 9:11, 21-39, 22:3). Even in the flourishing period of Gk. history it was a city (the *fasou* of tableon); but it was once a city.

Tartak*, a god of the Avrites (2 K. 17:31). The word has no Semitic or Arayn etymology. In Akkadian *tar* is "to judge"; *tart* (as in Turkish) would be "judgment"; and, with the personal suffix, *tart-ak* is "the judge." An Assyrian list of gods gives Tarta-han ("the chief of judgment") as a deity of the Su people in the W. The judge of the dead was Ra, the god of the abyss. The other Avite deity *Nirnaz* seems likewise to be Akkadian also: *nab* meaning "divinity," and *haz* "to judge." [C.R.C.]

Tartan (2 K. 18:17; Is. 20:1), formerly regarded as a personal name, is shown by the Assyrian inscriptions to be a title, like Rab-saris and Rab-shakeh. The tartan (in Assyr. *tartānu* or *turīānu*) was a general, or commander-in-chief, and there were two grades, "the tartan of the right" and "the tartan of the left." As one who could hold the office of eponym, giving his name to a year, he came next in order to the king. It is uncertain who held the tartan office under Solomon, and by Sennacherib to Jerusalem. See Hastings, D.B. (vol. IV. 1902), s.v. [T.G.P.]

Tatna', satrap of the province W. of the Ephruses in the time of Darius Hystaspis (Ezr. 5:3, 6:6, 13). [GOVERNOR.]

Taverns, The Three. [THREE TAVERNS.]

Taxes, the imposition of. According to the theocratic government contemplated by the law, the only payments required as of permanent obligation were the tithes, the first-fruits, the redemption-money of the first-born, and other offerings as belonging to special occasions. The payment by each Israelite of the half-shekel on the first day of the service of the tabernacle, on taking the census of the people (Ex. 30:13), does not appear to have had the character of a recurring tax, but to have been supplementary to the freewill-offerings of 25:1-7, levied for the one purpose of the construction of the sacred tent. After the return from Babylon there was an annual payment for maintaining the fabric and services of the temple; but the fact that this begins by the voluntary compact to pay one-third of a shekel (Ne. 10:32) shows that till then no such payment had been recognized as necessary. A little later the third became a half-shekel, and under the name of the daremac (Mt. 17:24) was paid by every Jew. II. The kingdom, with its centralized government and greater magnificence, involved, of course, a larger expenditure, and therefore a heavier taxation. The chief burdens appear to have been: (1) A tithe of the produce both of the soil and of live stock (1 Sam. 8:15, 17). (2) Forced military service for a month at the annual census (2 Sam. 8:12; 1 K. 22; 1 Chr. 27:1). (3) Gifts to the king (1 Sam. 10:27, 16:20, 17:18). (4) Import duties (1 K. 10:15). (5) The monopoly of certain branches of commerce (9:28, 10:28, 29, 22, 48). (6) The appropriation to the king’s use of the early crop (Am. 7:1). [MOWING.] At times, too, in the history of both kingdoms there were special burdens. A tribute of 50 shekels a head had to be paid by Menahem to the Assyrian king (2 K. 15:20), and under his successor Hoshea this assumed the form of an annual tribute (17:4).—III. Under the Persian empire the financial system which gained for Darius Hystaspis the "keeper king," involved the payment by each
TAXING

satrap of a fixed sum as the tribute due from his province. In Judaea, as in other provinces, the inhabitants had to provide in kind for the maintenance of the governor's household, besides a money-payment of 40 shekels a day (Ne. 5.14,15). In Ezr.4.13,20,7,24 we get a formal enumeration of the three great branches of the revenue. The influence of Ezra secured for the whole ecclesiastical order, from the priests down to the Nethinim, an immunity from all three (7.24); but the burden pressed heavily on the people generally,—IV. Under the Egyptian and Syrian kings the taxation of the Jews had become yet heavier. The taxes were put up to auction and 'farmed.' The contract sum for those of Phoenicia, Judaea, Samaria, had been estimated at about 8,000 talents. An unscrupulous adventurer would bid double that sum, and then go down to the province, and by violence and cruelty, like that of the Syrian collector, exact a large margin of profit,—V. Under the Roman Government many taxes were paid in Judaea, but it appears doubtful whether the system in vogue was that of the old publicani under the republic, referred to above under the 'farming system.' [PUBLICAN.] For Julius Caesar introduced the system for Judaea.

Taxing: Two distinct taxes, or registrations (ἀναγραφαι), are mentioned in N.T., each of them by St. Luke. (1) The first (Lk. 2:1) is stated to have been the result of an edict of the emperor Augustus that all the world (i.e. the Roman empire) should be taxed. The date is immediately before the birth of Jesus—that is, according to the commonly received chronology, in 4 B.C. (2) The second taxing (Ac.5.37) is associated by St. Luke with the revolt of Judas of Galilee. This taxing took place in 6 or 7 A.D. It was conducted by P. Sulpicius Quirinus, who was at that time legatus of Syria (Josephus, 1st Antiq. i. 1, ii. 1). Taxing was a favourite occupation of the procurators, and the history of this tax is disputed. It was agreed that it was for the purpose of the Census; but as to the year, the authorities are divided. (236) Thus, though Quinctilius Varus was the legatus of Syria at the time of the enrolment, yet Quirinus may have held some office by virtue of which he undertook the census. For recent arguments in favour of this view, see Ramsay's Was Christ born at Bethlehem? See also Plummer, Internal Crit. Comm. (on Lk. 2), and in Hastings, D.B. iv. 183; w. Gardner in Encycl. Bibl. iv. 1994.

Tear-bottle. The phrase, 'Put my tear into thy bottle,' occurs in Ps.56.8(9), and expresses, in apothecary way, the prayer that God will bear in mind the Psalmist's sorrow. The parallel phrase, 'Are they not in thy book,' emphasizes the figurative character of both clauses. This interpretation of the expression 'truncatory' to small bottles is very doubtful, though at one time generally accepted, and probably due to the passage cited. [W.O.E.]

Tebah, eldest of the sons of Nahor, by his concubine Kehmah (Gen. 22.24).

Teballah, third son of Hoshah of the children of Merari (1Chr.26.11).

Tebeth. The month of Nisan (N.T. 31).

Tehaphnehes (Ezk.30.18) — TAIPHANIES.

Tehinnah', the father or founder of Iriannah, and son of Eshton (1Chr.4.12).

Teel-tree. [OAK; TURPENTINE-TREE.]

Teko'a or Tekoa, a town in the tribe of Judah (2Chr.11.6). Jerome says that Tekoa was 6 Roman miles from Bethlehem, and that as he wrote he had that village daily before his eyes. In the Onomasticon he represents Tekoa as 9 miles only from Jerusalem; but elsewhere he agrees with Eusebius in making the distance 12 miles. It is not enumerated in the Heb. catalogue of towns in Judah (Jos.15.50), but is inserted in that passage by the scribe of the "wise woman" whom Joab employed to effect a reconciliation between David and Absalom from this place (2Sam.14.2). Ira, the son of Ikkos, one of David's Thirty, was called the "Tekoite" (2Sam.23.26). It was one of the places which Rehoboam fortified (2Chr.11.6). It is on the road, and a few miles from the town of Judah. Some of the people from Tekoa took part in building the walls of Jerusalem, after the return from the Captivity (Neh.3.5,27). In Je.6.1 the prophet exclaims, 'Blow the trumpet in Tekoa and set up a sign of fire in Beth-haccerem.' Amos was a herdsman of Tekoa (Am.1.1). It is now the ruined village Iepo'a,
overlooking from a high ridge the desert of Judah (see 1 Mac. 9:33), 5 miles S. of Bethlehem, and 10 miles S. of Jerusalem. Bethlehem, and even Bethel, are visible thence. Ashur, a grandson of Judah (1 Chr. 2:24, 4, 5), was the "father" of the city of Tekoa (C.R.C.).

Tekoite The. IRA, one of David's warriors, is thus designated (2 Sam. 23:26; 1 Chr. 11:28, 27, 9). [TEKOAH.] The Tekoites repaired two parts of the wall of Jerusalem (Ne. 3, 3, 27).

Tel-Abib', a city of Babylonia where Jewish exiles had settled, beside the river (or canal) named Chebar (Ezk. 3:15). As the scene of Ezekiel's labours seems to have been Babylonia, not Upper Mesopotamia, it is impossible to locate it on the Khabir, which, moreover, for philological reasons, cannot be the Chebar. The meaning of Tel-abib is generally regarded as being "hill of corn," but Fried. Delitzsch suggests that it may be for "the hill of the flood." The site is unknown. [CHEBAR.]

Telalah, father of Taham, 1 (1 Chr. 7:25).

Telaim', the place at which Saul numbered his forces before his attack on Amalek (1 Sam. 15:4 only). It may be identical with TELIM. On the other hand, the reading of the LXX in xiv. 11, which agrees with that of the Vulg., and is followed (6 Ant. vii. 2) by Josephus.

Telassar' (Assar's Hill) occurs in 2 K. 19: 12 (A.V. Thela'ar') and Is. 37:12 as a city inhabited by "the children of Eden." It is apparently the Til-asuri or Til-asurri of the Assyrian inscriptions, which, according to Tiglath-pileser, was a renowned temple, of Babylonian origin, dedicated to the sea-god, Esar-haddon, who conquered the place, seems to say that the people of Mîhrânu called it Piłânu, and informs us that its inhabitants were people of Barnaku or Parnaku. Parnaku apparently lay near Mitanni (Upper Mesopotamia), and may, therefore, be the Biblical site, as it is situated with Calah, and Reseph. As Asari was one of the names of Merodach, the form Telassar agrees with the statement made by Tiglath-pileser. It has still to be identified." [T.G.P.]

Telem, a doorkeeper of the temple (Ezr. 8:19); perhaps the same as TALMON.

Tem, one of the cities in the extreme S. of Judah (Jos. 15:24). It occurs between Ziph and Bealoth, but has not been identified.

Tel-harsa' or Tel-haresha', probably "hill of the wood," is a Babylonian town or village mentioned in Ezr. 2:59 and Ne. 7:61. It was probably in the low country near the sea, in the neighbourhood of Tel-melah and Cherub, but is as yet unidentified. In 1 Esd. 5:36 it is called Thelersas.

Tel-melah is mentioned with Tel-harsa and Cherub in Ezr. 2:59 and Ne. 7:61. It means "hill of the sower" (?', or "of salt") and is not yet identified. [T.G.P.]

Tema', the ninth son of Ishmael (Gen. 25:15; 1 Chr. 1:30); whence the tribe called after him (Job 6:19; Je. 25:23), and also the land occupied by this tribe (Is. 21:13, 14). The name is identified with Taina, a small town on the confines of Syria, on the road of the Damascus pilgrim-caravan. It is near Dumat el Jeddel. [DEMRAH.]

Teman.—1. A son of Eliphaz, son of Esau by Adah (Gen. 36:11, 15, 42; 1 Chr. 1:36, 53).—2. A country. The Heb. signifies "south" (see Job 9:9; Is. 43:6); and it is probable that the land of Teman was S. of Edom. It is mentioned with Edom and with Dedan (1 Chr. 5:13, 27). Eusebius and Jerome mention Teman as a town in their day distant 15 miles from Petra, and a Roman post. The gentilic noun of Teman is tēmānu (Job 2:11; 22:1), and Eliphaz the Temanite was one of the wise men of Edom. In Gen. 36:34 the land of Temani is mentioned.

Temeni', son of Ashur, the father of Tekoa, by his wife Naarah (1 Chr. 4:6).
TEMPLE and TEMPLE

still remains as an original conception. It is probably more easy to say what nations cannot have influenced the design and construction of the tabernacle. Asia Minor, Persia, Greece, and Rome may be eliminated; and there remain for consideration only Assyria, Babylonia, Egypt, and Phoenicia. In Babylonia and Assyria the early temples, or ziggurats, were elevated to a height of from 100 to 150 ft. above the plain, by erecting vast cubes of brickwork upon each other, in diminishing proportions, until a species of stepped pyramid was constructed, with the little temple on the summit. No resemblance can be traced between these masses of brickwork and the tabernacle and temple of Solomon and its courts. See illustration under BAAL, TOWER or. In Egypt there are few temples in existence dating before the 18th and 19th dynasties, except that of Gizeh, near to the Sphinx and Second Pyramid. This temple is in size between the tabernacle and king Solomon's temple, and in shape resembles the temple of Herod. It is built of granite, and is T-shaped—square to the plan and rectangular in the cross-section. The head of the T to E, the entrance of the temple being in the centre of the E. face, the end of the stem of the T to W. In its orientation, and in the formation of its doorway, this temple is similar to the tabernacle. In size it is about 77 ft. long, 33 ft. wide, and is measured by the Egyptian foot of 1 3/4 in.—an early standard found, wherever ancient civilized races have built in the past. The dimensions therefore in units are, 70 x 30 cubits, with a porch of 70 x 20 cubits. There is little in this temple that can be said to foreshadow the plan of the tabernacle. The splendid temples of the 18th and 19th dynasties, of the great Theban period, are wanting in the "precise ornamentation and careful masonry of the old kingdom, the buildings of the new race are of the past to guide us as to the general design of the tabernacle, and the assumption seems to lead us on the same path as temples go, an original design. When we come to the temple of Solomon, however—following the general plan of the tabernacle, double in all its dimensions—we shall find that it is in all probability influenced in its details by the master-mind of the chief artificer (Hiram of Tyre) and his workmen, who were sent by Hiram, king of Tyre, to assist king Solomon in carrying out the work. And we may be certain that in all its architectural details, excepting the ruling dimensions, it was Phoenician or Tyrian. The Phoenicians were expert builders; the people of Tyre had magnificent temples to Hercules; and Herodotus says of them (ii. 44) that at the temple of Hercules, at Tyre, there were two pillars, one of gold and the other of emeralds shining by night.—The Temples of the Jews. The accounts of the measurements of the temples, successively erected to the W. of the threshing-floor of Araunah the Jebusite, present difficulties when taken singly; but when compared they form the general plan of temples. The general plan of these temples vanish; and it is evident that the Holy of Holies and the altar remained in the same position from the time of king Solomon until the final destruction of the temple of king Herod by Titus. The continuity of the scheme can be shown as follows:—In the temple of Solomon, the centre of the plan was two squares, side by side, lying E. and W., of 50 cubits a side. In the centre of the eastern square was the centre of the altar; in the centre of the western square was the centre of the vail of the tabernacle (assuming a porch of 5 cubits to the tabernacle), the front of the porch being flush with the line of division of the two squares. The temple of Solomon was double of the tabernacle in all its ground portions; and as it had a porch of 10 cubits, the centre of the vail in one square of 100 cubits would be 100 cubits distant from the centre of the altar in the other square, the front of the porch being 50 cubits distant from the centre of the altar. The temple thought out by Ezekiel had three squares of 100 cubits each, lying E. and W.; but, considering for the present only the two western squares, we again have 100 cubits between the centre of the altar and the centre of the vail. The temple of Zerubbabel was, no doubt, restored in a great measure on the plan of Ezekiel. The temple of Herod followed suit. According to the Mishna, the distance from the centre of the altar to the centre of the vail was 100 cubits, as follows: In cubits—half altar 16, altar to porch 22, thickness of porch 6, width of porch 11, width of temple wall 5, length of holy place 40; total 100 cubits. With this dimension fixed, the records concerning the temples can be understood with greater facility. —Solomon's Temple. The idea of a permanent house of God (instead of a tent or tabernacle) originated with king David; but as he was a man of war, and had shed blood, his work in this respect was limited to furnishing the plans and preparing the building materials—the actual construction of the temple being entrusted by the Almighty to king Solomon (2Sam.7:5-13; 1K.5:3 ; 1 Chr.28:6). Detailed measurements of the building are given (1 K.6:2 and 2 Chr.2:.) but
Plan of MOUNT MORIAH

Contours show the original rock surface.
there is not yet sufficient information to draw up a correct restoration of the plan and elevation of the temple buildings, in the absence of any knowledge of similar buildings elsewhere. By doubling the dimensions of the tabernacle and its courts, we arrive at the first dimension of 100 cubits from the centre of the altar to the centre of the vail; and these two centres are the centres of two contiguous squares of 100 cubits a side, lying E. and W. Thus we arrive at the dimensions of the courts of Solomon's temple, the front of the porch of the temple being flush with the line joining the two squares. The Holy of Holies, Holy Place, and porch, taken together, were 70 cubits in length and 20 in width; and the outer wall of the temple on N., and S., and W. was from 10 to 16 cubits thick, according to various opinions, with three tiers of little chambers in the thickness of the wall, 5 cubits wide in the lower tier and 7 wide in the upper tier. What purpose these little chambers served we have no information. The temple measured about 80 cubits from E. to W., and from 50 to 60 cubits from N. to S., according to various estimates.—Heights. The height is given (1K.6.2) as 30 cubits, and the height of the porch (1Ch.3.1) 120 cubits. This latter height of 120 cubits for a porch of 11 cubits wide seems to be excessive; and some commentators consider this number to be corrupt, and suggest 20 or 30 cubits in lieu; but both Josephus (8 Ant. iii.) and the Talmud assert that not only the porch, but also the whole body of the temple, was 120 cubits in height.—Internal Supports. With an interior width of 20 cubits (about 34 ft.), some supports would be required for the roof; and it has been suggested by Mr. Fergusson that there were two rows of seven supports, one on each side, at 6 cubits from the wall, leaving a central aisle 8 cubits wide; thus dividing the

length of the Holy Place into bays of about 8 cubits each. In the Holy of Holies, the spacing would be something less. Of any upper chamber above the Holy Place there is no mention; but if the account of Josephus is correct, there is much space that was not occupied by the holy places.—Pillars. There is a considerable difference of opinion as to whether the pillars Jachin and Boaz, at the porch of the temple, were attached to the porch; or were detached, and in front of it (1K.7.15). It is stated, however (2Ch.3.17), that these two pillars were reared up before the temple, one on the right hand and the other on the left. They were 12 cubits in circumference and 18 cubits in height, with capitals 5 cubits in height, and with, apparently (1K.7.16), an entablature 4 cubits high joining the two capitals: giving altogether a height of 27 cubits.—Inner Court. The enclosure of the court of the temple (1K.6.36), 200 cubits in length and 100 cubits in breadth, was made of three rows of hewn stone, and a row of cedar beams, probably 10 cubits in height, double of the height of the curtain enclosing the tabernacle. There is no mention of any gate to this enclosure of the inner court; and as the term 'inner court' is used, it may be assumed that there was an outer court, to which the Gates Shallecheth and Parbar belonged.—Position of Solomon's Temple. We have certain data as to the position. First, we have the outer wall of Herod's temple and courts, still in existence; the interior of which is called the Noble Sanctuary, with the Qubbet es-Sakhrah erected on the highest point. In this space, about 2,420 level, the altar was the hill. by 200 cubits, we may be certain that the temple was situated; and this space is further circumscribed by a scar of rock and ditch cut in the rock E. of the Golden Gate, giving a four-sided figure, about 900 by 1,000 ft., i.e., nearly square. Within this is part of the eastern hill of Jerusalem, usually called Mount Moriah; the ridge of which runs from N.W. to S.E. The only portion of the ridge suitable for the temple—with its courts at least 200 cubits from E. to W., and space for worshippers to the E.—is upon the comparatively flat summit near where the Qubbet es-Sakhrah stands. Moreover, we know (2Sam.24.18) that the altar was at first a cave near the Aramah the Jebusite. Now, threshing-floors in Palestine are placed on high exposed positions, where the wind will blow away the chaff; so that the threshing-floor would have stood without doubt on some flat and elevated space on the ridge. Again, we are told that Azubah and his sons hid themselves (1Ch.21.20), so there was probably a cave near where the Aramah is common in Palestine, for the storage of wheat. We have then here the cave of the Qubbet es-Sakhrah, with the flat space on the S. as the threshing-floor; and we may be sure of the location of the temple to within a few feet.—The Causeway and the Gates Shallecheth and Parbar. Of these gates there is only one mentioned (1Ch.26.16) in connexion with the guarding of the gates of the outer court. They are all still in existence. The causeway is on the 2,420 level, giving a passage through the Bab es-Silsileh (at Wilson's Arch)—no doubt the Gate Shallecheth. The Gate Parbar is probably one of the suburban gates still piercing the old
walls, called respectively Barclay's Gate and Warren's Gate. The store-house (Asaphim) is still unknown. — Temple of Ezekiel. The vision of the temple and courts were seen by the prophet Ezekiel, while residing on the banks of the Chebar, in Babylonia, in the 25th year of the Captivity (574 B.C.), is entirely in keeping with the development of Solomon's temple, and its plan was probably followed in the erection of the temple of Zerubbabel. — Temple of Zerubbabel. What little is known of this temple, shows that it was in keeping with the plan of Solomon's temple and the vision of Ezekiel (Ezr. 6.3). Height 60 cubits, breadth 60 cubits, with three rows of great stones, and a row of great timber, as in Solomon's temple (1 K. 6.36). — Temple of Herod. For our knowledge of the temple of Herod we are indebted principally to Josephus (Antiquities and Wars) and to the Talmud (Tract, Measurements of the Temple, Mishna). The N.T. contributes very little to our topographical knowledge. The temple of Herod and its magnificent, and together were called the "inner courts" of the temple, and none but Jews were permitted to enter them. The two eastern courts were consecrated to the use of the priests only, and the buildings around them were so arranged that the inner portions were on the consecrated ground and the outer portions were common to all Jews; so that priests and people would meet for many purposes in the same building. Beyond these buildings was a raised space, 6 cubits higher than the level of the outer courts. It was called the hil (soreq), to cubic wide, with a reticulated wall enclosing it, 2 cubits in height, on which were inscribed in Gk. notices forbidding Gentiles to proceed further. One of these inscriptions has been recovered, and is now in the Museum of the Palestine Exploration Fund. King Herod undertook the rebuilding of the temple and its courts; but he was obliged to intrust all work within the inner courts to the priests, as Gentiles were not permitted to enter. He very much enlarged the outer courts, making the whole space double the area which it had in the time of Solomon. It is said that the walls have been increased to a perimeter of 6 furlongs; and this would accord with the indications of the existing remains. In thus increasing the area, the only space available was towards the S., where the buildings connected with Solomon's palace are said to have stood. The whole area was surrounded by a wall of magnificent masonry, of great height; which remains to the present day as the finest piece of masonry of ancient times left to us. The S. wall is 922 ft. in length, and in some places 200 ft. in height, and the E. wall extends to the Golden Gate, a distance of 1,100 ft. At the S.E. angle, the old wall of the palace of Solomon was taken in, and formed part of the outer wall. At the S.W. angle the work is all Herodian, and had to be built across the Tyropoeon Valley to complete the rectangle required. The outer wall (as it stands at present) is over 140 ft. high, at the S.E. and S.W. angles, from the floor of the court to the floor-level of the Noble Sanctuary, 2,420 ft. The courses of stones are from 3 ft. 6 in. to 4 ft. in height, and some of them are over 30 ft. in length, and weigh nearly 90 tons. They appear to have been quarried in the royal caverns, under Bezetha, and to have been brought to the Noble Sanctuary by a rock-cut passage under the Antonia, the bed of the quarry being higher than the level of the courts of the temple. — The filling up of the space beneath the outer courts and the rocks. This filling has taken place at different epochs. The most ancient filling is probably that from the S.E. angle to the Triple Gate on the S., and to the Golden Gate on the E., probably executed by king Solomon as part of the Millo. At the Triple Gate and Golden Gate the levels of the sills near the rock (2,380 ft.) are about 40 ft. below the level of the outer courts (2,420 ft.); but at the S.E. angle the rock (2,280 ft.) is about 140 ft. below the level of the courts. The portion above 2,380 ft. is occupied by Solomon's stables (vaults); but below there appears to be solid masonry. In it is built the passage for the blood, the floor of which is at a level of 2,347 ft., near the rock. On the W. side there is, on an average, 50 ft. of

TEMPLE

filling from the rock to the level of the courts, which is either solid or vaulted. Nothing is known of this, except where it is pierced by the suburban gates, or by tanks which have been explored. At the S.W. angle is the portion of the wall added by king Herod. Here there is about 150 ft. of filling, 110 ft. of which appears to be solid, and 20 ft. of which is occupied by late Roman and Saracenic buildings. On the E. side, to the N., beyond the limits of the temple, there is a very extensive filling up across the valley, near the Birket Israfil, of about 140 ft., a great portion of which appears to be solid. In the centre of the courts, where the rock crops up, a number of tanks for holding water have been discovered and explored.—The outer gates and porticoes. The outer wall of the courts was adorned by cloisters or porticoes, with flat roofs, on which the soldiers keeping watch over the temple could walk. On three sides—E., W., and N.—these porticoes were continued, N. by the Portico of the Prophets (Sebarim), from which side there was a great portico, or Stoa Basilica, about 60 cubits wide. Thus the interior space of the courts would be about 500 cubits a side, as stated in the Talmud. According to Josephus, there were eight gates to the outer courts of the temple; on the W. four. The first was the Old Gate, which led to the causeway. Shallecheth, which still exists as Bâb es-Silsileh, going over Wilson's Arch to the king's palace, on the level of the outer courts, 2,420 ft. The two suburban gates S. of the causeway are those of Robinson's Arch and Barclay's Gateway. At Robinson's Arch, the Stoa Basilica opened out on steps over an arch of 40 ft. span, leading down to the suburbs. At Barclay's Gateway steps went down in the courts of the temple to a gate, probably Pardar, leading to the marble pavement of the street which ran along the western wall at level 2,366. N. of the causeway is Warren's Gate, which is the gate leading to the "other court," and which led to the Court of the Gentiles, as stated by Josephus in the Talmud. The level of the suburbs is reached by a flight of steps inside the temple courts. On the S. side were the two Huldah gates of the Mishna (Middoth i. 3). These are represented by the two ancient gates now existing, equidistant from the corners of the wall and from each other. One to the W., called the Double Gate, has a double passage, with a total width of 40 ft.; the roof, supported by great columns, being flat domes, highly ornamented with Herodian tracery. The other, to the E., is now a triple gate, altered probably in the time of Justinian; but there are still three arches. The middle arch was a double gate and passage, similar to that on the E. Both these gates and passages led upwards as tunnels under the Stoa Basilica, to a distance of 190 ft., where they opened on the Court of the Gentiles. On the E. side there was but one gate, at the extreme N.E. corner of the Court of the Gentiles, called in the Talmud the Gate Shushan, through which could be seen the high-priest, who burned the heifer, going out to mount Olivet. This gate is mentioned by the prophet Ezekiel (44:2) as the gate that shall be shut, that no man may enter in by it, "It is for the Prince." It is now represented by the Golden Gate; and, in accordance with Moslem tradition, it is still walled up, probably owing to the words of Ezekiel. The portion of the gate which is visible to the E. is said to be Christian of the 4th to 5th cent.; but the substructures are very ancient (pre-Herodian), probably dating back to the Jewish kings or king Solomon. In the N. was the Gate Tadi, leading direct from the Court of the Priests to the outside.—Gates of the Court of the Priests. There were seven gates on the N. three, on the S. three, and on the E. one—the Gate Nicanor, leading to the Court of the Women. Of the three S. gates we have now no record, but two of the N. gates can be identified. The westerly one was the scarped entrance of the house Mokad (Mīqqei), whence the priests descended to the bath-room for washing purposes, and thence by a tunnel passed out of the temple through the gate Tadi. This bath-room leading to Tadi is to be found in Vault No. III. The easterly gate was called Nitsots (Netzva), from which the Hinnom Valley (the Valley of Hinnom) is named, and so the "desolate" (Gen. xlix. 24); so that the exit would be by Tadi. This gate or chamber lies over the Sakhrah, or sacred rock; and the passage appears to have been through the cave and so down into the tunnel (I.) leading to Tadi. Both these gates were guarded by the priests, because they led from the outer gates to the Temple. The other gate guarded by the priests was that on the southern side (Abťinâ), where the water duct came in; probably because the water duct was a possible line of entry. Along the N. side of the outer court, in line with the N. side of the Golden Gate, was a scarped rock, and a ditch cut in the rock, separating the temple courts from the Antonia. In this scarped rock was the Gate Tadi, the position of which can now be traced. This gate appears only to have been used for the priests to retire by unobserved. The temple itself was 100 cubits in length and 100 in breadth at the porch, but 70 cubits in breadth W. of the porch; the porch was 22 cubits wide, being 40 cubits deep, and was 120 cubits. In the temple of Herod, the porch was double the width of the original porch of king Solomon; therefore it encroached 11 cubits into the altar square. On the E. side also the altar square lost 11 cubits, owing to the Gate Nicanor and its gallery being accounted as part of the Court of the Women. Thus there were only 76 cubits (instead of 100) between the porch and the Court of the Women, as follows: From the porch to the altar 22, width of altar 32, Court of the Priests 11, Court of Israel 11; total 76 cubits. To the E. of the Court of Israel, the spot allotted for the assemblage of the priests (called the Court of the Women), originally 100 cubits sq., was now increased to 135 cubits sq. This court, though first appearing in the vision of the prophet Ezekiel, was probably constructed in the time of king Solomon (see 2 Chr. 29:4; 2 Esdras 10:9; Josephus, Ant. v. 3).—Solomon's Porch (Ac. 3:1-11) was the eastern cloister, or portico, of the Court of the Gentiles, running from the Golden Gate to the S.E. angle, and so named because it was the first cloister raised up in the time of Solomon (5 Wars v. 1).—The Beautiful Gate was the Gate Nicanor, leading from the Court of the Women to the Court of Israel
and the Priests (5 Wars v. 3; 6 v. 3). Joseph at the time that the nine gates closing the two Courts of the Priests and those of the women were 30 cubits in height, and covered with gold and silver, but that the one gate which opened on the E. over against the gate of (and without) the holy house (i.e. leading into the Court of the Priests from the Court of the Women) greatly excelled in magnificence than the other nine gates, and was of Corinthian brass in height 50 cubits, and adorned after a most costly manner, as having much richer and thicker plates of gold and silver upon them than the others. [C.W.]

Temptation. [SATAN; FALL, THE.]

Temptation of Christ. (1) The Records. The brevity of Satan corresponds to his method throughout, and may be merely the result of condensation. It is therefore quite uncritical to employ it to dis女排 all the contents of the other Evangelists. St. John's omission occurred when the narratives of SS. Matthew and Luke must surely have become complete (cf. Bovon, De fide xiii 234). (2) The Antecedents. All temptation must be interpreted in relation to the previous experience. The records concur in placing Christ's immediately after His baptism. Spiritually, this means that the human nature is strengthened by the Spirit, before being sent to the test. Temporally, in Essen, that the conscious entrance from Messiah's office determined its form. Most significantly also this sequence is affirmed by all the records to be divinely determined: Mk.1.12 (''the Spirit driveth Him forth,''' εκβάλειν); Mt.4.1 (''led up of the Spirit,''' ἀναβησθήνην); Lu.4.1 (''was led by the Spirit,'' ἀναβησθη). (3) The Actual Temptation. It is a widespread human experience that self-absorption in a great purpose will render the individual superior to, or unconscious of, physical needs, over an interval determined by the intensity of that self-absorption. The forty days may signify the actual period, or, generally, a considerable time. For the agent of Satan cf. 2 Thes.2.7; 2 Pet.2.17; Eph.4.27. (i) The first temptation. Consciousness of the promise of more than human power, the suggestion is to employ it for Himself. Now, Jesus had done no miracle as yet. If He had yielded to this temptation, would He not have abused and perverted a trust? The sublimity of His decision consists in ''declining to use for His own convenience what He regards as a sacred deposit committed to Him for the good of others'' (Becq Homo). Jesus resigns Himself, with absolute submission, to the Heavenly Father's care. The basis of this confidence is expressed in words from Deut.8.3. (ii) A second temptation follows whose essence is subtlety consists in its being founded upon this very truth. It is further fortified by a scriptural appeal. If, in this confidence, Jesus would cast Himself from the temple heights, and descend, borne on angels' wings, into the midst of the assembled worshippers, would He not give the noblest demonstration of His faith while utilizing His entrusted power, not on His own behalf, but expressly for the multitudes for whose education it was given Him? This temptation exaggerated a truth. Confidence in the Father's care must not be pushed to extremes by presumption or self-will. Christ's scriptural answer is a sublime illustration of His lofty life. The Father's promise, ''If again, Thou shalt not tempt the Lord thy God;'' (iii) The third temptation. The last assault, for the moment, on Jesus' self-mastery consists in a vision of universal empire secured on condition of employing unspiritual means. This vision of the kingdoms of the world and the glory of them, was that, it is said, in His early stage the universality of the Gospel was before the mind of Jesus Christ (cf. Rev.11.15). This temptation is to secure that ascendency, but by unspiritual means (cf. Mk.8.33). (4) The historic character of Christ's temptation is morally certain. (i) Contemporary thought and action have ascribed such ideas to Him. The views presented by the Tantara lay closer to the sentiments of the Jewish people than the ethical ideal of the Messiah existing in the mind of Jesus'' (Schmid, Bibl. Th., N.T. 50). (ii) These conceptions are in perfect harmony with the teaching of Jesus, and with His character. (iii) The singular meekness, sublimity, and self-mastery exemplified by the temptation is the strongest moral evidence to its reality. These three considerations point to the impossibility of its having been invented. Accordingly even the extremes of criticism acknowledge that this narrative must have been derived from Christ Himself (cf. Holtzmann, Life of J. 143; Wendt, Teaching of J. 97). (5) Its Objective Character. The essentials of the narrative are neither the exceeding high mountain from which were rendered visible all the kingdoms of the world and the glory of them nor the rapid moment of time in which this was beheld. It is obvious that such a vision must have received at least a mental amplification. But the narrative indisputably declares that the entire experience was not a mere self-created train of thought, but objectively presented, and that from without. The personality of the Tempter was not a matter of doubt in the precepts of N.T. thought (cf. Mt.8.13, 17; Heb.2.18, 4.15). (7) The Bearing of Christ's Temptation on His Sinlessness. (i) The temptations, rising far above the level at which temptation assumes with men, and meeting Him on these raised and unearthly levels, in relation to His selfless devotion to the loftiest interests of mankind, are in themselves a significant revelation of character. Moreover if, as is universally recognized, these inward experiences must have been related by Christ Himself, they affirm a serene unqualified consciousness of victory which would be inconsistent with sincerity in sinful human beings, but is perfectly consistent with the self-consciousness which could say ''the prince of this world cometh and hath nothing in Me''; nothing, that is, which He can call his own. And further, the moral decisions of Jesus in temptation are generally confessed to manifest a perfect judgment. Indeed we are not aware that our Lord's decisions in temptation have been adversely criticized (cf. Heb.4.15). (ii)
TEN COMMANDMENTS

Apostolic testimony declares that this is the Incarnate One. *Incarnation* is an assumption of the constituent elements of humanity by a Person Who is divine. He took into permanent unity with Himself the faculties common to man—body and mind, etc.—so that His divine Self became the centre of these human elements, which had no separate human personality of their own. From this must follow that it was impossible for Jesus to sin. It was not impossible that He should be tried and tempted, and that His human faculties should feel the force of the temptation, as it felt all the natural and sinless longings inseparable from human nature. What was impossible, by the very constitution of His being, was that His human will should yield. The truth of this appears irresistibly if we attempt to realize the existence of sinfulness in the humanity inseparably united with God. Of course He could have sinned, if He had willed; but the thing impossible was not the cost of the evil:—

**TEN COMMANDMENTS**

4:13, 10.4 (Heb.), also called the "testimony" (Ex. 25.16,16.34,31; 2 K.11.12), and the "covenant" (Deut.9.9), was promulgated, according to ancient Jewish tradition on mount Horeb amid thunders and lightnings, Moses alone going up to receive the Revelation. Some critics describe the ten commandments as the prophecies of the wilderness to prophetic times, on the ground that they presuppose a settled agricultural life, and that they prohibit idolatry in terms which were unheard of in earlier days. It may be answered that the Israelites had lived an agricultural life in Goshen, and that the sad lapse into idolatry is characteristic of the ex-slaving familiar in the experience of nations or of individuals. The decline of many civilizations may be adduced to support the evidence of Judges and 1,2 Samuel as to the declension of the people from earlier standards. We have only fragmentary histories of the prophets Elijah and Elisha. It is impossible to say whether or not they did ordain, c. 2, but the fidelity of the 7,000 (!K.19.18) suggests knowledge of some such prohibition. Following Goethe, *Zwei wichtige bisher unerorterte Fragen*, 1773 A.D., some critics discover an earlier ten words, referred to in Ex. 34.28 and embedded in rev. 10-26: (1) Thou shalt worship no other gods. (2) Thou shalt make thee no molten gods. (3) The Feast of Unleavened Bread shalt thou keep. (4) Every firstling is Mine. (5) Thou shalt observe the Feast of Weeks. (6) And the feast of ingathering at the year’s end. (7) Thou shalt not offer the blood of My sacrifice with leaven. (8) The fat of My feast shall not remain upon thee. (9) Thou shalt not make thee a house in which the Lord shall bring to the house of Jehovah, thy God. (10) Thou shalt not see the kid in its mother’s milk. This is really an arbitrary selection from a set of 12 precepts, and the mixture of moral precepts with directions concerning the ritual of outward worship by no means proves that such a code belongs to an earlier stage of national religion than that of Ex.20. Careful comparison, however, of the two versions of Ex.20 and Deut.5 reveals the fact that additions have been made to the earlier form. Thus in Ex. the reason given for keeping the sabbath (C.4) is that Jehovah was there in six days, Ex.20; in Deut. it is said that the slave as well as his master needs rest. In C.5 parents are to be honoured, according to Ex. "that thy days may be long," according to Deut. "as the Lord thy God commanded thee, that it may go well with thee." In C. 10 Ex. puts first "Thy neighbour’s house," in Deut. his wife, woman, and nearest kinsman; or depriving it of the spiritual force which renders imputation possible. Among modern literature on Christ’s Temptation see the admirable chapter in *Ecce Homo*: Bovon, *Theologie du N.T.* i. pp. 233-245; Latham, *Pastor Pastorum*; Hall, *Christ’s Temptation and Ours*; Westcott, *Introduct. Study of the Gospels*; Church. *Qtty. Rev.* "Our Lord’s Human Example," vol. xvi. No. 32; Knight, *Hulsean Lectures* (1907); Weston, *The One Christ* (ch. viii.), "The Christ and Evil Spirits," (1907); W. H. Mill, Five Sermons on the Temptation (1844). [W.1.s.s.]

**Ten Commandments.** The law of the "ten words" (Decalogue) (Ex.34.28; Deut. 56
shall not steal. 9. Thou shalt not bear false witness against thy neighbour. (10) Thou shalt not covet thy neighbour's house; (then wife, slaves, cattle, and the possession) This division of the Decalogue into two tables is the scheme known to Philo and Josephus. The R.C. and Lutheran Churches (differing herein from the Eastern and the Anglican) combine CC. 1, 2 and subdivide 10. In the LXX, the order of CC. 6 and 7 is reversed to bring together two Commandments which bear on the family, and this explains the order Mk.10.19, Ro. 13.9. The most important feature of this code is its combination of religion and morality. The law of piety teaches the sovereignty and spirituality of God, the law of probity and duty inculcates an austere code of morals which condemns criminality in word and thought as well as in act. Nothing more clearly shows the inspiration of such teaching wherein Moses and the prophets laid the foundations, deep and lasting, for a system of Christian ethics. Among duties to God, which carry with them no corresponding rights, in the first table comes duty to parents, who stand to young children in the same relation to God, pitting their life of the family. This is an interesting point of contact with the teaching of the Lord's Prayer, in which duty to an earthly father is made the model of duty to our heavenly Father. Christ fully recognized the divine authority of the Decalogue (Mt.5.17) at the same time that He confirmed the efficacy of an idea by condensing the law into the precepts to love God and to love our neighbour (22.36-40). His method of interpretation, however, immeasurably widened their range. C. 1 is to be kept by loving God with all thy heart (22.37). C. 2: worship is to be offered in spirit and in truth (Jn.4.24). C. 6, 7: anger is forbidden with murder and lust with adultery (Mt.5.22, 28). Similar veneration is expressed in the Ep. of St. Paul for the decalogue. It has fulfilled its purpose in bringing conviction of sin (Ro.3.20). It must always hold its place in the discipline of character. But the burden which it lays on conscience away from the heart finds full peace in Christ (8.1), for the Gospel is the message of forgiveness for past transgressions and of grace to do better in the power of the Holy Ghost. [Law in O.T.] S. R. Driver, Intro. to Lit. of O.T. (1861); W. R. Harper, Amos and Hosea (1907); W. P. Paterson, art. "Decalogue," Hastings, D.B. (5 vols. 1904). For legal points cf. Wiener's Studies in Biblical Law; for homiletical purposes cf. R. W. Dale's The Ten Commandments. [A.E.B.]

**Testimony**

**Tent,** Tentmaker. [Handicrafts, (11.)] Tenth deal (Ex.28.49, etc.) = one-tenth of an ephah; i.e. = an omer. [Weights and Measures.]

Terah, the father of Abram, Nahor, and Haran, and through them the ancestor of the Israelites, Ishmaelites, Midianites, Moabites, and Ammonites (Gen.11.24-32). From the O.T. we learn that he was an idolater (Jos.24.2), that he dwelt in Ur of the Chaldees (Gen.11.28), and that in his old age he migrated with Abram, Sara, and Lot to Egypt, where he died at the age of 205 years (11.31, 32). In Jewish and Arabic traditions Terah the idolater is turned into a maker of images, and "Ur of the Chaldees" is the original of the "furnace" into which Abram was cast (see Rashii's note on 11.28).

**Teraphim.** (found in plur.), a word of uncertain origin, denoting some object of idolatrous or superstitious regard, dating back to patriarchal times, and retained long among the Israelites. From Gen.31.34 it might be supposed that they were small objects, since they could be hidden under the camel's harness; though they might be regarded as life-size, to convey the idea of a man in bed. Laban calls them his "gods" (Gen.31.30). The R.V. preserves the word throughout untranslated, but A.V. has "images." They seem to have been household gods, like the Lat. lares and penates, though they are also associated with evil, and a graven and a molten image (Judg.17.5, 6), and they might be used for divination (Ezk.21.21[5,26]). Small figures in clay, supposed to be ancient teraphim, have been recently found in excavations in Palestine. Vincent, Canaan d'apres l'exploration recente (1902).

**Terabith.** [Turfentine-tree; O.T.]

**Terebinth.**

**Teresh,** one of the two cunums whose plot to assassinate Absaueus was discovered by Mordecai (Esth.2.21, 25). He was hanged.

**Tertius,** probably a Roman, was the amanuensis of Paul in writing the Ep. to the Romans (Ro.16.22).

"I am not a certain orator" (Ac.24.1) retained by the high-priest and Sanhedrin to accuse St. Paul at Caesarea before the Roman procurator Antonius Felix. Evidently he belonged to the class of professional advocates, and was of Italian origin. The oration of his speech is designed to conciliate the good will of the procurator, and is accordingly overcharged with flattery. There is a strange contrast between the opening clause and the brief summary of the procurator's administration given by Tacitus (Hist. v. 9).

**Testament,** or Will. Following the Vulg. and old Lat. versions, A.V. translates " testamentum," R.V. "will" (as in Heb.9.17). In the description of the blessing of the cup at the Last Supper, and in Heb.9. Elsewhere the same word is rendered "covenant," which R.V. prefers everywhere except in Heb.9.16, 17, apparently considering that the context there requires the meaning of "will." Certainly " testamentum" is the word for a will in ordinary Greek, but apparently the N.T. writers, following LXX, use it for a divine Covenant to show that this is not an agreement between two contracting parties, but a disposition made by God alone of what is strictly His own. There is therefore no valid reason for rendering it anything else but "covenant" (throughout N.T. Westcott, Epistles to the Hebrews (1889). [A.E.B.]

**Testament, Old.** [Old Testament.]

**Testimony** (Heb. ḫidūth, plur. ḫidūweth). The word occurs 61 times, and is rendered Witness in A.V. (Num.17.2, 8, 18, 2; 2Chr.24.6). The tables of the Law (in Deut.) are called "testament," Ex.20.17; and the tabernacle was the " tent of the ḫidūth" (Num.1.50, 53). In Ex.16.34, we have a note that the pot of manna was finally
TETHA

laid up "before the 'ădāh" (originally "before Jehovah," ver. 33), as was Aaron's rod (Num.17:10). The term in plur. refers to laws, and in Pent. appears to mean the tablets of the ten commandments in the ark (Ex.25:16, 36.26.33.34). The testimony given to King Josiah (2K.11.12) may have been the original tablets of the Law (see Deut.17.18). [c. c.]

Teta (θέτα) = Hatita.

Tetrarch, the dependent prince of any small district; originally ruler of the fourth province of the Persian empire (Ezr.10.21). Jerusalem (Mt.14.1), Lu.3.1.10,9.7, Ac.13:1 (popularly called "king," Mt.14.9, Mk.6.14,22;ff.; Phil. and Lysias, Lu.3:1. [h.s.]

Thaddaeus. [Judas of James.]

Tha'hash, son of Nahor by his concubine Re Mahi (Gen.22.24).

Tha'mah, a family of Nethinim who returned, and Zerubbabel (Ezr.2.53).

Tha'mar (Mt.1.3)= Tamar, 1.

Tham'na, one of the cities of Judea fortified by Bacchides (1Mac.9.50). It is noticed between Bethel and Pharathon, and is probably Thamna (3 Wars iii. 5), the chief town of a district of Judea. Now Tibebe, a ruin in the valley of the Roman tombs, c. 8 miles W.N.W. of Lydda. [c.r.c.]

Tha'na (Lu.3.34)= Terah.

Tha'ra (Est.Apop.12.1)= Teresh.

Tharshish.—1. (1K.10.22,22.48.) The least accurate term of Tarsus was Tyre, E E Acomeanea of Billian (1Chr.7.10 only).

Tha'ssi, the surname of Simon, son of Mattathias (1Mac.2.3). It perhaps means "the zealous," but the derivation is uncertain. [C.G.]

Theatrical. The Gk. term denotes both the place where dramatic performances are exhibited, and the scene or spectacle witnessed there. It occurs in the first or local sense in Ac.19.29. It was in the theatre at Caesarea that Herod Agrippa I. gave audience to the Tyrian deputies, and was stricken with death for his impiety (Ac.12.20-23; cf. Josephus, 18 Ant. viii. 2). The other sense of the term occurred in 1Cor.15.29 where A.V. has made a spectacle (βαραποβ ἐφερετομα) unto the world." (Tyndale, Cranmer, and the Geneva version, gazing-stock.)

Thebes, the greatest city of Upper Egypt. It does not occur under this name in O.T. It is called No-Amon, "the city of Amon, or sometimes only No," "the city." The Gk. translation is Driopolis, the Greeks having assimilated Amon to Zeus. Thebes is referred to but seldom in the Bible, and only by the prophets. In their time Upper Egypt had been superseded by the Delta, which was also nearer to Palestine. Nahum (3.5) speaks of No-Amon as a fallen city which had suffered from the policy of the Assyrians. Jeremiah (46.25, R.V. threatens Amon of No with being delivered into the hands of Nebuchadnezzar, king of Babylon, and Ezekiel (30.14,16) also foretells the destruction of No; but it is not absolutely certain that No does not here apply to a city of the Delta. Thebes probably goes back to a very early antiquity; but it is not as ancient as Memphis. It does not appear in the inscriptions of the Old Empire, when Memphis was the centre of the political life. Apparently it was the 11th dynasty which took it as their capital and made the worship of Amon, the god of the locality, of great importance. The Hyksos, or Shesheshet kings, did not rule over Thebes, where the native princes remained in power and at length succeeded in driving out the foreign kings. In the times of the 18th and 19th dynasties Thebes became a large and wealthy city and the capital of the empire. The worship of Amon extended over the whole (Thebes) and the kings erected the marvellous buildings, the reputation of which spread in foreign lands. Homer speaks of Thebes as ἀκατάφθαρόν, "with a hundred gates," meaning the numerous pylon placed near all the temples. The college of the priests of Amon was so powerful that in the time of the 21st dynasty they succeeded in ousting all the legitimate rulers and usurping the throne. From that time dates the real decline of Thebes. The city was taken and plundered by Esar-haddon, king of Assyria, in 671 B.C., and again ten years later by Assur-bani-pal so completely that it never recovered from that blow. The 26th dynasty, the gods attempted to restore to Thebes something of its former magnificence; but in their time the fate of Egypt was decided in the Delta, and Thebes had become a second-rate city. A rebellion under the Ptolemies was quenched in a barbarous way by Ptolemy Lathyros; thenceforward Thebes decayed more and more rapidly. The city at the time of its great prosperity was built on both banks of the Nile. On the E. were the two great temples of Amon, the ruins of which are now surrounded by the villages of Luxor and Karnak. In the temple of Karnak is the wonderful hypostyle hall, built by the two great kings of the 19th dynasty, Seti I. and Ramses II. (Coptic: "the temple of two great Gods") covers an enormous area; it may be described as a record of the history of Egypt; nearly all dynasties from the 12th to Roman times have added something to it. On the left side of the Nile is the necropolis of Thebes, with its funerary temples. There were a great number of them: a few have been preserved: Qurnah, Deir-el-balari, the Ramessseum, and Medinet Habu, besides the substructions of others. In Christian times there have been several Coptic convicts around Thebes; they are now abandoned and ruined. [E.n.]

Thebez, a place memorable for the defeat of Abimelech (Judg.9.45). Eusebius (Onomasticon) places it "in the district of Neapolis, on the road to Scythopolis, at the 9th milestone." It is now the village Tibbas, 10 miles N.E. of Shechem (Neapolis) on the road to Beisan (Scythopolis). [C.R.C.]

Thece, Wilderness of. [Techoa.]

Theft. [Cf. DEPOSITION.]

Thelemas = Tyassar.

Thele'sas (1Esd.5.36) = Tel-harsa.

The'man = (Ba.3.22,23) = Teman.

Theoc'aras (1Esd.9.14) = Tikvahai.

Theod'otus, an envoy sent by Nicanor to Judas Maccabaeus, c. 162 B.C. (2Mac.14.19).

Theophanies. Since "no man hath seen God at any time," the special name of Theo-
THEOPHILUS

The name of the person to whom the third Gospel and the Acts of the Apostles were addressed (Lu. 1:3; Ac. 1:1). There are several theories concerning the identity of the person intended by this title. One interpretation, dating from the 4th cent. (Euseb. Hær. ii. 9. 42), was that the address was to any pious reader, denoting, as it does literally, one who loved God or was loved by God. But the name is certainly that of an individual. In the first place, there is no evidence of its generic use as applicable to each and every Christian. Secondly, the numerous connections among Jews (mal’āḵ) and Gentiles. Thirdly, the epithet spáραστας, usually applied to persons of rank, is in itself almost conclusive. This is evidently here and in Acts purely an official title, for it is prefixed to the names Felix and Festus (Ac. 23:20, 24:3, 26:23), implying that the person to whom it was ascribed belonged at least to the equestrian order, and was therefore a Gentile. Theophylact conjectured that Theophilus was even of senatorial rank. Occumenius tells us that he was a governor. Other theories have variously assigned Antioch, Alexandria, Achaia, and Rome as the seat of his government or the place of his residence, and some writers have identified him with a high-priest of this name (Josephus, Ant. v. 3), who held office for about five years, and was possibly that high-priest from whom Saul, afterwards Paul, obtained his letters to Damascus unto the synagogues that he might bring any Christians he found there prisoners to Jerusalem. And lastly, with some, he is said that Theophilus must have there been a Gentile of rank and consideration who came under the influence of St. Luke and was converted to the Christian faith. Two difficulties however arise. In the first place, is it probable that a Roman of professed Christian views would have had a high position in any part of the Roman world entrusted to him? In the second place, how could a Roman of high rank in the early part of the 1st cent. have had the name Theophilus originally conferred upon him? The answers are: first, his religious convictions, as was the case with so many Christians at Rome in the 1st cent., may have been kept from the knowledge of the city authorities; secondly, it is quite possible that the name was only given to him late in life at his baptism, and so was used and known only among Christians. [R.S.M.]

The ras (1Es. 8:14.61) = AHAAYAH.

Thermeloth (1Es. 5:36) = TEL-MEELAIH.

Thessalonians, First Epistle of St. Paul to. The epistle to the Thessalonians, Thessalonica (15.10.16) on the sea and the great commercial road (Via Egnatia) leading from Dyrarrhium, through Macedonia and Thrace, to the mouth of the Hebrus, and so connecting Italy with Asia, made it a flourishing commercial town, great, rich, populous by its trade (Strabo, viii.), luxurious and licentious by its riches. Its population was mostly Greek; next in number were the Roman colonists, and there was a considerable Jewish population, having not a mere παροικια, but a synagogue proper (Ac. 17:1). St. Paul's first visit to it was on his second missionary journey, when he first came into Europe (Acts 17.1), and journeyed there by Amphipolis and Apollonia (17.1), with two assistants, Silas (or Silvanus) and Timotheus (17.4, 16.3, 12; 17.14; Ph. 2.22). He turned first to the Jews, and gained few converts, but obtained greater access among the proselytes and Gentiles (Ac. 17.3). After a few weeks (cf. Ph. 1.18) there was a new congregation, Jews and Gentiles, the latter much the more numerous (Th. 1.9 and Ac. 17.4, Lachmann's reading). The embittered Jews raised a tumult, and forced St. Paul to leave (17.5). Taken by night to the neighbouring Macedonian city of Berea, he found there, both Jews and Jews and Gentiles, the highest reception for the Gospel. Thereupon the Thessalonian Jews hastened to Berea, stirred up the multitude, and expelled him thence also. Silas and Timotheus remained behind for the confirmation and instruction of the Bereans. St. Paul went to Athens and thence to Corinth, where he stayed a year and a half (Ac. 18.18). Later on, the third great missionary journey led him repeatedly back to Thessalonica (20.1, etc.)—Occasion. The persecution against St. Paul soon attacked the Church (Th. 2.13.3.3, 16). Thus, not only personal love (2.17, etc.), but also anxiety (3.3), urged him back to Thessalonica. Twice he resolved to return, but circumstances prevented him (2.18). No longer able to resist their solicitude, he sent Timotheus from Athens (3.12) to obtain information, and strengthen and encourage them. The return of Timotheus (3.6), and his message, were the occasion of the epistle. The message was not only one of confidence, but also of anxiety. In spite of persecution and trial, was steadfast...
and unshaken (1.6.2.14), so that its members could be named as examples for the Christians in all Macedonia and Achaia (1.7); their heroic faith was everywhere spread abroad (1.8). Distinguished by active brotherly love (1.3.49.10), and on the whole by faithful adherence to St. Paul’s rules of conduct (4.1), they kept aflame the memorials of him (3.6), and their church life had so flourished that the gifts of the Spirit (5.19) and prophecy (5.20) were manifest. But there were also defects and incompleteness (3.10); the two cardinal vices of heathenism, sensuality and covetousness (4.3, etc.), not always respect to presbyters (5.12), and, in consequence of inordinate attention to Second Advent, an unsettled and excited habit, with neglect of ordinary duties, and idleness (4.11, etc.). Lastly, there was perplexity as to whether deceased friends would share in the blessings of the Advent (4.13), about which probably a question had been asked (4.13, etc.).—Design. They, therefore, who were especially diligent, would strengthen them to persevering stubbornness in Christian confession. (2) Exhortation to relinquish moral weaknesses, by which they were still enfeebled. (3) Consolation concerning the deceased by more minute instruction about the Advent.—Contents. Two parts: two chapters are united for convenience in translation (1.1). (1) Joy and thanksgiving for the Christian soundness of the church (1.2.3). (2) The operation of the grace of God manifest in their conversion to Christianity: (a) the Gospel preached by himself with energy, confidence, undaunted, pure, self-sacrificing love for his divine calling; (b) received by them with eager desire, and steadfastly maintained amid suffering and persecution (1.4-2.16). (4) The longing that came upon him, the mission of Timothy, and the consolation imparted by the return of Timothy (2.17-3.13). II. Moral and dogmatic (4.1-5.28). (1) Exhortation to make progress in holiness, to remove the defects of their moral life (4.1-3); to increase yet more in brotherly love (4.9-10); and instead of surrendering themselves to unsettled disposition and exasperation, to be diligent and laborious in their worldly business (4.11.12). (3) Comfort concerning those deceased before the Advent, and exhortation to be watchful and prepared for it (4.13-5.11). (4) Divers counsels, and wish that God would sanctify the Thessalonians wholly for the coming of Christ (5.12-24). (5) Concluding remarks (5.25-27). (6) Benediction (5.28).—Time and Place of Composition. (1) The time was not long after the founding of the church of Thessalonica. (2) After a year (1.1), when the moral and dogmatic part shows that this church, though already eminent and flourishing, as yet consisted only of novices. (2) When he wrote this epistle, he had already preached the Gospel in Achaia (1.7,8). According to 3.6, “now” (ἀποκριτος), the epistle was written immediately after the return of Timothy from Thessalonica. From Ac.18.5,6 we learn that Timothy and Silas, returning from Macedonia, rejoined St. Paul at Corinth when he had not long been there; for until then the Gospel had been preached by him chiefly to the Jews. Therefore, there is no reason to doubt that this epistle was written at the beginning of St. Paul’s stay at Corinth, in the year 52, perhaps a half year after his arrival in Macedonia or his flight from Thessalonica (Wieseler, Chronologie des apostolischen Zeitalter, p. 40 f.).—The Subscription, “written from Athens,” is probably a mistaken inference from 1 Th.3.1. St. Paul sent Timothy to Thessalonica when at Athens on his way to Corinth. The view of the Theodoret and others that it was written during the first visit to Athens does not fit in, nor the view of others that it was during a later visit. There is no reason to imagine a short, unrecorded return to Athens during the year and a half at Corinth, mere conjecture for this matter, hence the objection. genuineness. The epistle is not clearly mentioned by the apostolic Fathers, because, being of an intimate personal character to an elementary church, it does not present such obvious points for quotation as other epistles. But the historic attestation is so old, continuous, and universal, that the matter for doubts its authenticity on external grounds is inconceivable. Iren. Haeres. V. vi. 1; Clement Alex. Paedag. i. p. 88 D; Tertull. De Resurr. Carn. 24; Origen, Contra Celsum ii. 65; Canon Murat.; Peshitta; Marcion (in Tertull. Adv. Marc. v. 15), etc. The arguments of Schrader and Baur on internal grounds are purely fanciful and arbitrary, and will not bear examination. [PAUL] [W.M.S.] Thessalonians, Second Epistle to Oecasion. After sending his first epistle, St. Paul received further news of the Thessalonian church. It had actively progressed in Christianity; faith had been confirmed; brotherly love had grown; events, especially the conversion of the Thessalonians, and its enduring steadfastness under persecution, had been renewed, been had to St. Paul a glory in all the churches (2 Th.1.3,4). But the thought of the Second Advent had given rise to new disquietude. The question had advanced another stage; perplexity about deceased friends; unbelief about the Advent, which had previously been regarded as certain, and which was greatly increased. Some maintained that they had received divine revelations about the nearness of the Advent, and even forged an epistle in the name of St. Paul. Appeal was made to some oral word of St. Paul (2.2), and explanations of the first epistle may have been promulgated that view; for though nothing was said about immediateness, St. Paul said it would be sudden and unexpected (1 Th.5.2,4), and spoke as if he and his contemporaries might hope to be alive (4.15,17).—Design. Threefold. (1) The apostle wished, chiefly, to
oppose the disturbing and exciting error that the Advent was even at the door, by further instructions. (2) He wished strongly and emphatically to dissuade from that unsettled, disorderly, and idle disposition into which the church had fallen. (3) He desired, by re-claiming and praising their progressive good-ness, to encourage them to steadfast perseverance.—Contents. (1) Salutation (1.1-2). (2) Introduction or retrospective portion (1.3-12). (a) Thanksgiving for progress made (1.3-4). (b) Hopes thus afforded in preparation for the Advent (1.5-10). (c) Prayer for continuance in that happy state (1.11, 12). (3) The In-structive and Hortatory Section (2.1-3.15). (i) On the date of the Advent. (a) Caution against believing the Advent close at hand (2.1-3). (b) What must happen first (2.3-10). (c) Terrible fate of the apostates (2.11, 12). (d) Thanksgiving that the Thessalonians' fate is so different (2.13, 14). (ii) Prayer (2.15-20). (ii) On the necessity of work. (a) Request for prayers for himself, which skilfully serves to predispose the readers to obey the ensuing commands (3.1-4). (b) Prayer for the same purpose (3.5). (c) Commands to make all work, and to excommunicate those refusing (3.6-9). (d) Prayer for tranquillity (3.16). (i) Final benediction, with attention drawn to the autograph (3.17, 18).—Time and Place of Composition. Interpreters and chronologists agree that this second epistle was composed shortly after the first; with the exception of Grotius and Ewald, who held that the second was a first compounding which has nothing for it, but much against it. The arguments of Grotius may be measured by the fact that he holds 2.1-12 to refer to Caligula; whereas Caligula was dead in 41 A.D., 10 years before St. Paul came to Thessalonica. Ewald's chief argument is that this epistle has all the signs of being addressed to a recently founded church; whereas in 2.15 it is clear that St. Paul had already sent some letter to the Thessalonians. In fact, everything in the second naturally follows on from the first. The following reasons prove that the second was composed soon after the sending away of the two former letters. S. Silas and Timotheus are still in the company of the apostle (1.1), whereas Acts, at least, never informs us that after St. Paul left Corinth (Ac. 18.18) these two apostolic assistants were again together with him. We find Timotheus again in the apostle's company, first at Ephesus (19.2), whilst there is no further mention of S. Silas in the Acts after his Corinthian residence. Besides, the relations and wants of the church are throughout analogous to those which are presupposed in the first. The same circle of thought occupies the writer; similar instructions, exhortations, warnings, and wishes are found throughout in both epistles. It is therefore to be assumed also that the second epistle was written during the first residence of St. Paul at Corinth; but, according to 2Th.3.2, at a time when he had already suffered hostility on the part of the Jews, and, according to 1.1 ("the churches"; cf. 1Co. 16.1), when branch churches had already been founded from Corinth—probably at the beginning of the year 54.—Genuineness. (1) As to the external evidence of Christian antiq-uity, the epistle is completely unassailable, Polyc. Ad Phil. 11 fin.; Just. Mart. Dialog. cum Tryph. col. 1686, p. 336 B, p. 250 A; Iren. Adv. Haeres. vii. vii. 2; Clem. Alex. Strom. v. p. 554, ed. Syrhi.; Tertull. Resurr. Carn. xxiv.; Canon Murat.; Peshitt[a]; Marcion, etc. (2) Doubts from internal grounds did not arise till the beginning of the 19th cent. The arguments are purely arbitrary, and easily answered. This is the sign in every epistle: so I write," is specially for the Thessalonians, as they had been troubled by spurious letters; not for every church. Interpretation of the Man of Sin, and the Prophecy (2Th.2.3). It is founded on the language and threatenings of Joel, Zech. 14, Malachi, and especially of the book of Daniel. Westcott shows that there was probably no better book in the N.T. more valued among the Jews of the apostolic age than was Daniel. It was regarded with full reverence as an inspired revelation; our Lord Himself founded discourses upon it (Mt.24.15; Mk.13.14). The taste for apocalyp-tic literature was very strong at that time. (1) Pray for Paul; (2) Pray for the church; (3) Pray for their enemies; (4) Pray for the prophecy of Daniel, and agree that the prophesies in that book pointed to the existing era. Tacitus (Hist. v. 13) and Suetonius (Vesp. c. 4) allude to the expectations of the Jews founded on their ancient literature. The predictions are contained in Dan. 2,7,8, and 11, and give two descriptions of five monarchical schemes, the first of which is Nebuchadnezzar, and the fifth the kingdom of God, which had been the main subject of St. Paul's preaching at Thessalonica. The seventy weeks had pointed to the existing era, so that men saw in the fourth monarchy, which was to be crushed by the kingdom of God, the Roman empire. "In the same manner Daniel also wrote concerning the empire of the Romans," says Josephus (Ant. xi. 7). To St. Paul the fifth monarchy meant in all probability the First and Second Advent of Christ; the more readily because he did not see how vast an interval was to elapse—about 600 years—between the time of the Thessalonians not to expect the Second Advent so soon as they thought; and reminds them of "what withholdeth"—i.e. the Roman empire or the Roman emperor, not yet crushed. The great opponent cannot be developed till "he that withholdeth" is gone; that opponent seems the same as the little horn of Daniel, which cannot appear till the fourth empire has broken up into ten monarchies. St. Chrysostom says, "Seeing that he says this of the Roman empire, he naturally puts it enigmatically and very obscurely, for he has no wish to subject himself to unnecessary hostilities and unprofitable perils. For had he said that the Roman empire would shortly after be dissolved, they would soon have transfixed him for a miscreant, and all the believers with him, as living and fighting for this end." St. Paul had been able to speak more clearly about it when he was with them; so now he takes the reader to the end of the chain of events (Dan. 12.1). With regard to the Man of Sin, St. Paul draws his characteristics from the little horn in Dan.
and 8:5. The Jews held that Antiochus Epiphanes had not exhausted the meaning of the prophecy, but looked on him as the type of some other Antichrist, which should precede and anoint the Son of Man. The Christian interpretation only differed from the Jewish in holding that the Man of Sin, or Antichrist, Daniel's little horn, would appear near the Second Advent instead of the First. This they had a right to do, as in Dan.12:2 the Rabbis regard the coming of the Lord and the development of the Antichrist. Dr. Lightfoot thinks that St. Paul himself expected to see the development, and that he found the materials for it in the bitter, hostile, arrogant, persecuting, unbelieving Jewish spirit. The fulfilment did not come in St. Paul's time; but the spirit would be the same. The characteristics of the Man of Sin are that he is a human being, a single person, heading a movement, not atheistic but claiming personal worship, with power, signs, and lying wonders, not necessarily breaking with the Church, but forming an apostasy; and (according to Daniel) "wishing out the (Gentile) people, thinking to change times and laws." Against such a spirit men need constant warning; but the climax is not yet seen. [W.M.S.]

Thessalonica. The original name of this city was Therma; and that part of the Macedonian shore on which it was situated was called throughout the Roman period the Thermaic Gulf. The history of the city under its earlier name was of no great note. It rose into importance with the decay of Greek nationality. Cassander, son of Antipater, rebuilt and enlarged it, naming it after his wife, the sister of Alexander the Great. As the modern Saloniki, it is still, after Constantinople, the most important port of European Turkey. Under the Romans, when Macedonia was divided into four governments, Thessalonica was made the capital of the second; afterwards, when the whole was consolidated into one province, this city became practically the metropolis. Strabo in the 1st cent. speaks of its having in his time a place in 6 or 7 cities of Macedonia. To this busy city came St. Paul (with Silas and Timothy), during his second missionary journey, and thus Christianity was introduced into Thessalonica. Two facts illustrate the importance of this visit and journey, and throw light upon the two epistles to the Thessalonians. (1) This was the chief station on the great Roman Road, called the Via Egnatia, which connected Rome with the whole region to the N. of the Aegean Sea. Thus Thessalonica was an invaluable centre for the spread of the Gospel, being a close rival with Corinth and Ephesus for the commerce of the Levant. (2) The fact (Acts 17:1) that here was the synagogue of the Jews in this part of Macedonia. This had evidently much to do with the apostle's plans, and also doubtless with his success. Trade would inevitably bring Jews to Thessalonica; and it is a fact that, ever since, they have had a prominent place in Macedonia. The history of the first scene of the apostle's work at Thessalonica was the synagogue (Ac.17:2,3). The dismissions from the Jews continued for three weeks (ver. 2); we are not obliged to limit to this time the whole stay of the apostles at Thessalonica. A flourishing church was formed there, and the epistles of these elements were much more Gentile than Jewish. The narrative in the Acts shows close familiarity with the political constitution of Thessalonica. Not only is the demus mentioned (Ac.17:5) in harmony with what has been above said of its being a "free city," but also the peculiar title (properly "chief") of the city magistrates. This term occurs in no other writing; but it may be read to this day conspicuously on an arch (the Vardar Gate) of the early Imperial times, which spans the main street at the W. end of the city. From this inscription it would appear that the number of polibarchs was seven. At the E. extremity is another Roman arch of later date, probably commemorating some victory of Constantine. The main street, containing these arches and intersecting the city, is undoubtedly part of the Via Egnatia. During several centuries this city was the bulwark both of the later Gk. Empire and of Oriental Christendom; and was largely instrumental in the conversion of the Slavonians and Bulgarians. Thus it was known as "the Orthodox City"; and its struggles are very prominent in the writings of Byzantine historians.

Theudas (Gr.Θεύδας = Θεόδορος or Θεόδοτος: Schmiedel in Encycl. Bibl. iv. 5051) is the name of a usurper (see infra p. 536) in Gamaliel's speech before the Jewish Council at the time of the arraignment of the apostles. The date of this speech cannot be placed later than 37 A.D. According to Gamaliel, Theudas had pretended to be some great person. He was joined by about 400 men, but was slain, and his followers scattered and brought to nought. Gamaliel then continues: "After this time rose up Judas of Galilee in the days of the taxing (ἐν τοῖς ἡμεροῖς τῆς ἀσφαλείας;) but he also perished, and his supporters were dispersed." The taxing here referred to is the famous registration with a view to taxation which took place in 6 or 7 cities of the whole of Syria and Macedonia (Lu.2.2). Hence the defeat and death of the Theudas mentioned by Gamaliel must have taken place before 6 A.D. Josephus, however (20 Ant. v. 1), gives an account of a certain Theudas who lived in the time of the emperor Claudius, when Fadus was procurator of Judaea. This Theudas persuaded many of the people to follow him across the Jordan, but Fadus attacked him suddenly, scattered his followers, and put Theudas himself to death. The date of these events is fixed, by the reference to Fadus, as falling between 44 and 46 A.D. The defeat and death of the Thedas of Ephraia was at Ephraia, at earliest, several years after Gamaliel's speech, and probably forty after the death of the Thedas referred to in that speech. If, then, there was but one Thedas, either St. Luke or Josephus is guilty of a chronological blunder. Interpolation has been suggested, but the differences between the Acts and Josephus are only conceivable on the theory of the position of independence; and, in regard to this particular question of Thedas, the dependence of St. Luke on Josephus or vice versa
THICK TREES

THOMAS

has not been conclusively demonstrated. Hence we conclude that the Theudas of St. Luke is distinct from that of Josephus. Of those who take this view some identify the Theudas of St. Luke with one or other of the various insurrection leaders who (as we know from Josephus, e.g. 17 Ant. x. 8, 2 Wars iv. 1) were prominent in the last days of Herod the Great. Thus Sonntag identifies him with Simon, a slave of Herod; Wieseler with Matthias ("gift of God," cf. ὢνα, i.e. ὢνα), a teacher of the law; see Josephus, 1 Wars xxxiii. 2. But these identifications with specified leaders are merely fanciful, and we conclude that the Theudas of the Acts is an otherwise unknown insurgent leader, whose defeat and death, in the circumstances recited by Gamaliel (Ac.5.35-39), took place some time before 6 A.D. See also A. C. Headlam in Hastings, D.B. (5 vols. 1904) iv. 750; P. W. Schmiedel in Encycl. Bibl. iv. 504 B.; and F. C. Burkitt, The Gospel History and its Transmission, p. 106. [J.A.N.]

Thick trees are mentioned (as the translation of ἐχθρός) in Lev.23.30, Ne.8.15, and Ezk.20.28. According to the Talmud, Targums, and the Syr. version, the myrtle is intended. The myrtle tree is included in the context in the two latter passages, which makes it an improbable rendering. Trees full of boughs, or bowerings, is the Wycliff rendering. In Leviticus (L.c.) several ancient authorities read for "goodly trees" (the translation in E.V. of ἐχθρός), the citron-tree, for which probably intended the myrtle-tree or North African cypress. [I.C.I.]

Thieves (R.V. Robbers), The two (Mt. 27.38; Mk.15.27), called Malefactors Lu.23.32-43. Possibly comrades of Barabbas, a robber, under similar sentence of death at the same time (Jn.18.40; Lu.23.19). They accompanied to death Him in preference to Whom Barabbas had been set free, and were crucified one on either side of Him (Mt.27.38; Mk.15.27), joining at first in the general execration of the rejected "King of the Jews" (Mt.27.44; Mk.15.32). One, however, changing his tone, first rebuked his companion and then called Him "Lord" and "Master." Thus that prayer Jesus Himself answered Amen, promising relief from the cramps and tension of the Crucifixion before sunset in words on which Bossuet comments: "To-day—what speed! In Paradise—what rest! With Me—what companionship!" In the gospel of Nicodemus the penitent thief is called Dismas, and the name has passed into the hagiology of the Syr., Gk., and Lat. Churches. According to the legend, he had been one of a band of robbers that attacked the holy travellers in the flight from Bethlehem, and he had then pleaded for their lives. The Virgin mother had blessed him. The child Christ had foretold his suffering and repentance. Now, as he gazed on the Divine Sufferer, he recognized the features of the infant Jesus. But, legend apart, he protested from his cross against the innocence of Jesus, and became the special type of those who "are justified by faith but not the deeds of the law," the precursor of all those who find salvation through "deathbed repentance." [C.R.D.B.]

Thigh (Gen.32.25). Jacob's thigh is dislo-
they that have not seen, and yet have believed” (Jn. 20.29). These notices, few as they are, place the character of Thomas before us with great clearness, in that of a man so completely free from the difficulties of a case, subject to despondency, and yet full of ardent love for his Master. In N.T. we hear of Thomas only twice more, once as present at the sea of Galilee with six other disciples (Jn. 21.2), and again among the apostles after the Ascension (Ac. 1.13). His hodex is that of a man of the world who had been in India, where he suffered martyrdom at the point of the spear. There are to-day Christians, as there have been from the earliest times, dwelling near the tomb of St. Thomas in Malabar. Some believe that this tomb is that of the apostle, others that of a Nestorian merchant-prince. These “Indian Christians” have a church at Edathma, or a church near the Edathma damas”; but there his day on July 1. By the Lat. Church it is observed on Dec. 21, and by the Gk. on Oct. 6. [R.S.M.]

Thomoi (1 Esd. 8.32) = Thamai.

Thorn in the flesh (see 2 Cor. 12.7; Gal. 4.14, 15; 2 Cor. 10.10). Various explanations of this phrase have been suggested. (1) The personal opposition of the devil (see 1 Cor. 4.9; 2 Cor. 11.12). (2) Active opposition and persecution on the part of enemies both within and without the Church (see 2 Tim. 4.14; 2 Cor. 11.26); supported by St. Chrysostom. (3) Temptatio horrendi — i.e. the mental suffering caused by intense personal temptation. (The modern Roman theory.) (4) Bodily ailment. This is the oldest and most frequent view, that of Tertullian and St. Jerome and (among recent scholars) Bp. Lightfoot. Among various ailments suggested are epilepsy and malaria. The latter has considerable recent support (see, e.g., art. Paul, I. (5) (i) in this Dict.), and a man constantly travelling in the East is especially liable to such attacks. The thorn, or thorns, are those which point to different kinds of prickly or thorny shrubs, and which are variously rendered in A.V. by “thorns,” “briers,” “thistles,” etc. We shall confine our remarks to some of those which afford indications as to the plants they denote. (1) 'AIlith occurs for some spiny plant in Judg. 9.14, 15, where A.V. renders it “bramble” (marg. thistle), and in Ps. 58.9 (A.V. thorns). It is supposed to be Lycium europaeum or L. afrum (box-thorn), both of which occur in Palestine. The Arab. name is identical with the Heb. Lycium europaeum is a native of the S. of Europe and the N. of Africa; in the Grecian islands it is common in hedges. It readily establishes itself near the sea in many places in England and Ireland, where it is known as the “tea-plant.” (2) Hodex occurs in Pr. 15.19 and in Mi. 7.4. Celsius, referring the Heb. term to the Arab. hadnag, thinks that some spiny species of Solanum is intended. If so, the root or stem of some kind of Solanum; either the S. melagela, var. esculentum, or the S. sodomaeum (“apple of Sodom”). The Heb. term may be generic, and intended to denote any thorny plant suitable for hedges. (3) 'Aqub, a word of very uncertain meaning, occurs in Is. 35.2, Ho. 9.6, Pr. 26.9, Cant. 2.2, 2 K. 14.9. Cf. Job 31.40, “Let *hok* [A.V. thistles] grow instead of wheat.” Celsius believes that the blackthorn (Prunus sylvestris) is denoted. Perhaps the term is used in a wide sense to signify any thorny plant. (4) Dardar is mentioned twice in connection with the Heb. qophim, in Jer. 22.21 and Ho. 10.8. The Gk. ῥάβδος occurs in Mt. 7.16. Cf. Heb. 6.8. It is probable that either of the Tribulus terrestris, which, however, has spines on the fruit only, or else the Centaurea calycithra, is the plant more particularly intended by dardar. (5) Shdmir, almost always found in connection with the word shayith, occurs several times in the Heb. text; it is variously rendered by the LXX. According to Abulfeda, cited by Celsius, “the samur of the Arabs is a thorny tree; it is a species of Sidra which does not produce fruit.” No thorny plants are more conspicuous in Bible lands than different kinds of Rhamnus, the thorny plant of the Wild (thorn) and Zizyphus spinus christi; the latter is the nubq of the Arabs, which grows abundantly in Syria and Palestine. The ναδάρι (of Is. 7.19, 55.13 probably denotes some species of Zizyphus. [Crown of Thorns; Nettle.]

Thracia. A Thracian horseman is incidentally mentioned in 2 Mac. 3.35; and thereafter one of the bodyguard of Gordias, governor of Idumaea under Antiochus Epiphanes. Thrase at this period included the whole of the country within the boundary of the Strymon, the Danube, and the coasts of the Aegean, Propontis, and Euxine—all the region, in fact, now comprehended in Bulgaria and Roumellia. In the early times it was inhabited by a number of tribes, each under its own chief. The wars on a large scale which followed the death of Antiochus furnished an outlet for the martial tendencies of the Thracians, who found a demand for their services as mercenaries everywhere. Cavalry was the arm which they chiefly furnished, and the range of their operations in Roumellia abounding in horses. The only other passage, if any, in the Bible alluding to Thrase is Gen. 10.2, where Hiraz is by some supposed to mean Thrase.

Thraseas, father of Apollonius, i (2 Mac. 3.5).

Three Children, Song of the. [Daniel, Apocryphal Additions to.]

Three Taverns, a station on the Appian Road, along which St. Paul travelled from Puteoli to Rome (Ac. 28.15). The distances, reckoning southwards from Rome, are given as follows in the Antiquvs Itineray: “to Aricia, 16 miles; to Three Taverns, 17 miles; ‘to the Appulum Forum, 10 miles.” Thus “Three Taverns” was near the modern Cisterna. Here a road came in from Antium on the coast. Doubtless “Three Taverns” was a frequent meeting-place of travellers.

Threshold—1. (Judg. 19.27; 1 Sam. 5.4; Ezk. 43.8) The threshold was an object of superstitious reverence amongst ancient peoples,
owing to its marking the inner dividing line between all that was ruled by the outside law of the community and all that which was subjected to the will of the individual who was, sui juris, master of free persons, slaves, and objects of property in the house. Probably for this reason Ezekiel (43.8) calls the sanctuary the threshold of God, and the temples of the idols their thresholds. At the present day in Asiatic Turkey and Persia the people regard with reverence the thresholds of mosques, tombs, houses of high personages, and also, in a minor degree, of private houses.—2. (Ne. 12.25.) [Asuppim.] [c.w.]

**Throne.** The Heb. kissê, which in A.V. is usually rendered "throne," is used for any seat of honour. In the East, where it is usual to sit on the ground or recline on couches, the single elevated seat is a sign of honour or authority. It was used by Eli as high-priest (1Sam.1.9, Ps.1.4, 13.18) and by the provincial governors of Persia (Ne.3.7). It was bestowed on Elisha as a token of honour (2K.4.10). But this term is especially used to express the royal seat, as that of Pharaoh (Gen.41.40; Ex.11.5,12.29), of David (1K.2.3), of Solomon (1K.2.19), and of Ahaz (2K.18.2). The royal throne had a footstool as part of its insignia (2Chr.9.18; cf. Is.66).

**Assyrian throne or chair of state. (Layard, Nineveh, ii. 34.)**

1. The throne of Solomon is elaborately described as unique in its design (1K.10.18-20). The thought of God's sovereignty is frequently brought out by allusion to His throne, seen in vision (Is.6.1; Ezk.1.26,10.1) or described in poetry (Job 26.4; Ps.11.4). As used metaphorically to stand for the sovereignty of God, the term occurs in poetry only (Ps.47.8,89.14, 93.2,97.2,103.19; Is.14.21, which is part of a passage of poetical parallelism; Lam.5.19). On the other hand, it is used to symbolize the power of evil (Ps.94.20). In N.T. θρόνος is used to express kingly power (Lu.4.12,52; Ac.2.30), and then is frequently used of the sovereignty of God (Mt.5.14) and of Christ (Mt.19.28). It is the seat also of judicial authority (Lu.22.30) and of heavenly honour (Rev.4.4). It stands for the power of Satan (Rev.2.13) and of the Beast (Rev.16.10). [J.c.v.d.]

**Thummim.** [URIM AND THUUMMIM]

**Thunder** is in summer very rarely heard in Palestine, but thunder-storms do sometimes occur in harvest-time (1Sam.12.17). Poetically it is regarded in O.T. as the voice of God, and the instrument of divine punishment (1Sam.2.10; 2Sam.22.14; Job 37.2-5; Ps.18.13,29.3,91.7; 15.30,30.31). [c.r.c.]

**Thyatira,** a city on the Lycus, founded by Seleucus Niarchus. It is one of the many Macedonian colonies established in Asia Minor after the destruction of the Persian empire by Alexander. It lay to the left of the road from Pergamum to Sardis, on the southern incline of the watershed which separates the valleys of the Caicus (Bakyr-techar) and Hermus, on the very confines of Mysia and Ionia, so that it was sometimes reckoned in the one, and sometimes in the other. In earlier times it had borne the names of Pelopia, Semiramis, and Ethippia. In the 1st cent. A.D. the Macedonian element so preponderated that Strabo calls it a Macedonian colony. The original name of the city—clearly appearing in surroundings hamlets when Thyatira was founded. During the Attalic dynasty Thyatira scarcely appears in history; and of the various inscriptions found on its site, now called Ag Hisâr, not one is unequivocally anterior to the Roman empire. The prosperity of the city seems to have declined under Vespasian. Dying apparently formed an important part of the industrial activity of Thyatira, as also of Colossae and Laodicea (Ac.16.14). The principal deity of the city was Apollo, worshipped as the sun-god under the surname Tyrimnas. He was no doubt introduced by the Macedonian colonists, for the name is Macedonian. A priestess of Artemis is also mentioned in the inscriptions. Another superstition, of an extremely curious nature, existed at Thyatira. A fane stood outside the walls, dedicated to Sambatha—the name of the sibyl who is variously Jewish, Greek, and Chaldean. She is mentioned in the midst of an enclosure designated "the Chaldean's court." This seems to illustrate the obscure passage in Rev.2.20,21, which Grotius interprets of the wife of the bishop. Now, there is evidence to show that in Thyatira there was a great amalgamation of races. But amalgamation of different races, in pagan nations, always led to a syncretism of different religions. If the "prophetess" Sambatha was not discon tentened by the authorities of the Judaeo-Christian church at Thyatira, both the censure and its qualification become easy of explanation.

**Thyine wood** occurs once only (Rev.18.12), where the marg. has "sweet" (wood). [A.V.18.] There can be little doubt that the wood referred to is that of the conifer Thuya articulata, Desfont., the Callitris quadrivalvis of present botanists. This tree was much prized by the ancient Greeks and Romans, on account of the beauty of its wood, for ornamental purposes. By the Romans it was called citrus, the wood citrum. It is a native of Barbary, and grows to the height of 15 to 25 ft. Pliny says that it was abundant in Mauretania,
TIBERIAS

but he does not identify it with "the tree Thuya." (xiii. 15, 16). He refers to Homer as reporting that "dame Circe (whom he would have to be reputed as a goddess) burnt of this

THUYA ARTIFICULATA.

Thyron." Theophrastus wrote that "all carpenters work of temples in old time was made of the same; as of a timber everlasting," and that it grew in Cyrenaica. The derivation is probably from ὄμαρ, to sacrifice. [Thick Trees.]

Tiberias, the capital of the tetrarchy of Herod Antipas, who built the city and named it in honour of Tiberius, removing the seat of government there (after 14 A.D.) from Sephoris, N. of Nazareth. Tiberias was thus a great city in our Lord's time (Josephus, Life, 9, 18. Ant. ii. 3), but regarded as unclean, because built over ancient tombs. It had a royal palace, decorated with figures of living creatures, in spite of the law, and full of treasures (Life, 12, 13); but it also had a Jewish place of prayer (54). Agrippa I. afterwards restored Sepphoris to the rank of capital. Tiberias was apparently an open town, and its walls were not built till 67 A.D. (2 Wars xiii. 2, xx. 6). According to Talmuds it was on the site of Rakhat (Jos.19.35; Tal. Jer. Megilla i. 1; Tal. Bab. Sanhed. 124a), a "shore" city near Hammat, or the "hot baths" still existing S. of Tiberias. From this city (on its W. shore) the sea of Galilee was called the sea of Tiberias (Jn.6.1,21.1). Our Lord does not appear ever to have entered this unclean city, which is only once noticed (Jn.6.23). Coins of Tiberias under Tiberius, Claudius, Trajan, Hadrian, and Antonius Pius are known (Robinson, Bib. Res. ii. p. 390). Under the last named the Jews enjoyed toleration, and the Sanhedrin settled at Tiberias, where the Mishna was compiled (150 to 200 A.D.) by Rabbi Judah. Justinian (527-565 A.D.) built walls at Tiberias (Procopius, De Aedifici. v. 9), and the line of fortification on the slope W. of the modern town (surveyed by Mr. Schumacher) probably belongs to this age. The ruined walls of the present small town represent the fortress of the 12th cent. built by the Franks. The population is about 3,000, of whom half are Jews, 100 Christians, and the rest Moslems. The tombs of the famous Rabbis, Jochanan, Maimonides, Meir, and even of Akiba, are shown near the town. The modern walls were built in A.D. 1738 (Sure. W. Pal. i. pp. 301, 371, 418-420). Tiberius (in full, Tiberius Claudius Nero Caesar) was born 42 B.C. His parents were T. Claudius Nero and Livia. His mother, however, after divorce, was married to Augustus, and Tiberius was thus his stepson, and subsequently, in 14 B.C., his successor on the imperial throne. A soldier for 20 years, he commanded in several campaigns, notably in Germany, and in Illyricum, which he subdued, and in 12 A.D. he enjoyed a triumph for his victories in Germany and Dalmatia. As emperor, he gained esteem for his provincial administration, but in Rome his rule was arbitrary and cruel. Velleius Paterculus, contemporary historian, who served under his military command for nine years, leaves a favourable impression of him. Two later writers, Suetonius, a retailer of gossip, and Tacitus, a biassed partisan, draw terrible pictures of the man, crediting him, especially during the last four years of his life and retirement at Capreae, with monstrous vices. Their estimate must be considerably discounted. Tiberius died in 37 A.D. It was in his reign that our Lord was crucified. See Velleius Paterculus (Hist. Rom. ii.), Suetonius (Tiberius), Tacitus (Annals, vi.), and, for a warm vindication of his character, J.C. Tarver's Tiberius the Tyrant. [A.R.]

Tibhath' (1Chr.18.8). [Betealh.]

Tibni', son of Ginath, and Omri's rival for the throne of Israel (1 K.16.21,22). The struggle lasted four years (cf. vv. 15 and 23), and was only ended by the death of Tibni. [OuRk.]

Tidal', "king of the Hittites" of the third meal., in Gen.14.19, as one of the vassal kings who assisted their suzerain Chedorlaomer of Elam in suppressing a rebellion in Canaan. In the cuneiform texts his name is written Tughula, "nation" being a close translation of the Babylonian Umman Manda or "hordes" of Kurdistan over whom Tidal would have ruled. [A.c.t.s.]

Tiglath-pileser (2K.15.29; in 1Chr.5.26 and 2Chr.28.20, wrongly named Tilgath-pileser). The native Assyrian form is Tukulti-apil-esarr, for which the Tiglath-pileser of 2K. is a fair rendering. He was the third of the name, and the third Assyrian king to come into conflict with the Israelites. He succeeded Assur-nirari in 745 B.C., on Iyyar 13, but by what right he came to the throne is not known. His identity with Pul (2K. 15.19) is practically proved by the Babylonian Canon, which has Pulu (Ptolemy's "Ptolus") for the Tiglath-pileser of the Babylon Chronicle during the years corresponding with 729 and 728 B.C. His first campaign,
which took place five months after his accession, was to Babylon, to crush the Aramean tribes. On his way back he annexed N. Babylonia. In 744 B.C. he marched to Namri and suppressed an uprising there. Rezin of Damascus, Hiram of Tyre, and Pisseris of Carchemish gave tribute on this occasion. Arpad, having again revolted, became the object of the Assyrian king's campaigns during the years 742-739 B.C. In 739 B.C. he marched to Ullhu in Mesopotamia, and the positions occupied enabled him to put an end to Syrian and Phoenician resistance there during the year 738 B.C. Kullani (possibly the Calho of Is. 10.9), which was apparently his objective, was taken. Rost (Keilschrift feete Tigrat-Pileser III.) thinks it possible that Azrian or Izriu (Azariah) of Judah was in some way connected with this campaign, but this is doubtful. Menahem of Samaria, however, was one of those who paid tribute. In 737 B.C. Tiglath-pileser restored peace in Media, setting up, in the course of his campaign, bands guarded with alliance, in certain of the cities which he occupied. The next year (736 B.C.) he led his armies against Mesopotamia, penetrating as far as the Nal mountains, and capturing many cities and the country of Mueqania. The consequence of this march was, that Ararat was conquered in 735 B.C. Sarduri II., king of Ararat, received him passive. Though Tiglath-pileser reached the capital, Turnisi (Van), for some reason he did not take the city. Piliista (Philiistia in the sense of the coast-lands as far as Joppa) was the object of attack in 733 B.C., his intention being to use it as a basis for future operations. Hanun of Gaza decided not to meet him, and fled to Muṣri (Egypt or an Arabian tract), leaving his capital a prey to the conqueror, who took his throne and set up his own image in the royal residence. Affairs in Judah claimed Tiglath-pileser's attention in 733 B.C. After the death of Azariah, and the short reign of Jotham, Tiglath-pileser invaded Judah, and mounted the throne. Pekah of Israel thereupon profited by the change to ally himself with Rezin of Damascus and attack Judah (2K. 15.8ff.), whereupon Ahaz, fearing ultimate defeat, turned to Tiglath-pileser with a gift of gold and silver from the temple and from the palace, asking for help. This being accorded, the allies retreated, but instead of joining their forces against the common foe, each awaited attack in his own territory. Assuring himself first of the submission of the rulers in N. Phoenicia, Tiglath-pileser invaded N. Israel, taking Ijon, Abel-beth-maacah, Janoah, Kedesh, Hazor, Gilead, Galilee, and all Naphthali, carrying the people captive to Assyria (2K. 15.29). The inscriptions do not give us these names, but Hommel has suggested that "the broad land of . . . .4h," which is mentioned as having been annexed to Assyria, may be the last named. Pekah seems to have surrendered to Tiglath-pileser, but Kenaz, his ally, was defeated, and compelled to take refuge in Damascus, his capital, which was besieged by the Assyrians, and taken in 732 B.C. Hadara, Rezin's ancestral home, and 501 towns in addition, were then destroyed. The annals record, in conclusion, an attack upon Sami, queen of the Arameans, who had to submit, while the king led an army against that nation in Yemen. Tiglath-pileser's favour brought gifts. Apparently whilst these things were taking place, the conspiracy headed by Hoshea came into existence, and having murdered Pekah, its leader mounted the throne (2K. 15.30), and gained the recognition of the Assyrian king, who was still devastating Syria, by a prompt payment of tribute. The fate of Rezin, king of Damascus, so strongly affected Miinti of Ashkelon, that he is said to have gone mad, and his son and successor, Rūkāipti, followed Hoshea's example, and thus atoned for his father's hostility to Assyrian overlordship. Even Menennu of Tyre became tributary. Damascus was now annexed to Assyria, the people were carried captive (following the Assyrian custom) to Kir (2K. 16.9), and Rezin was slain. It was in Damascus that Ahaz met Tiglath-pileser, and saw the altar which served him as the pattern for that which he caused to be made, and afterwards used for burnt-offerings (6K. 16.11). Hitherto Tiglath-pileser was confident that he had nothing to fear with regard to Assyrian influence in Palestine, left the country in peace, and its states remained tributary as long as the rulers thought that Assyria was strong enough to enforce her claims. In 731 B.C. Ukhin-šeš, a Chaldean prince, subdued the Chaldean tribes, and invited Tiglath-pileser to invade the country, when the pretender was captured in Sapia, his capital (729 B.C.). The next year (728 B.C.) the Assyrian king mounted the throne of Babylon, but beyond "taking the hand of Bel" as king of the country, during two successive years, took part in no expeditions. He died in 727 B.C., the year when an expedition was being made against a city whose name is lost, and Shalmaneser IV. ascended the Assyrian throne (Tebet 25). When in his own country, Tiglath-pileser resided either in Nineveh or Calah. In the latter city he resided during his last born, Otrain, who ascended the Central Palace in imitation of the Hittite style, decorating it with Hittite and Chaldean objects sent as tribute. The reign of this king may be regarded as having been one of the most brilliant in Assyrian history. [R.G.F.]

**Tigris**, in the T.N., is the Gr. form of the Heb. hiddekel, and occurs also in the apocryphal books Tobit (6.1), Judith (10), and Ecclesiasticus (24.25). Like the Euphrates, the Tigris has two principal sources, the more distant (and real) source being the western one, a little S. of the high mountain range called Goljik or Golenzik (lat. 38° 10' long. 50° 20' nearly), in the sharp bend of the Euphrates which begins at Karput, and not many miles from the course of that river where it returns to about the same longitude. The course of the Tigris is at first nearly E., but after about 25 miles it sweeps to the S., and descends by Argahan Marden to Diarbekr. Here it again runs west, and then curves S., when it enters the Taurus, and as it receives a large stream, the Boblan-su, from the N.W. At Osman Kieui it receives the eastern Tigris, which descends from Niphates
translates the Heb. tōph, which is derived from an imitative root occurring in many languages not immediately connected with each other. It is the same as the Arabic and Persian daff, which in Spanish becomes adafe, a tambourine.

Tabouret (of which tabret is a contraction) and tabourine are diminutives of tabor, and denote the instrument now known as the tambourine. The Heb. tōph is undoubtedly the instrument described by travellers as the daff or dīf of the Arabs. It was used in very early times by the Persians and Greeks, and also by the Arabs.

Samaritans and Jews. The Samaritans and Jews believed that from the time of Joshua's conquest of Canaan, to the time of the destruction of Jerusalem by Nebuchadnezzar, this name was given to a mountain called timnah, and that the ancient town of that name was situated there. The exact position of the town is not known, but it is generally supposed to have been near the site of the modern village of Timnah, in the desert of Judah, about seven miles north of Gaza, and near the ruins of the ancient town of Timnah, which is mentioned in the Bible as the site of a battle between the children of Israel and the Philistines (Josh. 15:10). It is also mentioned in the Talmud as a place where the Israelites rested during the migration from Egypt to Canaan.

The town of Timnah was probably the site of the ancient city of Timnah, which was the capital of the Philistine tribe of Dan. It is also mentioned in the Bible as the site of a battle between the children of Israel and the Philistines (Josh. 15:10). It is also mentioned in the Talmud as a place where the Israelites rested during the migration from Egypt to Canaan.

According to the Talmud, Timnah was the birthplace of King Solomon, who was born in the house of Solomon, the son of David and Bathsheba. The town was also the site of a battle between the children of Israel and the Philistines (Josh. 15:10). It is also mentioned in the Talmud as a place where the Israelites rested during the migration from Egypt to Canaan.

Timnah was also the site of a battle between the children of Israel and the Philistines (Josh. 15:10). It is also mentioned in the Talmud as a place where the Israelites rested during the migration from Egypt to Canaan.

TIMOTHY

Timon, the fifth of the Seven, commonly called “deacons” (Ac.6.1-6). He was probably a Hellenist. Nothing further is known of him with certainty.

Timothy.—1. An Ammonite leader repeatedly defeated by Judas Macabaeus 166 and 164 B.C. (I Mac.5.6,11,34-44; 2 Mac.8,30, 9,3), and finally killed at the capture of Gaza by Judas (2Mac.10.24-37).—2. The Gk. name of Timothy (Ac.16.1,17,14, etc.).—3. (C.D.) The name of two younger companions of St. Paul, was probably a native of Lystra in Lycania (Ac.16.1). He was the offspring of a mixed marriage. His father (whose name is unknown) was a Greek; his mother (named Eunice, 2Tim.1.5) was a Jewess (Ac. L.c.). The absence of any personal allusion to the father of Timothy in the Acts or epistles makes it probable that he died during Timothy’s infancy. Thus upon Eunice, his mother, and Lois, his grandmother, devolved the care of the boy’s education. He was trained by them in the O.T. Scriptures (2Tim.1.5,3.14), but reached manhood without being circumcised (Ac.16.3). Timothy’s initiation into Judaism and his being circumcised (Ac.16.22) and accompanying St. Paul on the second missionary journey. SS. Paul and Silas found Timothy already a member of the church at Lystra (16.1). His high character recommended him as one likely to be of value in missionary work; and by the laying on of hands he received the office of an evangelist (Tim.4.14; 2Tim.1.6). He was also circumcised by St. Paul, in order to allay the susceptibilities of the Jews. He accompanied SS. Paul and Silas to Europe; and at Philippi (Ac.16.12) and Thessalonica (1Thb.1.2) he proved his energy. His relations with Philippi were exceptionally close (Ph.2.20-22). He thence passed to Berœa (Ac.17.14), and rejoined St. Paul at Athens. After another visit to Thessalonica, he returned to St. Paul, who had meanwhile gone to Corinth (18.5). At Corinth he shared St. Paul’s work; and was associated with him in both cpp. to the Thessalonians (1Th.1.1; 2Th.1.1). We next meet him at Ephesus, when St. Paul, after the third missionary journey (Ac.19.22), was sent by St. Paul on a mission through Macedonia to Corinth (1Cor.4.17), and returned to Ephesus. He next accompanied St. Paul to Corinth (see Ro.16.21, written from Corinth), and returned with him to Asia (Ac. 20.7-8). Though not named by St. Luke as a companion of Paul on his voyage to Rome, yet he certainly was at Rome during St. Paul’s imprisonment (Col.1.1; Ph.1.1). After the apostle’s release, Timothy visited Ephesus once more (1Tim.1.3). He there represented St. Paul, who hoped to come to Ephesus shortly; and his task was to check false teaching, and to enforce discipline throughout the Ephesian church. St. Paul wrote to. Tim. to encourage his friend, and to give him guidance on certain points. He had fears for the youth and inexperienced of Timothy; and, after his second arrest, sent from Rome an epistle (2Tim.4.13) to Timothy by a young man to come to him. Timothy was perhaps himself arrested when visiting Rome in response to this appeal; his liberation is recorded in Heb. 13 21. Tradition regarded Timothy as bishop of Ephesus. He was held to have suffered martyrdom there towards the end of 1st cent. A.D., in making a protest against the licentiousness and corruption of the local festival. He is therefore known to us chiefly from 1Tim. and 2Tim. His youth and timidity, his affectionate nature and delicate constitution, are mentioned in several passages of these epistles—e.g. 1Tim.4. 12,5,23; 2Tim.1.4,5,22. St. Paul also expresses anxiety as to Timothy’s capacity to meet the difficulties of the situation at Ephesus; but shows his great esteem and regard for him in various descriptive phrases; thus he calls him his “genuine” or his “loved” son (1Tim.1.2; 2Tim.1.2) and his “fellow-worker” (Ro.16.21); while Timothy’s religious zeal is commemorated when he is described (Ph.1.1) as the “slave of Jesus Christ.”—W. Lock in Hastings, D.B., iv. 767; J. Moffatt in Encycl. Bibl. iv. 5074. [J.A.N.]

Timothy and Titus, Epistles to. Date and Authorship. The external evidence for the Pauline authorship of the ep. to Timothy, and of the ep. to Titus which is inseparable from them, is very strong. It includes the witness of Presbyter, Apostolic, and Patristic literature down to the fifth century. It includes the evidence of early heretics (e.g. Polycarp and Justin Martyr and Marcion, 112-146 A.D.); of ancient versions (e.g. the Peshitta-Syriac and the Old Latin, 130, 150 A.D.); of the Gallican, Alexandrian, African, and Roman Churches (e.g. Irenaeus, Clement, Tertullian, Muratorian Fragment, 180-220 A.D.); of Tertullian, African and Eusebian (300 A.D.); and of the Councils, being included in the Canon of the N.T. by the third Council of Carthage (390 A.D.).—Their Date in St. Paul’s Life. (1) There is no time possible before the end of the Acts. (a) 1Timothy could not have been written on some visit to Macedonia in 20-22; for the letter could not have been written before his 3rd visit to Macedonia (20-22). This could not have been written when he did go to Macedonia (20-22) and “gave much exhortation” there (20.2), for he was not expecting then to return to Ephesus (1Tim,3.14). (b) Titus was not written before St. Paul’s arrival at Ephesus, since Apollos, who was unknown to him before this, is referred to (Tit.3.13); nor during the stay at Ephesus, for the reason given above; nor on the voyage as prisoner to Rome, because then St. Paul could not be expecting to winter at Nicopolis in Epirus or Macedonia (3.13). (c) 2Timothy supposes St. Paul at Rome expecting death. But this cannot have been at the time of Ac. 28, because then the words “Trophimus I left at Miletus sick” (2Tim.4.20) must refer to the visit to Miletus of Ac.20.4,17; but Trophimus was not left there then, but was with St. Paul when taken prisoner at Jerusalem. (2) There is a time possible after the end of the Acts. For (a) St. Paul’s trial after the second arrest had been favourable, and not such as to lead to death. (b) St. Paul was expecting release when he wrote, “Find me a lodging” (Ph.22), i.e. at Colossae; “I know I shall abide . . . with you”
(Ph. 1.25). (c) If St. Paul's death had occurred at the end of the two years, the writer of Acts must have named it, if only in a sentence. (d) Tradition speaks of other journeys: "The departure of Paul for Spain" (Mur. Frag. 220 A.D.); "Having reached the end of the West" (Clem. Eph. 2 Cor. 15 A.D.). The latter is probably based on St. Paul's own statement, "I know that I shall not see you again at Ephesus" (Ac. 20.23), is met by the still stronger words, "I know with a sure conviction that I shall see you again at Philippi" (Ph. 1.23). (3) St. Paul's last years may then quite possibly have been spent somewhere at Rome. First journey eastward, to Philipps, Colossae, Ephesus, Crete. Laying the foundation for these epistles (see Ph. 2.24; Ph. 22; and 1 Tim.; Tit.; 2 Tim. passim). 65 A.D. (spring) and autumn. Second journey westward, from Crete to Puteoli and Rome to Spain and Massilia and Ephesus and Crete, and their missionary assistants. The language has many new words for new business needs and details. Recent light on N.T. Gk. from contemporary literature and archaeology lessens materially the difficulty still felt by many under this head, as to the authorship. Dr. Nagel, for example, dates the Mur. Frag. 220 A.D. (spring). A first account of the work of the church at Rome is given, no doubt compiled from the records of the church and its missionaries at Ephesus and Crete, and from the other missionary groups. The language which inscriptions and papryi prove to have been the language of daily intercourse; his doubts about the "Pastoralis" may yet be removed by more inscriptions and fresh papyri.

—Theme and Contents. The principle underlying this three-part Manual of Pastoral Care is individual headship in each district —Timothy and Titus in Ephesus, Crete, and their missionary assistants. The language has many new words for new business needs and details. Recent light on N.T. Gk. from contemporary literature and archaeology lessens materially the difficulty still felt by many under this head, as to the authorship. Dr. Nagel, for example, dates the Mur. Frag. 220 A.D. addressed to the episcopal portion of the letters only, with no allusion to the presbyters. (2) "Ordain presbyters in every city," followed by "a bishop must be blameless." (Tit. 1:5-7). Here again the presbyter’s office is described by the title episcopus. Against this, it is argued, presbyters are in the plural, episcopuses, markedly in the sing, and with the definite article. But immediately after "presbyters" we have the singular (ver. 6), "if any be blameless." And then (ver. 7), when the title episcopus is used, the reason is given for this requirement of blamelessness, "as the steward of God." (3) Those who have offered the gifts of the bishop’s office, followed by "blessed are those are called (Iren. 5:14). For the term "bishop" are "presbyters" here is shown: (a) By the previous sentence, where the apostles are said to have appointed bishops and deacons; for Clements could not have omitted the presbyters, when his one object was to defend their authority, which had been assailed. (b) By the fact the word of presbyters in the New Testament has been said to show that presbyters appointed and deposed bishops; but this is from the wrong identification of "other approved men" with "other men of repuete" just above, while the Greek, (ἐπίσκοπος, the word used for "others of the same class") clearly shows that the first "other" refers to the presbyter class, but the second to the apostolic class. It is "other apostolic men of repuete" who appointed "other approved presbyters," after receiving the "injunction" from the apostles. And our Pastoral Epistles give us just a sample of this injunction. As to two words for one thing, a parallel is seen in "Saul who is also Paul," where "Saul" was Joseph, "Paul" was a name. For the term "presbyter" was essentially Jewish, the term "episcopus" essentially Greek. Both were in use in LXX, for official dignity and position. But in most other cases only word was used in New Testament, and to "episcopus" in the Pauline epistles, as the Greek surrodnines eclipsed the Jewish. Hence, therefore, of the two names, the one transferred to the higher office, higher filled by an "apostle" or "prophet" or "angel," was the one connected with the dominating Gk. and Gentile life, episcopus. Cf. (112 a.d.), "I am devoted to those who are subject to the bishop, the presbyters, and the deacons. (Ign. Ad Polyc. vi. 1). (Bishop: Church). For a summary of contending views on the episcopus, see Schniedel, "Ministry," Encyc. Bibl. Of the best German comm., Holtzmann rejects, Weiss accepts, the Pauline authorship. Recent English comm., are Humphreys, Epp. to Tim. and Tit.; Bernard, Pastoral Epistles. Among the latest writers, Prof. Clemen, Paulus sein Leben und Wirken (1904), accepts some fragments only as Pauline, because of the subject-matter; Dr. Resch, Der Paulinismus und die Logia (1904), defends the whole as Pauline; Dr. Nagel, Der Wortschatz des Ap. P. (1905), has doubts, because of the language. [A.E.H.] TIRE TIN was one of the metals found among the spoils of the Midianites (Num. 31:22). It was known in the form of an alloy to Heb. metal-workers (Is. 1:25; Ezek. 22:18, 20). The markets of Tyre were supplied with it by the ships of Tarshish (27:12). It was used for plummets (Zech. 14:10), and was so plentiful as to furnish a figure to express the wealth of Solomon (Eccles. 47:18). In the times described by Homer the Greeks were familiar with it. Twenty layers of tin were in Agamemnon’s cuirass. Copper, tin, and gold were used by Hecaleus in welding the famous shield of Achilles. The melting of tin in a smelting-pot is mentioned by Hesiod (Theog. 862). Bronze, an alloy of copper containing about 10 per cent. of tin, was used in Egypt under the 12th dynasty, or at least 2,500 years B.C., and over 8 per cent. of this metal is present in a 3rd-dynasty ring. Tin was known very early in European countries. [Lucanus.] In Crete bronze has been found in the older or pre-Mykenian palace ruins, and it must have been widely known some centuries before the Exodus. Tin is not found in Palestine. Whence, then, did the ancient Hebrews obtain their supply? One theory is that the Hebrews were known to contain a very considerable quantity of it: Spain and Portugal, Cornwall and the adjacent parts of Devonshire, and the islands of Junc, Ceylon, and Banca, in the straits of Malacca. (Kenrick, Phoenix, p. 212). Spain may have been a chief source of supply, but by 5th cent. B.C. (Herodotus, iii. 115) the metal was also obtained from the Cassiterides, or tin districts of Britain. Pliny (vi. 30) identifies the cassiteres of the Greeks with the plumbeum album or candidum of the Romans, which is our tin. Stannum, he says, is obtained from an ore containing lead and silver, and is the first to become melted in the furnaces where copper is part. It is very evident the present Tafsa, which preserves the final guttural—a ruined village 6 miles S.W. of Scheem, where the road "crosses" a great valley. This place Menahem would easily reach from Tizma (Suid. W.—Pal. ii, pp. 169, 198). [C.R.C.] TIPHSAH (crossing).—1. A city on the Euphrates (I K. 4:24), the limit of Solomon’s dominions. It is mentioned by Xenophon, Arrian, and Strabo, as Thapsacus, and by N. of Arrian. A. 2. A town south of the Dead Sea, (2 K. 15:10), at a time when he could not have reached Thapsacus, while all Syria was held by the Assyrians. It is evidently the present Tafsah, which preserves the final guttural—a ruined village 6 miles S.W. of Shechem, where the road "crosses" a great valley. This place Menahem would easily reach from Tizma (Suid. W.—Pal. ii, pp. 169, 198). [C.R.C.] TIRAH, the youngest son of Japheth (Gen. 10:2). We have no clue in the Bible to identification with any particular people. Josephus (Ant. vi. 1) and the Targums understand the Thracians, which is etymologically improbable. The known tribes of the list belong to Asia Minor and Armenia. [C.R.C.] TIRATHITES, THE, one of the three families of scribes residing at Jabez (1 Chr. 2:55), the others being the Shimeathites and Suchathites. The passage is obscure. TIRE, an ornamental headress worn on festive occasions (Zek. 24:17, 23). [HEADRESS.]
TIRHAKAH

Tirhakah' (Egyptian. Thakarka, Odp, Ospaka; 2 K. 19.9; Is. 37.9), king of Ethiopia. He is spoken of as threatening the Assyrians, who besieged Jerusalem. He was a successful enemy, Esar-haddon, shows him as of the negro type, and we have no reason to doubt this testimony. About 670 B.C. Tirhakah joined a coalition against Esar-haddon, king of Assyria, but was defeated; the king of Assyria invaded Egypt and took and plundered Thebes. This was followed by the occupation of Assyria, having been succeeded by his son Assur-bani-pal, Tirhakah marched against Egypt and conquered the whole country a second time. But he could not resist Assur-bani-pal, who reconquered Egypt. Thebes was again plundered. Tirhakah fled to Ethiopia, where he died.

Tiphahnah', son of Caleb ben-Hezron by his concubine Maachah (1 Chr. 2.48).

Tiria', son of Jehaleel (1 Chr. 4.16).

Tirshatha, The (Ezr. 2.63; Ne. 7.65,70,8,9.10), properly "the prefect, procurator," Pers. title given to Nehemiah when on his mission to Jerusalem. His Babylonian title, and his Persian titles, and his Persian title, were "the elder of the firstborn of the children of Judah for the city of Jerusalem" (Ezr. 8.20; Ne. 12.21), and his Persian title, was "the elder, or bel paḥhātī," "procurator," "governor"; and this (Ne. 5.14) shows the meaning of "the tirshāthāh;" tirshāthāh (properly ti-shāthāh) from ti, contracted for Akk. paḥhātī. Pers. atti. Skt. atti, "over," cf. Skt. ati-mudūsha, "superhuman," and Avest.štāthā (later form of Akk. paḥhātī, ksštāthā, Skt. kshtātrān), "district," Mod. Pers. shahr, "city;" ti, for ati, is used in Armenian; e.g. inti-kin, "over-woman," "queen," "lady;" ti-ezerkh, "over-limits," "world," etc.) has puzzled all ancient translators; hence LXX. and Vulg. merely transliterate (Ἄβαραθ, Ἀβαράθ Ἀβαράθ, Ἄβεραθα, Ἀβεραθα), and Peshît. Syr. renders "chief of the priests." With ti-shāthāh cf. ti-tištān, ti-nāštān, etc. (cf. Prov. 25.20, 26.21; 27.2, 29.13). The derivation from Avest. trṣhta (Tara, teres, or teres, "be afraid," Skt. Jiras) is hopeless, because the word was then used for the "terrified." Mod. Pers. tarsākh. For transposition of the r, cf. Ellasar (Gen. 14.1), for āl Larsa, city of Larsa, and Jerusalem (Heb. tī-rāšāh), for Aeg. Târēgha, Assy. Tarqa. [wst. c.t.]

Tirzah' (delight).—1. The youngest daughter of Zelophehad (Num. 26.33, etc.), in Gilead.—2. A royal Canaanite city (Jos. 12.24), where Jeroboam I. lived (1 K. 14.17), and Baasha of Israel ruled (15.21,33) and was buried (16.6). Elah was here slain (vv. 8,9), and Omri here besieged Zimri (v. 15,18), who perished in the flames of his palace. Omri reigned in Tirzah 6 years, before he transferred the capital to Samaria (vv. 23,24). Thence Menahem attacked Tiphssah (2 K. 15.14,16). Solomon's bride (1 K. 5.4) is likened to this ancient city, in this words, "Thou art beautiful, O my love, as Tirzah, comely as Jerusalem, terrible to look on." There is no indication of the situation of the town, which must, however, have been in Samaria. The most probable site is Tʾēḏār, a village 11 miles N.E. of Shechem, at the junction of two Roman roads leading to Beisan. The name has the required radical letters, though inverted—as in some other cases. Brocadus, in 1283, placed Thirsia about 10 miles E. of Samaria, from which Tʾēḏār is 12 miles N.E. The village is small, but ancient tombs are numerous, and the lands round are fertile. A fine monument on S. appears to be a tower of rectangular stones. See Tzarza. [C.r.c.]

Tishbite, The, the designation of Elijah (1 K. 17.1,21,17,28; 2 K. 1.3,8,9,36). The name naturally points to a place called Tishbeh, or Teshub, as the residence of the prophet. If a town is alluded to, it is not , a town of Shechem (1 K. 18.24), or Saphir, or Tarqum, or Pal. Sue. W. Pal. ii, pp. 228, 245). See Zereda. [C.r. c.]

TITHE

(Tithed. [Heb. Bēḏeh, Egyptian. Тιθη, Ti-thēh, "a third"].) (1) Animals. Jacob vowed at Bethel to give a tithe of "all that Thou shalt give me" to God if He brought him back in peace (Gen. 28.22). As his wealth was pastoral, the custom of tithing animals must have been pre-Mosaic. The law provides that the tithe of herd or flock "shall be holy," and shall not be exchanged (Lev. 27.29,33). A "holy" animal was withdrawn from ordinary use and sacrificed. There was no idea to bring tithe animals to the temple. Later the law was interpreted otherwise, and the animals seem to have been brought to Jerusalem and applied to the support of the priests (2 Chr. 31.6). (2) Vegetables. It is provided that a tithe of seed and fruit shall be holy. It redeemed, 1/10th was added to it. In 2 years out of 3 it was to be taken to the temple and consumed there at a sacrificial feast by the peasant and his family and dependants. In the third year (i.e. allowing for the sabbath year 2 years out of 7) it was to be given to "the Levite, the stranger, the fatherless and the widow," a declaration being made by the peasant to his Levite landlord. But with a lawyer (Lev. 27.30,31; Deut. 14.22-29,26.12-15). In Num. 18.21-24 (addressed to Aaron) we read "to the children of Levi behold I have given all the tithe in Israel . . . the tithe of the children of Israel which they have [offered, set apart] to God as a heave-offering [a tithe] I have reaped from all the land, and in 25-32 it is provided that the Levites shall give a tithe of their tithe to the priests: cf. Ne. 10.38ff.37f. It has been thought that this tithe in Num. is a different tithe to that enjoined in Deut.; but the passage only
deals with the internal arrangements of the priestly tribe, and probably refers only to the tithe contributed in the third year. In that case the expression "all the tithe in Israel" is used not to denote that no portion went to strangers, etc., but rather to show that the whole of what was set aside to priestly uses (the tithe . . . which they have) went in the first instance to the Levites, exclusive of the priests. Later the law was thought to require three titles: one for the feast, one for the Levites, and, in the third year, one for the Poor (Tob. 4, Ant. viii. 22). (3) Secular. Abram gave a tithe of his spoil to Melchizedek (Gen. 14. 20) and Samuel foretold that the king would take a tithe of the vegetables and animals (I Sam. 8. 15, 17) as a secular tax. Other views in Driver, Deiit. 165-173; Van Hoonacker, Sacred Levitique, 38; Leaven, Sacred Bibl. and Talm., 2nd ed. i. 1971-1972. Parallels in Lunds, Sacred Tenth, i. 11-38. [H.M.W.]

**Title on the Cross.** [Cross]

**Titles of Psalms.** [Psalms, Titles of—]

**Titus.** [Writing.]

Titus, a companion of St. Paul, always mentioned by the apostle with great affection. His name never appears in the Acts, and only rarely in the epistles (Gal. 2 Cor., and 2 Tim., besides that to Titus himself). His birthplace is uncertain, perhaps in Crete. He was a Gentile (Gal. 2.3); and was at Antioch when the dispute arose as to the bearing of the Mosaic law (and especially circumcision) upon Gentile Christians. St. Paul took Titus to Jerusalem, and successfully opposed an attempt to have Titus circumcised (2.5). Titus next appears in connexion with the events recorded in 1 and 2 Cor. He paid two visits to Corinth—the first, in the year before 2 Cor. was written, with a view to organize a collection for the saints (2 Cor. 8.6); on the second occasion he came to Corinth from Ephesus, and rejoined St. Paul in Macedonia, bringing news of the loyalty of the Corinthian converts. On hearing this, St. Paul wrote 2 Cor.; and Titus was sent again to Corinth to complete his collection (see 2 Cor. 2.7). From the ep. to Titus, it appears that St. Paul, after his release from prison in Rome, travelled with Titus in the East, and preached the Gospel in Crete. There he left Titus to appoint presbyters, to teach sound doctrine, and to exercise authority generally (Tit. 1. 5, 11, 13). Titus is also requested (3. 12) to leave Crete later, and to join St. Paul at Nicopolis. Probably the mission to Dalmatia (2 Tim. 4. 10) was from Nicopolis. Titus appears to have been older than Timothy, and also stronger in character (see 1 Cor. 16. 10; 2 Cor. 7. 15). St. Paul speaks of him in warm terms: as his "brother" (2 Cor. 2. 13), his "partner and helper" (8. 23), his "genuine son" (Tit. 1. 4, whence it has been inferred that he was converted by St. Paul himself). According to tradition, Titus became Bp. of Crete, and lived there till an advanced age. Lock in Hastings, D.B. iv. 782; J. Moffatt in Encycl. Bibl. iv. 5105. [J.A.N.]

**Titus, Epistle to.** As this epistle involves subtle questions for discussion as Timothy, Ep. to, it is more conveniently discussed under that head.

**Titus Manlius.** [Manlius.]

**Trizite, The, the designation of Joha, one of the heroes of David's army (1 Chr. 11. 45). It occurs nowhere else, and nothing is known of the place or family which it denotes.**

**Tob, Land of (Judg. 11.3-5), a region in or near Gilgal. The Isht-tob, or "men of Tob" (2 Sam. 10.6.8), who fought against David in Gilgal, may have come there. It appears to be the Tobie of 1 Mac. 5.13, in Gilgal; and the Jews called Tubieni (2 Mac. 12.17) were in the same place, of Tobie. The word means "good," and in Arab. would be Taibiybe. The most likely site is the district in N. Gilgal, where the village Taiseybe now stands, 9 miles S. of Gadara. It is a large place, and was till recently the chief town of a district. A number of dolmens are found scattered over a distance of 2 miles to W. (Schumacher, Northern Ajum, pp. 123, 191-193.]

**Tob-adonijah**, one of the Levites sent by Jehoshaphat through the cities of Judah to teach the law to the people (2 Chr. 17.8).

**Tobiah.**—1. "The children of Tobiah" returned with Zerubbabel, but were unable to prove their pedigree (Ezra 2.60; Ne. 7.62).—2. The father (or possibly the son) of Tobit, and an adversary in the opposition made by Sanballat and others to the rebuilding of Jerusalem (Ne. 3. 3, 7, 13, 4. 8). Though a slave (2.10, 19), unless this is a title of opprobrium, and an Ammonite, he allied himself with a priestly family, and his son Johanan married the daughter of Meshulam the son of Berechiah (6.18). He himself was the son-in-law of Shechaniah the son of Arah (6.18), and these family relations created for him a strong faction among the Jews. Ewald conjectures that Tobiah had been a page ("slave") at the Persian court, and, being in favour there, had been promoted to be scribe of the Ammonites.

**Tobiase, the Gk. form of TOBIAS, or TOBIJAH.**—1. Tobit's son, holding nearly as prominent a position as his father in the book of Tobit. The father (seemingly grandfather in Josephus) of Hyrcanus, a man of high standing, who had deposited some of his wealth in the temple, a man of wealth and position, who was.rotate: Tobias (6.18). He himself was the donor in-law of Shechaniah the son of Arah (6.18), and these family relations created for him a strong faction among the Jews. Ewald conjectures that Tobit had been a page ("slave") at the Persian court, and, being in favour there, had been promoted to be scribe of the Ammonites.

**Tobijah.**—1. A Levite sent by Jehoshaphat to teach the law in the cities of Judah (2 Chr. 17.8).—2. One of a delegation that came from Babylon to Jerusalem with contributions of gold and silver, from which crowns were to be made for the high-priest Joshua, the crowns being preserved in the temple as a memorial to Tobijah and his companions (Zech. 6.10-14). [H.C.B.]

**Tobit.** son of Tobiel, husband of Anna, father of Tobias, of the tribe of Naphtali. Before being exiled to Nineveh, where he attained an office at court, he (alone of his family) attended the sacrifices at Jerusalem. At Nineveh he kept the high priest and buried the dead (personal risk and loss) until protected by Achiacharus, his nephew, a high official. Being unclean through burying, he sleeps out of doors, and
his sight is ruined by birds. A slight dispute with Anna leads him to pray in grief. He directs Tobias to fetch, from Gabael at Ragae in Moab, a talent of silver to buy him on a former journey. He gives Tobias much good advice, and tells him to hire a companion, Azarias, who satisfies him as to his suitability. Anna fears for her son, but Tobit reassures her. Unaware of the delay caused by Tobias' marriage to Sara, daughter of Raguel, the ancient priest, he marries him for a long time, and Anna fears the worst; but Tobias returns with wife and money, to their great content, and heals his father's eyes with the gall of a fish caught in the Tigris. When it was proposed to pay Azarias, he declared himself, to the amazement of father and son, to be the angel Raphael. Tobit utters a panegyric, with prophetic passages, chiefly addressed to Israel and Jerusalem. He lives in piety to a great age, and before his death gives a prophetic address to Tobias, advising him to quit Nineveh before its downfall. According to his wish, he and Anna are buried by Tobias in one grave.

Tobit’s character is simple, devout, and uprightness of heart; a very good man. [w.h.d.]

**To'bit, Book of.** This book consists of family memoirs of home life and of journeys undertaken during the Captivity; many interesting incidents and examples of religious observance being interwoven therewith. They are, therefore, of private and homely rather than public and national concern; in this forming a contrast with Judith. Tobit’s simple, naturally told, domestic tale, full of faith and benevolence, shows the blessing of God on pious households, and is as touching as almost any O.T. story. If all Jews had practised such piety as Tobit’s, Christ would have had little occasion for reprimanding his well-known woes. Tobit’s life has some parallels with Job’s; but the problem of the suffering of the innocent is less profoundly considered. The activity of spirits, Raphael and Asmodeus, good and bad, taking part in human affairs, is very prominent. The duty of paying tithes (1.6,7) and of burying the dead (2.17, 8.15, 17); the sanctity of marriage, including the doctrine of affinity (10.12), are exemplified. The spiritual results of almsgiving are perhaps a little disproportionately extolled (4.10, 12, 5). Still two Offertory Sentences are chosen from 4.7-9; the Marriage Service is indebted to Tobit for some phrases; and the Homilies quote the book as Scripture. Though constantly used in the early Church, opinion as to the canonicity of this book was much divided; but, though never in the Jewish canan, it gradually won its way, partly as admitted into the LXX., partly on its own merits as an offshoot of oral tradition; in the character of the story, rather than in the matter of the words. The matter of this composition is largely derived from I-Macc. (8.4-8, 15-17), but is no longer connected with it. The work consists of three distinct parts: 1. The story of Tobit’s life; 2. The journey to Raguel; 3. The return. The existing texts yield no certain result—witness the opposite opinions of competent scholars; but, on the whole, a Semitic original has rather the stronger probability, and accords best with the intensely Heb. character of the story. Of this Neubauer can only suggest the general plan, that attempts have been made to show that it is only a rendering from the Gk. The linguistic indications of our present documents can hardly be deemed decisive: but the earlier the book is dated, the less likely does a Gk. original become; while the existence of a Gk. text in Jerome’s day is certain. The doubt which exists as to the author’s country unfortunately deprives us of a valuable clue.

—**Text and Versions.** The Sinaitic text, probably the basis of the Old Latin, differs largely from the ordinary LXX. type. Early variations—not merely verbal, but divergences in the narrative itself—suggest the current oral traditions of the tale. Jerome professes (Pref.) to have rendered Tobit for the Vulg., like Judith, very hurriedly from a Chaldee MS. Doubtless the Old Latin, as well as the Gk., was also before him. The extant Heb. texts are of late date, and cannot claim to represent an original version. The late A.D. date proposed by Kohut: while it makes the Hadrian period supported by Graetz and Neubauer improbable. On the whole, from 200 to 170 B.C. seems a likely period for the origin of the book. Certain parallels with Ecles., and the absence of Maccabean traces, fit in well with this date; but certainly not in 1878, E. W. Erb, in *Encycl. Bibl., s.v.*; Speaker’s, S.P.C.K., and Bissell’s Comm.; arts. in Hastings (5 vols. 1904) and Vigouroux’s D.B.; Strane, *Age of the Maccabees* (1895); L. E. T. André, *Les Apocryphes* (Florence, 1903).

[w.h.d.]

**Tobit’s fish. [Fsh.]**

**To'chen,** a town of Simeon (1Chr.4.32).

**Togarmah** (Gen.10.3) was the third son of Gomer, brother of Ashkenaz and Riphath. Geographically, the name is connected with Armenia, and Ezekiel’s references to Togarmah as trading with Tyre for war-horses and mules (Ezk.27.14, 36.6) accord with this. Fried. Delitzsch connects it with the Assyrians, the *garimmi* of Assyrian texts. It was the capital of Melitene, and Sargon of Assyria states that he captured and re-colonized it. According to Sennacherib, who took *Til-garimmi* and destroyed it, it was on the borders of Tabal (Tubal, g.v., and c.f. *Ezk.* 27.13). It is difficult to see how this was—it might possibly become 90, but the position agrees fairly well. Kiepert and Dillmann, however, make it to be S.W. Armenia.

[r.g.p.]
Tohu’, an ancestor of Samuel the prophet, perhaps = Toah (1Sam.11:1; cf. 1Chr.6:34).

Toi, the king of Hamath who sent his son Joram, bearing presents of gold, silver, and brass, to congratulate David upon his defeat of their mutual enemy the Syrian king Hadadezer (2Sam.8:9,10).

Tola'.—1. The first-born of Issachar, and ancestor of the warlike To’aites (Gen.46:13; Num.26:23; 1Chr.7:1,2).—2. (Judg.10.1-2.) Son of Patri, a man of Issachar, who, after Abimelech, judged Israel for 23 years at Shamir in mount Ephraim.

To’aites, The. [Tola, 1.]

To’bhanes (1Esd.9.25) = Telefim.

Tomb. Heb. rock-cut tombs consisted of square chambers, with tunnel graves (kokim, Mishna, Bab. Batra vi. 1) running in from the walls. These tombs were whitewashed outside (Mt.23:27; Mishna, Sheqalim i. 1). Phoenician tombs [Sidon; Tyre] were usually reached by a shaft from above, as in Egypt, though the Heb. type occurs also near Tyre. After c. 100 B.C. a new type of tomb appears, often in inner chambers cut behind the old kokim chambers, which are entered from the face of the rock. In this three sarcophagi, parallel with the walls, occur on three sides of the chamber, each under an arcobulum, or arched recess, as in the Roman catacomb. The "new sepulchre" (Jn.19.41) was evidently of this type, which was then used at Jerusalem, since it would be impossible, in the case of the old kokim, for the angels to be seen, "the one at the head, and the other at

TONGUES, CONFUSION OF. The unity of the human race is clearly implied, if not positively asserted, in Gen.1.27 (cf. 2.4). Man was regarded as of the most rigid nature, all mankind being conceived as descending from a single pair. This naturally presupposes the doctrine of the unity of language, handed down from parent to child by the process of imitation which perpetuates it still. No explanation is given of the origin of speech, but it was regarded as coeval with the creation of man (cf. 1.29 with 2.19,20). Whether the speech of man developed into dialects and languages between this period and the Flood is not stated; but if so, its unity was restored in Noah, and must have continued down to the time of the tower of Babel and the dispersion (11.1-9). Recognizing, apparently, the tendency to dispersion, the human family, or a portion of it, sought to check it by the building of a great central edifice, and a city which should serve as the metropolis of the whole world. This, however, was not the Creator's design—the human family was to be gathered all in one place; hence the confounding of their language, and the consequent dispersal of men to the various regions of the earth (11.7,8). We are left to imagine that this dispersal was because they could not understand each other, and that the change in speech which took place involved ethnic groups or families. Whether the language in existence before the confusion of tongues continued to exist is not stated. Though spoken of in 11.7,8 as practically contemporaneous events, the scattering would follow the confusion, though but at a short interval. The confusion of tongues must have been conceived as having been very thorough, as it was not a mere sudden development of dialects (though this is involved), but also a creation of new languages. A chronological period is also implied—the confusion took place as soon as men grew numerous enough to have towns and building-metropolises, so ch. The table of languages precedes ch.10 (cf. vv. 5,20,31,32). The Mosaic table in ch. 10 does not aim at describing the process of the dispersion, but assumes it as an accomplished event, and the narrative presupposed a certain amount of geographical knowledge on the part of the reader. It records, therefore, the ethnic relations between the various nations affected by it, these relations being expressed under the guise of genealogies. The ethnic character of the document, however, is clear from the names, some of which are gentile in form, as Lindim, Jobonsite, etc., others geographical, as Mizraim, Sidon, etc.; and these different though combined, points of view are admitted and stated in the formula which concludes each section—"after their families, after their tongues, in their countries, and in their nations" (vv. 5,20,31). That the table is geographical as well as ethnological, and the combination of designating the countries by the countries they occupied. The whole human race is referred back to Noah's three sons, Shem, Ham, and Japheth, and is divided into
three divisions corresponding therewith. Apparently that the continuity of the narrative following therewith might not be disturbed, the order of the three might be as follows: (1) Japheth, (2) Shem, (3) Ham. Associated therewith are (a) Ashkenaz, (b) Riphath, and (c) Togarmah. (ii) Magog, the Scythians. (iii) Madai, the Medes. (iv) Javan, the Ionians and Hellenic race in general, with which are associated: (a) Elishah, (b) Tarshish, (c) Kittim, Cyprus, (d) Dodanim, if for Rodanim, probably Rhodes. (v) Tubal the Tibareni, (vi) Meshech, the Moschians. (vii) Tiras. (2) The Hamitic list contains 30 names, of which 4 represent independent, and the remaining affiliated, nations: (i) Cush, Ethiopia, and probably the Asiatic Kusu and Kasu of the Assyrian inscriptions, the eastern Kasu being the same nation, and distributed among the tribes associated: (a) Seba, (b) Havilah, (c) Sabtah, (d) Raamah, (e) Sabtechah, (f) Nimrod, Babylon. From Raamah came: (a) Sheba, the Sabians; (b) Dedan. (ii) Mirraim, Egypt, with which are associated the following 7: (a) Ludim, (b) Anamim, (c) Naphtuhim, (d) Pathus, (e) Casluhim, (f) Japheth. From Casluhim came (c) Philistim, the Philistines, though this is regarded as incorrect—it should be from Caphtorim (in that case f). (iii) Phut, evidently regarded as one of the original nationalities, which is, perhaps, confirmed by a Babylonian inscription, which mentions Pu'tu-Yasan, Phut of Ofana. (iv) Canaan (well known), to which belong the following 11: (a) Sidon, the renowned coast-town (language Semitic); (b) Heth, the land of the Hittites (language seemingly Aryan); (c) the Jebusites, of Jebus or Jerusalem; (d) the Amorite (language seemingly Semitic); (e) the Hivite (language Semitic); (f) the Japhet, the Hivite, in the same district: (g) the Arkite, in Phoenicia; (h) the Sinite, in Phoenicia; (i) the Arvadite, of Aradius in the same district; (j) the Zemarite, probably of Simyra; (k) the Hamathite, of the city now called Hamah, where the ancient Hittite script was in use. (3) The Semitic list has 25 names, 5 being those of independent, and the remainder of affiliated, nations: (i) Elam, an early Semitic possession. (ii) Asshur or Assyria. (iii) Arphaxad, probably Chaldea. With these are associated: (a) Salah or Shelah; (a') Salah's son Eber, the Hebrew nation; (b) Peleg and (b') Joktan, the tribes of Arabia, whose names are then given—(a') Almodad, (b') Sheleph, (c') Hazarmavath or Hadramaut, (d') Jerah, (e') Hadoram (f'), Uzal, (g') Dlkah, (h') Obal, (i') Abimael, (j') Sheba, (k') Ophir, (l') Havilah, (m') Jobab. (iv) Lud, possibly Lybia, the language Semitic, and of a general, with which are associated: (a) Uz, perhaps the Assyrian Ussä, N.W. of Aleppo; (b) Hul; (c) Gether; (d) Mash, apparently the Assyrian Mas, a desert country (Syrian or Arabian). The total number of the names mentioned in this table amounts to 70, which has been raised by ancient writers to 72, so as to make six dozen—suggesting the numerical influence. It is difficult to fix the date of this ethnographic table, as arguments can be deduced for a period as early as 2000 B.C. and as late as the Jewish Captivity. In all probability some date between these two would best suit the case, and it has been pointed out that the absence of any mention of Tyre names seem to indicate an early date for the composition of the table. [Tyre] Whatever may be its date, it is noteworthy that the writer, even then, had recognized the fact that language was no test of nationality, for he has no hesitation in stating that Canaan and the Ethiopians as having been heathen at the time, withholding that it must have been well known that a language closely akin to Hebrew was spoken there. He may, however, have regarded the people present at the time of the building of the tower of Babel as having the languages which there came into existence and the races which were distributed among them. The names, which are associated, are: (a) Saba, (b) Havilah, (c) Sabtah, (d) Raamah, (e) Sabtechah, (f) Nimrod, Babylon. From Raamah came: (a) Sheba, the Sabæans; (b) Dedan. (ii) Mirraim, Egypt, with which are associated the following 7: (a) Ludim, (b) Anamim, (c) Naphtuhim, (d) Pathus, (e) Casluhim, (f) Japheth. From Casluhim came (c) Philistim, the Philistines, though this is regarded as incorrect—it should be from Caphtorim (in that case f). (iii) Phut, evidently regarded as one of the original nationalities, which is, perhaps, confirmed by a Babylonian inscription, which mentions Pu'tu-Yasan, Phut of Ofana. (iv) Canaan (well known), to which belong the following 11: (a) Sidon, the renowned coast-town (language Semitic); (b) Heth, the land of the Hittites (language seemingly Aryan); (c) the Jebusites, of Jebus or Jerusalem; (d) the Amorite (language seemingly Semitic); (e) the Hivite (language Semitic); (f) the Japhet, the Hivite, in the same district: (g) the Arkite, in Phoenicia; (h) the Sinite, in Phoenicia; (i) the Arvadite, of Aradius in the same district; (j) the Zemarite, probably of Simyra; (k) the Hamathite, of the city now called Hamah, where the ancient Hittite script was in use. (3) The Semitic list has 25 names, 5 being those of independent, and the remainder of affiliated, nations: (i) Elam, an early Semitic possession. (ii) Asshur or Assyria. (iii) Arphaxad, probably Chaldea. With these are associated: (a) Salah or Shelah; (a') Salah's son Eber, the Hebrew nation; (b) Peleg and (b') Joktan, the tribes of Arabia, whose names are then given—(a') Almodad, (b') Sheleph, (c') Hazarmavath or Hadramaut, (d') Jerah, (e') Hadoram (f'), Uzal, (g') Dlkah, (h') Obal, (i') Abimael, (j') Sheba, (k') Ophir, (l') Havilah, (m') Jobab. (iv) Lud, possibly Lybia, the language Semitic, and of a general, with which are associated: (a) Uz, perhaps the Assyrian Ussä, N.W. of Aleppo; (b) Hul; (c) Gether; (d) Mash, apparently the Assyrian Mas, a desert country (Syrian or Arabian).
of languages known to exist on the earth. There is no attempt therein to account for the diversity of race, though diversity of language, notwithstanding that it is no real test of race, is nevertheless dependent upon it. In all probability it was regarded as sufficient to account for by the statement that Sem, Ham, and Japheth were the three sons of Noah, who developed, as we may suppose, by divine will, the three racial types with which the Hebrews were acquainted. And here we are again met by a difficulty, for, admitting the miracle of the confusion of tongues, we have still to find time for the increase of the families of mankind, and we know from the ancient inscriptions that, at the date of the Flood (2501 B.C. according to Ussher, 3066 B.C. if we accept the LXX chronology), there were at least four distinct languages spoken—Sumerian, Accad, Elamite, Semitic Babylonian, and Egyptian. It is, therefore, possible, with Wellhausen, to shift back the narrative to an earlier period, so as to give time for the increase of men to the number needed at that date, but this would interfere with the narrative as it stands, and transfer ch. I-11, as Duhm regards, to the prehistoric period. The explanation of the Biblical narrative therefore is, that as soon as the more learned and intelligent among them began to reflect, they wondered how the various languages with which they were acquainted came into existence. The people wished not to be scattered abroad, and in building the tower they committed an impious act, which, if completed, would have been the punishment for which was the bringing about of that disadvantage which they sought to avoid. As yet no Babylonian parallel has been found, but it is not improbable that such may have existed, notwithstanding that the Biblical narrative is anti-Babylonian. Travellers or merchants visiting that ancient city in those early days, noticing the many languages spoken there, and seeing an unpersonified word or temple-tower, regarded it as an evidence of man's self-exaltation checked by God in the manner related. Nebuchadnezzar speaks of the temple-towers of Babylon having an unpersonified word in its present form. The narrative of Babylon is shown by the mention of brick and bitumen as building-material, as if they were unusual (which a Babylonian would not have done), and to this may be added the incorrect etymology of Babylon, which, though it may not have been meant originally, as the Babylonian inscriptions indicate, "Gate of God," could hardly have signified "confusion," as the Babylonian language seems not to have possessed the grammatical form involved. See T. H. O. Driver in Hastings, D.B. (vol. iv. 1902); and the Rhyl Church Congress Report (1891), p. 461. "P. Races, Semitic Languages," etc.}

**Tongues, Gift of.** The chief question which throw light on the nature and purpose of the gift in question are Mk.16:17, Ac.2:1-13, 10, 46, 19, 6, 1 Cor.12:13, 14. We assume that, whatever interpretation may be put on these passages, they at least imply a special manifestation of the Holy Spirit, Who was promised to the disciples, not only to give them understanding, but also new power of expressing truth. Their moral courage was to be strengthened, that they might be good witnesses; even before kings (Mt.10:19, 20; Mk.13:11) should Galilean peasants speak freely. The reading of Mk.16:17, "with new tongues," is not confirmed; but in any case it refers to something probably to the tongue of Pentecost. Together with the sound as of the rushing of a mighty wind," there appeared, apparently to all who were in the house, "tongues parting asunder like as of fire," and it sat upon each one of them. And they were all filled with the Holy Spirit, and began to speak with other tongues as the Spirit gave them utterance." (Ac.2:1-4.) The word used for speaking, ἀναστροφή γρηγορίας, is used in the LXX. for the speech of prophets with a suggestion of solemn, musical tone (1Chr.25:1; Ezk.3.3). They spoke "the mighty works of God" (Ac.2:11) in a kind of hymn of praise. They took the multitude, ca ?? ?t; together, some mocked and said they were crazy, others caught at words in their own language and expressed surprise that the speakers were Galileans, men of a marked provincial dialect. The list given of the nationalities represented in the crowd is "one of countries, not of languages." All these Jewish pilgrims may be supposed to have spoken either Greek or Aramaic, no doubt with differences of dialect, and it is possible that the difficulty overcome was only the roughness of Galilean speech. Even so it was a marvellous triumph of spiritual influence over natural deficiency. The difficulty about accepting the traditional interpretation which the Holy Spirit gives to his unworthy power of preaching in foreign languages comes from the fact that St. Paul claimed to possess the gift (1Cor.14:18) in words which exclude the idea of preaching. As we have seen, the words of Ac.2:11 suggest praise as the dominant idea. In St. Paul's letter to the Corinthians he says that tongues is the form of ejaculatory prayer, uttered in rapturous devotion; not always the same, for there were "kinds of tongues" (1Cor.12:10); occurring in prayer only (14:2) addressed to God. The speaker edified himself, but sometimes lost self-control (ver. 11). He was not understood unless he had some knowledge of the language present where the gift of sympathy and could follow obscure trains of thought and interpret them. St. Paul compares it to the sound of the trumpet when it gives an uncertain sound (1v. 7, 8) or the use of a foreign language (1v. 10, 11). One who speaks in a tongue should pray for ability to interpret (ver. 3). We may suppose that unusual words, such as Maranatha, Abba, imported from the Aramaic, may have mingled with other words and sounds of ecstatic joy. The use of such expressions would not be improbable in a state of high spiritual tension, and in fact the last-named word is regarded by St. Paul as specially characteristic of the Spirit (1Cor.13:13; Gal. 4.6). But in the case of one singing in the spirit but without understanding, a strain of ecstatic melody is alone perceived. The spirit prays or praises, but the mind takes not part, is, in St. Paul's word, "unfruitful" (1Cor.14:4, 15). The implication made on verbal incoherence would be that there was an assembly of madmen (ver. 23), whereas St. Paul an
toparchies from the exercise of the higher gift of prophecy. This passage seems to propose the idea that the gift of tongues was a gift of speaking foreign languages, such as the Lydian tongue (Ac. 14:17). It must be remembered, however, that St. Paul was grateful to God for the gift of tongues (1 Cor. 14:18), and urged that it should be used in private, although he did not allow its public use when no interpreter was present. Such an explanation applies satisfactorily in Ac. 10:46, 19:6, and in 11:15; the gift of 10:46 is the same gift which was conferred on the apostles "at the beginning." We are bound to find an explanation which will apply also in ch. 2, and it is possible that the tongues at Pentecost were a higher grade, perhaps never repeated, of the gift spoken of by St. Paul. Not that the proverbial "gift of tongues" had a history to itself. Traces of the gift have been found in Romans, Galatians, and Ephesians, but disappeared gradually, while its place in Christian worship was more and more supplied by "hymns and spiritual songs." From time to time interesting parallels have been noted in Church history. The gift of tongues was claimed by Fee.' the northern islands, and has been contemporaneously with a revivalist movement in Silesia. Similarly, more recent "revivals" have during the last century been accompanied by phenomena which have been claimed to be akin to the "gift of tongues." The consideration of these lies outside our scope. It is admitted by most of the Fathers that the gift recorded in the Acts was bestowed on men in full vigour and activity, preceded by no morbid excitement or ecstatic frenzy, and followed by no exhaustion. It was the starting-point of the long history of the Church of Christ, the witness, in its very form, of a universal and confessor religion, which belonged, however, to a critical epoch, not to the continuous life of the Church. It implied a disturbance of the equilibrium of man's normal state, and it was not the instrument for building up the Church. Commentaries on Ac. 2, especially Knowling; on 1 Cor., see especially J. A. Abbot's art. "Gift of Tongues" in Hastings, D.B. (5 vols. 1904); A. Wright, Some N.T. Problems, p. 277. [A. E. B.]

Toparchy (Gk. τοπαρχία). Applied in one passage of the LXX. (1 Mac. 11:28) to indicate three districts to which elsewher (10:30, 11:34) the name νους is given. R.V. translates in the first-named passage "provinces," but in the latter two "governments," which A.V. uses in all three passages. The three "toparchies" in question were Aphrodisias, Lydia, and Pamphylia. The "toparchies" seem to have been of the nature of the Turkish agaliks, and the passages (e.g. 2 K. 18:24, etc., L.XX.) where the toparch (τοπάρχης) is mentioned harmonize with the view that, like the aga, his duty would be to collect the taxes and administer justice in all cases affecting the revenue, and, for the purpose of enforcing payment, he would have the command of a small military force.

Topaz (Heb. בְּרֲדָד; Ex. 23:17, 39:10; Ezk. 28:13; Job 28:19; Rev. 21:20). It is clear from the account given by Pliny (Nat. Hist. xxxvii. 32) and other ancient writers that their topaz was not the mineral now bearing the name topaz, but that called Chrysolite or peridot, a choice variety of olivine. The yellower kinds were first obtained from an island in the Red Sea, of which some specimens are stored in the Egyptian, the name greener from near Thebes in Egypt. The modern topaz, of which the best specimens come from Brazil and to which in mediaeval times the name was gradually transferred, consists of silica and alumina with fluorine, and it is distinctly harder, while chrysolite is rather softer, than rock-olivine. It however, does occur in Egypt, near the emerald-mines. [R.G.R.]

Tophem, To'phem. The word occurs almost always with the definite article in Hebrew (תפּוֹפָם), thus showing it was first a common noun. The name attests the presence of a locality. Tophem (once tophaled, Is. 30:33; "a Tophem," R.V., more correctly "a pyre," "a funeral pile") gave its name to a part of the valley of the (son, var. the sons of) Hinnom (Jer. 7:32, 19:2, 6, 13, 14; 2 K. 23:10; cf. Jos. 15:8), and stood to the S.E. of that valley, near the Kidron valley. It was the 21st of the 24 tribes of Jerusalem, called the Gate Harsith, or of potsherds (R.V.). For its history, see GEBHENA. The name Tophem no longer existed in N.T. times, or even after the Captivity. The LXX. spell the name Τάφθα, Θαφθα, Θφθα, etc., and hence the Peshitta has Taphath. Possibly this change of vowels throws light on the derivation of the name. It is a corruption of the Syrian verb תֶּפַח ("to heat"), whence tephaya ("fireplace," "tripod"). If the Heb. form is right, it is from the verb which in Syr. (Aphel) is awphah ("to perfect," "finish"), cf. Heb. yapheh ("to be perfect," hence "beautiful"); Arab. wafah ("to keep a promise," "pay a debt," "atone," "conclude, God""); Syr. verb epah ("to cook") may be mentioned. The word must mean "a burning-place," "pyre," or "place of atonement," made by fire. The later Jewish explanation, "place of spitting," is impossible. Thomson, Land and Book; Neil, Pal. Explained. [W.S.G.T.]

Tortoise (Heb. כַּבֵּד). The word cabb occurs only in Lev. 20:18, as the name of an unclean animal, and is translated tortoise in A.V. (R.V. great lizard). It is the equivalent of dab, the Arab. name of the spine-tailed lizard (Uromastix spinipes). These lizards, which grow to a length of nearly 2 ft., are common in the deserts of Arabia, Syria, and N. Africa, where they live in burrows. They take their generic name from the rings of stout spines girdling the tail, which is often left exposed when the creatures are in their burrows. [R.L.]

Tou' (1 Chr. 18:9,10) = Toi.
Tower. A.V. so renders seven Heb. words: (1) bahçon (Is. 23.13), bahun (Je. 6.27), or bahan (Is. 32.14), a "watch tower" on a mound. [Ophel.] (2) mîqôdîth (2Sam. 22.51; mîqôdîth in the qvr), a "great" building. (3) mîqôdîth, the common word (Arab. mejdel) for a "strong" or "high" building; or "castle" (1Chr.27.25), rendered tower in 40 passages, and fence in 15; margin: "a tower (or fort) = mîqôdîth (Ezk. 29.16, 30.6). (4) môkîd (Hab. 2.1), occurring in 28 other cases, rendered siege (i.e. siege tower), bulwark, defence, stronghold, fortress, fenced, place. (5) [Ophel.] (6) piinnû, a "corner tower" (Zeph.1.16,3;6) or bulwark (2Chr.26.15). (7) mîqôabâh, a high tower (2Sam. 22.3; Ps.18.14A), the title ascribed in Ex.2.14 times, otherwise rendered refuge, defense, high place. Town walls were very early strengthened by projecting towers [Cities; Lachish] like that on Ophel (Ne.3.25), of which the foundations still remain. Vineyard towers, 2 or 3 ft. high, served—as they still do—for a platform on which a watchman stood (Is.24.1, Mat.21.33; Mk.12.14). [C.R.C.]

Tower of David (Ceaddim). The neck of Solomon's bride is compared to David's tower (probably at Jerusalem) built "to talpixyûth (R.V. marg. "with turrets"). The meaning of this word is doubtful, but it is perhaps best rendered "with slopes" (Arab. lafa) "diminishing upwards like the neck. The gold doors of her necklace are compared to round shields of heroes hung on the wall (see Ezk.27.10,11), such bucklers being represented on towers in Assyrian pictures. The site has been located at the ancient tower near the Jaffa Gate (Phasaelus), but this was built by Herod the Great. [Jerusalem]. [C.R.C.]

Trachonitis (Lu.3.1 only). From Josephus we gather that it lay S. of Damascus and E. of Gaulanitis, and that it bordered on Auranitis and Batanaea, from Ptolemy that it bordered on Batanaea, near the town of Saccara. In the Jerusalem Talmud (Shebith vi. 1) it is made to extend as far S. as Bozrah of Arabia or Auranitis.

Trade. [Commerce.]

Tradition. The most scrupulous endeavors made to keep the exact letter of the law led during the four centuries before Christ to the creation of a great body of Midrashim (from durash, to "seek"), i.e. interpretations of Scripture and inquiries into the meaning of the Scriptures. These were of two sorts—legal and homiletical, Halakoth and Haggedoth: for which and for their history in O.T. times see Talmud. In the time of Christ, these Midrashim ("traditions of the elders," Mt.15.2,3,6, etc.) were considered of equal, if not superior, authority to the Scriptures, and their character is well illustrated in Mk.7.3, etc. (cf. Mt.23.26ff.). Their minutiae (e.g. cf. the 39 prohibited labours on the sabbath; cf. L.6.14ff.) involved the poorer people in hopeless entanglements (see Jn.7.19), and provoked the strong language of Christ. Care must be used to distinguish between the "traditions of elders" which evoked our Lord's indignation, and the Christian tradition of the apostles. Three times St. Paul uses the word παραδόσεις, παράδοσις, of the instructions which he had given to his converts in the faith (1Cor.11.2; 2Th.2.7,3.6). Obviously, all the first Christian teaching must have been oral, the written word coming later. But this need not be avoided such an expression as "traditions." The Jewish doctrines that he had formerly held, he does call his παράδοσις traditions (τῶν παραδόσεων τῶν παραδόσεων, Gal.1.14). Pocock, Portia Mosis; art. "O.T." Curtis in Hastings, D.B. (5 vols. 1904); Edersheim, Life of Christ, vol. ii. pp. 9ff. [S.S.]

Trance. An abnormal suspension of the faculties of the body while the mental faculties may or may not be active. Possibly a form of catalepsy. It is a remarkable fact that in all ages and nations extreme religious fervour seems apt to produce in special cases extraordinary ecstasies. Although the word "trance" only occurs on four occasions in A.V. (Num.24.4; 2Esd.12.3; Ac.10.10,22,17), yet the state indicated, in which the person acted in an entirely abnormal fashion while under the influence of an external spiritual power, is fairly frequent. Thus Abraham in his "horror of great darkness" (Gen.15.12), Balak seeing the stars with staring eyes, the vision of God (Num.24.4), Saul prophesying naked on the ground (1Sam.19.24), Ezekiel and Daniel at the time of their prophecies, all appear to have been in a condition of trance. Possibly, too, the apostles were in a similar state on the Day of Pentecost: almost certainly the three chosen ones were on the Mount of Transfiguration (Mt.9.28; L.9.32). St. Paul again did not know whether soul and body were together or no at the time of his revelation (2Cor.12.1ff.), and St. John saw the Apocalypse when he was "in the Spirit on the Lord's Day" (Rev.1.10). But these trances are by no means restricted to Bible times. Everywhere they have been prevalent, till they have almost come to be regarded as a mark of a special degree of sanctity. Here, of course, we are on difficult ground, for so many would-be reformers have been possessed with a mad hysteria which has simulated the religious trance or ecstasy that one is almost tempted to dismiss the whole thing as a mere form of neurosis. This, however, it is impossible to do in the face of the extraordinary variety of the people who have experienced these ecstasies. And after all,
there is a very palpable difference between the mad ravings of a Joanna Southcote and the devout trance of a St. Francis of Assisi. No sane person believes in the former; every devout mind reverences the latter. [TONGUES, GIFTS OF, VISION.]

Transfiguration (Mk.9:1-10). This is interpreted here connected with Jewish ideas of death. Neither O.T. nor N.T. regard human death as natural. The retribution pronounced in Gen.2:17 would certainly convey to our Lord's contemporaries the idea that physical death was a consequence of sin (cf. Ps. 93:11; Wis.1:13-16,2:23; Ecles.25:24; 2 Esd.3:5-7). It is impossible to exclude from Pauline doctrine the thought of intimate relation between the spiritual and the physical, between moral and physical death (1Cor. 15:21; Ro.5:12,15,21,8:10; cf. Jn.5:25,28).

According to Scripture, the possession of an animal constitution rendered physical death a necessary evil, but converted it into a necessity was sin. No one can reasonably argue that physical dissolution as now experienced is the only possible method of transition into a higher existence. The universality of sinfulness involves the universality of death. Now, the historic entrance of the Son of God into the human race must be, in that one instance, new moral conditions within mankind. The N.T. asserts repeatedly the sinlessness of Jesus Christ. But if physical death is the wages of sin, not the debt of nature, it will follow that moral perfection includes exemption from the necessities of such experience. If Christ's sinlessness, then, according to Biblical conceptions, He need not die. And this is exactly what our Lord asserts (Jn.10:17,18).

"In the case of Christ, even death itself was voluntary" (Westcott, in loc.). "Christus autem et pro nobis posuit, et quando voluit, posuit" (St. Aug. In Joannis Ev. tract. xlvii. i. Gaume's ed., iii. 2153). Transition, therefore, into the new life of God was as necessary as the penalty of death belonged by right to Him Who had advanced along the lines of a sinless development. This was offered Him when He was transfigured. The moral glory transfiguring the flesh suggests a higher method of transition. He stood on the verge of the other world. Moses and Elijah, the law and the prophets, acknowledge Him. If the Incarnation had occurred in a sinless environment, we may suppose that our Lord's earthly life would have terminated with an ascension at the Transfiguration. But what was individually His right would, if accepted, have left mankind unaided. God's method of grace, which is the burden of the sinful. The law and the prophets had relatively to mankind, another ideal—the idea of redemptive work. Accordingly Christ speaks of His decease which He must shortly accomplish at Jerusalem. Thus the death of Christ is absolutely voluntary. Others may consent to all the experiences which therefore cannot avoid. He alone consented to death which He need never have experienced. And that death, so accepted, would have unique results is implied in the Father's expressed approval: "This is My beloved Son" (Lu.9:35). Thus the Transfiguration had its primary significance for our Lord Himself. Yet, since it was permitted to occur in the sight of His selected brethren, it was intended, subordinately, to convey to the Twelve instruction and strength at an extremely critical hour. For it followed upon our Lord's first announcement of His death. This heavenly glory as a right merely won by the approval of the heavenly Voice, gave the highest sanction to our Lord's previous prediction of His death. It must have helped to reconcile them to an idea so abhorrent to their preconceptions. They may at the time have continued only partially comforted. But afterwards they would have perceived the purpose of His sacrifice and the profound value of such an experience of the Sinless voluntarily endured. We know how this impressed St. Peter (2Pe.1:16-18). B. Weiss, Life of Christ, ii. 98 ff.; Our Lord's Resurrection (Oxf. Lib. Theol.), pp. 207 ff.; Weber, Zum Zorne Gottes; Massee, Life of the Prophet (p. 207).

Treasure-house. Treasurer or Treasury. Four distinct Heb. and Aram. roots are represented by these words in A.V.

(1) Heb. 'ôtâr, the common word for "store," or "treasure," is rendered treasure in Jos.6.19, 24, 1Chr.28.12, Ne.13.13, Ps.135.7, Je.38.11, otherwise suchhouse, mchaseh, 2Ch.35.22, Pr.7.1, Mal.3.10; arscheh, Je.50.25; cellar, 1Chr.27.27,28.

(2) Heb. sôkhôn (1Sa.22.15, treasurers; R.V. marg. steward), meaning a resident (Ass. šakanum).

(3) gîžêr in Ezr.1.18 (Heb.) and 7.21 (Aram.), or gâdhabbhrâyâ (Aram. def. plur. in Dan.3.2.3, 1treasurer (Syri. gêbârî), thought to be a Persian word from its term to govern," to hold a people," Esth.3.4,9,7; treasures; Aram. gîszyn, Ezr.5.17,7.20), properly "treasures" or "collections," as in 6.1, bêtî-siphhrâyâ di gîszynayy, "house of rolls" (R.V. archives), or "of writings" (Writings) i.e. the storehouse of official records. The Heb. ganzâh (1Chr.28.11) for treasury does not seem to be of Semitic origin. It might be Akkadian (ganzub) for "tablet building," meaning a library for sacred writings in the temple (2K.22.8).

Trench (1Sa.m.17.20,26.5,7). [ENCAMPMENT.]

Trespass-offering. [SACRIFICE, 3.ii.a; 3. v.a.]

Trial. See Judge, Law in O.T., Sanhedrin, Pontius Pilate. A few judicial proceedings in N.T. may be mentioned here. (1) The trials of the apostles, of St. Stephen, and of St. Paul before the high-priest, were conducted according to Jewish rules (Ac.4.5,27,6.12,22,30,25.1). (2) The trial, if it may be so called, of SS. Paul and Stephen (Acts 6.13) was held before the sanhedrin, or, as they are called, στρατηγοί, prae tors, on the charge of innovation in religion—a crime punishable with banishment or death. (3) The interrupted trial of St. Paul before the proconsul Gallio was an attempt made by the Jews to establish a similar charge (Acts 18.12). (4) Those of St. Paul at Caesarea (24.25,26) were conducted according to Roman rules of judicature. (a) In the first of these, before Felix, we observe the employment, by the plaintiffs, of a Roman advocate to plead in Latin. [ORATOR.] (b) The postponement,
TRIBE

after St. Paul’s reply. (c) The free custody in which the ascension was kept, pending the decision of the judge (24.29, 11). The second formal trial (25.7, 8) presents two new features: (a) the appeal, *apelleatio* or *procovatio*, to Caesar, by St. Paul as a Roman citizen, which at once removed the case to the jurisdiction of the emperor. (b) The conference of the procurator with the council (25.12) — i.e. either the procurator, who sat on the tribunal with the praeceptor as consiliarius, or the deputies from the Sanhedrin. (5) We have, lastly, the mention (19.38) of a judicial assembly which held its session at Ephesus.

Tribe. If we take the Bible, which derives the twelve tribes from Jacob’s sons, at its own value, and consider the sons of Jacob to be set before us as men of flesh and blood, they will be for us neither clans nor chieftains of clans, but actual fathers of tribes; though foreign elements might be incorporated in their tribes (Gen.17.12, 13) by circumcision, with the restriction in Dent.23.2ff., Neh.2.4, 23, and 13.

The signes of the Zodiac, any relation to which could only have arisen in later times. The same number in Nahor’s sons (Gen.22.20 ff.) and Ishmael’s sons (Gen.22.20, 23, 25.13, 14) need not at all be regarded as an artificial imitation by Israel, but simply as a fact. Notice the difference in the mothers. Nahor descended from two wives and two concubines, the sons of Nahor from one wife and one concubine, the Ishmaelites without mention of the mothers, but see 21.21; and the varying numbers in the posterity of Esau (Gen.36.), of Joktan (10.26ff.), of Keturah (25.2ff.). To keep to the numbering-twelve, which was disturbed by the adoption of Ephraim and Manasseh (ch. 48.), either Levi, because of his separation to God and his deprivation of inheritance amongst his brethren (Num.18.20 ff.; Deut.18.1) was not counted (Num.1.2.16.14ff.; 13.16-16; Ezek.38.1-29), or Ephraim and Manasseh were reckoned as one (2.29, 899, 13; Ezek.48.10ff.). The order of the tribes was considerably, often without any clear principle being distinguished; but Leah’s sons, as being those of the first wife, are preferably set first, and the order of camping is grouped according to descent on the mother’s side (Num.2.10, 13ff.). The system of division was patriarchal, as the influence of the family connexions in nomadic peoples generally makes it. The tribes called *malṭe* genealogically [cf. Ezek.19.10, Heb.], politically *šēbḥet*; so that these terms are not available as indications of sources are divided into clans (mispḥāḥoth), these into houses (bṭīn or beth *shabbāth*), these into families (gāḥārīm; see specially Josh.7.14ff.). (A.V. confuses this distinction by translating both *mispḥāḥoth* and gāḥārīm as “families,”)

Yet the conceptions are not constant, the first two being interchangeable (Josh.17.17; Num.4.18, Heb.), and the last but one being used for any of the others (Num.17.2[17]; Ex.6.14, 12, 3). As a rule, then, the terms refer to the nation (yet see Num.26.21, 29, 36, 40; 1 Chr.4.18ff.), the houses from the grandchildren, the families from the great-grandchildren of the tribal father. Groups that were too small were put together (1 Chr.23.11). The word *boleph* for *mispḥāḥoth* cannot, however, be connected with *boleph* (25.40, 12ff.), but with *allāhāp*. At the head of the tribe was the “prince” (māṣîl), at the head of the clan the house the rōsh, at the head of the family the gēbber, though here also we find interchanges. All chief men together form “the whole congregation or church,” as its representative (25.13). By the law of inheritance, according to which the tribes were divided, the sons of Jacob (1 Chr.1.16), and are identical with the “elders” (cf. Ex.16.22 with 17.5). This already existing tribal institution was taken up by Moses and made part of his theological system (see Deut.1.15; Num.1.48.16.11ff., 13.2ff., 34.18ff.). By the law of inheritance, according to which the twelve tribes were divided, the sons of Jacob (1 Chr.1.16), and are identical with the “elders” (cf. Ex.16.22 with 17.5). This already existing tribal institution was taken up by Moses and made part of his theological system (see Deut.1.15; Num.1.48.16.11ff., 13.2ff., 34.18ff.).

TRIPOLIS

The Gk. name of a city of great commercial importance, which served at one time as a point of federal union for Aradus, Sidon, and Tyre. It was at Tripolis together (1 Chr.23.11). The word 'boleph' for *mispḥāḥoth* cannot, however, be connected with *boleph* (25.40, 12ff.), but with *allāhāp*. At the head of the tribe was the “prince” (māṣîl), at the head of the clan the house the rōsh, at the head of the family the gēbber, though here also we find interchanges. All chief men together form “the whole congregation or church,” as its representative (25.13). By the law of inheritance, according to which the tribes were divided, the sons of Jacob (1 Chr.1.16), and are identical with the “elders” (cf. Ex.16.22 with 17.5). This already existing tribal institution was taken up by Moses and made part of his theological system (see Deut.1.15; Num.1.48.16.11ff., 13.2ff., 34.18ff.). By the law of inheritance, according to which the twelve tribes were divided, the sons of Jacob (1 Chr.1.16), and are identical with the “elders” (cf. Ex.16.22 with 17.5). This already existing tribal institution was taken up by Moses and made part of his theological system (see Deut.1.15; Num.1.48.16.11ff., 13.2ff., 34.18ff.).
TROAS

that, in the year 351 B.C., the plan was con-
cested for the simultaneous revolt of the
Phoenician cities and the Persian depend-
dencies in Cyprus against the Persian king
Ochus. When Demetrius Soter, the son of
Seleucus, succeeded in wresting Syria from the
young son of Antiochus (161 B.C.), he landed
there and made the place the centre of his op-
nerations. It is this circumstance to which allu-
sion is made in the only reference to Tripolis
in the Bible (2Mac.14.1). The city continued
to be important ever after, and is still a large
town. The port—el Minch—2 miles W. of the
city of Tribbis, is considered the best in Syria.
The town, and the island, and the river, lie
opposite one another, and the river, which may preserve its ancient name, but is not
noticed in early records. [C.R.C.]

Troas, the city from which St. Paul first
sailed, in consequence of a divine intimation,
to carry the Gospel from Asia to Europe
(Ac.16.8,11). It is also mentioned in Ac.20.5,
ex.2Cor.2.12; 1Tm.4.13. Ancient under the name of Antigonea, Troas, and peopled from some neighbouring
cities. Afterwards it was embellished by
Lysimachus, and named Alexandra Troas (Liv. xxxv.42), sometimes called simply Alex-
andraea, as by Pliny and Strabo, sometimes
simply Troas. It lay on the coast of the
province of Asia, opposite the S.E. extremity of the
island of Tenedos. Under the Romans it
was one of the most important towns of the
province of Asia. In the time of St. Paul,
Alexandria Troas was a colonia with the Jus
Italicum. The modern name is Eski-Stamboul,
and the ruins there are considerable. The
village Eleutheropolis, on the S.W. ridge of the
city in the apostle’s time, encloses a rectangu-
lar space, extending above a mile from E. to
W., and nearly a mile from N. to S. The
harbour is still distinctly traceable in a basin
about 400 ft. long and 200 broad.

Trogyllium. The island of Sanus is ex-
actly opposite the rocky extremity of the
ridges of Mycale, called Trogyllium in N.T.
(Ac.20.15), and by Ptolemy (v. 2). A little to
the E. of the extreme point there is an
anchorage still called St. Paul’s Port.

Troop, Band. These words are employed
to represent the Heb. word g'dhabh, which has
invariably the meaning of an irregular force,
gathered with the object of marauding and
plunder.

Trophi'mus, one of the companions of
St. Paul. He was a Gentile and a native of
Ephesus (Ac.21.28,29). With Tychicus he ac-
 companied St. Paul on the third missionary
journey and over part of the return route from
Miletus, when the apostle was supposed to have remained in Asia, while Trophimus
journeyed with the apostle to Jerusalem.
There he was the cause of the tumult leading
to St. Paul’s arrest (21.27-29). He is men-
tioned but once more, in 2Tm.4.20, from
which we learn that he had been with St. Paul,
had been left, by reason of illness, at
Miletus. [A.C.B.]

Trumpet. [Cornet.]

Trumpets, Feast of, better known,
from Jewish tradition, as the New Year’s Day.
It fell on the first day of the seventh month
(Tishri), reckoned by the national year be-

TUBAL

inning with Nisan as the first month from
the Exodus (cf. 1K.6.1). But the civil and
economic year began from Tishri. This feast
is designated as “a memorial blowing of trumpets” (Lev.23.24), and as “a day of blowing the trumpets” (Num.29.1). The single
word truita is translated “blowing of the trumpets” but according to the rabbinical
interpretation it signifies a certain thrill-sound
of a shophar, which is a ram’s horn. The word
shophar is also mistranslated as “trumpet”
or “Cornet.” The trumpet (Heb. ḫofer) was
used at the temple when offering sacrifices
on festivals, new moon days, and on other
occasions (29.2-6). This festival is included
among the seven days of holy convocation.
Lazra said, “This day is holy unto the Lord,
and bade the people not to mourn or weep,” but
then “blow, eat, and be cheerful (Ne.8.2,9,10).”
Ps. 81.3,4 is interpreted as referring to the New
Year celebration, which is held on the new
moon day, when the shophar is sounded for
a “solemn feast day.” Indeed, the observance of New Year’s Day is next in
importance to the Day of Atonement, which
falls ten days later, and is considered as a
day of judgment for all men before their
Creator, as sheep pass for examination before
their shepherd (Mishna, Rosh hash-Shanah i.2). The symbolic meaning of blowing the
shophar is variously explained. Philo regards
the blowing as in memory of the giving of the
Law in Sinai (10.3-10) as the Feast of Trumpets
(Ex.19.16). Others consider it as the hugle-
creaky to awaken the people from their spiritual slumber, and for the sinner to repent in
the interval, known as the “days of repentance,”
between New Year’s Day and the Day of
Day.” “Shofar” or “Cornet.”

Tryphena and Trypho’sa, two Christian
women at Rome, saluted by St. Paul
(Ro.16.12). They may have been sisters, but
it is more likely that they were fellow-deacon-
esses. It is an interesting fact that the colum-
baria of “Caesar’s household” contain both
these names.

Tryphon, the surname assumed, after his
accession to power, by Diodotus, a usurper of
the Syrian throne. For the account of his intriguers in favour of Antiochus VI., see De-
metrius II. He afterwards murdered in turn
his ally Jonathan and Antiochus VI. (1Mac.
12.13). Simon appealed against him to De-
metrius (15.7), and he was succeeded in the
occupation against him (14.1 b.c.), when he was taken prisoner by Arsaces (15.1-3). Tryphon retained
the throne till Antiochus VII. (Sidetes),
the brother of Demetrius, drove him to Dora, from
which he escaped to Orthosia (1Mac.15.10-14,
37-39) and thence to Apamea where he either
committed suicide, or was killed, 138 B.C.
( Josephus, 13.4.2, 14.1.2).}

Tryphosa. [Tryphena.]

Tubal (Gen.10.2; 1Chr.1.5) is placed, with
Javan and Mesech, among the sons of Japheth,
and all three are again classed together in
the enumeration of the sources of wealth of Tyre
TUBAL-CAIN (Ezk.27.13). Tubal and Javan (Is.66.19), Mesekh and Tubal (Ezk.32.26,38.2,3.39.1), are described as nations of the North (38.15.39.2). Jossiah, the king of Judah, the defenders of Tubal, visited with the HEBREWS—not the Spaniards (Jerome), but the inhabitants of a tract between the Caspian and the Euxine, nearly corresponding with modern Georgia. This is similar to the view of Bockh and Lagarde, that Mesekh and Tubal are the Moschi and Tibeareni. These two nations, thus described under the names of Mesech and Tabal, are variously transliterated, or rendered, in the Assyrian inscriptions. In the time of Shalmaneser III. mät Tabali, "the land of Tubal," comprised 24 petty kingdoms, whose tribute he received. Assurnurup of Tubal also paid tribute to Tiglath-pileser, but afterwards refused to do so, and was himself deposed, and his son set on the throne. Later, Sargon of Assyria placed Ambaris on the throne of Hulli, his father, and gave him his daughter in marriage with Cilicia as a wedding-gift. Nevertheless, Ambaris plotted with Armenia and mät Musk (Mesekh) against his benefactor, the result being that Amris (Ambaris), with all the royal house and the nobles, was carried captive to Assyria, Assyrians taking their place. The exact limits of Tubal are difficult to determine, but Prof. Rawlinson placed the Tibeareni between Cape Yasoun (Isa.31.1) and the Melcit-Irmak (the river Melanthius). In the time of Xenophon the Tibeareni were an independent tribe. [T.G.P.]

Tubal-ca'in, a son of Lamech the Cainite (Gen.4.22). He is called "an instructor of every artificer in Brass and Iron" (A.V. and R.V. marg.), a rendering of the Heb. which agrees roughly with that of the amended text of Oshansen and Gunkel, "he was the father of all such as forge copper and iron." The R.V. reads, "the forger of every cutting instrument of brass and iron." The derivation of the name is obscure, but it may mean "the forger of the spear." [R.C.B.]

Tubileni. The "Jews called Tubileni" (2Mac.12.17)—i.e. men of Tob, which lay near Ammos (Is.14.13)—are described as the massacre of the Jews "in the places of Tobie" (R.V. land of Tubias). [c.d.]

Tertipunet-tree occurs only once (Eccles. 24.16). The περιψάδος or τιμπανός of the Greeks is the Pistacia terebinthus, terebinth-tree, common in Palestine and the East, supposed by some to represent the 'אדר of the Heb. Bible. It occasionally grows to a large size, and belongs to the Anacardiaceae. In Is.6.13 the Heb. word 'אדר is rendered teel-tree in A.V.; in Wyclif, "terebynth"; R.V. "terebinth." But the teel-tree is also the name of the linden, or lime, which seems to have misled some commentators. See Harris (Nat. Hist. of B., 1824) on the teel-tree. The terebinth was generally classed with oaks. [n.c.n.]

Turtle, Turtle-dove (Heb. חוך). The Heb., like the English, name is onomatopoetic, derived from the cooing of the bird, and is first mentioned in Scripture in Gen. 15:10. Turtle-doves (Turtur communis) visit S.W. Asia in great numbers during the winter; but other kinds, such as the Egyptian or palm turtle-dove (Stigmatopterus senegalensis), are summer visitors to Palestine. Both kinds may have supplied the sacrifices in the wilderness, as the last-named is found in numbers wherever palms occur. From its habit of pairing for life, and its fidelity to its mate, the turtle-dove was a symbol of purity and an appropriate offering. The regular migration of the Egyptian turtle-dove and its return in spring are alluded to in Je.8.7 and Can.2.11, 12. It is from its plaintive note that David in Ps.74.10 compares himself to a turtle-dove. For other species of doves, or pigeons, mentioned in the Bible, see Dove. [R.L.]

Ty'chicus, described with Trophimus as "of Asia" (Aor. 20.4). They travelled with St. Paul through Macedonia, and went in advance of him to Troas. At the time of the apostle's first imprisonment in Rome Typhicus was again with him (Col.4.7,8), and was the bearer of his epistle to the Colossians, and, most probably, with Onesimus of that to Philemon. On two occasions he acted as St. Paul's messenger to Ephesus (Eph.6.21,22; 2Tim.4.12). In Tit.3.12 St. Paul speaks of sending him or Artemas to Crete, and the statement is likely that he and Trophimus may have been the two brethren (2Cor.8.16-23) dispatched with the epistle cited to Corinth. According to tradition, he became Bp. of Chalcodon. [A.C.D.]
Resurrection (Mt.12:30,40); the brazen serpent, of the Crucifixion (Jn.3:14); the manna, of the Exodus (Jn.6:32,33); the events of the Exodus, of the people of the Exode (Ex.23:10); Melchizedek, of the royal priesthood of Christ (Heb.7); the tabernacle, of the whole economy of the Incarnation (Heb.9). The word “antitype,” usually applied to the N.T. fulfillment of a “type,” is only found in that sense in 1Pe.3:21. The terms are used in an almost opposite sense in Heb.9:24, where “antitype” is applied to the earthly copy, while “type” is used of the heavenly pattern and original of the tabernacle (Ex.25:40; Ac.7:44; Heb.8:5). A “type” should properly be distinguished from an “alllegory,” which is a fictitious narrative designed deliberately to convey spiritual truth, independent of the knowledge and historical event suggested by pious imagination. The interpretation of types stand on a higher level, and is more akin to prophecy. To recognize and interpret the typical meaning of O.T. belongs to the prophetic office of the Church. For types are significant illustrations of the later things of the Christian era, in which the mind of the Church is guided by the Spirit to recognize and teach. A “type presupposes a purpose in history wrought out from age to age” (Westcott). Typology may be rightly regarded as the application of scientific method to spiritual truth. It recognizes the inner significance of events of sacred history, and sees the development of revelation as a connected whole. Thus to the spiritual mind typology supplies one of the most remarkable evidences of the truth of revelation. It should be noted that this typical value of the events and characters of O.T., while in no way diminishing their historical and immediate purpose of the actors and authors, and may not be recognized till long afterwards, like the Messianic meaning of many utterances of the prophets (cf. 1Pe.1:10-12). The development of typology beyond what is actually suggested in N.T., while important, is to be done with due caution and a sense of proportion. For typology in mediaeval and even in patristic exegesis degenerated at times into mere fanciful allegorizing. Hence the Reformation produced a reaction in favour of literalism, and even tended to reject typology altogether. The more orthodox Protestantism of Bingen and the Württemberg school emphasized, however, the broader aspects of typology, and in the present day the typical value of O.T. history and institutions is again becoming widely recognized as an element that needs taking into account to form a true conception of Inspiration. Keble, The Mysticism attributed to the Early Fathers of the Church (1849); Willis, The Worship of the Old Covenant (1880); Westcott, The Epistle to the Hebrews (1889); Tholuck, Schaff-Herzog Encyclopedia (1891); Arnold and Scannell, A Catholic Dictionary (new ed. 1897). [A.R.W.]

**Tyrannus,** a man in whose school, or place of attendance Paul taught the Gospel for two years, during his sojourn at Ephesus (Ac.19:9). The reading adopted in R.V., “the school of Tyrannus,” seems to imply that he was well known, and in this case the probability is that he taught in a public place. On the other hand, the reading which A.V. follows, “the school of the seven brethren of Jerusalem,” suggests that the name will be unknown to the reader. If so, Tyrannus was probably a private teacher, who taught pupils in a lecture-room attached to his own house. [A.G.D.]

**Tyre, Tyrus** (Heb. שָׁרוּ; Arab. شرَّب, “rock”), the Phoenician city on a rocky island in N.W. corner of the Holy Land. It was a “strong city” outside the limits of David’s kingdom (Jos.19:29; 2Sam.24.7), whose king Hiram sent cedars, firs, carpenters, and masons to Jerusalem, and aided in building the palace and temple (2Sam.5:11; 1K.5.1,7,13,14; 1Ch.14.1; 2Ch.2.3,11). Solomon ceded 20 cities of Genoa to Hiram in return for the assistance he had given him in building the temple (2Ch.2.1,12). Tyre is unnoticed in the historic books after Solomon’s time. An early Psalm (45:12) speaks of the “daughter of Tyre” offering a gift; but later (83.7) Tyre joins the general league, under Assyria, against Israel. Isaiah (approximately c. 728 B.C.) speaks of troubles which would afflict Tyre, and which would begin such troubles began in 727 B.C., and continued till 664 B.C., or even later. Je.25.22 speaks of the approaching desolations due to Nebuchadnezzar’s attack. Tyre sent messengers to Zedekiah, probably as to mutual aid against the Babylonian conqueror (27.3); but its fate was foreseen (47.4); and when Nebuchadnezzar came, he passed by the ruin of Tyre, just about the time, apparently, when Nebuchadnezzar besieged and took the city. The prophecy of Isaiah that Tyre should be restored (Is.23:17) had then been fulfilled, and Ezekiel gives a full account of the prosperity of the city under the later kings of Assyria (Ezk.27.2-25), and just before the accession of Nebuchadnezzar, the city passed into the hands of Tyre. It was then “a merchant of the people of many coasts,” and built “in the midst of the seas.” It had firs from Senir, cedars from Lebanon, ships with oars of Bashan, oak, beeches (or hatches) of boxwood inlaid with ivory, the sails being of Egyptian linen, and the deck and coasts of precious stones from the coasts of Elath. The mariners came from Sidon, Arvad, and Gebal; the mercenary troops from Persia, Lud (Lydia), and Phut, as well as from Arvad [Gammadim]. Precious metals came from Tarshish and from the regions of Javan, Tubal, and Mesech, in Asia Minor. Horses, chariot horses, and mules were brought from Togarmah (Armenia), ivory and ebony from Dedan (or from Rhodes, according to LXX.). From Syria came gems, brodered work, and linen; from Palestine, corn, honey, oil, and balsam; from Damascus white wool and wine of Helbon. The Danai and Ionaen brought metals [Dan.; Javan.]. While Indian spices came as a tribute from Ionia on the W., with India on the E., with Egypt and Arabia on the S., and with Armenia on the N. The mention of Persia in this early
age is explained by the yet earlier appearance of Persians in the texts of Sennacherib.  The prince of Tyre (Ezk.25:1-2) was then perhaps a sôkîhen, or "protector"; but the "king of Tyre" (ver. 12) was regarded as divine, unless we are to understand the deity of the city to be intended by the "anointed cherub" (ver. 14), who had been in the garden of God; for the Phoenicians, like the Assyrians and Babylonians, represented on their seal cylinders the Kirîbu (or "guardian") as a winged figure—human or monstrous—in pairs flanking the tree of life, or ʿashkîrî, and the winged sun, "brooding" or "settling" above those whom he protected. The "mountain of God" (Ḥûṣaṣk-Kalâma, or "world mountain") was also an ancient Akkadian name for the Caucasus (see ver. 14), and Phoenician mythology was of Babylonian origin. But all this wealth, pride, and trust in Melqarth, the deity of Tyre, was to be abased by Nebuchadnezzar (29:8). The earlier prophets say little of Tyre. In Ho.9:13 the meaning seems to be "Ephraim looks to me like a rock set in a meadow"; and this does not refer to the city. Jl.3:4 refers apparently to the old Phoenician slave traffic at Tyre and Sidon; while in the book of alliance of allegiance to Judah (14:26-27) and, after the Captivity, Zech.9:2-3 alludes to the revived prosperity of Tyre under the Persians. Later notices are scarce (Isa.5:5-6; Mic.5:15, 11, 59), and in N.T. Tyre is only noticed as visited by our Lord (Mt.11:21, 22, 15:21; Mk.3:7-8, 23:31; Lk.6:17, 10:13, 14), as one of the ports touched at by St. Paul (21:3, 7).—The Site. Tyre was built on a flat rocky reef of about 100 acres in area, including a smaller rock, on S.W., of some 25 acres, which seems to have been filled in early by filling in between it and the main island. It is always mentioned as having two ports, the oldest notice of these being c. 1330 B.C., when the Egyptian Mohar (see Brugsch, Hist. Egit. ii. p. 105) says (according to Chabas) that it was called "Tyre of the two ports." "The drinking water is brought to her in boats. She is richer in fishes than in sands." The Greeks tell us that in the older times there was on the mainland at Palea-Tyrus, which Strabo places 30 stadia away (xiv. ii. 23) by streams. This is the present ḫūṣel-ʿāin, about 3 1/2 miles S. of the island, with two springs, whence an aqueduct led to the shore near the city. Strabo also refers to the "two ports," and these are mentioned (by Dionysios Smylius and Arrian) in connexion with the seven months' siege by Alexander the Great, in 333-321 B.C. The N. port is the present harbour, about 10 acres in area. It was called the "Sidonian Harbour." The southern harbour, surveyed by swimming, in 1851 (by Capt. Coulter and Lieut. Mantell, R.E.), was previously supposed to have disappeared. It is also about 10 acres in extent, formed by reefs, and divided into an outer and an inner port by a cross quay. This was the "Egyptian Harbour." There were also small landing-places between reefs on W. side of the city. Alexander made a mole to join Tyre to the mainland, and this, as it is represented by some now makes an isthmus about 500 yds. wide, joining the island to the shore. The ruins include the 12th-century walls, and a cathedral S. of them (where Origen was buried in 253 or 254 A.D. and Frederic Barbarossa in 1190 A.D.), with a Phoenician shaft tomb on S.W., explored in 1881. The main cemetery is on the rocky mainland, presenting tombs with kôkîm (rock tombs) or tumulus, and the Phoenician shafts 6 to 10 ft. deep, as in Egypt. The springs at Ḫūṣel-ʿāin were dammed up in five tanks, of which three were apparently ancient. The aqueduct thence to Tyre fell, from a level 80 ft. above the sea, to about 40 ft. or less opposite the island. It is mainly mediaeval, but Lieut. Mantell discovered, in 1881, that at one point there are remains of false arches, which may be as old as the time when (according to Menander, as quoted by Josephus, q. Art. xiv. 2) Shalmaneser IV. besieged Tyre (before 722 B.C.), and cut off the water supplied by an aqueduct. The modern town, within the mediaeval walls, occupies only about half the island, towards N.W. It has a small trade in fruits, and a population of about 3,000 persons, half of whom are Gk. Christians, and the rest fanatical Metaîwâlî, or Moslems of a Persian Shi'âh sect (Surv. W. Pat. i. pp. 51, 60, 72-81; iv. pp. 432-435).—History. As in the Sibylline oracles (Bk. iv. 228), so in the Egyptian and Assyrian accounts the city is also noticed as on an island. The Gk. idea that Palea-Tyrus ("Old Tyre") was on the mainland, 30 stadia away, and Phain's assertion that the city-streched 16 miles (Hist. Nat. v. 17), were unfounded, though Ktesias, perhaps dictating out of Strabo's time (about 120 B.C.), may, in Strabo's time, have been older than the flourishing city on the island appeared to be. Kames H. II. must have passed Tyre, since he left records at Sidon and Beirut, and the Mohar (as above) describes the island-city in his reign. It is not yet known how early it was built, although its priests gave to Herodotus (ii. 44) a date answering to 2700 B.C. There is nothing improbable in this statement, if we accept the Babylonian date which makes the Akkadians enter Syria a century earlier. [PHENICUS SYRIUS.] The Amarna letters, in 15th cent. B.C., include five from Tyre (Berlin 99, Brit. Mus. 28 to 31). No palace remains on the island have been found, and it appears that Zaráphithi (Zarpitii) was then placed under Tyre. Abimelech was attacked by Azuri the Amorite, with chariots and infantry, aided by ships from Arvad, and the water supply was cut off. Menander (see 9 Art. xiv. 2) appears to have had historic information as to the reigns of Tyrian kings, though Josephus (8 Art. iii. 1) is wrong in supposing Tyre not to have been founded till c. 1240 B.C. He appears to be correct, on the other hand, in giving the foundation of Carthage as the great Tyrian colony of the W. c. 870 B.C. (Against Apion, i. 17). Beginning with Abibi (Abi-ībāl), the father of Hikan, he follows the Phoenician history of Dios and the records of Menander. Hiram had reigned 12 years when Solomon built the temple, and was succeeded by Baalzeber, Abī-ʾĀbdātēr, and his son, followed by Abārītēr, Asheer-āmūn, and Pielēsh. The next king, Uthaal, ruled 17 years (see dates of King Ahaz, detailed in account, according to the total in the present text of Josephus) contemporary with Ahab. His name (as the Baby- lonian Ḫūṣel-ʾābāl shows) meant "Baal with
him." He was also king of Sidon (see 9:Ant. v. 16) and was the Ethbaal whose daughter Ahan married. He reigned 32 years, succeeded by both Bozeth and Mutkun, and Pugum-an-lim in whose 7th year Carthage was built by his sister. His reign of 47 years brings us to the time when (in 842 B.C.) Tyre became tributary to Shalmaneser II. of Assyria. There is a gap in Tyrian history till the reign of Luliya (or Eliulia), who ruled a whole sea, but from Sidon to Accho, for 36 years (see 9 Ant. xiv. 2). He was attacked by Tiglath-pileser III. and also by Shalmaneser IV. (according to Menander), when Sidon and Accho deserted him, and the water supply from the aqueduct was cut off for 5 years. He was again attacked by Sennacherib in 703 B.C., and though Tyre was not taken, an Assyrian nomee (Tubil) was set up in Phoenicia. Luliya would thus have acceded c. 740 B.C. In the reign of Esar-haddon, Baal of Tyre was tributary, but joined Tirhakah of Egypt in 670. The Eponym Canon states that when Esar-haddon proceeded against Tirhakah he sent a force to cut off the fleet of the sea, and caused its submission. On Esar-haddon's death Baal again joined in an Egyptian revolt, and Tyre was again besieged by Assur-bani-pal, who appears to have desired peace with Phoenicia. In 660 B.C. he had forgiven Baal his first revolt; in 664 B.C. he besieged Baal of Sidon, and was forced to the Tyrians to submit when they had only sea water to drink. Even then he restored Yahi-melek, the king's son (a famous warrior), to his father, and accepted daughters of Baal and of his brothers, with large dowries, as wives. The history of Tyre in the time of Nebuchadnezzar is taken by Josephus (4 against Apion, i. 21) from Phoenician records. Another Ithu-baal then reigned, and was blockaded by the Babylonians for 13 years (600-587 B.C.), being succeeded, or replaced, by another Baal, ruling till 577 B.C. Nebuchadnezzar then appears to have appointed Phoenician judges (shoph'tim), instead of kings, till 570 B.C.; and, as Hiram had once attacked Meri-baal and another Hiram were sent in succession from Babylon. The latter reigned for 20 years, and in his time Cyrus took Babylon (538 B.C.). The Tyrian kings under the Persians are unknown, and Sidon may have been the capital city of Phoenicia in this age. In the time of Alexander the Great, 'Az-melek, who was king of Tyre, and alone remained faithful to the Persians, who had destroyed Sidon. The famous seven months' siege (333-332 B.C.) is described by Diodorus Siculus in detail (xvii. iv.), and Arrian repeats his account (ii. 18-24). When the great mole had forever destroyed the inundability of Tyre, and the Greek-Phoenician fleet had burst the boom of the Egyptian harbour, 8,000 Tyrians are said to have fallen fighting, and 2,000 were crucified by Alexander round the walls. Women, children, and slaves, to the number of 30,000, were sold; and the conqueror, after sacrificing to Melqarth, and establishing an imperial government there, remained there ever five years (see 2 Mac. 4:18), made Baal-amin, of the old royal house, ruler of Tyre. We hear little of the ruined city, which was again besieged (for 14 months) after Alexander's death (by Antigonus), until Roman times, when Tyre and Sidon were recognized as free cities by Pompey in 63 B.C. Josephus (Life, 66) makes Tyre the metropolis in 1st cent. A.D. Strabo (xvi. ii. 23) in the same age speaks of its two ports, its flourishing trade, and its "purple dye." Jerome (on Ezek. 26:7) calls it the most noble and flourishing city of Phoenicia, trading with all the world; and this trade continued, under the Romans, the Moslems, and the Franks (who held it from 1124 to 1291 A.D.), but yet later, till its harbours were destroyed by Fakhredd-Din early in 17th cent. A.D.—Antiquities. Coins of Tyre are known, belonging to the Persian and Roman ages (Taylor, Alphabet, i. p. 225), beginning with those of 'Az-melek (456-424 B.C.), and others under Artaxerxes III. (350-339 B.C.). The Gk. and Roman coins range from 145 B.C. to 153 A.D. One of these represents Melqarth as a Hercules, and on the reverse are the "two ambrosial stones," which (according to a Phoenician legend) existed under the sea at Tyre. No remains of the famous temple of Melqarth have yet been found. It stood perhaps where the cathedral was built, in the centre of the island; and the columns of Egyptian granite, lying in the ruins of the latter, may have once belonged to it. Many of the Tyrian tombs have been rifled; none having yet been found intact. The only Phoenician text in the city (Clermont-Ganneau, Recueil, ii. p. 87) is a much-damaged inscription of nine lines, found by natives in 1885 near the Serai, or court-house. It is cut on a white marble block like an altar, and is evidently votive. It records the presentation of a "basin," costing "ninety of silver—Tyrian coinage," by two "judges" (shoph'tim), who seem to have paid the expense of the object, given in fulfilment of a vow. The names are interesting in connexion with Tyrian mythology. One donor is "Adon-baal the Shopheq, son of 'Az-melek," who apparently had ancestors, also judges, named Bod-Melqarth and D'a-melek; and the other, apparently his brother, also "a Shopheq," son of 'Az-melek." If the latter were the Tyrian king of Alexander's age, the text might be as early as 300 B.C.; but probably it belongs to a later period of prosperity in Tyre, under the Ptolemies. [Phenic; Sidon.] [c.r.c.]

Tyre, used for Tyre in A.V. of Jeremiah, Ezekiel, Hosea (Joel has "Tyre"), Amos, Zephaniah, Héilus, Judith, and the Maccabees. [Typos, Ladder of.]

TYRE, TYRUS.

UCAI'. In the received text of Pr.30:1 (A.V. and R.V.) Ithiel and Ucail appear as proper names. The R.V. marg. reads, "I have wearied myself, and am consumed." The passage is very obscure. See Encyclopaedia Biblica, "Ithiel and Ucail." [h.e.b.]

UCIL, one of the sons of Bani, who had married a foreign wife (Ezr.10:34).

ULAI (Dan.8.2,16), the Eulæus of the Gk. and Roman geographers, is mentioned as the river flowing past Susa or Shushan, where
Daniel saw his vision of the ram and the he-goat. Assur-bani-âpî records that in the battle which his army fought outside the city, the Ulai (Ulad or Ulaa) was choked with the heads of the enemies and was only saved by going to Pism, seven miles N.W. of Susa, sending out a branch which passed E. of the ruins, and receiving the waters of the Shapur, flowed in a S.E. direction until it joined the Karan in Ahwaz. The two might, therefore, have been anciently regarded as a single stream. Concerning the Euæus an Assyrian copy of an old Babylonian (student's) tablet says "Let him explain the Ulà as that which carries its abundance to the sea," confirming the general opinion that it flowed anciently into the Persian Gulf.

ULAM—1. A descendant of Manasseh, and father of Bedan (1 Chr.7.47). [Rækem.—2. Firstborn of Eshek, a descendant of Saul and prince of a family of archers (1 Chr.27.39).

Ulla, head of an Asherite family (1 Chr.7.39).

Ummah, one of the cities of Asher (Jos.19.30 only). Possibly 'Alma, as suggested by Thomson, since the Heb. begins with the guttural 'ayin. Now a village in the hills 6 miles N.E. of Aczûn (rv Zib), next to which was the city of 'Alma (rv Elah).

Unclean Meats. The distinction between clean and unclean animals is anterior to the Mosaic law. The first mention of the division occurs in the Flood story, when Noah took into the ark seven each, male and female, of all kinds of clean animals and fowls, and two each, male and female, of the unclean animals and fowls (Gen.7.2,3,8). The distinction seems then to have been made with reference to sacrifices only. Noah offered each kind of clean beasts and fowls on the altar that he made after the Flood (8.20); whereas every moving thing that liveth shall be clean (8.21). The use of the division into clean and unclean is made the basis of an important food-law (Lev.11.44,47). Living creatures permitted for food are "clean" or "pure," those forbidden are "unclean" or "an abomination." (1) Beasts and animals permitted: those that chew the cud and divide the hoof. Four which fulfill only one of these two conditions, and therefore were prohibited, are mentioned by name (Lev.11.7; Deut.14.7,8): (a) the camel; (b) the ox, oxen, or hyrax, the flesh of which is eaten by the Arabs of Arabia Petraea, and also by the inhabitants of Lebanon; (c) the hare, which is eaten by the Arabs; (d) the swine. (2) Fish: "whatsoever hath fins and scales" was permitted (Lev.11.9; Deut.14.9). (3) Birds: no distinguishing feature of clean or unclean birds is given, but from the list of forbidden birds (Lev.11.13-19) it would appear that all birds of prey and nearly all water-fowls were forbidden. (4) "Winged creeping things that go upon all four, which have legs above their feet, to leap withal upon the earth," were permitted, and four kinds of locusts are mentioned (11.21,22); all other creeping things were forbidden (11.20,31-38,42,43), of which a list is given in vs. 29,30. Other restrictions were: (i) Blood was not to be eaten (Lev.17.15,14). The prohibition was older than the Mosaic law, being one of the Noahic precepts (Gen.9.4). The blood of fowl and beast was forbidden; the penalty for transgression was "cutting off" (Lev.7.26,27). This law applied to the stranger as well as to the Israelite (17.10,12). The blood of an animal taken in hunting was to be drawn off (ver. 13). Probably because the blood remained in the body, a clean animal that had been torn by a beast was not to be eaten (Ex.22.31); or one that had died a natural death (Deut.14.21), but this might be given or sold to a stranger. An instance of the transgression of the law occurs in 1 Sam.14.32, and the narrative shows that the sin was considered a great one. Two reasons are given for the prohibition against eating blood: (a) it is the seat of life, or the life itself (Lev.17.11,14; Deut.12.23; cf. Gen.9.4); (b) the blood on the altar made atonement for souls, and therefore should not be eaten by man (Lev.17.10-16). The Levitical restrictions of the Christian Church were exorcised to abstain from blood (Ac.15.29,21,25). (ii) The fatty parts of sacrificial animals to be burned on the altar were prohibited; the fat, like the blood, seems to have been considered to be the seat of life (Lev.3.17). The penalty for this offence is "cutting off" (7.25). (iii) The command not to seethe a kid in its mother's milk is three times repeated (Ex.23.19,34,36; Deut.14.21). The Targ. Onk. renders the phrase "Thou shalt not eat meat in milk," and it is understood in this sense by later Jewish teachers. (iv) The fruit of a tree during the first three years was "as uncircumcised," and was not to be eaten (Lev.19.23). (5) Meaning of the prohibition. The only reason given for the division into clean and unclean is that Israel may be holy as God is holy (11.43). [Horv.] The peculiar obligation among the Hebrews was that the laws of clean and unclean animals are the arbitrary decrees of God; others (e.g. Grothus, Spencer, Michaelis) that they are purely sanitary laws, intended to promote physical well-being; others again (Ewald, Ant. of Is. 144 ff.) that they were designed to form a barrier between Israel and the surrounding nations. Whether the latter was the original intention or not, the laws have had this effect. [Medicine, Hygiene.] This is seen in N.T.: e.g. St. Peter says, "It is an unlawful thing for a man that is a Jew to join himself or come unto one of another nation." (Ac.10.28); and the first thing necessary to the removal of this barrier was the abolition of the distinction between clean and unclean as applied to peoples. With the abrogation of the law as applied to animals there fell the barrier between men (Ac.10.9-16). These laws have contributed largely to the continued existence of the Jews as a nation. A sort of self-discipline, a self-disciplinary, and intended to teach the people self-control through the exercise of self-denial in food matters. Various reasons have been suggested for the division of animals, etc., into
the two classes, but no one theory meets all the difficulties. [LAW IN O.T. [H.H.]

Unleanness. The Mosaic law regarded certain acts and states of the body as rendering the person unclean, and as the state could be transmitted to others by personal contact, separation from the congregation was prescribed until an act of purification had been performed. The matter does not concern health, nor is the act or state of the nature of sin. The cases of unleanness are arranged in three classes (Num.5.2) — leprosy, issues, and death. These again fall into two classes: (1) matters connected with the propagation of life, e.g., conjugal intercourse, all kinds of sexual discharges, childbirth; (2) those connected with the other extreme, death; leprosy being in a peculiar sense a death in life. Some, including Jewish writers, divide all the cases into two classes, the greater and lesser degrees of uncleanness according to the period required for purifying, the lesser requiring one day the greater a longer period. The Mosaic division is probably the most convenient.—I. Leprosy. It is evident from the description given in Lev.13 that the kind of leprosy intended is the malignant form, the symptoms being more serious than those of leprosy not uncommon in Syria at the present day. The dishevelled hair and rent garment (13.45) are the signs of mourning for the dead (10.6), and suggest that the leper was regarded as already dead, and therefore contact with him would defile like contact with the dead (11.19). There was a purification for seven days (14.33-53). The house was subjected to the same process of examination as the man suspected of leprosy, and when found to be infected with a malignant type, it was to be demolished, and the materials deposited in an unclean place without the city. Any one entering a leprous house was unclean till the evening (14.46). The leprous garment was to be destroyed by fire as unclean (13.47-50).—II. Issues. Those specified are: (1) In woman. (a) The menses. She was to be unclean seven days; anything that came in contact with her was unclean, and any person touching the unclean was unclean till the evening of the second day (15.15-24). Any man who was stained with her taint was unclean for the same period as the woman, and he imparted his uncleanness to the bed (ver. 24). (b) Issue of blood (16.25-28). The conditions were the same as in the preceding case, the uncleanness continuing as long as the issue. This is not mentioned. (c) Childbirth (12.2-6). The uncleanness lasted seven days for a boy and fourteen for a girl, with 33 days for the former and 66 days for the latter spent in her home. During this period she was not to touch anything holy nor enter the sanctuary. (3) In man (15.2-12). (a) Two kinds of issue, the conditions of uncleanness being as in woman's (ra supra). If the unclean man spits on one who is clean, the latter is unclean till the evening (ver. 8). (b) Discharge of semen, involuntary or in coition, rendered the man, and in the latter case the woman also, unclean for seven days, even though it was spat upon or spat out was the same.—III. Death. It was not death itself that defiled, but the dead body, whether of man or of clean or unclean animal (Num.19.14-22). (1) The dwelling in which a man died, and all open vessels in it, were unclean for seven days, as was also one who entered it, or who touched the body of one who had died of any kind of filth. If the soul is bone, or even a grave. A thing touched by the unclean man, or one who came into contact with the thing so defiled, was unclean till the evening (19.22). (2) Contact with slaughtered animals, clean or unclean, did not defile, but the carcass of any animal defiled when even seven days, the Evening (11.24-25) of the species of smaller animals defiled also things, domestic utensils, etc. (vv. 29-30), and the objects were unclean till the evening. The animals are enumerated in vv. 29,30, and the things defiled in ver. 32—IV. The following instances represent a different class of defilement. These were unclean till they entered the priest who superintended the offering of the red heifer (Num.19.7), the man who burnt it (ver. 8) and he who collected the ashes (ver. 10); on the Day of Atonement the man who conducted the scapegoat out of the city (Lev.16.26) and he who burnt the bullock and the other goat (ver. 25). The soldiers who slew the Midianites were unclean for seven days (Num.31.17ff.). [CRIMES.]—V. There can be little doubt that in every instance (I—III) the cause of defilement was contact with decomposition and corruption. This is clearly the case where dead bodies are concerned (animals slaughtered are in a different category). There was no defilement in the negative man’s state, and the same element of corruption in the defiling discharges. The Israelite was to be Holy as God is holy. Sin defiles the soul, and for this defilement sacrifices were provided; contact with corrupt or decomposing animal matter defiles the body, and for this defilement purifications were provided as an integral part of the Levitical system. These were not expiatory, because the defilement was not sin, but they did for the body what the sacrifices did for the soul—they brought it into covenant relationship with God, between Whom and His children defilement raises a barrier. [H.U.]

Unction. [ANointing.] Undersetters (kâdêpâh). The Heb. means lit. "a shoulder"; the A.V. word expresses admirably the meaning in 1 K.7.30,34—viz. "supports," which held up the laver. [W.O.E.O.]

Unicorn (Heb. rê’em, rîm), the rendering by A.V., following the LXX., of the Heb. r’em, which occurs seven times in O.T. as the name of some large wild animal. That the r’em was not a one-horned animal (whatever the mythical "unicorn" may have been) is evident from Deut.33.17, where, in the blessing of Joseph, it is said, "His glory is like the firstling of his bullock, and his horns are like the horns of an unicorn," not, as the text of A.V. renders it, "the horns of unicorns." The two horns of the r’em are "the two thousands of Ephraim and the thousands of Manasseh." Some difficulty arises from the fact that rîm is the modern Arab. name of Loder’s gazelle (N. Africa). Tristram indeed suggests that this name may have been transferred to the
gazelles (and perhaps other antelopes) after the extermination of the wild ox, but this is doubtful. The idea that the buffalo is intended is very unlikely, seeing that this animal only exists in a domesticated state in Palestine, where it appears to have been introduced at a comparatively late epoch. Little can be urged in favour of the African or horned rhinoceros, for that animal does not exist in Syria, and even if it had been a native it would have been forbidden to be sacrificed by the law of Moses, whereas the r'c'm is mentioned by Isaiah as coming down with bullocks and runs to the Lord's sacrifice. Again, the skippin' horned ox, the wild ox, or aurochs (Bos taurus primigenius), which, although now extinct, survived in Poland till the 17th cent., is doubtless the animal indicated by the word r'c'm. Representations of the aurochs undoubtedly occur in some of the sculptures discovered by Sir H. Layard at Nineveh; and an inscription of Tiglath-pileser's time (1130-1110 n.c.) depicts young aurochs under the name of rimu (see Dürst, op. cit. p. 10). This last instance seems to settle the question as to the identity of the r'c'm with the aurochs. [k.n.]

**Unknown God** (Ac.17.23, ἔρως θεός, ἵγωνός δε). St. Paul mentions an altar which he had seen with the inscription "To an [or the] Unknown God," in Athens, and makes it the text of his discourse on Mars' Hill. Jerome says that the inscription actually ran, "To the gods of Asia, Europe, and Africa, to the unknown and strange gods;" and Euthalimus mentions a similar inscription. Philostratus says, in his life of Apollodorus of Tyana, that there were altars of unknown deities in Athens; and Kásas in his account of Athens written about fifty years after St. Paul's visit, mentions altars dedicated to a god not with any definite title, but nameless or unknown. It is mentioned in Diogenes Laertius' account of Epi-nomides that when a pestilence broke out in Athens the citizens erected "to the king of all deities, but these altars seem to have had no inscriptions. Eichhorn suggests that the altar was one which had been erected before writing was invented (I) or that the inscription had been defaced, and so that ἔρως θεός was engraved on it. [g.m.v.]

**Unleavened bread.** [Passover; Leaven; Bread.]

**Unni.**—1. A Levite doorkeeper in the time of David (1 Chr.15.18,20).—2. (Unno, R.V.) The name of a Levitical family that returned from Babylon (Ne.12.6).

**Uphaz** (Je.10.9; Dan.10.5) = Unni.

A place of the Arabian desert occurs only in Gen.11.28,31, and is mentioned as the land of Haran's nativity, whence Terah and Abraham started "to go into the land of Canaan (11.31). In Acts 7.2,4 St. Stephen places it, by implication, in Mesopotamia. One tradition identifies Ur with the modern Orfa, apparently in account of the name Orfa, which it seems to have borne in the time of Isidore (150 n.c.). According to Pocock, it was the universal opinion of the Jews, and is also the local belief, that Ur is Edessa or Orfa. Another tradition makes Ur to be Warka, the Ὀρφών of the Greeks, but this is certainly Ereh (Gen.10.10). Whatever may be said in favour of the flat site as the situation of the city, there it is proof that the name Chaldea has ever extended to the region above the Sinjar; and in any case the Jews meant, by Chaldea, exclusively the lower country, the upper being called Mesopotamia or Padan-aram (Job.1.17; Is.13.10,43.14, etc.). That being the case, this tradition connecting Ur with the Babylonian inscriptions seems to be the most probable. It is quoted by Eusebius from Eupolemus, and is to the effect that in the tenth generation there lived in Camarina, which is by some called Urie, the 13th in descent, Abraham, "a man of noble race, and superior to all others in wisdom." There hardly any doubt that Camarina is to be connected with the Arab. qamar, "the moon," and the inscriptions tell us that the god of Ur, or Urtuca, as it was called by the Sunnero-Akkadians, was Sin or Nannara, the moon-god. This city, which is represented by Mugur or Umugur (Dungi, son of the Uprates), nearly opposite its junction with the Shat' al-Haí, is now not less than 125 miles from the sea, but in a reference, a bilingual list, to "the Urite ship" gives ground for believing that it was in ancient days a maritime city. The most remarkable building is the ruin of the temple called to Nana, and the moon-god, near the northern end of the ruins—a true Babylonian tower in stages. [Barrel, Tower of.] The bricks of the structure bear the name of Ur-Engur, who reigned c. 2700 b.c. Among other rulers whose names are found in connexion with this ruin are the generic names of Agbar, and Kudur-malak and his son Arad-Sin or Eri-Mu (Assur. 1). It was here that the four cylinders with identical inscription of Nabonidus mentioning his son Belshazzar were found, and from them we learn that the temple-tower was called Eš-šagal-gala-sas, and belonged to the temple of the goddess Zissu, and to the S.E. was E-sipara, "the temple of the lady of the gods." Ur was the capital of the kingdom of which it formed the centre until the consolidation of the states of Babylonia into a single kingdom during the time of Hammurabi and his suc-
cessors. The ruins measure about 1,000 yds. by 800, and consist of a number of low mounds within an enclosure. It is completely surrounded by graves, having evidently been one of the sacred places to which the dead were taken for burial. The statement of Eupolemus is important, as we have said, but it is needful to point out that the comparison of Ur with Uruc is not altogether satisfactory, the original (Sumero-Akkadian) form of the word being *Uruka*, the termination of which is not reproduced in the Heb. Ur. It is therefore possible that Ur of the "Chaldees" may have been the country of *Uru* or *Uru*—i.e. Akkad or N. Babylonia. (See Sinua.) This would give a wide field for a pastoral family such as that of Terah, though in the province to which *Uru* (*Muqeir*) belonged they would have found no lack of pasture. The principal objection to its identification with *Ura* or N. Babylonia is that the name Chaldea was not applied to that part of Babylonia until a comparatively late date. That Terah was a worshipper of the moon-god, and went to Haran because, like Ur, it was a centre of his worship, is also possible, and would confirm the identification of Ur with *Uru*. [T.G.P.]

**Urbane** (better, as R.V. and Genevan Bible, *Urbaneus*, Gk. Ὠρβάνος), the name (masculine) in gender) of a Christian quoted by St. Paul in Rom. 16.9. "Nothing further is known of him." [Urbane.—1. A man of Judah, grandson of Caleb ben-Hezron, and father of Bezaleel, 1 (Ex. 31:2, 35:30, 38:22; 1 Chr. 2:29; 2 Chr. 1:5).—2. Father of Geder, 2 (1 K. 4:19).—3. A gate keeper of the temple who put away his foreign wife (Ex. 10:24).]

**Uriah**.—1. One of David’s mighty men (2 Sam. 23:39; 1 Chr. 11:41). Like others of the king’s officers, he was a foreigner—a Hittite; but his name and manner of speech (2 Sam. 11:11) indicate that he had adopted the Jewish religion. He married Bath-sheba, the daughter of Eliam—possibly the same as the son of Ahithophel, and one of his brother-officers (23:34), and hence, perhaps, Uriah’s first acquaintance with Bath-sheba. In the first war with Ammon he followed Joab to the siege, and with him remained encamped in the open field (11). He returned to Jerusalem, at the king’s order, sent on the pretext of asking news of the war—really in the hope that Uriah’s return to his wife might cover the shame of the king’s own crime, but the austere fidelity of Uriah disappointed the king’s expectation. Finding it impossible to screen Bath-sheba from the death-punishment to which she was liable (Lev. 20:10), David sent Uriah with a letter to Joab containing the command, “Set ye Uriah in the forefront of the hottest battle, and retire ye from him, that he may be smitten, and die.” Joab did as he was told; an assault was made on Rabbah-ammon, and Uriah, with his fellow-officers, was shot down by the archers on the wall of that city.

**Ba**
URUIJAH

David (15.5.11) — 3. Uriel of Gibeah was the maternal grandfather of Abijah (2 Chr. 13:2). [UBS 9]

Urijah. — 1. Urijah the priest, in the reign of Ahaz (2 K. 16:10); = probably Uriah, 2. — 3. A priest who stood at Ezra's right hand when he read the law to the people (Neh. 8:4). — 4. The son of Shenaiah of Kirjath-jearim; slain by Jehoiakim for prophesying against the king (2 Chr. 29:21). — 5. One of the Levites who was appointed to undertake the work of the Lord, in the reign of Josiah (2 Chr. 35:18). — 6. Uriah was a Benjamite who accompanied David on his flight from Jerusalem to Gibeah (2 Sam. 15:18). — 7. Uriah, or Urijah, was a Benjamite who carried on the war with Israel (1 Sam. 18:16). — 8. Uriah, or Urijah, was one of the eunuchs who guarded the Lord's Sanctuary (1 Chr. 26:10). — 9. Uriah, or Urijah, was one of the Levites appointed to help the family of Hur with the offices of the Sanctuary (Neh. 12:39). [UBS 9]

Urim and Thummim’ (Ex. 28:30; Lev. 8:8; Ezr. 2:63) were the official method of divination by which the ecclesiastical head of the Israelitish nation inquired of the Lord and obtained guidance for the secular ruler. Thus Eleazar divides for Joshua (Num. 27:21), Ahiah for Saul (1 Sam. 14:18), Abiathar for David, who by this time had been anointed king (1 Sam. 23:9). It is a sign of Saul's official degradation that the Lord answered him not by Uri (1 Sam. 28:6); and Zerubbabel postpones a decision on a difficult matter till he can have the assistance of this method of high-priestly divination, which apparently disappeared with the despotism of Nehemiah (1 Chr. 6:23). The two names are given in reverse order in the blessing of Moses (Deut. 33:8), and several times Urim is used alone (Num. 27:21; 1 Sam. 28:6). Hence it is inferred that they are not two things, but two names for one and the same thing — viz. an object laid within the breastplate of judgment, which was doubled back upon itself to form a kind of purse, to contain what was a treasure greater even than the precious stones with which the breastplate was encrusted. It was probably a diamond, or other white stone, with two sides known respectively as Urim and Thummim, one being engraved with the ineffable Name, the other being plain. When the one inquiring of the Lord, the priest put his hand in the breastplate and drew out the stone (1 Sam. 14:19), the verdict being according to which side was uppermost. Thus in 1 Sam. 14:41, where, according to the Massoretic text, Saul says, "Shew the innocent", or "Give a perfect lot" (RSV); "if the one which is within the breastplate be uppermost" — the LXX. and Vulg. suggest that the unmentioned text ran, "if the iniquity be in me or in Jonathan my son, O Lord God of Israel, give Urim, and if it be in my people Israel, give Thummim," the unengraved side, or Thummim, coming uppermost; if, as he hoped, the guilt might prove neither his nor his son's. This simple choice between two alternatives is apparent also in Abiathar's use of Urim with the ephod on behalf of David (1 Sam. 23:9-12); and possibly in Jos. 7:14-18; Judg. 20:27; 1 Sam. 10:19-22; 2 Sam. 5:19-23, the inspiring of the Lord was made by this means. The significance of the two names has been, and will probably continue to be, the subject of much guess-work. [EB 9.6.14.16.18.19.30]

Usury. — [Loan.]

Utah. — (Gen. 10:23) — Eldest son of Aram, and in 1 Chr. 1:27 called a "son" of Sham. — (Gen. 25:21, K.V.) — Eldest son of Nahor. — (36:28.) — Son of Dishan. — 4. In Job 1:1 the land of Ut is mentioned, probably as a country near, if not in, Cush. (cf. Je. 25:20, 21 and Lam. 4:21), north of the Sabeans and Chaldeans, mentioned in Job 1:15, 17. The LXX. places it in the same direction, reading in the verse added to 42:17, "in Ut or on the borders of Idumea and Arabia." Josephus places it more N., including the city Damascus (1 Ant. vi. 4). It is probably (though this is not certain) synonymous with the Assyri. Uz'iz (Friedr. Deitzsch, Paradies). The Arameans are spoken of as a race widely distributed throughout Mesopotamia, and even in parts of Palestine, especially in places bordering on mount Seir. For literature, see Jon. [EB 9.6.14.16.18.19.30]

Uzai, the father of Palal (1 Chr. 29:25). — 1. The sixth son of Joktan (Gen. 10:27; r Chr. 1:21), whose settlements are clearly traced in the ancient name of San'ad, the capital city of the Yemen, which was originally Auzial. It has disputed the right to be the chief city of the kingdom of Sheba from the earliest ages of which any traditions have come down to us. In the days of Solomon it was the best portion of that kingdom, it must always have been an important city. Niebuhr says that it was a walled town, situated in an elevated country, in lat. 15° 2', and with a stream (after heavy rains) running through it. It has a citadel on the site of a famous temple. The houses of Uz was the finest in Arabia; and it possesses many mosques, public baths, and khans. It is probably the same as the Anzara, or Anusara of the classics. (Cassia.)

Uzah. — 1. A Benjamite (1 Chr. 8:7). — 2. (13.7f.) = Uzai. — 3. The head of a family of Nethinim who returned with Zerubbabel (Ezr. 2:40; Neh. 7:51). — 4. Properly Uzah as K.V.; the head of a Merarite family (1 Chr. 6:29 [14]).

Uzai, Garden of. — the spot in which Manasseh, king of Judah, and his son Amon were both buried (2 K. 21:18, 26). It was the garden attached to Manasseh's palace (ver. 18).

Uzahzah, son of Abinadab. Together with his brother Benaiah, he was appointed a guard over the ark and the ark was removed from Kirjath-jearim (2 Sam. 6:3, 6ff.; 1 Chr. 13:7, 6ff.). At the threshing-floor of Nachon (or Chidon), the oxen stumbled, and Uzza took hold of the ark to steady it. For this God smote him, and the place received the name Perez-uzazah. His error or sin is not explained. [EB 9.6.14.16.18.19.30]

Uzzen-zerah,' a town founded or rebuilt by Sherah, an Ephraimitic woman, the daughter either of Ephraim himself or of Beriah. It is named only in 1 Chr. 7:24, in connection with the two Beth-horons. It is perhaps Beth Serah, a village 2 miles S.W. of the lower Beth-horon. [EB 9.6.14.16.18.19.30]

Uzzia, one of David's guards; a native of Asherethoth Karmim (1 Chr. 11:4).

Uzziah (I. jah is my strength). — 1. Uzzi, king of Judah, also called (e.g. 2 K. 15:1)
Azariah (Jehoah hath helped me). After the murder of Amaziah, his son Uzziah was chosen by the people to occupy the vacant throne, and was declared by the Lord (2 Chr. 26.5) to be the most successful of all the kings of Judah. He is characterized as a ‘watcher and a pious ruler. He began his reign by a successful expedition against his father’s enemies the Edomites, who had revolted from Judah in Jehoram’s time, and penetrated as far as the head of the gulf of ‘Aqaba, where he took the important town of Eloth (the Elath of the Old Testament). Eloth was a strategic point in the wars in the S., especially against the Meunim, or people of M’aan, and the Arabs of Gburbaal. Towards the W., Uzziah fought successfully against the Philistines, razed the walls of Gath, Jabin, and Ashdod, and founded new fortified cities in Philistine territory. He strengthened the walls of Jerusalem. He was a great patron of agriculture; and also brought his army to a state of high efficiency. He never deserted the worship of the true God, and was much influenced by Zechariah, a prophet who is only mentioned in connexion with him (2 Chr. 26.5).

The southern kingdom was raised to such prosperity as it had not known since the death of Solomon, in the days of Uzziah’s mother, Azubah, who determined to burn incense on the altar of God, but was opposed by the high-priest Azariah and eighty others. (See Ex. 30.7, 8; Num. 18.40, 18.7.) Enraged at their resistance, he pressed forward with his censers, and was suddenly smitten with leprosy. He was buried “within the family of his father’s house” (2 Chr. 26.23). During his reign an earthquake occurred, which, though not mentioned in the historical books, was apparently very serious in its consequences, for it is alluded to as a chronological epoch by Amos (1:1), and mentioned in Zechariah 14:5. Josephus connects it with Uzziah’s sacrilegious attempt to offer incense, but this is very unlikely. (Chronicology.)

Uzziel—1. For an oath against Kohath (Ex. 18.18, 22; Lev. 10.1; Num. 26.22).—2. A simeonite captain, in the days of Hezekiah (1 Chr. 26.42).—3. Head of a benjamite family (1 Chr. 26.42).—4. A musician, of the sons of Heman (25.4).—5. A Levite, of the sons of Jeduthun (2 Chr. 29.44).—6. A people who took part in repairing the wall (Ne. 3.8).

V

Vail. [Tabernacle; Temple.]

Vazezatha’, one of the ten sons of Haman whom the Jews slew in Shushan (Esth. 9.9).

Valle, Valley. The A.V. so renders five Heb. words. (1) ‘eqeq, a “deep valley,” occurring 69 times, including the vale of Siddim (Cities of the Plain), of Shaveh, of Hanoa, of Abarim, of the Valley of Zered, of the Valley of Jehoshaphat (2 Sam. 17.3), a word occurring 76 times, especially of Hinnom (Gehenna), Charashim, and Hamon-gog. For Jiphthah-el (Judg. 19.14, 27), see Darrabasheth. The valley of Salt was in Edom (the Talmud applies the word to the gorge leading to Petra), and see also that of Jabbok (1 Sam. 17.2). The valley of the shadows’ (Ps. 23.4) was such a grooved or nahl, a torrent bed. The word occurs 133 times, rendered in A.V. as “brook,” “stream,” “flood,” “river,” “valley.” It applies to the valleys of Gerar, Escol, Zarek, Arnon, Zered, Jabbok, the river of Egypt (Jos. 15.4), Kanah, Kishon, Sorek, the valley of Rephaim, the vale of Achor, and the vale of Gihon, Willows, Shittim (J. 3.18). In Job (6.15) the drying of such torrents is noticed, as also in 1 K. 17.7 of Chireth. In Job 51.33, probably, the reading should be, “clods of the bees” (Arab. nahl), as meaning honeycombs used in embalming. (4) hir‘ (the Hiphil, hir‘im), “being lowly or humble.” These terms are not interchanged in the Heb. in the case of the sites named. [C. R. C.]

Vaniah, a son of Bani who put away his foreign wife (Ezr. 10.36).

Vashi, the firstborn of Samuel, according to A.V. of 1 Chr. 6.26[13]; but in 1 Sam. 8.2 the name of his firstborn son is given as Nahash. In Chronicles the name of Joel has dropped out, and “Vashi” is a corruption of veshëhî, “and (the second).” C. R. V.

Vashi, possibly a modification of the Old Pers. vahesta (excellent), or to be identified, though by no means satisfactorily, with Anesiris, the only wife of Xerxes who is known to secular history, the first of his four wives. [A. W. S.]

Veil. (1) mashe; used of the veil which Moses assumed when he came down from Mount Sinai (Ex. 34.33–35). (2) mishpakhth; used of the veil which the false prophets placed upon their heads (Ezk. 13.18, 21; A.V. chiefs). (3) rêsôlath; used of the light veils worn by females (Is. 3.19; A.V. veils). (4) ammâ; understood by A.V. of “locks” of hair (Can. 4.1, 3, 6, 7; 17.2). But the contents of the passages favour the sense of the ‘veil.” For other words improperly translated veil, see Dress. The use of the veil was by no means so general in ancient as in modern times. It was often only in exceptional cases, and used of the ornament of dress (Can. 4.1, 3, 6, 7). It is used by betrothed maidens in the presence of their future husbands, especially at the wedding (Gen. 24.65; 29.25), or by women of loose character for purposes of deceit (Gen. 38.14). The veil was adopted only in exceptional cases, and used as a symbol of modesty in the presence of their future husbands, especially at the wedding (Gen. 24.65; 29.25), or by women of loose character for purposes of deceit (Gen. 38.14). Among the Jews of N.T. times it appears as a symbol of modesty in the presence of their future husbands, especially at the wedding (Gen. 24.65; 29.25), or by women of loose character for purposes of deceit (Gen. 38.14).
their heads (not necessarily their faces) when engaged in public worship. For the use of the word (O.T. tail, N.T. tail) as a curtain, see **TABERNACLE**; **TEMPLE**.

**Vermilion.** [Colours.]

**Version, Authorized.** The desire to enable the people of England to read the Holy Scriptures in their own language first finds expression in the works of Bede. But none of his translations have survived; and, though fragmentary efforts were made in the meantime to render portions of the Bible into English, it was not till the 11th cent., that the great era of Bible-translation began. Then the work of John Wyclif led the way to the remarkable series of versions which culminated in our A.V. in 1611. Since therefore the A.V. is the literal descendant of all English versions that preceded it, we shall best understand its characteristics by tracing its historical antecedents.—I. We begin, then, with the work of **John Wyclif.** Wyclif was born in Yorkshire in the year 1320. He was acutely conscious of the evils that had arisen from the corruptions of the Church, the wealth of the hierarchy, and the oppression of the people. He felt that no remedy was possible unless the Church could be restored to a Scriptural basis, and that for this purpose the Scriptures must be brought within reach of the people in a language they could understand. So, in spite of fierce attack, especially from Archbishop Arundel, his great work of translation was set on foot. With him was associated one Nicholas of Hereford, to whom was assigned the work of translating the O.T., Wyclif himself working on the N.T. In 1372, however, Nicholas came under ecclesiastical censure for preaching Wyclifite doctrines at Oxford and was excommunicated. The result was that his share in the work of translation ended abruptly, and the O.T. was completed by another hand, perhaps by Wyclif himself. So the first complete English Bible was made, its appearance, probably, in 1385. But Wyclif did not rest content with his first attempt. He saw that revision was needed, and at once set to work to prepare a new edition. He had a valuable helper in **John Purvey**, who completed this new edition after Wyclif's death in 1384 and has left an account of the procedure adopted. The translation had been made from the Vulgate. The existing texts of the Vulgate were, however, full of errors. The translators were therefore at pains to search for old copies of the Latin Bible, which gave a better text than those in common use. In order to determine the meaning of difficult words and passages they used the **Glosa Ordinaria** of Walfrid Strabo, and, for the O.T., the Commentary of Nicholas de Lyra, a converted Jew. Another important aim in Purvey's revision was to improve the English idiom in Wyclif's Bible. The first translation bore obvious signs of having been made from the Latin; for the English rendering often retained the Latin idiom, and was in consequence difficult to understand. Purvey's revision is therefore an improvement on Wyclif's first Bible in that its English is more idiomatic. In spite of the hostility of those in authority and the great cost of making copies, the new Bible circulated widely and was eagerly sought after, as is shown by the fact that even now nearly 200 MSS. copies of the whole or a part of the Scriptures in this version are in existence.—II. A century passed by before the next great advance was made; and in that interval the art of printing was invented. The fall of Constantinople had brought the treasures of Gk. learning within the reach of the West; and so the New Learning arose, with Erasmus as its leading exponent. It was through him that the Greek Text reached the Western Church. The advance of the New Learning brings us to the next great name in Bible-translation. **William Tindale** was born in the last quarter of the 15th cent., and, first at Oxford and then at Cambridge, came under its influence. From quite early days it had been his desire to bring the Scriptures within the reach of all the people of England in their own tongue. He would cause the fads at the plough, he said, to become more familiar with the Bible than were the clergy of his own day. He had been sent to the university of London to enable him to carry out his scheme. But he met with no encouragement; indeed, as he said subsequently in his preface to the Pentateuch, he found that "not only was there no room in my Lord of London's palace to translate the N.T., but also there was no place in Oxford or Cambridge." So Tindale was driven to the Continent to carry out his great work. His special claim to honour lies in the fact that he was the first to go behind the Vulgate and to translate from the original languages. First at Cologne and, when driven thence by persecution, then at Worms, Tindale pursued his work upon the N.T., and in 1525 there appeared the first printed copy of the N.T. in English. The printer's name is not given, but it is generally considered to have been issued at Antwerp. The appearance of this volume in England was followed quickly by its official condemnation, in which Tunstal, bishop of Bath and Wells, took part. Pope Leo X ordered all the copies that could be found to be bought up and burnt; but the effect of this order was hardly what the bishop intended, for the money paid for the books enabled Tindale to proceed to the preparation of a new and better edition. In addition to the N.T. he also translated and printed the Psalter and certain other books of the O.T. It is impossible to praise Tindale too highly for his single-minded devotion to truth. It was his aim to ascertain always the exact meaning of the original and to render it faithfully into English. His work is singularly free from theologica]
entrapped him and imprisoned him in the castle of Vilvorden, where, after over a year's confinement, he was strangled and burnt in 1536. "Lord, open the king of England's eyes," were the last words he uttered.—III. The work of translation was carried forward under very different conditions by Miles Coverdale, a native of Yorkshire. Thomas Cromwell was now in authority and was anxious that the Bible in English should be in the hands of the people. The bitter opposition which the bishops had offered to Tindale's work, associated as it was in their minds with his heretical tendencies, would make it impossible to hope that a translation bearing his name would ever be received by ecclesiastical authority in England. So Cromwell looked round to find a scholar who should be competent to make a new version. He fixed on Coverdale, who indeed had been one of Tindale's leisest—a protomartyr of peculiarly imposing and charming grace. His name is associated with the dedication of this volume, which was the production of a volume which, from its size, was known as the Great Bible. Of this version seven editions were issued between 1539 and 1541. The title page describes the contents of the volume as having been "faithfully and truly translated out of Dutch and Latin into English." In other words, Coverdale's principal authorities were Luther's German version and the Latin Vulgate. In his dedication, however, he speaks of other versions which he had consulted, and it is generally considered that the final form of his work was dictated to him in the last degree by the vorlage, and that it was adopted for inclusion in the Prayer Book of 1562 in preference to the version of 1561.—IV. The next edition of the Bible was that which bore the name of Thomas Matthew (1537). This name, however, was a pseudonym, the real editor being John Rogers, a friend of Tindale's and a rather young and enthusiastic Marian propagandist. The translation was not of one hand. It incorporated Tindale's N.T.; and in the O.T. the Pentateuch is also that of Tindale. The books from Joshua to 2Chronicles seem, from internal characteristics, to be similarly derived from Tindale's hand; and the rest of the O.T. is taken from Coverdale's Bible. The special characteristic of Matthew's Bible was its strong Protestant bias of its very diffuse explanations and annotations. This Bible claims to be set forth "with the king's most gracious licence," and is therefore the first A.V. Permission was granted for it to be freely sold and read within the realm. Taverner's Bible, which appeared in 1539, was little more than a new edition of Matthew's Bible. Changes were sometimes made in the text with a view to greater accuracy or to a more idiomatic rendering, but the principal modification was the softening down of the strong controversial bias shown by the notes.—V. Meanwhile, Cromwell was anxious for the preparation of a new translation which should be free from the manifest defects of Matthew's controversial production. So for the second time he entrusted the work to Coverdale. Matthew's Bible was to be employed as the basis for this new work, but no private opinions were to be introduced into it. The outline of the scheme was the production of a volume which, from its size, was known as the Great Bible. Of this version seven editions were issued between 1539 and 1541. The title page describes the contents of the volume as having been "truly translated after the verity of the Hebrew and Greek tongues, and of divers excellent learned men expert in the foresaid tongues." The method adopted by Coverdale was somewhat as follows: Matthew's Bible was taken as the basis of the new translation, but such portions as had been incorporated from Tindale's Bible were now coloured more free. Coverdale's work was reconsidered and the whole was revised in point of scholarship by the aid of those experts in Greek and Hebrew of whom he speaks on the title-page. The Great Bible was ordered to be set up in all the churches throughout the kingdom. In the church and later editions a long preface by Cranmer was inserted, and this version is consequently known as the Great Bible with Cranmer's preface.
composed was naturally unequal in merit, and though the Bishops' Bible, as it was called, had the support of Convocation, it was not able to secure the royal licence.—VIII. In the meantime, the activity displayed by the Reformers in producing successive translations of the Bible was reacting upon the Romanists. The Bull of Pope V. against Queen Elizabeth in 1570 resulted in the Romanist schism and in the flight from England of many who adhered to the Pope. They accused the existing English versions of being false and heretical, and resolved that they would put out a new version of their own. The initiative came from Dr. William Allen, then Bishop of Lichfield and Coventry, the leading spirit in the founding of the English college at Douay. The disturbances in Flanders had made Douay insecure, and so the college removed to Rheims, where the work of translating proceeded. The task seems to have been completed in 1582, but the poverty of the exiles did not allow them to publish at first more than the N.T., which appeared in 1584. The O.T. was published in 1588, and the whole book of the Bible was assigned to one or other of the six companies into which the translators were grouped. The method to be adopted by each company was as follows. Each chapter was to be revised on the basis of the Bishops' Bible by all the members of the company working separately. Then the company was to meet together and each member was to present his own translation or emendations, and so, by means of a conference, agreement was to be reached as to the form in which the chapter was to stand. When in this way a book had been completed by the company to which it was committed, it was to be sent to the other companies for their consideration. By this provision a greater uniformity of language was secured than would have been the case if the several companies had acted quite independently of one another. Differences of opinion between the companies were to be referred to a committee of five, of which the chairman was to be the Dean of Westminster. The refusal of the Romanists to have anything to do with the Douay version resulted in its being received with less enthusiasm, and selected a body of fifty-four divines to undertake the work. These were divided into six companies, two of which sat at Westminster, two at Oxford, and two at Cambridge. A set of rules was drawn up for their guidance. The translation was not to be made de novo, but the Bishops' Bible was to be taken as its basis, and as few alterations were to be made in it as should be consistent with faithfulness to the original. Proper names were to be rendered in the forms commonly accepted. The old ecclesiastical words were to be retained e.g., the word "church" was not to be altered to "congregation." The method to be followed was: an emendation of the Douay version was to be made, and this presented to the Bishops and the Romanist Church to Christian antiquity appeared in the instruction that, when the meaning of a word was doubtful, it was to be interpreted in that sense in which the most eminent of the Fathers had understood it, provided always that such interpretation was consistent with the context and the leading principles of the Faith. The arrangement of the chapters was not to be changed, or as little as possible. The tendency of previous versions to develop into controversial treatises led to the laying down of the rule that no marginal notes were to be affixed except for the explanation of the Heb. or Gk. words. Marginal references from one place of Scriture to another were not to be affixed. Each book of the Bible was to be divided into chapters, and the meaning of each verse was to be explained. The notes were to be at the bottom of the pages or in a separate column, and were not to be introduced in the main text without special permission from Convocation. The Bishops were to have the right of revising the work; and if they did not send back the notes they were to be excused. The Dorey Version was to be revised on the basis of the Bishops' Bible by all the members of the company working separately. Then the company was to meet together and each member was to present his own translation or emendations, and so, by means of a conference, agreement was to be reached as to the form in which the chapter was to stand. When in this way a book had been completed by the company to which it was committed, it was to be sent to the other companies for their consideration.
the words "Appointed to be read in churches." No evidence in support of this statement has ever been found. The new version does not seem to have been publicly sanctioned by any constituted authority. Neither Convocation nor Parliament nor the king gave it authorization, so far as now appears. Its claim to be known as the Authorized Version rests therefore not upon formal edict but upon the position which its own merits have won for it. Owing to the circumstances of its production, it rapidly displaced the Bishops' Bible as the official version; but as a Bible for the people it had long to wait for recognition. The Geneva Bible was too popular to be superseded at a stroke, and it was not till the middle of the century that the new version was in anything like universal use. By that time the popular verdict had justified the claim of king James's Bible to be the Authorized Version. It remains to consider some of the characteristics of this time-honoured translation. It comes to us from the stateliest period in the development of the English language, and, considered merely as a monument of English prose, it is a worthy example of the period to which it belongs. The Revisers of the N.T. have borne ungrudging testimony to the excellence of their work, and they have had to study "the great version," they say, "carefully and minutely, line by line: and the longer we have been engaged upon it, the more we have learnt to admire its simplicity, its dignity, its power, its happy turns of expression, its general accuracy; and, we must not fail to add, the music of the sentences, jarred upon by nothing. But the beauty of this version must not blind us to its defects; indeed, this richness of language was to some extent purchased at the expense of exact scholarship. For in their anxiety that as many standard English words as possible should find a place in the pages of the English Bible, the translators used a variety of expression hardly consistent with faithfulness to the original. The same words, even when occurring in the same context, were variously rendered. Moreover, the method adopted of dividing the Bible between different companies was the cause of many inconsistencies. The provision made for referring the work of the separate companies to a final supervision. The translators of 1611 were at a disadvantage in the meagreness of the apparatus criticus at their disposal. In the O.T., indeed, the materials available at the present time for solving the problem of the text are hardly more complete than those which the ancient MSS. of the Massoretic text are known to exist of an earlier date than the 10th cent., and all belong to the same recension; though the evidence of ancient versions, and notably the LXX., proves that other recensions existed. Hence the method adopted by the Authorized Translator, far from having their standard the Massoretic text and only departing from it in exceptional cases gives substantially the best text that can even now be constructed. But in the N.T. the case is different. The translators of 1611 were able to use the Complutensian Polyglot, published in 1517, the Gk. text of Erasmus, and Robert Stephens's edition, which represented a revision of these two; but they principally relied upon Beza's edition of 1598. The great Gk. MSS. of the 4th and 5th cents. were then quite unknown, the intricate science of textual criticism had not yet come into being, and hence inevitably the renderings of A.V. are often far from being a true rendering of the original text which are now in some cases seen to be erroneous. In the course of three centuries the English language has necessarily undergone a change, and many words which A.V. uses have altered their meaning, while others have become obsolete. That the change of language has not in this long space of time been more felt may be evidently put down to the influence of this version. Its language so endeared itself to the people as to set the standard of what English writing and speech should be; and it is interesting to note that certain words and phrases which occur in A.V., but which have passed out of general use, are still employed in the English Bible in the broad dialects of the country districts of Yorkshire. H. W. Hoare, The Evolution of the Eng. Bible (1901). G. Milligan, The Eng. Bible: a Sketch of its Hist. (1895). W. F. Moulton, The Hist. of the Eng. Bible (2nd ed. 1884). F. H. A. Scrivener, The Auth. Ed. of the Eng. Bible (1884). B. F. Westcott, General View of the Hist. of the Eng. Bible (1872); The Bible in the Church (1875). [J.C.V.D.] Version, Revised. It would have been impossible in the nature of things for the A.V. of 1611 to have remained the standard of accuracy and diction, partly because expressions, tolerable among the Tudors and Stuarts, jarred upon the ears of later generations, partly because the growth of scholarship led to the recognition that some translations were faulty, and that by adopting readings from MSS. discovered since the Reformation it was possible to get nearer to the original text. The desirability of some authoritative revision was often urged in the middle years of the 19th cent., parliamentary interest being shown by Mr. Heywood's motion in 1856 for an address to the Crown praying for the appointment of a Royal Commission to consider amendments of the A.V., and by the inauguration in 1863 of The Speaker's Commentary, one express object of which was "a revision of the translation." In 1870 action was taken in the Convocation of Canterbury, that of York having refused to co-operate, by the adoption on May 5 of resolutions (see Preface of R.V.) to the effect that a revision of the A.V. should be undertaken by a body of its own members, who should take no-opts others or antiquities, and that the MSS. of the Massoretic text are known to exist of an earlier date than the 10th cent., and all belong to the same recension; though the evidence of ancient versions, and notably the LXX., proves that other recensions existed. Hence the method adopted by the Authorized Translator, far from having their standard the Massoretic text and only departing from it in exceptional cases gives substantially the best text that can even now be constructed. But in the N.T. the case is different. The translators of 1611 were able to use the Complutensian Polyglot, published in 1517, the Gk. text of Erasmus, and Robert Stephens's edition, which represent
VERSIONS

Deans Bickersteth, Alford, Scott, Stanley, Blakesley, and Vaughan, Drs. Lightfoot, Kunkel, Cook, Hort, and Moule, from Cambridge, and Drs. Angus, Eddie, Milligan, Newth, and Vance Smith, with Archdeacon Palmer and Dr. Scrivener. The actual sessions of the O.T. Committee commenced on June 30 of the N.T. Committee on June 22 in the Jerusalem Chamber, and thenceforward weekly sessions continued for four successive days in each month but August and September until the completion of the work. The task of presenting the case for or against deviations from the Received Text of the Gk. was generally left to Drs. Scrivener and Hort, who were the ablest exponents of opposite points of view. From July 2 onward the Revisers had the advantage of association with two companies of American Biblical scholars, whose final conclusions, where they differed from those of the English revisers, were printed as a supplement to the complete work. The actual American Re-

vision, containing further work than that of the complete English Revision, was not published till 1901: but the English Revisers were able to bring out the N.T. on May 17, 1881, the O.T. on May 19, 1885, and the Apocrypha in January, 1885. In the Apoc-

rypha the Revisers as a rule left textual questions on one side, and the benefit which they have conferred on the average reader by making passages intelligible which were not so very great. But owing to the work having been done by four different committees, there is a want of uniformity in execution, e.g., in the printing of poetical passages, and the rendering of proper names; and a freer use of the Oriental versions would have secured greater advantage. The English Rev-

ers, Ecclus. 25:15, "There is no head above the head of a serpent," and Ecclus. 51:10, "I called upon the Lord, the father of my Lord," should be, "I called unto the Lord, my father, O Lord," etc. In the O.T. the Re-
vision has been able to give in the later stages of their work by the criticisms which had appeared on the N.T. They certainly published, in proportion, far fewer changes in the translation and text, intimating in their Preface that renderings preferred by a mere majority of the Company were in many cases placed in the margin, a third majority being required to give them a place in the text. Their treatment of archaisms and coarse expressions was generally satisfactory, and the improvement in the sense of such passages as 1 Sa. 9:1-6 and Job 28 was sincerely welcomed, the latter becoming intelligible as a description of the miner's underground search for treasure. In Ecclesiastes they were less successful; "a straying after wind" (2:11) and "the caperberry shall fail" (12:5) were repelled. In the earlier books a very clever change was that of "meal" for "meat" offering; and the substitution of "temples" for "temple" in "the congregation" made for a truer understanding that it was where God met with His people (Ea. 29:42). Elsewhere the transliteration of proper names such as Sheol, Abaddon, and Asherah, made for clearness, and the Revisers rightly lay stress on the gain to the reader of the use of the plural "popples" in Ps. 87:3, 5, 55:8, 119:46, to express the Gentile nations of the N.T. the struggle of which Drs. Hort and Scrivener were the respective leaders resulted in the compilation of a new Gk. text, and consequent English version, which contained departures from A.V. much greater than had been contemplated at the commencement of the Revision. The heavenly witnesses disappeared from Rev. 5:7 with general approval; but the omission of the angel troubling the water (Jn. 5:6) and of the eunuch's profession of faith (Ac. 8:37); the marginal notes throwing doubt on the authenticity of the last twelve verses of S. Mark, of the pardon of the adul-

teress (Jn. 7:53), and of the first cry from the Cross (Lu. 23:34); the abandonment of the reading "God" in 1 Tim. 3:16, and the variant form of the Lord's Prayer in Lu. 11:2-4, provoked much feeling, as also did the translation in Mt. 5:13, "Deliver us from the evil one." The effort to render the same Gk. word by the same English word in cases where no such characteristic of the second gospel as the use of "straightway," deprived the reader of the familiar "charity" in 1 Cor. 13, but gave him "robber" in a number of passages illustrative now of the wild disorder of the times (Jn. 18:19; Lu. 10:30; Mt. 21:43, 26:55, 27:38), the prevalent amongst both lost and redeemed (Rev. 2:13, 12:16, 4:11, 15:16; cf. Mt. 19:28). If the preference for the more difficult reading gave us angels arrayed in "stone" (Rev. 15:6; A.V. "bricks"), there were brilliant cor-

rections in Mk. 8:23, "If thou cast," as a quotation of the father's own words, and Mk. 7:19, "This He said, making all meats clean." Amongst minor improvements in rendering may be quoted, "It is hard for thee to kick against the goad" (Ac. 26:14), "New wine must be put into fresh wine skins" (Mt. 9:17), and, "Be not therefore anxious for your life, what ye shall eat and drink" (Mt. 6:25). The changes made and their character can be best judged from the Interlinear Bible, in which, where the R.V. differs from the A.V., both are printed, the Revised in the upper and the Authorized in the lower of the two lines of smaller type. However disagreeable may be the pedantry of strict rendering of texts and propositions, it is impossible not to respect the spirit in which the work was done. Bishop Westcott wrote (Some Lessons of R. V. p. 63), "He who has mastered the meaning of the two prepositions now truly rendered 'into' the Name, 'in' Christ (Mt. 28:19; Rev. 1:5) has found the central truth of Christianity. Certainly I would gladly have given the ten years of my life spent on the Revision to bring only these two phrases of the New Testament to the heart of Englishmen." J. W. Burgon, The Revision Revised (1883); B. F. Westcott, English Bible, also arts. in Expositor, 2nd ser., 4, 7-8; Newキ. Lectures on Bible Revision. [c.r.d.b.]
O.T. is very late (9th cent. A.D.); the earliest Greek MS. of N.T. belongs to 4th cent. A.D., i.e. much earlier, but still some 300 years later than the original text. Many versions trace their history back to a time anterior to that of the earliest MSS., and therefore some of them contain elements of great importance. In the following description of the ancient versions the order is, for the sake of convenience of reference, alphabetical not chronological, nor yet in order of importance. Whenever possible, a version will be treated under a single heading, comprising both O.T. and N.T., but this cannot always be the case, for some versions only contain the O.T. or parts of it, while others only contain the N.T. or parts of it. Unless otherwise specified, it will be understood that both O.T. and N.T. are referred to.—I. AETHIOPIE VER.

This should more strictly be called the Ge'ez version; Ge'ez was the language of the Abyssinians and the name given to the kingdom of Axum. Frumentius was consecrated at Alexandria by St. Athanasius (Apologia ad Constantium, §§29-31), a fact which makes it probable that the first Aethiopic version was made from the Greek. (1) The Arabic-speaking Abyssinians were guided, and might be guided, by the fact that it is a peculiarity of the Aethiopic version that it knows nothing of the books of Maccabees, and shares this peculiarity with Cod. B (Nestle, Theol. Literatur. pp. 148 ff., 1895); moreover, the Aethiopic shows the closest relationship with this MS. in Kings and in Isaiah (pp. 142 ff., 147 ff., 84 ff., ii. 54 ff.), besides striking points of resemblance in other books; hence the supposition amounts almost to certainty that the Aethiopic Version rests ultimately upon Cod. B, or a MS. very much like it. There are, however, good grounds for Lagarde's contention (Materialien i. 3, Anhängel., p. p. 25) that the version is not direct, but derived from the Greek, but that its parent was an Arabic version, and that it belongs to the 14th cent., a striking piece of evidence in support of this being contained in two poems composed in praise of Abba Salama, as the Abyssins called Frumentius, because he translated the Ge'ez Version. A later story also tells how the nine companions of Frumentius translated the Bible from the Arabic (Cornill, Das Buch des Propheten Eschrichel, p. 37). To these main arguments, which support on the one hand a Greek original for this version, on the other hand an Arabic one, must be added these further considerations: it contains a number of transcriptions from the Hebrew, to which it approximates in other respects as well; there are distinct signs of the influence of some Hexaplaric text, e.g. some striking agreements with the version of Aquila; and yet, upon the whole, it is a verbal translation from the Greek, as regards O.T., while as regards N.T. its text shows a relationship which is closest to Cod. B, N, though Aethiopian and Syrian elements are not wanting. The conclusions to be drawn from this conflicting evidence are, that the original basis of the version was a genuine LXX. text, that later on it was revised, so as to introduce the Hebrew text in some places, and LXX. MSS. with Hexaplaric elements on the other, while in later times still it was corrected from Arabic and Coptic texts. The various MSS. of the version exhibit these various influences, and must be classified accordingly. About 100 Aethiopic MSS. exist; for the most part late in date, the earliest being the Paris one (14th cent.), which "exhibits the gospels in an unrev. text" (Nestle). The Aethiopic O.T. contains all the books of the Alexandrian canon excepting 1,4-Mac. but it includes a number of pseudepigraphic works not found in LXX. MSS., e.g. the book of Jubilees, the book of Enoch, 24:1 Esdras, Baruch, etc.; the N.T. contains, in addition to the usual 27 books, a work (in 8 books called the "Synodos") on Canon Law, so that the books of N.T. are reckoned as 35 (Nestle). No good critical edition of this version has yet been published as a whole, though single books have appeared (e.g. Textus Sept. pp. 142 ff., Urim und Thummim, O.T. in Grk. p. 115), e.g. the Octateuch and four books of the Kingdoms, by Dillmann, the book of Enoch, by Charles; no publication of N.T. books has yet appeared which is of any value.—II. ARABIC VER.

Egypt and Syria were the only two countries in which the Christians were of Arabic-speaking countries; it was therefore natural that Arabic versions should have been made from the Greek and the Syriac; besides these, there are other Arabic versions from the Hebrew, Coptic, and Samaritan. (1) Arab. Versions of O.T. Translations from the Greek exhibit a relationship to the Hebrew (e.g. Hexaplaric in Pesh. p. 147, Targums, etc.); the other poetical books and the prophets are from the Greek. Some MSS. are wholly translations of the Peshitta; the Pentateuch, in others, is direct from the Samaritan; other MSS., again, are from the Hebrew. These latter follow strictly the Massoretic text; most of the books thus translated are taken from the labours of Sa'adya the Gaon, a native of Upper Egypt (d. 942); those published are the Pentateuch, Joshua, Isaiah, Canticles, Job, and part of Proverbs. The Apocrypha does not seem to exist in this version. (2) Arab. Versions of N.T. The oldest Arabic MS. of any part of N.T. is Cod. Vaticanus A, in the possession of the convent of Mar Saba, near Jerusalem, and is a translation from the Syriac (Peshitta). It belonged to Daniel of Emesa, and contained originally the Psalms, the Gospels, Acts, and all the Epistles; and many fragments of the gospels and of the Pauline epp. now remain (Burkitt, art. "Arabic Versions" in Hastings, D.B. i. p. 136). Another translation from the Syriac is found in a 10th-cent. MS., Syr. and Arab.; part of it is in Leipzig and part in the Brit. Museum. An Arabic translation from the Syr. of the Pauline epp. is contained in a later 9th-cent. MS., now at St. Petersburg; from this were printed the
of Targums was discontinued; from the 10th cent. onwards they were no more read in the synagogues. The Targums may be classified as follows: (i) Targums to the Pentateuch. (a) The "Targum Babli" (Babylonian Targum), or the Targum of Onkelos, was, according to the most probable view, written in Palestine, but re-edited in Babylon; hence its title. The compiler Onkelos was a pupil of Rabbi Gamaliel the elder (Tosetta Sabbath c. 8), who died in 70 a.d.; the fact that this Targum was written almost within the life-time of Christ and that it embodies material which was centuries older shows its value as representing Jewish exegesis and post-Exilic Jewish anthropomorphisms. (b) The Babylonian Talmud (Megillah 59) it is said that "the Targum to the Pentateuch was composed by the proselyte Onkelos at the dictation of Rabbi Eliezer and Rabbi Joshua." This statement regarding the proselyte Onkelos "seems to be due to an erroneous application of the tradition current in the Palestinian Targum to the Hebrew text of O.T. Reference is made in the Jerusalem Talmud (Megillah 271) to the proselyte Aquila having translated the Pentateuch. The translation here referred to, is of course, the Greek one of Aquila; but in Babylon it was mis-interpreted to refer to the Aramaic translation of the Pentateuch, Aquila and Onkelos being a confusion of one and the same person" (Oesterley and Box, The Religion and Worship of the Synagogue, p. 46). This Targum is especially valuable on account of the literalness of its translation (Nödeke, Die alt-testamentliche Literatur, p. 257); like all the Targums it avoids, whenever possible, the "Targum of Jonathan ben Uzziel on the Pentateuch," but this is a mistake arising thus: "The Targum was often indicated briefly as 'Targum J' (i.e. Targum Jerusalem); the J was mistaken for an abbreviation of Jonathan, and it was supposed that the Jonathan ben Uzziael, to whom 'Targum on the Prophecies is ascribed, was also responsible for this Targum on the Pentateuch" (Oesterley and Box, op. cit. p. 47); it is now usually described, more correctly, as the "Targum of pseudo-Jonathan." The other form is called the "Jerusalem Targum," but it is also known as the "Fragmententargum," for only fragments of it survive (see Ginsburger's edition, Das Fragmententargum, Berlin, 1890); the form in which we now have it belongs perhaps to the 7th cent. As to its origin the opinions of experts differ. On the one hand it is held to have been from the beginning only "a collection of detached glosses, not on the Pseudo-
I. AETHIOPIC (Gen.48, part of ver. 15). From a MS. in the Library of the British and Foreign Bible Soc.

III. ARAMAIC (paraphrase on Mal.4.6), 12th cent. From the Oriental Series of the Palaeographical Soc., Pl. lxxvii.

IV. ARMENIAN (Mt.1.11.), 9th cent. From a plate in Évangile traduit en langue Arménienne ancienne et écrit en l’an 887: edition ... de l’Institut Lazareff des langues orientales (Moscow, 1899).

SPECIMENS OF SCRIPTS (A).
Jonathan, but on the primary recension."

Others hold that these fragments are not the remains of what was once a separate Targum, but formed a "Haggadic supplement and a collection of marginal glosses and various readings on Onkelos" (Hetzog, Realencyclopädie, xv. p. 372); at any rate this fragment Targum is very closely related to the pseudo-Jonathan. The language of the former is "a Palestinian dialect of Aramaic; hence we must select Syria or Palestine as its author's native country; and this assumption is confirmed by the oldest examples we have of the way in which the work was referred to—the Targum of the land of Israel—targum e'rey yisrael (Zunz, Die gottesdienstliche Vorügge, p. 73).

(ii) Targum to the Prophets. This is called the "Targum of Jonathan," and comprises the historical books called in the Heb. canon the Former Prophets, as well as the prophetic books proper, known in the Heb. canon as Prophets. More correctly than ben Uzziel is described as a pupil of Hillel, who lived in the early part of 1 st cent. A.D. This Targum is more a paraphrase than a translation, and is full of Haggadic material. Zunz says: "Even in the case of the historical books Jonathan often acts the part of an expositor of the text. But, when he gives another version, such a style of exposition is uninterruptedly pursued as makes it really a Haggadic work" (op. cit. pp. 62, 63). Its language is substantially the same as that of Onkelos (cf. Merx, Chrestomathia Targumica). It has been printed in the London Polyglott, and also by London (now called "the Targum of Codex Reuchlinianus."). (iii) Targum to the Hagiographa. The third main division of the Heb. canon is called kethubhim, "Writings;" the Targums to these are of less importance, because, unlike those already mentioned, they are not officially recognized, and never have been. The only points of importance that need be noticed here are that the Targums to Job and the Psalms are strongly Haggadic in character, and belong at latest to the 5th cent.; they show much independence of the Massoretic text—a striking fact, insomuch as it seems to denote that this text had not become fixed even so early in their use. The Targum to Proverbs shows remarkable resemblance to the Peshitta Version, i.e. the Syriac Vulgate. The Targums to the five m'gilloth ("Scrolls," i.e. Canticles, Ruth, Lamentations, Ecclesiastes, Esther) are again strongly Haggadic; Esther has three Targums to it, showing its great popularity. There is also a Targum to the Book of Esther which is more a paraphrase than a translation. The Targums are important not only for the light they throw on Jewish theology, but also, especially, as a Theaurus of ancient Jewish exegesis; in this way they frequently offer matter of interest to the O.T. and N.T. writer: many important passages are shown in the N.T. often agrees with the ancient synagogue in interpreting certain passages messianically which later were expounded differently in orthodox Jewish circles. Another fact which makes the Targums important is that much of their material goes back to times anterior to the Christian era; Nöldeke has shown that fragments belonging to the time of John Hyrcanus are to be found in them (op. cit. p. 256). No Targums to Ezra, Nehemiah, or Daniel are known to exist.—IV. ARMENIAN VERSION. (i) O.T. The evidence as to the origin of this version is conflicting. In favour of a Syriac origin we have the following facts:—The grounding of Armenian Christianity was the work of Syriac-speaking missionaries. The Armenian Church, which was founded in the middle of the 3rd cent., used Syriac as its ecclesiastical language; it is distinctly asserted by Moses of Khorren that the earliest translations of the Armenian O.T. were made from the Syriac. Moses of Khorren was the pupil of Mesrop (4th–5th cent.), who is said to have been the first to translate the Bible into Armenian. According to tradition Edessa was the place where the first Armenian Bible was made; the Armenian Version, as it now exists, still shows clear traces of Syriac renderings. In spite of these facts, the view that the Armenian Version can be shown to be based, without any doubt, upon a Greek original, though the existence of other elements is also clearly discernible. The fact is that the Armenian Version, while being in the main a translation from the LXX., did not rely solely upon this, but utilized a large number of Hexaplaric MSS. "This composite character of the Armen. text is probably due to the fact that the translators used the Hexaplaric text of Origen, whose obeli and asterisks, marking additions of the LXX. to the Massora, or additions to the LXX. from Ag. Sym. Theod. (Gk. Targumic Versions) of the 3rd cent., were still alive in Arm. MSS. as well as actual marginal references to the Gk. versions used by Origen. The Armenians, then, must have made their version from a Hexaplaric text such as we have in the Gk. Codices 22 and 88' (Conybeare); to which we may add Cod. Y (Taurinensis) upon which Cod. 22 is based, as far as the Dodekapropheton is concerned (Oesterley, Codex Taurinensis [Y], Oxford, 1908). According to Mr. McLean, "the Armenian shows a typical Hexaplar text in Genesis and Exodus, agreeing closely with the Syriaco-Hexaplar version, and in varying degrees with the MSS. that compose the Hexaplar group (S catching the O.T. version) is also useful as containing, in parts, translations made from Gk. MSS. of the Lucianic recension. The most important printed editions are those of Zohrab (1789–1805), and the Venice one of 1859, undertaken by the Mechitarist fathers of San Lazzaro. (ii) N.T. Much of what has been said about O.T. applies here as well. Up to the 5th cent. Syrian influence predominated in Armenia, so that in the first instance the N.T. was translated from the Syriac, but in the 5th cent. a translation from the Greek Bible was introduced. The N.T. of this version does not offer the various problems as to its origin which the O.T. of course, but it has some special points of interest, among which are the following: in all the MSS. of the gospels the canons of Ammonius are added in the margin; in many the Fourth Gospel comes first and is, in some MSS., followed by an apocryphal addition called the "Rest of St. John." Again, the last twelve verses of Mark,
as also the Apocalypse, which were translated and incorporated into the Armenian canon in the 11th cent. and not included in the MSS. until 12th cent. In the Etschmiadzin MS., belonging to the year 986, the verses which follow Mk.18.8 are headed: “Of Ariston the Presbyter.” As Nestle remarks, “We learn from this, what is evidently correct, viz. that the present conclusion of Mark’s Gospel is due to a certain Aristion, who may perhaps be identified with Aristion, the teacher of Papias, in the second century” (Textual Crit. of the Gk. Test. p. 142).—V. EGYPT, COPTIC, VERSIONS. The Versions now to be considered are called Egyptian because Egypt was the land of their origin, or Coptic, in the etymology more correctly Egyptian = Αιγύπτιος because the various dialects in which they are written are all varying forms of the original script so named. The different versions of the original Coptic (all the letters of which, except seven, are from the Greek) arose from the existence of different popular dialects in the various Egyptian provinces. The names of these somewhat confusing on account of differences of opinion among scholars as to their correct designations, it may be well to state first what these names are. (i) Sahidic, from σα.σα.id— the Arabic name for Upper Egypt. This version was formerly known as the Thebaic, from the districts of Thebaïs. (ii) Bohairic, from El-Bohairah (= lake), a district S. of Alexandria, between lake Mareotis and the W. arm of the Nile. These names are frequently confused with the Markian, from the province of Memphis. These versions, therefore, represent the different dialects which were spoken respectively in Upper, Middle, and Lower Egypt; it was perhaps the geographical form of Egypt which gave special opportunities for the growth of popular dialects (cf. ed. of Hist. c. 155). As to the date of their origin we have the following data: In Ac. 2:10 we read that among those who were present in Jerusalem at Pentecost, and heard the preaching of St. Peter, there were some from Egypt (cf. 6:9, 18, 24); it is extremely probable, therefore, that some of these accepted the new faith and took back to Alexandria (which had for centuries been a Jewish colony) the knowledge of Christianity. Unquestionably these converts, as well as others of their race who embraced Christianity, were Greek-speaking Jews; but it cannot have been long before the new faith spread from the urban settlements to the country districts and villages, where different Egyptian dialects were spoken. These native Egyptians would in course of time have required the Scriptures in their own vernacular. No doubt from the time that the Gospel was first preached among these native Egyptians the sayings of Christ must have been translated, so that there was a fairly accurate translation of the NT even before they were actually made; and therefore, though proof is not forthcoming, it is probable that the earliest of these versions, at all events of N.T., began to be made almost immediately after the original was in the hand of the bishops of the various sees. Under Demetrius, consecrated a far greater number of Egyptian presbyters in twenty-three years than his predecessors, it is probable that there was an increase of the Episcopate in Egypt, a fact which suggests also an increase in the extension of Christianity, and the consequent need of having the Scriptures in the vernacular. Heracle, the successor of Demetrius, consecrated a far greater number of Egyptian presbyters in twenty-five years. Eusebius (Hist. Eccl. vi. 41) speaks of the sufferings of “Egyptian” Alexandrians during the Decian persecution (250 A.D.). These facts point to the possibility of an Egyptian version having existed in the first half of the 3rd cent.; at any rate, it cannot have been much later, for the common opinion of scholars is that all the Sahidic MSS. in Upper Egypt in 322 must certainly have required copies of the Scriptures in their vernacular. “The evidence of the Pistas Sophia,” says Prof. Burkitt, in the Encycl. Bibl. iv. 5007, is inexcusable as to date. . . . It is a Gnostic work of the latter half of the 3rd cent., which survives in a very ancient Sahidic MS. Most of the allusions in it to the Old and New Testaments are loose and paraphrastic, but several of the Psalms are quoted by number in full, almost word for word with the Sahidic Version. We cannot, however, certainly infer from this that Sahidic is the original language of the book. The Sahidic Version must be older than the Pistas Sophia as we have it; but the Psalms in question, which are all put into the mouths of the various apostles, may illustrate the Gnostic teaching of Jesus, may have been added by the Sahidic translator with the view of commending the book to the Gnostics. Thus, for instance, the Biblical text shows quite a different spirit from the free invention of the rest of the book.” We shall, then, not be far wrong in regarding the commencement of the 4th cent. as the latest date for the earliest form of an Egyptian version. To deal with the three Egyptian versions individually: (i) Sahidic. As regards O.T., this version was unquestionably made from the LXX., and apparently represents, like all the Egyptian versions, the Hesychian recension, which was well known in Alexandria and Egypt. As regards N.T., the most interesting points are that this version has some striking “Western” readings and interpolations, and that in many readings it supports ρ or ο, or both, where these great MSS. stand almost alone. “We learn, therefore,” says Prof. Burkitt, “from the evidence of the Sahidic version, that a text similar in essentials to that of ρ and ο, though slightly more ‘Western’ in character, was current in Egypt about the beginning of the 4th cent.” In both O.T. and N.T. there are a few MSS. of complete Biblical books, but for the most part only fragments of this version survive; those of O.T. have been gathered and edited by
Ciasca, Sacrorum Bibliorum Fragmenta Copiose Sahidicae Musci Borgiani, Rome, vol. i. (1885), vol. ii. (1889), and Lagarde, Aegyptiaca, pp. 65 ff. (1883); those of N.T. by Amélineau, "Fragmentum Thébaïnæ ineditum du N.T.," in the Zeitschrift für Aegyptische Sprache, vii. xi. xxvi. (1886–1888); see also an art. by the same author, the Athenaeum, No. 3601, pp. 599 ff. (ii) Akhmimic. This sub-division of the Sahidic is at present known only by fragments of Exodus, Ecclesiastis, 2Maccabees, and the Minor Prophets, as well as by a very ancient MS. of Ecclesiasticus (B). (iii) Fayumic, or Middle Egyptian. Although the date of this version is unknown, it betrays certain relationships with the Sahidic, than which it is probably not much later. Very little of O.T. has come down to us—fragments of Isaiah, Lamentations, and the Ep. of Jer.; of N.T. more exists (see Hyvernat, Études sur les versions Copètes de la Bible," in the Revue Biblique, v. 3, 4, vi. 1; Forbes Robinson, "Coptic Apoc., Gospels, in Texts and Studies, iv. 2."

(iv) The Bohairic Version is still in ecclesiastical use among the Copts., or Egyptian Christians; of O.T. there are several MSS. of the Pentateuch, Psalms, Proverbs, Job, Minor Prophets; Isaiah is written in Cairo Coptic, or Coptic; Ezekiel; the earliest MSS. of N.T. are of the 12th cent., though some fragments probably belong to the 9th; it is later recension of the Sahidic (see Guidi in Nachrichten von der K. Gesellschaft der Wissenschaften, pp. 49–52, Göttin-ingen); many of the MSS. have an Arabic translation intercalated; the Bohairic diverging in this respect from the Sahidic MSS. In both versions the full Gk. canon is represented, though the order of N.T. books varies in each; the Apocalypse was not regarded as canonical, and is never bound up with MSS. of N.T. A new translation of N.T. was published by Horner in 1898–1905.—VI. GEORGIAN OR IBERIAN Version. This is of subordinate importance; the O.T. is based upon the Gk., the translation of Gk. words putting this beyond doubt; the N.T. is a version of the Old Syriac, according to F. C. Conybeare (American Journ. of Theology, ii. 193–227, v. 64–83 ff.); of the Gk. or Aram. version, according to Nestle is dated 10th cent., and as we have it represents a revision, made before the 10th cent., of an earlier form, a fact which may possibly be found to account for the varying opinions as to its origin when the MSS. have undergone a more thorough-going examination. The printed edition of 1743 (Moscow) is the earliest extant (14th cent.) and was a second attempt at a revision, as "fairly to represent the MSS," as far as the Gospels are concerned.—VII. GOTHIC Version. This was made for the Teutonic tribes who dwelt in the Danubian provinces by Ulfilas, the apostle of the Goths," in the middle of 5th cent. According to Philostorgius, "he translated the whole of the O.T. and one book of the Kingsdom, which he omitted, as likely to inflame the military temper of the Gothic race by their records of wars and conquests" (quoted by Swete, op. cit. p. 117). Of O.T. only a few fragments have been preserved. All the N.T. books, in part or whole, have been found except for Matthew, Lp., and the Apocalypse. In the latter part of the 6th cent. the existence of a MS. of this version was known, through Morillon having mentioned that he had observed one in the library of the monastery of Werden, on the Ruhr, in Westphalia. In 1648, almost at the conclusion of the Thirty Years' War, a MS. came into the possession of the Swedish authorities, amongst the spoils from Prague, a copy of the Gothic Gospels, known as the Codex Argenteus. This MS. is generally supposed to be the same that Morillon had seen. On the abdication of Queen Christina, of Sweden, a few years later, it disappeared. In 1655 it was in the possession of Count Magnus Gabriel de la Gardie, who placed it in the library of the university of Upsala. While the MS. was in the hands of Vossius a transcript was made of the text by Derrer, from which Junius, his uncle, edited the first edition of the Gothic Gospels, at Dordrecht, in 1665. Ten leaves were stolen from the MS. between 1821 and 1834, but restored after many years by the thief upon his death-bed. "This magnificent Codex was written in the 5th or 6th cent. on purple, with gold and silver lettering. It now comprises 187 leaves out of 330, and contains fragments of the four Gospels and the order of the Psalms, Lamentations, Song of Songs, and Deuteronomy (Nestle). New light dawned on Ulpilias and his version in 1817. While Cardinal Mai was engaged in the examination of palimpsests in the Ambrosian Library at Milan, he noticed traces of some Gothic writing under that of one of the codices. This was found to be parts of Ezra, and Nehemya (Nehemiah), which, with the aid of the Codex Amiatinus, and some parts of the Gospels, were recovered. Another MS. is the Cod. Carolinum, which contains versions in other matter some 40 verses of Romanus. This was published in 1762. The edition of Gabalentz and Loebe (1836–1845) contains all that has been discovered of the Gothic version. In 1854 Upplström published the text of Cod. Argenteus; in 1855–1856 Massmann issued a small edition of all the remains of the Gothic Scriptures known to be extant; St. Mark was edited by Scheer in 1882. The O.T. text of the Version is interesting as exhibiting a text which is clearly Lucianic (see Lagarde, Librorum V.T. canoniciorum, pars. i. p. xiv. (1883), Kauffmann, op. cit.). "Ulfilas was in Constantinople for some time about 340 a.d., and his MSS. of the LXX. were doubtless obtained in that city, which, according to the Life, was one of the headquarters of the Lucianic LXX." (Swete). As regards N.T. Kauffmann says that "the Goth to whom we owe Matthew used the Gk. text current in the diocese of Constantinople" (op. cit. xxxi. p. 180); he holds the same to be the case with St. John's Gospel. For the relationship between this version and the Old Latin see Burkitt (Encycl. Bibl. iv. 4994, 5012). For textual criticism this version is only of subordinate importance.—VIII. GREEK Versions. (i) The Septuagint (see the article on this). When the LXX. had ceased to be the exclusive property of the Jews through having been adopted by the Christian Church, it was natural that the Jewish authorities should
have desired to have a version more specifically Jewish for the use of Hellenistic Jews. This desire was accentuated by the fact that a Heb. text had received the official sanction of the Rabbis which differed considerably from the earlier Heb. text which had been the basis of the LXX. translation; thus, from the Rabbinical point of view, it became imperative that a Gk. version should be made which would have for its basis this later and officially accepted form of the Heb. text. Of these later Gk. versions we know six; fragments, in greater or less numbers, of each are still extant, and the number is gradually increasing.

(ii) Aquila. Originally a Gentile, and related to the emperor Hadrian, Aquila became a Christian while living in Jerusalem, whether he had been sent by the emperor to superintend the building of the new city, Aelia Capitoline, on the site of the ruins of Jerusalem. He was, however, excommunicated on account of practising heathen rites; thereupon he became a Jew. He was well acquainted with Rabbinical lore and tradition, and is not infrequently quoted in the Talmud. As far as is known, his version was the earliest of the Gk. post-Sevagant ones, and it may be stated with tolerable certainty that it was completed c. 125-130 a.D. The chief characteristics of this version are: firstly, the literal rendering of the Massoretic text. Origen says that he was “a slave to the letter,” and that “whatever was wanting in the Heb. text was not to be found in Aquila”; Jerome writes to the same effect. This is borne out by comparing the Aquila-fragments which we possess with the Massoretic text. In many instances the translation is so literal as to leave the Gk. equivalents for Heb. proper names the transliterations of Aquila are more faithful to the Heb. than is the case with the LXX.; on the other hand, in some few cases Aquila transliterates a word as a word, its etymology; some instances of this occur even in the few fragments of the book of Amos that survive (see Oesterley, Studies ..., p. 70). For the published fragments of this version, see the Bibliography at the end of this article. (iii) Theodotion. Also a Jewish convert, according to Irenæus. Theodotion was a native of Ephesus. He lived probably during the first half and middle of the 2nd cent. The characteristics of his work are, firstly, great freedom of translation; indeed, it is almost more correct to say that this was a revision of the LXX. based upon the Heb. text, than that it was an independent version, though it omits the LXX. addition to Job. Hence, on comparing the text of the LXX. with that of Theodotion the two are often seen to differ very widely. Secondly, Theodotion made a good deal of use of the Heb. text; this may be seen by the very literal translations which often occur, as well as by transliterations from the Heb.; in these latter cases Theodotion in most cases differs from the LXX. The freer rendering of Theodotion as regards the LXX., and his less slavish use of the Heb., makes his version much less inelegant, from a linguistic point of view, than that of Aquila. One extraordinary fact about this version is that its translation of the book of Daniel, which was received by the Christian Church, and which therefore, for some reason or other, had supplanted the earlier LXX. translation, is now found, with one exception only, in all MSS. of the LXX. How this originally came about is a question which has not yet been settled (see Burkitt, Old Latin and Hula, pp. 48 f., 49 ff.). The text of the LXX. which Theodotion revised had many readings which do not appear in any existing MSS.—a fact which gives Theodotion's version its chief value. (iv) Symmachus. According to trustworthy tradition Symmachus was an Ebionite; his version belongs to the beginning of the 3rd cent. His chief aim seems to have been to give a translation which should be in good Gk.; he made use, however, of the earlier versions, relying perhaps more on Theodotion than on the LXX. or Aquila; but that he used the Massoretic text as a basis is abundantly clear. Interesting, if not always instructive, is the way in which Symmachus gives renderings sometimes of an entirely independent character—independent of the other versions, as well as of the Massoretic text; this, is, apparently, due to the desire to give a good Gk. rendering, or to give the sense of the original, as he understood it, or, in other cases, to express properly the term or name Symmachus is not consistent sometimes they are taken from one or other of the versions, at other times transliterated from the Heb. His avoidance of anthropomorphic terms and phrases is marked. (v) Quinta, Secula, Septuaginta. These are the names given to three Gk. versions of the O.T. with the exception of the 5th, 6th, and 7th from their relative positions in the columns of Origen's great compendium. They belong probably to the beginning of the 3rd cent. or the end of the 2nd; of their authors nothing is known excepting what can be gathered from the fragments still extant. Probably none of these versions covered the whole O.T., for Eusebius uses the word θεοδοτικας in reference to them, meaning, according to a highly probable interpretation, that one version represented some books of the Bible, another other books, and a third yet others; however this may be, it is certain that the same books figure in more than one of the versions. The Minor Prophets, fragments of which have been found belonging both to Quinta and Secula. Field, in speaking of the later Gk. versions, says of Quinta that it is “omnium elegantissimum.” The author, according to St. Jerome, was a Jew. Secula likewise makes use of good Gk.;
V. Greek (I.K.20, part of ver. 10), 5th or 6th cent. From Burkitt's *Fragments of the Books of Kings according to the translation of Aquila*; the original fragment came from the Cairo Genizah.

VI. Sahidic (Jn.20.21), date uncertain, but early. Brit. Mus. Papyri xiii. 4.

VII. Slavonic (Mt.4.25), 1332 A.D. Brit. Mus. Add. MS. 26839.

VIII. Syriac, Curetonian (Jn.6.67), 4th or 5th cent. Brit. Mus. Add. MS. 14451.

IX. Syriac, Peshitta (Mt.7.8), 5th or 6th cent. Brit. Mus. Add. MS. 14470.

SPECIMENS OF SCRIPTS (B).
the author was a Christian, judging from the rendering of Hab. 3.17: "Thou wentest forth to save thy people through Jesus Thine Anointed (dv [ἐργανὸς τοῦ χριστοῦ σου). Of Septima nothing is known excepting that it is mentioned by Eusebius. (vi) A much later Gk. version belonging to the late Middle Ages is known as the Graecus Venetus; this is a translation of the Massoretic text, use being made, however, of the other Gk. versions; it consists of the Pentateuch, Ruth, Proverbs, Canticles, Ecclesiastes, Lamentations, and Daniel. The author was a Jew whose "chief guide appears to have been David Kimchi, whose interpretations are closely followed" (Swete). The best printed edition is von Gebhardt's Graecus Venetus Syriac edition. Nothing is known for certain as to the origin of Christianity in the Syriac-speaking countries, i.e., the districts in the valley of the Euphrates and neighbouring provinces, but it is certain that the new religion was well established in Edessa (the literary head-quarters of the Syriac-speaking church) before the end of the Roman empire in 216 a.d., during the reign of Caracalla; the political independence of the little state accounts for the early translation of the Scriptures into the vernacular of the Euphrates Valley (Burkitt). The early date of this version is one of the indications of its value as a critical authority for the Biblical text. i. The O.T. (a) The Peshitta, or more fully "Mappaṭṭa Peshittā," which means the "Simple Edition," was to the Syriac church what the Vulg. was to the Western. It was used by all the divisions of Syriac-speaking Christians, Nestorians, Monophysites, etc. Thus it was evidently older than the middle of the 5th cent., when the division between Nestorians and Monophysites took place. The name Peshitta was, however, not given to this version until the 9th cent.; this term "Simple" was attached to it in order to distinguish it from other Syriac versions which were made subsequently, and which seemed more complicated on account of the many critical signs inserted in their texts. It is impossible to say for certain where the Peshitta was made; but every probability points to Edessa as the place of origin; as to its date see XI. ii.

(b). The Peshittā O.T. version was made direct from the Heb., most likely by Jews, and was the work of different translators, for in some books the translation is very literal, in others more paraphrasical; the Heb. text underlying the Syriac is that of the Massoretes. In the prophetic books the influence of the LXX is observable. Does this extraordinary phenomenon mean that in certain books the LXX, was believed to represent, in some respects, a more faithful text than that of the Massoretes? Jews of the Dispersion had settled in Mesopotamia before the Christian era. Of MSS. there are some very ancient; the oldest is Cod. Add. 14,425, in the Brit. Mus., which contains the Pentateuch with the exception of Leviticus. It is a transcription, and is dated 464 a.d., which makes it the oldest known dated MS. of any portion of the Bible extant in any language. Cod. Ambrosianus (6th cent.), also in the Brit. Mus., contains the whole O.T., and has been published entire in photo-lithographic form by Ceriani (1876—1881). The only MSS. of this period of any merit are three very unsatisfactory one issued by the Brit. and Foreign Bible Soc. 1823. Some single books have, however, been issued: Min. Prop., by Sebök (1887); Job, by Manal (1892); Apoc. of Baruch, by Charles (1896); Add., by Bensly and Barnes (1896); the latter has also published the Syro-Hexaplar Apparatus Criticus in the Peshitta Version (1897); 2 Kings, by Berlinger (1897); 1 Sam., by Schwartz (1897). (b) The Philoxenian Syriac. Only a few fragments of Isaiah are left of this version so far as O.T. is concerned. It is called after Philoxenus, bishop of Mabbug, for whom it was made in 508 a.d., and is the earliest known attempt to give a Syriac version translated from the LXX. "It seems to have been a free revision of the Peshitta by a Lucianic MS., producing a curious mixed text." Ceriani has published the fragments in Monumenta Sacra et Profana, v. i. 1-40. (c) The Syro-Hexaplar was a translation, made at Alexandria in 477 a.d. by Ps.-Ptolomy, and Tella. As its name shows, it was a translation of the fifth column of Origen's Hexapla, i.e. of Origen's text of the LXX; but it also gives the asterisks and obelis as employed by him, together with many other marginal renderings from Gk. versions; moreover, the translation is exceedingly literal, so that it is obvious how very valuable this version is for textual criticism. Nearly all the books of O.T. are still extant; Middeldorp published 2 Kings, Is., Min. Prophets, Prov., Job, Cant., Lam., Eccles. — 2 Kings from a Paris MS., the other books from Cod. Mediolanensis—in 1835; and in 1852 Lagarde published what remains of the Pentateuch and the other historical books. (d) The Palestinian Version. That the Bible should have been required by native Christians of Palestine in their own dialect is obvious. This dialect was very closely akin to that of the Jews of Galilee, and is therefore of very great interest (see Dahan, Grammatik des Jüdisch—malathnischens Sprachbrauch, p. 33); for, as Prof. Burkitt says of this version: "Its linguistic interest, therefore, is very great, for although it is a somewhat literal translation from the Greek, the language in which it is written comes nearest of all known Christian dialects
to that spoken by Jesus and the apostles" (Encycl. Bibl. iv. 506). Only a few fragments of O.T. remain, but that these will in time be increased seems highly probable. Those which have so far come to light have been published by the following scholars: Land, Anecdota Syriaca, i. (1878); J. Rendel Harris, Biblical Fragments from Mt. Sinai (1890); and I. Delitzsch, Einleitung in das Semitische. Studia leit. i. v. (1893-1896); Margoliouth, Liturgy of the Nile (1897); Mrs. Lewis, Studia Sinaiatica, vi. (1897); for the passages from Scripture which have been so far discovered, see Swete, op. cit. p. 115. It is said that another version, under this heading, of the LXX. was made by the Nestorian patriarch Mar Abbas in 552 A.D., but it is no longer extant (see further Nestle, Utext, pp. 227 ff.).

(ii). The N.T. The Syriac versions of N.T. offer problems of an entirely different kind from those of O.T., and the subject must therefore be treated from a somewhat different point of view. It will be found most convenient to consider with the various books of N.T. the extant versions (1S90) and to treat them according to the order of their passage from Scripture which have been so far discovered, for the passages from Scripture which have been so far discovered, see Swete, op. cit. p. 115. It is said that another version, under this heading, of the LXX. was made by the Nestorian patriarch Mar Abbas in 552 A.D., but it is no longer extant (see further Nestle, Utext, pp. 227 ff.). (ii). It is said that another version, under this heading, of the LXX. was made by the Nestorian patriarch Mar Abbas in 552 A.D., but it is no longer extant (see further Nestle, Utext, pp. 227 ff.).

The results of Prof. Burkitt's researches have entirely revolutionized all previous theories as to the history of the Syriac Gospels; his conclusions are generally accepted, so that in this section we shall be entirely guided by him; to his name must, however, be added those of Mrs. Lewis and the late Prof. Bensly. It will be well to state at the outset the special literature to be studied for this section: The four Gospels in the Old Syriac Version,..., by Bensly; Rendel Harris, Burkitt, and Mrs. Lewis (1894); Some Pages of the Four Gospels retranscribed from the Sinaitic Papyrus, by Mrs. Lewis (1896); the art. "Texts and Versions," by Burkitt, in Encyc. Bibl. (1903); Evangelion da-Mipharrēsē, the Coptarian Version of the Four Gospels,..., vol. i. Introduction and Notes, by Burkitt, and vol. ii. Notes and appendices, by Burkitt, 1904.}

Some Pages of the Four Gospels retranscribed from the Sinaitic Papyrus, by Mrs. Lewis (1896); the art. "Texts and Versions," by Burkitt, in Encyc. Bibl. (1903); Evangelion da-Mipharrēsē, the Coptarian Version of the Four Gospels,..., vol. i. Introduction and Notes, by Burkitt, and vol. ii. Notes and appendices, by Burkitt, 1904. Besides various articles in the Journal of Theological Studies, the Expositor, and the Expository Times. (a) The Gospels. That a Jewish colony lived in Edessa (Osrhome) some considerable time before the Christian era is an ascertained fact; sooner or later, as in the case of every other Jewish colony, Christian missionaries would have reached Edessa. From a number of indications (see Burkitt's Early Eastern Christianity, pp. 1-38) the new faith was first brought there during the former half of the 2nd cent. The chief authority for the early history of Christianity in Edessa is a 5th-cent. work called The Doctrine of Addai; although this probably contains more legend than history, there is much in it which is of historical value. According to it, Addai (one of the 72 discipies) was sent by the apostle St. Thomas, immediately after the Ascension, to Alagar, king of Edessa, to preach the Gospel. Special mention is made of the Jews of Edessa, who are represented as being friendly to the new teaching. Addai is wholly successful in his mission, and a Christian community is founded. It is scarcely possible to conceive of the Jews having been without a copy of the law and the prophets: when, therefore, they were converted they at first had nothing but these Scriptures—of course in their own vernacular—which they would have interpreted in a Christian sense. This is what must have been done wherever Jews were converted and no copy of the Gospels was available. From this we may take for granted that a Syriac O.T. existed before the Christian time. The first Christians here most probably had no copy of the Gospels for at least a generation. Tatian, the philosopher, was the first to supply this want, and he gave to this Christian community a Syriac translation of his "Harmony of the Gospels," known as the Diatessaron. The extant authorities for the Diatessaron are the Commentary of Ephrem Syrus (d. 373), of which only an Armenian translation exists; some quotations from the original work found in some Syriac commentators on the Gospels; and an Arabic version of it (11th cent.) which is, however, almost useless, as it represents a later edition of the text. This edition was probably that of a man who had assimilated himself to the Nasbati. There is, then, the earliest form in which the Gospels existed in Syriac, and the "circumstance that on Syrian ground it had no rivals made the Syriac Diatessaron an instant and assured success." As to its acceptance we have no certain knowledge, but, to quote Prof. Burkitt again, "the Greek name that Tatian gave to his Harmony, the fact that he himself was a Greek author, and—most important of all—the existence of direct, though degenerate, descendents of the Diatessaron in the Codex Vulgius and the medallion of John Damascus at the Hagia Sophia, all these things tell us that the Syriac Diatessaron is not an original work, but a translation of a previously existing Greek Harmony. In the absence of evidence to the contrary there is, I consider, no reason why we should not accept Tatian as the author and compiler of this Greek version. The fact that he did so, and that his Diatessaron was read in the East, c. 172 A.D. Doubtless it was very soon rendered into Syriac, probably under his immediate supervision " (Evangelion,..., p. 266). The textual character of the Diatessaron is of high importance and interest, because there is a great affinity between the Eastern and the Western. We are met with the extraordinary phenomenon that the Diatessaron contains many readings which are found nowhere else but in Cod. D and in some other Old Latin texts; thus the Gk. text that underlies the Diatessaron represents the tradition in the West in the latter half of the 2nd cent.; this Western character is apparent throughout, as can be seen by comparing the Diatessaron with, e.g., Cod. D; and the only and obvious way of accounting for this is to suppose that Tatian brought with him to the East a text with which he had become familiar while sojourning in the West. The next great event known to us in the history of the Edessene church is that persecution broke out during the last decade of the 2nd cent. The Bp. of Edessa at this time was Aggai, who was martyred before he could consecrate his successor, Polit, who thereafter went to Scarpion, Bp. of Antioch, for his
consecration. Serapion, according to Eusebius (Hist. Eccles. vi. 12) was Bp. of Antioch from 190–203 A.D.: "there is absolutely no reason why the Edessene church should have traced their succession to him, except that historical fact compelled them to do so." Serapion is known to have been especially active in promoting the ecclesiastical use of the four Gospels, and all the facts combine to make it probable that when he consecrated Palaiht he influenced him in the direction of the use of the Antiochen text of the Gospels; so that when the latter returned to his diocese he brought with him a copy of the Gospels which was considered more authoritative than the Diatessaron which had hitherto been in use in the Edessene Church. If this was so, we are justified in recognizing in what is now usually known as the "Old Syriac Version of the New Testament" the text of the Codex which Palaiht introduced into the Edessene Church. In each of the two extant MSS. of this version the Gospels are described as Evangelion da-Mepharreshe, i.e. "The Gospel of [or, according to the separated ones]". Burkill has shown that this term is used of the former text in the 5th cent. Perhaps, therefore, the "Harmony" of Tatian, in which the four Gospels are combined in one single narrative. The two extant MSS. of the Evangelion da-Mepharreshe are: a palimpsest discovered in 1892 in the convent of St. Catharine in Mt. Sinai by Mrs. Lewis and Mrs. Gibson; this is usually quoted in the abbreviated form M.S. 606. The date is most probably in the 5th cent. It contains the four Gospels in the usual order. Almost the whole of the original MS. is still preserved, only 450 verses being missing. The other MS. is that known as the Curetonian, quoted as S; belonging formerly to the library of the convent of St. Mary Deir in the 5th cent. it was purchased by Harmer. In 1842–1847 to the Brit. Museum, where it is numbered add. 14,451; it belongs to the middle of 5th cent.; and originally contained the Gospels in the order Matthew, Mark, John, Luke; less than half of the original whole is all that is now left. The respective Gk. texts which these codices exhibit differ radically, as we should expect, since the former represents the Roman, the latter the Antiochene type of text. But the Evangelion da-Mepharreshe did not displace the more popular Diatessaron form of the Gospels; the two existed side by side, the former being perhaps more a reference authority, while the latter was used in the daily services of the Church. The next step in the history of the Syriac Bible is connected with the name of Rabbula, Bp. of Edessa, 411–435 A.D. This man’s influence on the Edessene Church was many-sided, and, among other things, he very naturally occupied himself with the text of the Scriptures. We read in his lite that "he translated by the wisdom of God that was in him the N.T. from Greek into Syriac, because of its variations, accurately just as it was" (Life of Mar Rabbula, in Overbeck’s collection of Syriac writings, 172, pp. 18 ff.). The Diatessaron and the style in which he would find in his diocese varied greatly from the Gk. text with which he had become familiar in the Catholic centres where he had been baptized and had hitherto lived; moreover, that Tatian, the author of the Diatessaron, had been a heretic would be a strong reason for getting rid of this version. Therefore he introduced a new version, and it was this which became known later as the Peshitta. The O.T. was left very much as it was, the need of revision being less than in N.T. The strongest proof that it was during the episcopate of Rabbula that this new version of N.T. came into being is the fact that from this time the N.T. quotations of Syriac writers are all influenced by the Peshitta, beginning with Isaac of Antioch (d. 460); but the quotations in Syriac writers earlier than Rabbula agree with the known peculiarities of the Diatessaron and the Ev. da-Mepharreshe; hence "there can be little doubt that the translation of the N.T. in the Codex of Rabbula was the Peshitta itself. The Peshitta is thus an edition of the Ev. da-Mepharreshe, revised into closer conformity with the Greek, and published by authority with a view of superseding both the Diatessaron and the then current Syriac text of the four Gospels" (Burkill); and it has ever since this time been the form of the ecclesiastical text of the Syriac Church. Many MSS. of it are still extant, some as early as the 5th cent., but all exhibit the same type of text. Among the Monophysite Syrians, however, two other revisions of N.T. were made: the Philoxenian (so called after Philoxenus, Bp. of Mabbög, for whom it was prepared); this was probably the beginning of the 6th cent. and contains the Peshitta, supplemented by those books of the Gk. canon which were not included in the Syriac (see below); and the Harkelean, a revision of the Philoxenian made in 600 A.D. by Thomas Harkel, Bp. of Mabbög; this is a literal translation of the Gk., its text agreeing with the later Gk. MSS. One other Syriac version of the Gospels needs mention viz. the Palestinian, which is represented by a few fragments in the "Palestinian" dialect (see above); besides these fragments, there are three complete Gospel lectionaries, all belonging to 11th cent. or later. The version itself probably dates from the 6th cent.; the text is a mixed one of the Gk. and Syriac, and it was being, however, often apparent. The best editions of the various versions referred to are: The Diatessaron: Zahn, Tatian’s D. (1891); Hill, The Earliest Life of Christ (1893); Hogg, The D. of Tatian (1897). Ev. da-Mepharreshe: the Curetonian and Sinaite, as mentioned above. The Philoxenian: Myrr., "Die in der Peschito fehlenden Briefe...der Philox. entstammender Uebersetzung," in Zeitschrift für Assyriologie, xii. 240 ff., 348 ff., xiii. 1–28. The Apocalypse has been published by Gwynn (1897). The Harkelean: Bensly, The Harke. Vers. of Ep. to Hebrews (1889). The Palestinian: The various fragments published by Land; Mrs. Lewis, Nestle, and Mrs. Gibson have published "A Palestinian Syriac Lectionary" (Studia Sinaitica, No. vii. 1897). (b) Acts and Pauline Epp. As regards the Old Syriac Version no MSS. of either Acts or the Pauline Epp. are known to exist; at one time the Church must have had them, the various early Syriac writers like Aphraates and Ephrem Syrus, who quote from these books,
with the Peshitta, that shows the latter is not the original form of the Syriac Version of these books. In the Philoxenian Version, likewise, nothing from these books has been preserved. Of the Harklean Version several MSS. have survived. This version was published by White (1778-1803); an interesting portion of Hebrews was edited by Bensly in 1889. The Peshitta N.T. was published in New York in 1886 in the Nestorian character. (c) The Catholic Ep. and the Apocalypse. These never formed part of the Old Syriac Version; in the Philoxenian Version 2 Epp., 2.5.11, and Jude are preserved, and are usually found bound up in the modern editions of the Peshitta. The Apocalypse in this version was discovered and published by Gwynn in 1847. But the Apocalypse and the minor Catholic Epp. were never included in the Syriac Vulg., and whenever they appear in editions of the Peshitta they belong to another version. —

Vial (vi-a’l) [path]. This word occurs twice only in O.T., each time of a small vessel containing oil for anointing to the kingship (1Sam. 10:1. 2K. 9:1,3). The root meaning is “to trickle.” In N.T. “vial,” or “bowl (φασιλις),” used in a figurative sense in the visions of the Apocalypse: (Rev. 5:5, etc.): (w.o.e.)

Village, (1) Heb. ḫāṭer (Hazer), an “enclosure.” (2) kāpāhūr. [Capar.] (3) >{$viah}, a hamlet, only inhabited in summer. —

Vine, the well-known valuable plant (Vitis vinifera), very frequently referred to in O.T. and N.T., and cultivated from the earliest times. The first mention of it occurs in Gen. 9:20,21. The Egyptians said that Osiris first taught men the use of the vine. That it was abundantly cultivated in Egypt is evident from frequent representations on the monuments, as well as from Scriptural allusions (Gen. 40:9,11; Ps. 78:47). The vines of Palestine were, and are, celebrated for luxuriant growth and the plenteous fruit from them. Excavations cut in the valley of Eschol one cluster of grapes which had to be carried by two men on a staff (Num. 13:23). Schulz speaks of a vine near Ptolemais, whose stem was (according to him) about 18 in. in diameter, whose height was more than 30 ft., and whose branches formed a canopy. In the Conder, Excavations of these extraordinary vines,” he adds, “are so large that they weigh 10 or 12 pounds, and the berries may be compared with our small plums. Especial mention is made in the Bible of the vines of Eschol (Num. 13:23,32,39), of Sibmah, Heshbon and Eleach (Is. 18:8,9,10; Je. 48:32), and of Engedi (Can.1:14). The vine is a frequent subject of metaphor in Holy Scripture. To dwell under one’s vine and fig-tree signifies domestic happiness and peace (R ev. 22:3; Mi. 4:4); the rebellious peoples of Israel are compared to wild grapes.” An empty vine,” the degenerate plant of a strange vine,” etc., is prominent in Is. 5:1-7. Je. 2:32,33; Zec. 3:10. v. 1. Lord selects a vine to show the spiritual union which subsists between Himself and His members (Is. 15:1-6). The training of cultivated vines upon supports appears to be alluded to by Ezekiel (19:10-12). The vintage (ba’ir), formerly a season of general festivity (cf. Judg. 9:27), commenced in September. During it the people lived among the vineyards in hedges and tents. The grapes were gathered with shouts of joy by the “grape-gatherers” (Is. 25:7), and put into baskets (see 6:9). They were then carried on the head and shoulders, or slung upon a yoke, to the “wine-press.” In Palestine the finest grapes, says Dr. Robinson, are now dried as raisins (simmu), and the juice of the remainder, after having been trodden and pressed, “is boiled down to a syrup which, under the name of dībs, is much used by all classes, wherever vineyards are found, as a condiment with their food. Raisins are mentioned several times, as in 1Sam. 25:18,30,12; 2Sam.16:1; 1Chr.12:40; [Flagon.]. Tristram gives praise to the raisins of Eschol of his time. The vineyard, which was generally on a hill (Is. 5:1; Je. 31:5; Am. 9:13), was surrounded
by a wall or hedge to keep out wild boars (Ps.80.11,12), jackals, and foxes (Num.22.24; Can.2.15; Ne.4.3; Ezk.13.4,5; Mt.21.33). Within the vineyards were towers of stone in which the vine-dressers (kōrānim) lived (Is.1.8,9,2; Mt.21.33). [WINE-PRESS.]

Josephus deemed (Deut.32.12) that the latter "resemble edible fruit in colour, but, on being plucked by the hand, are dissolved into smoke and ashes." Some travelers, as Maundrell well remarks, regard this story as a fiction. Pococke supposed the apples of Sodom to be pomegranates. Hasselquist suggests the egg-shaped fruit of the Solanum melongena when attacked by some species of tenurodo, which converts the whole of the inside into dust, while the rind remains entire and keeps its colour. See Trave. [P.22-23]." This described the shape of the fruit of Sodom in a kind of cotton-tree (known as 'oshesh) which grew in the plain of El Ghor. Dr. Robinson pronounced in favour of the 'oshesh fruit being the apples of Sodom. He identifies it with the Aexteupis (Calotropis) procera of botanists. Mr. Walter Elliot suggested oak-galls, which he found growing plentifully on dwarf oaks (Quercus inferiors) in the country beyond the Jordan. Dr. Hooker writes, "The vine of Sodom I always thought might refer to Cucumis colocynthis, which is bitter and powdery inside; the term vine would scarcely be given to any but a trailing or other plant of the habit of a vine. This last also of all the plants previously suggested for the vine of Sodom, which in the Bible is merely represented as a poor kind, though the 'oshesh suits the "apples" of Josephus. [THORNES.]

**Vinegar.** The Heb. term Ḥōmeq was applied to a beverage consisting generally of vinegar or sour drink, turned sour, but sometimes artificially made by an admixture of barley and wine, and thus liable to fermentation. It was aced even to a proverb (Pr.10.26), and by itself formed a nauseous draught (Ps.69.21), but was used by labourers (Ru.2.14). A similar beverage was the actum of the Romans (Ac.11.4,5), which is the fruit of many of the plants previously suggested for the vine of Sodom, since in the Bible is merely represented as a poor kind, though the ‘Vinegar' suits the "apples" of Josephus. [THORNES.]

**Vineyard.** The Heb. term Ḥōmeq was applied to a beverage consisting generally of vinegar or sour drink, turned sour, but sometimes artificially made by an admixture of barley and wine, and thus liable to fermentation. It was aced even to a proverb (Pr.10.26), and by itself formed a nauseous draught (Ps.69.21), but was used by labourers (Ru.2.14). A similar beverage was the actum of the Romans (Ac.11.4,5), which is the fruit of many of the plants previously suggested for the vine of Sodom, since in the Bible is merely represented as a poor kind, though the ‘Vinegar' suits the "apples" of Josephus. [THORNES.]

**Vineyards, Plain of the** (Judg.11.33). The name Beel el Kerm (house of the vineyard) was found by De Saulcy N. of Kerak. This name may be modern, but the site is near Aza, with which it is sometimes confused. But it is noticed as the place where the Seer was born (Ps.11.27; 78.60). It was the place of residence of the old prophet Samuel, and was often the scene of some of the events connected with his life. [1Sa.1.19]. "The Seer" is in direct communion with God, and sees and declares His inner purpose. Canonical prophets ascribe to "visions" their knowledge of God's will (Is.1.1; Ob.1; Na.1.1). A false prophet "speaks the vision of his own heart, not from Jehovah's mouth" (Je.23.16). Later prophets like Ezekiel clothe their "visions" in literary form (Ezk.33). As, before Samuel, there was "no frequent vision" (1Sa.3.1, R.V. marg.), so, with the cessation of the prophets, visions ceased except in apocalyptic literature, e.g. Daniel, Joel foretells the future outpouring of God's Spirit, "when your young men shall see visions." N.T. visions, also, are signs of prophetic intuition (Lk.1.15; Ac.9.10), often decided the apostles' action (Ac.16.9,10,26.19; 2Cor.12.2), and are apocalyptic (Rev.9.17). [TRANCE; DREAMS. [C.C.T.]

**Vophsi**, father of Nahbi (Num.13.14).

**Votive-offering.** [SACRIFICE, 3. ii. c.]

**Vow** (Heb. nedher), a promise made to a deity in the belief that it will be pleasing in his sight. The subject matter was usually that of a gift or to conduct. A vow differs merely in motive from an oath declaring intention. Thus Uriah uttered an oath that he would not go home (2Sa.11.11). Had he spoken the same words for the purpose of pleasing God, they would have constituted a vow. Again, a vow differs from a promissory oath addressed to God. Vows were frequently conditional: e.g. Gen.28.20 ff. (on God's giving Jacob a safe return); Num.21.2, Judg.11.30 ff. (on God's giving victory), etc. The general principle governing vows is clearly stated in Deut.23.21-23[22-24]. There is no sin in not vowimg; but a vow once made must be strictly observed (cf. Num.30.2-10, 15-22; Mal.1.14). For the capacity of women see Oathis, A. ii. (a). A vow could be made by simply uttering the phrase "(it is) holy," and rash vowimg appears to have been prevalent at one time (Pr.20.25). In offerings the law requires that a votive peace-offering must be unsullished and perfect. The law forbids the owner of a vow to redeem the thing which was brought to God's house for any vow (Deut.23.18[19]). Redemption was permitted in the case of certain vows. Human beings were redeemed according to a fixed scale, subject to abatement in cases of poverty (Lev.27.2-8; 2K.12.4[5]). [POOR.] Animals capable of being sacrificed were not subject to redemption (Lev.27.6,19). Unclean animals and houses might be redeemed at six-fifths of their estimated value (Lev.27.11-15). Fields were also subject to redemption, but the details are obscure. The valuations were calculated on the number of years to the jubilee, the sowing of a homer of barley being valued at 5 shekels. The valuation was sufficient to cover the whole period from one jubilee year to the next, and some abatement was made if the vow was uttered at any intervening period. The owner could then redeem at six-fifths of the valuation in the case of a field he had inherited; but if he refused to redeem or had sold the field to another, it was not to be subject to redemption at all, but...
fall to God at the next jubilee, the possession being the priest’s. In the case of a purchased field, the owner who dedicated it by vow could redeem at a valuation calculated on the number of years then past, and the priest who returned would own the original vendor (Lev.27.16-25). Firstlings could not be consecrated by vows, being already holy by operation of law (Lev.27.26-27). Perhaps it should be inferred from 2K.12.4[5]. Pr.20.25, that other articles dedicated by vow (e.g. a cup) were subject to redemption. A fragment form of vow to which was attached the Nazarite. The Jews held that ‘issar, ‘issar, a word meaning bond, and so used in Num.30, denoted a special form of vow (abstinence) in Num.30.13[14]; but it is clear from the scope and language of the chapter that the reference throughout is only to the bond which was bound on the soul by any oath (Num.27.3, etc.) or nether, and that the legislator is not contemplating some new form of vow other than a nether or an oath in ver. 13 [14]. The bond on the soul was exactly the same in all vows and oaths, and no distinction is drawn in this chapter between (i) an oath, such as that of the Israelites not to give their daughter in marriage (ii) a vow of abstinence, and (iii) a vow to sacrifice. [Sam.14.24ff. is sometimes given as an example of ‘issar, but there the term “oath” is expressly used (26, etc.). Side by side with the ordinary vow, which made the thing vowed holy, was a more solemn vow whereby it was rendered “devout” (Matt.23.2). Everything devoted was made holy (Lev.27.28). Devoted persons (Family) and animals were put to death, no sale or redemption being allowed (Lev.27.28-29; cf. Ex.22.20[19]). Devoted clean animals fell completely to the priests (Num.18.14; Ezk.44.29), instead of being sacrificed and eaten by the owner, as were things vowed and ordinary holy things (Lev.27.23-27; cf. Ex.38.19). The possession of a devoted fell to the priest (Lev.27.21-22,28). The penalty for taking of that which was devoted was death by burning (Jos.7.15, etc.). [ANATHHEMA. Reclamycr. fur Protest. Theol. und Kirche, vi. 483-487. [H.M.W.]

But denounced the practice of exalting the duty of helping parents by vows to bring them and their children to God, and the time of his troubles in Corinth, and 21.23-26, when he undertook to defray the expenses of the sacrificial offerings of the four disciples who had a vow on them” in Jerusalem. In 23.12 certain Jews bound themselves under a Curse to abstain from food till they had killed St. Paul—an Illustration of a vow having the force of and being associated with an oath. For instances of Anathema in N.T. sense of accursed, delivered over to destruction, see R.V. of Ro.9.3, (Cor.12.3.16-22, Gal.1.8). [H.H.]

Vulgata, The. The Vulgate Version was almost the sole form in which the Bible was known to Western Christendom for more than 1,100 years; it is still the official version of the Latin Church. It is the Latin translation of the text of St. Jerome, the parent of all the vernacular versions of Western Europe, the Gothic Version of Ulflas alone excepted; its effect was felt on Luther's translation and on our own A.V.; and it may claim to have exercised a wider influence on the Christian Church than any other version or even than the original Gk. and Heb. Its language has been the model on which the majority of the vernacular translations have been based. It has been the form in which the Bible has been read in the West for more than 1,100 years. The Vulgate is a Latin translation of the Bible, and was the first complete Bible translation in Latin. It was commissioned by Pope Gregory I in the 6th century. It was completed in 593, and the work was finished by St. Isidore of Seville. The Vulgate is a translation of the Hebrew and Greek Scriptures, and was the first translation to include the Deuterocanonical books. It was the standard version of the Bible in the Latin West for over a thousand years.
speaking, and a Latin Bible, or at any rate N.T., would be indispensable. With this inherent probability accords the fact that such Old Latin MSS. as the Cod. Bobiensis, 5th or 6th of the Gospels, and h (Fleury Palimpsest, 6th or 7th) of the Acts, agree with the quotations in the African Fathers, especially Cyprian († 257 A.D.), and with the language and style of African writers; while their texts seem to show all the marks of extreme antiquity and primitive translation. On the other hand, there has been an increasing tendency of late years to doubt whether "Africanisms" in style and vocabulary may not be the characteristics of 2nd and 3rd cent. Latin generally, rather than of African Latin in particular; while the fact that some of our earliest Old Latin MSS. such as the Becae (Gospels and Acts), and the Laudian Acts (both 6th cent.), are bilingual, may point to such a city as Antioch as the home of the version. At Antioch Greek would be the ordinary spoken language, but there would be a large Latin-speaking element in connexion with the Roman legions and the Latin "notarii" would be accustomed to write public notices in the two languages. There is, at any rate, no doubt that a Latin version of N.T. was current in Proconsular Africa early in the 3rd cent., and was used by the African Fathers for some considerable time. In the 4th cent. desert of Chalcidion, there is the translation current in Western Europe and especially in N. Italy, called by Dr. Hort the European. Scholars are not yet agreed as to whether this was an independent version, or a revision of the African text in the direction of smoother Latinity; the principal MSS. of it are a (Codex Vercellensis, 4th or 5th cent.), b (Codex Vercellensis 5th or 6th, f Codex Corbeiensis, 6th), f (Codex Vindobonensis, 6th or 7th), r (Codex Usserianus, 7th), all of the Gospels. A third type, named by Dr. Hort the Italian, is considered by him to be a revision of the European, made (1) to obtain a still smoother Latin text, and (2) to amend the uncritical and uncollected nature of the "Syrian" type. The name "Italian" was given because Dr. Hort supposed this type to be that referred to by St. Augustine when he praises the "Itala interpretatio" as being clearer and more accurate than others (de Doctr. Christ. i.2), and because St. Augustine's Biblical citations agree on the whole with this type. The principal MSS. of this family are f (Codex Bruxianus, 6th cent.) and g (Codex Monacoensis, 7th), both of the Gospels. It is to be noticed, however, that the readings of the "Italian" type agree in many instances so closely with Jerome's text, that many scholars maintain that the group is not Old Latin at all, but essentially Vulg., with a certain admixture of Old Latin readings. It is a harder task to classify our MSS. of the Old Testament. This is partly because they are fewer and more fragmentary; the early circulation of O.T. in the West was probably far smaller than that of N.T., and authority and priority of text is less important than that of O.T. Moreover, patristic citations do not help us to anything like the same extent. Speaking roughly, however, we may say that for most books of O.T. we possess fragments of MSS. which, judged by patristic quotations and by the nature of their Latin, may be assigned to the European or Italian type. Job, Proverbs, 3 Esdras, Wisdom, and Ecclesiasticus survive in African versions, the two latter books passing unrevised into the Vulg.—

III. The Work of Jerome. In addition to these three (or possibly two) main families of Old Latin versions, each containing many MSS., one of which agreed completely with any other, there must have been a number of independent translations; both Jerome and Augustine use language which, even allowing for exaggeration, demands this. Grave inconvenience and confusion naturally followed from the absence of one standard version; and (c. 383 A.D.) Pope Damasus commissioned St. Jerome to prepare a revision of the New Testament which should serve as an "Authorized Version." The choice was a wise one; Jerome was probably the one scholar living who combined knowledge of the Bible with a great knowledge of the original tongues in which it was written. In one respect, at least, of expressing himself in clear, forcible Latin enabled him to produce a translation suitable for the simple and learned alike. Eusebius Hieronymus, to give him his full name, was born of Christian parents c. 340 A.D.; he was educated at Rome; in 374 he retired to the monastic life; after a numberless years' residence in Antioch, he returned in 382 to Rome, where he became the trusted adviser of Damasus. The letter entrusting him with the great task is not extant, and it is from Jerome's answer (the In Evangelistas ad Damasum Praefatio, printed at the beginning of most Vulg. Bibles) that we learn its nature. Damasus had bidden him judge which of the numberless Latin translations of N.T. most faithfully represented the original Gk.; and Jerome now presented him with a first instalment of the work, consisting of the four Gospels revis ed by himself and his four Gk. MSS.; he had not altered the Latin save when the sense of the original required it. The Gospels appeared in 383 and, as Jerome clearly intimates, were to be followed by the rest of N.T. These books must have appeared (probably in the order, Pauline epistles, Hebrews, Acts, Catholic epistles, Apocalypse; see the letter to Paulinus, Frater Ambrosii, also printed at the beginning of most Vulg. Bibles) during the course of the next year. It has indeed been doubted whether Jerome ever did revise the rest of N.T. because (a) the Latin does not show the same signs of correction as in the Gospels; (b) the other books do not possess the prefaces which Jerome was wont to write; and (c) Augustine, in a letter (Ep. lxxi. 6) written as late as 403 A.D., mentions Jerome's translation of the Gospel only. On the other hand, Jerome affirms repeatedly that he revised all the N.T., and replying to this very letter of Augustine (Ep. cxxi. 20) he emphasizes the very fact to correct him. The other books of N.T. were not treated with the same care as the Gospels, but a thorough examination of the evidence makes it practically certain that they were revised
and that the Vulg. MSS. represent a type of text distinct from the Old Latin. The absence of prefaces may be due to the fact that Pope D amasus, the inspirer of the work, died in 384 A.D., before these books were brought out. During this same sojourn at Rome, Jerome made his first revision of the Psalter; the Old Latin Psalter was simply emended from the Gk. of the LXX. without any very thorough examination of the text. This is the Psalterium Romanum, still in use at St. Peter's and at Milan. In 385 Jerome left Rome, and, after a short time spent in travel, settled for the rest of his life at Bethlehem; and now his serious work at O.T. translation began. The dates of his various works are not always easy to fix, but they probably appeared in the following order. Shortly after his arrival at Bethlehem (c. 385) he found that the Psalterium Romanum had been so carelessly copied that he proceeded to revise it more thoroughly; he corrected the underlying LXX. from the other Gk. versions, and appended to his translation the critical signs by which Origen had marked (a) passages left out of the LXX. but retained from the version of Theodotion (an asterisk, *), and (b) passages present in the LXX. but absent from the original Hebrew (an obelus, †). This is the Gallican Psalter, so called because it afterwards obtained wide popularity in Gaul, apparently through the efforts of Gregory of Tours (d. 597). This revision was followed by the current version in the Latin Church, and this, not Jerome's later translation from the Heb., appears in his Vulg. Bible. This was probably followed by revised translations of the other O.T. books from the LXX. (though such a translation survives only in the case of Job, together with prefaces only to Proverbs, Ecclesiastes, Song of Songs, and Chronicles). For this reason it has been plausibly argued that Jerome did not proceed very far with his version from the LXX. but abandoned it for the more ambitious scheme of a new translation direct from the Hebrew. This is quite parallel to that of the other O.T. texts. He defines and adds nothing to what he has, but he defines more and adds nothing to what he has, but he defines and adds more than once (e.g. Ep. Ixxi. 5; Contra Ruff. ii. 24, iii. 25) that he translated the whole O.T. from the LXX. In these passages (written in 398 and 402 A.D.) he refers to it as having been undertaken "ante annos plurimos," which would probably mean during the earliest years of his stay at Bethlehem. The conditions under which the O.T. was translated from the Heb. were different from those which brought about the revision of the New; the latter was undertaken at the instance of the Pope, and was intended to be the authorized version in the West, so far as the Pope could make it such; the former was undertaken by Jerome in his private capacity, at the desire of friends or from his own sense of the need of a new translation, and the work was spread over a far greater number of years. Allusions in the prefaces to the various books, and references in his letters, enable us to follow him in the prosecution of his great task almost book by book and year by year. He began with Samuel and Kings, introduced by the famous Prologus Galicus (for this and his other prefaces, see the beginning of any ordinary Vulg. Bible): though attached to these books only, it is really an introduction to the whole O.T. and shows that he must have already contemplated a new translation of all the books. By 393 (see Ep. Ixxi.), written in that year, there had followed Psalms, the Prophets, and Job. By 395 Ezra and Nehemiah were translated, and in 396 Chronicles (vide prefaces to those books, and Ep. Ixxi., written 395-396). In 398, after a severe illness, he completed Ecclesiastes, Song of Songs, and Proverbs, and could tell a friend (Ep. Ixxi.) that he had translated all the O.T. except the Octateuch, and was now working at that; by Octateuch he probably meant the five books of Moses, Joshua, Judges and Ruth (counted as one book), and Esther. The Octateuch was therefore translated between 398 and 405, for in the preface to Joshua, written soon after the death of Paula (394 A.D.), Jerome says he has finished the Pentateuch and is now at work on Joshua, Judges, Ruth, and Esther; and these remaining books were probably finished in the following year. The fact that Esther is described as being still in hand after the other books of the O.T. are finished is perhaps due to the dedication of that book to Paula and Eustochium (vide preface to Esther); and the insertion of Esther in the first case, or of Paula in the second, must be a scribe's error. With regard to the books of the Apocrypha, the evidence is conflicting. In his preface to the books of Solomon (comp. LXX.), written probably 388-389, he states that he did not then correct Wisdom and Ecclesiasticus, "tantummodo Canonici Scripturam vobis emendare desideram." In the Prologus Galicus he enumerates the books of the Heb. Canon, "ut seire valeamus, quiquid extra hos est, inter apocrypha esse ponendum," and then says of Wisdom, Ecclesiasticus, Judith, Tobit, and the Shepherd (of Hermes), "non sunt in Canone." In the preface to Ezra and Nehemiah he refuses to include the third and fourth books of Esdras (i.e. 1 and 2 Esdras of our Apocrypha) in his translation; and when translating Jeremiah, he refused to add the Prophets which must then be considered apocryphal. He Macabees he simply remarks in the Prologus Galicus, "Machabaeorum primum librum Hebraicum referi. Secundus Graecus est." This would suggest that he did not translate either of them. He does not mention the Prayer of Manasses. In the case of Daniel, however, he consented to retain the Septuagint, Sicut ergo Judith, et Tobiae, et Machabaeorum libros legit quidem Ecclesia, sed eos inter canones scripturarum non recipit; sed et haer duo volumina [i.e. Ecclesiasticus et Wisdom] legit ad inarticulatiun plenos, non ad autoritatem Ecclesiasticorum datum confirmandum" (this is the passage referred to in the 6th Article of the English Church). At the request of friends he made a rapid translation of Tobit and Judith, pleading that the latter was said to have been
reckoned amongst the Holy Scriptures by the Council of Nicaea (there is no other authority for this statement). As these books were written in "Chaldee," he obtained the help of a learned friend who translated them from Hebrew, and he in turn translated into Latin, probably after the canonical books were finished. It is also worth bearing in mind that the late M. Samuel Berger, a high authority on the Vulg., was of opinion that the text of *Wisdom* and *Ecclesiasticus* shows signs of having been revised by Jerome, while that of the *Maccabees* was probably retranslated by him.—IV. *The History of Jerome’s Translation to the Invention of Printing.* It is the fate of Revised Versions to be unpopular at first; and Jerome’s was no exception. This may have been due in part to personal reasons: Jerome himself had never been popular, and his bitter tongue and ready pen did little to conciliate opponents. But there were other and inevitable reasons: he was accused of disturbing the peace of the Church, and shaking the foundations of faith; and especially of placing his own work above the LXX. Popular legends as to the miraculous results of the Vulgate, combined with the fact that N.T. writers used their work in quoting from O.T., had invested them with a halo of sanctity, and even Augustine held that their version was as much inspired as the original Heb. [Septuagint]. Jerome replied that he had the utmost reverence for the O.T., but his only aim was to produce a translation which should be clear where the LXX. was obscure; that he was only doing what Aquila, Symmachus, Theodotion, and Origen had done; and that N.T. writers did quote occasionally from the Heb. In the time the opposition calmed down and Jerome’s version gained wider acceptance. Augustine approved of it, at any rate in the Gospels; Pelagius used it in his commentary on St. Paul’s Epistles; throughout the 5th cent. it was gaining favour with ecclesiastical writers in Gaul, and in the 6th it had apparently become (except in Africa) the reigning version; throughout the 7th and 8th the vulgar text bore the name of the Great Spoke of it as used equally with the Old Latin by the Roman See, while personally he preferred it. In one book only (the Psalms) Jerome’s version from the Heb. has not to this day won the battle; the "Gallican" Psalter was too deeply rooted in the affections of the faithful to be supplanted even by a more accurate version, and the "Psalterium juxta Hebraeos" has no more chance of displacing Jerome’s earlier work than our own R.V. has of displacing the Prayer Book Psalter. The Old Latin Bible was never authoritative deposed by the Roman Church or the Vulg. formally installed in its place; partly by its own merits, partly through the reputation of its author, partly through the example of the Roman Church, the version of Jerome won its way in the West; but long after the 6th cent. we find traces of the older versions surviving, sometimes in lectionaries and service books, sometimes in historical and literary works. The Vulgate, that widely and thoroughly used for four centuries, has for most of that time been the official text of the Church; it is probable that the Vulg. text was used with that of the Old Latin, the N.T. at least being used. But the Vulgate, a word derived from Vulgaris, was only the Vulg. text, but it was in England that they were most carefully preserved: the *Codex Fuldensis* of N.T. was transcribed in the middle of the 6th cent. for Victor, Bishop of Capua, and corrected by him; the *Lindisfarne Gospels* (7th or 8th) were written in England, and were copied from a MS. that belonged to N.T.; the magnificent *Codex Amiatinus* of the whole Bible (beginning of the 8th cent.) was copied in Northumbria from an Italian exemplar and taken to Italy by Celidfrid as a present to the Roman pontiff in 715. It was with Archbishop Theodore in 668, and during the numerous journeys to Rome (653–684) of Benedict Bishop and Celidfrid (abbots of Wearmouth and Jarrow), not during the earlier mission of St. Augustine, that the best examples of these Italian texts were brought to England; and it was in Northumbria that they were preserved, carefully and beautifully copied, and thence sent to other monasteries, not only in England but throughout the N. of France, Switzerland, and Germany back into Italy. But a more corrupt type was spreading in the South, Spain was separated from the rest of Europe by the mountains as Britain was by the sea, and it developed its own national type; but the Spanish MSS. all resemble the English, and the later the Spanish MSS. are the less valuable is their text. At the end of the 8th cent. the first authoritative effort to revise the text of the Hieronymian Bible was made—not by the papal power, but on the initiative of Charles the Great, who was anxious to obtain a good uniform Bible text for Church use, and commissioned Alcuin, the abbot of St. Martin’s at Tours, to prepare him such an edition. Alcuin was an Englishman educated at York, and he wisely sent to that city for MSS.; in the N.T. his revision seems to have followed the Northumbrian type of text (though the Gospels, it would appear, were mainly dependent on the Codex Fuldensis or MSS. resembling it). At Christmas, 801 A.D., Alcuin presented his revised Bible to Charles the Great; and in the splendid writing-school at Tours copies of its text could be multiplied with ease. "Alcuinian" Bibles were soon in great request and the revision was spelt by its own success, the demand for copies being so large that they were produced hurriedly, and the numerous fine MSS. of this period show wide diversity of text, the *Codex Vallicellianus* at Rome (9th cent.) being probably the best specimen. Another revision was undertaken at much the same time by Theodulf, bishop of Orleans (787–821), who seems to have tried honestly to correct the Spanish type of text by the MSS. current in the S. of France, but his work had no popular success or influence; its best representative is the beautiful 9th-cent. Bible, sometimes called the *Codex Memmius*, now in the *National Library* of Paris (Int. Cent. 610). From this forward the history of the Vulg. text is one of increasing degeneration. Efforts were made at emendation, but with very little effect, by Lanfranc, archbishop of Canterbury 1069—
VULGATE, THE

1089; Stephen Harding, abbot of Citeaux; Cardinal Nicetus Manucia; Herveius of Bourgoin; and by others during the 12th cent.; while the 13th saw the formation of several correctoria, or lists of various readings, with authorities, prepared by bands of scholars mainly belonging to the religious orders, such as the Franciscans or Dominicans. But the same century was marked by a great acceleration in the process of decay. The fame of the university of Paris drew great numbers of theological students to it and caused a large demand for Bibles; these were copied hastily from any MS that happened to be at hand; and Roger Bacon complains bitterly and justifiably of the wretched state to which the books were brought by such carelessness. The vast majority of 13th, 14th and 15th cent. Vulg. MSS. represent what we may call the "mediaeval" text, and are full of mistakes and interpolations. The earnest attempts of Laurentius Valla († 1457) to amend the text by comparison from the Gk. without result, but deserve to be remembered with gratitude.—V. The History of the Printed Text. The earliest and most beautiful productions of the printing press were Bibles; the famous "Mazarin" or "42-line" Bible, printed at Mainz by Gutenberg (or Schoeffer, or Fuseli: 1454—1456), is one of the finest and most valuable books in the world. During the 15th cent. more than 90 editions of the Latin Bible were printed; the printers, even those of the first Roman Bible (a.d. 1471), were mainly German. The printers chose cheap, late MSS. for the rough usage of the printing-office, probably not suspecting that their text was unsatisfactory. Succeeding editions were as a rule reprints of the earlier, and thus by the time scholars were beginning to examine the text the thousands of printed copies circulating in Europe presented it in its most corrupt form. Thus though the rule is: the later and more correct the text, yet the later a printed edition, the nearer it is as a rule to the text of the earliest and purest MS. The 16th cent. was, however, the great age of the Latin Bible. The number of editions published during it was enormous—438, according to Copinger, and its last years were a regular and systematic revision of an official version, to be used henceforth and reprinted "ne minima quidem particea de textu mutata, addita, vel ab eo detracta," by all members of the Roman Church. Some scholars, both Catholic and Protestant, made independent Latin translations of the N.T.; others set the task of revising the current Hieronymian text, either by correction from the Gk. or by collating more ancient Vulg. MSS. The famous Complutensian Polyglot Bible (1514 and following years), published at the expense of cardinal Ximenes, was, in its Latin text of N.T., corrected mainly from the Gk. An earlier Bible, printed by Froben at Basel in 1502, seems to have been set up from good Vulg. MSS., and often preserves right readings almost alone among early editions; but the Latin Bible of Robertus Stephanus (Paris, 1528), was the first genuine attempt at a critical edition. Three good MSS. were collated for it, and seventeen for the larger edition (printed 1538—1540, reprinted 1546), which is practically the foundation of the official Roman Vulgate. The modern verse divisions appear first in his small 1555 edition. Similar attempts at revision were also being made by the Catholic theologians at Louvain. The fine folio edition of Joh. Hentenius (Louvain, 1547; and often reprinted) was based on the 1540 text of R. Stephanus, but some 30 MSS. were also collated for it, and the text was thus greatly improved. It was, however, the Council of Trent in 1546 that first ordered an official edition of the Vulg. in accordance with the traditional Hieronymian text; but it was nearly half a century before it appeared. Nothing of importance was accomplished till the pontificate of Sixtus V. (1585—1590), who appointed a commission, with Cardinal Caraffa († 1591) at its head, to effect a complete revision of the text. Good MSS., such as the Codex Amiatinus, were consulted, and reference made to the Heb. and the Gk.; Sixtus V. passed his last years in the task, which was assisted by Francisca Toletus and Angelus Rocca. The volume was printed at the Vatican press, and the proofs were revised by the pope himself; errors that were discovered after the sheets had been printed off were corrected either with the pen or by pasting a small piece of paper over with the right reading. It appeared in 1590, and was prefaced by the famous bull Aeternus illae, which declared the edition to be the actual Vulg. prescribed by the Council of Trent, ordained that its readings should be introduced into all missals and service-books, forbade the publication of future editions without careful collation with the official copy, and prohibited the printing of various readings in the margin—all this under the pain of the greater excommunication. After the death in 1599 of Sixtus V., Bellarmine persuaded Pope Gregory XIV. that a new edition was necessary. A new commission was appointed, and the presidency of Cardinal Colonna; current report at the time, and the inscription which commemorates the event at Zagarola (the country seat of Cardinal Colonna, where the work was done), maintained that the revision occupied only nineteen days; but this is hardly credible. In the beginning of the 16th cent. Clement VII. had ordered that he gave orders that the copies of the Sixtine edition should be as far as possible recalled and destroyed. The final revision of the new edition was entrusted to Fr. Toletus, and the printing was done by Aldus Manutius the younger. The whole was finished and published by the end of 1598; these are the three official editions. The second is said to be the most, and the third the least, accurately printed; but each contains some obvious errors, and the "authentic" Clementine edition must be found (as Hetzner says in his careful reprint of the Bible, 1906) by a comparison of them all. The Clementine Vulg., which is a real improvement on the Sixting
has remained the Authorized Version of the Roman Church, and though individual scholars have at times collected materials for a further revision, the prohibitions of the bull have prevented them from publishing a new text or even a critical edition with variant readings. Ultimately, however, Pope Pius X. in 1907 entrusted the Benedictine Order with the task of preparing a revised edition of the Hieronymian Bible, and we may hope that the Latin Church may at length possess St. Jerome's Version in a more exact form. 

VI. Language. The question of "Africanisms" has been shown above (§ II.) to be probably due to the time, rather than to the place, of the origin of the versions, and likewise the so-called "archaisms" were probably never such in colloquial Latin, at any rate in the period before Jerome, and the more so in Africa than in Europe. The Latin versions made for popular use, and by men who did not belong to the literary classes, they reproduced the familiar idioms and expressions of their time. Jerome, in turn, retained them as far as was possible. The Latin of the Vulg. is therefore largely the Latin of the earlier versions, and the development of a distinct idiom of a scholarly translation and the simple force of popular language. We may classify its main characteristics under the following heads, bearing in mind that there is a good deal of cross division. (1) Africanisms. Such words as claritas, clarifico (for gloria, glorifico), excitare (for acceindere), nequam as a substantive, substancio (for biscutatio), sacrum (for tributatio), sacerdotium (for mundus), are all characteristic African translations of the Greek which have passed here and there into the Vulg.; as are also such long compound verbs as collaborare, inhumanare, obtenebrem, readicifciare, subsanare. Characteristics of style and construction which, though not peculiar to Africa, are more evident in African than in European Biblical MSS, are, e.g., the use of co-ordinate verbs instead of the participle and the verb, the use of quos instead of which, of the imperfect or pluperfect subjunctive instead of the present participle or the ablative absolute, the use of ne or non with the perfect subjunctive in the Vulgate, and the frequent use of the participle. There is also a tendency to throw the verb to the end of the sentence. It is only sometimes true that Graecisms are characteristic of Africa; similitudo and sacramentum, not parabolae and mystesrum, are the African renderings of parapoeia and μυστῆρος, while tangere was only in time replaced by baptizare. (2) Graecisms and Hebrewisms. Every page of the Vulg. N.T. shows how deeply its Latin has been modified by the underlying Gk. text; of a very large collection of peculiar Vulg. constructions given by Kaulen (Handbuch zur Vulgata), most are simply exact reproductions of the Gk. The lack of the definite article in Latin was scarcely noticed in the original Gk. In certain cases the Gk. has, e.g. apostolus, baptizatura, diabolus, evangellum, haeresis, penitentia, schisma, synagog, give a flavour of the original Gk. to many versions whose language was drawn from the Latin. To Graecisms must be added Hebrewisms, for the Gk. of N.T. itself strongly resembles the original Heb. of the O.T. and derived from it. Jerome translated the O.T. from the Heb. he deliberately tried to reproduce its construction and idioms; such sentences as "non addidit ultra quærere eum" (1 Sam. 27, 4) or "adposuit ut adprehenderet et petrum" (Ac. 12, 3), or expressions like "a facie, in conspectu, de manu, in ore (alceus)" are not found in the Vulg. The reading in the West was written in the East. On the other hand, the reader of the O.T. cannot fail to be struck with Jerome's habit of translating the names of places; e.g. the land of Moriah in Gen. 22, 2 becomes terram visionis; Beer-lahai- roi in Gen. 16, 14 becomes Putnum Gramet Videlis me, etc. This made it more difficult for the narratives far more intelligible than could a simple transliteration. (3) Finally, many words which have for centuries been common theological terms in the Western Church either appear for the first time in the Vulg. (e.g. predestinatio, justificatio, sanctificatio, regeneratio, redemptio, incarnation, idole, mediate, mediator, nequam, creatura, conceptio), or are archaisms to which that version gave a new currency (e.g. gratia, redemption, electio, reconciliation, satisfactio, inspiratio, scriptura) and were devoted there to a new and holy use.—BIBLIOGRAPHY. (4th ed. 1894), vol. ii. ch. iii.; Gregory, Prolegomena to (i.e. vol. iii. of) Tischendorf's Novum Testamentum Graece (5th ed. Leipzig, 1894), pp. 948-1108; Burkitt, The Old Latin and the Vulgate, in vol. iv. of Texts and Studies (Cambridge, 1896); E. Nestle, Uebersetzungen der Bibel, Leipzig, 1897 = (vol. iii. of the Prot. Realencyc.), pp. 84-118; von Soden, die Schriften des neuen Test. i. iii. (Berlin, 1907), §§ 350-362; arts. on "Vulgate," "Vulgar," and "Late Latin" in the Enc. Brit., vol. v.; D.B. (5 vols. 1904). (b) Life and works of St. Jerome: the best complete edition of his works is that of Vallarsi (17 vols. folio, Verona, 1734-1742; fol. quarto, Venice, 1766-1772). For his life, see O. Zöckler, Hieronymus; sein Leben und Wirken, etc. (Gottha, 1865); A. Thierry, S. Hieronymo (Paris, 1867); E. L. Cutts, St. Jerome, in The Fathers for Eng. Readers (S.P.C.K.; 1877); Fremantle, Hieronymus in the Diet. Christian Biogr., and his Life of Jerome in Wace and Schaff's Select Libr. of Nicene and Post-Nicene Fathers, vol. vi.; Grützmacher, Hieronymus; eine Biographische Studie, etc. (Leipzig, 1901). (c) History of the text: Van Ess, Pragmatische Kritische Geschiedenis der Nieuwe Testamenten, 1872; Kaulen, Gesch. d. Vulgata (Mainz, 1858), and others cited under (a). (d) Grammar, Latinity, etc.: Kaulen, Handbuch zur Vulg. (Mainz, 1870); Roensh, Italia u. Vulgata (Marburg, 1875); Goetzl, Latinité de S. Jérôme (Paris, 1884). (e) Editions of the Vulgate: Verecello's reprint of the text of the Vulgata, Bibbia Sacra Vulgatae Editionis ..., Romana, Typis S. Congregationis de propaganda fide (1861), is a hand-
some and careful reprint of the Clementine text; its place, however, will probably now be taken by Hetzenauer’s Biblia Sacra Vulgatae Editionis, etc. (Oeinpont, 1906). Hetzenauer moved to Tübingen, but, even there, he continued to give the variants of the three official Clementine editions, and of the Sixtine. For X.T. Hetzenauer has also published a handy small edition of the Clementine text, Novum Testamenti Vulgatae Editionis, etc. (Oeinpont, 1899), and Nestle, Novum Testamenti Latine, etc. (Stuttgart, 1906). Nestle gives the variants of the Sixtine edition, and of the most important Vulg. MSS. Dr. P. Cerssen published a critical edition of the Ep. to the Galatians in 1885 (Ep. ad Galatas, Berlin); the Oxford critical edition of the Vulg. by B. J. Wordsworth, of Salisbury, and the Rev. H. J. White, is still in course of publication; the four Gospels and the Acts have already appeared. [H.J.W.]

Vulture, the A.V. translation of the Heb. דָּוָּד, dayyah (Lev.11.14; Dent.14.13; and Is.34.15), and also in Job 28.7 of 'ayyā. There seems no doubt that the A.V. translation is incorrect, and that the words refer to some of the smaller birds of prey, such as kites or buzzards. Dayyah is synonymous with הָֽדָּוָּד, the Arab. vernacular for the kite, especially the black kite. 'Ayāyā almost certainly indicates the 'kirk', which in other passages it is taken to represent. Vulture should be the translation of the Heb. nesh'er, which is Ex. 23.31 used in British English as 'vulture'. But the larger vulture is aluded to under the name Gier-eagle. [GLEDE; OSSIRAGE.] [R.L.]

W

Wages. The earliest mention of wages in the Bible is of a recompense, not in money but in kind, to Jacob from Laban (Gen.29.15,20, 30.28,31,7,8,41). In Egypt, money payments of wages were in use (Ex.2.9), and though the terms there cannot now be ascertained, they were doubtless regulated by law, as they were in Babylonia by the Code of Hammurabi (c.2100 b.c.). In the parable of the householder and the vineyard (Mt.20.2) the labourer's wages are one denarius per day, probably £7/11, a rate which agrees with Tob.5.14, where a drachma is mentioned as the rate per day, and might be fairly taken as equivalent also to the usual pay of a soldier (ten asses per diem) in the later days of the Roman Republic (Tac. Ann. i.17; Polyb. vi. 39). In earlier times the rate was probably lower. But most likely labourers, and also soldiers, were supplied with provisions. The law was very strict in requiring daily payment of wages (Lev.19.13; Dent.24.1,15). The employer who refused to give his labourers sufficient victuals is censured (Job 24.11), and the impiety of withholding wages is denounced (Jer.22.13; Mal.3.5; Jas.5.4).

Waggon. The Oriental waggon (Arab. ar'abah) is composed of two or three planks, fixed to axles, and held in place by poles 2 to 5 ft. in diameter, which serve as wheels. To the floor are sometimes attached wings, like those of a wheelbarrow. For the conveyance of passengers or straw or clothes are laid in the bottom, and the vehicle is drawn by buffaloes or oxen (Num.7.3-6,8; Heb. "עגָּלָה"). [CART.]

Wall. The Accident renders nine Heb. words, 'nēshārāh (Ezr.5.3), a "vertical" wall. (2) gāḏār (Num.22.24), a stone fence protecting vineyards by the roadside, also rendered wall in Ezr.9.15, Is.5.5, Hos.2.6, Mt.11.1; but otherwise fence (Ps.62.3) or hedge (80.12; Ec.10.8; Ezek.13.22,30); and pointed goether in Pr.24.31, Ezek.42.16 (A.V. wall). (3) hōmā, the common word for a masonry wall, used symbolically of a "protection," as in Ex.14.22,29, when the waters flanking the ships protected the Israelites in crossing the head of the Red Sea. (4) hāl, a "fortification" (1K.21.23; Ps.122.7), occurs ten times (where there is no other wall, "outer wall", host, bulwark, and rampart. (5) hāyāq (Arab. hêt), an ordinary wall (Ezek.13.10). (6) ḫārāq (Dan.9.25 R.V. moat). (7) kōhēl (Can.2.6) or kēthāl (Ezr.5.8; Dan.5.5); apparently a cemented wall. (8) gîr, a common word for house and city walls. (9) šā'ār (Arab. gîr), in several passages as a word of city, and perhaps (Gen.49.22) the terrace wall of a fruit garden or vineyard. Walls were often not founded on the rock but, as now, on the surface soil, or on older ruins (1K.6.18), as is shown by recent excavations in Palestine. [c.w.c.]

Wanderings in the wilderness. [EXODUS, NUM.]

War. Before entering on a war of aggression the Hebrews sought the divine sanction (Judg.1.1,20,22,27,28; I Sam.14.37,23.2,30.8) by consulting either the Urim and Thummim (1 Sam.28.6) or the prophets (1K.22.6), hence the regular term ‘sanctity war.’ Formal proclamation of war was to take place only at the time of battle. Before entering the enemy’s district, spies were sent to ascertain the character of the country and the preparations of its inhabitants for resistance (Num.13.17; Jos.2.1; 1Sam.28.4). When an engagement was imminent, a sacrifice was offered (1Sam.7.9,13,9) and an inspiring address delivered either by the judge (2Ch.20.20) or a priest (Deut.20.3). Then followed the battle-signal or shout (1Sam.17.52; Je.50.12; Ezk.21.22). The combat assumed the form of a number of hand-to-hand contests; hence the high value attached to fleetness of foot and strength of arm (2Sam.1.23.2,18; 1Ch.12.8). Various strategic devices were practised, such as the ambuscade (Jos.8.21; Judg.20.36), surprise (Judg.7.16), or circumvention (2Sam.5.2). The siege of a town or fortress was thus conducted: A line of circumvallation was drawn round the place (Ezk.4.2; Mt.21.14), constructed of trees and earthworks (Deut.28.18). Various strategic devices and other materials at hand. This line both cut off the besieged from the surrounding country and served as a base of operations for the besiegers. From this line one or more
WAR-CLUB

Washes the hands and feet. It was necessary that the hand, which, in eating, was thrust into the mouth, should be scrupulously clean: and, as sandals were ineffectual against the dust and heat, washing the feet on entering a house was an act both of decency and of refreshment to the traveller. The washing of the hands was made by the Pharisees of the N.T. age a matter of ritual observance, and the special rite was laid down as to the times and manner of its performance. Washing the feet only rose to the dignity of a ritual observance in connexion with the services of the sanctuary (Ex.30.19,21). It held a high place, however, among the rites of hospitality. Immediately a guest presented himself at the hospitable door, it was usual to offer the necessary materials for washing the feet (Gen.18.4,19.2,24,32, 43; 1Sam.19.21). It was a yet more complimentary act, betokening equality, humility, and affection, if the host actually performed the office for his guest (1Sam.25.41; 2Sam.6.48; Lu.7.38,44; Jn.13.5,14; 1Tim.5.10). Such a token of hospitality is still occasionally exhibited in the East.

Wash-pot (sir rah). A term of contempt applied to Moab (Ps.60.8 = 108.8). It is only used in this figurative sense. [W.O.E.O.]

Watches of the night, a division of time, probably of military origin. In O.T. times the night was divided into three watches, "the beginning of the watches" (Lam.2.19), probably from sunset till about ten o'clock; "the middle watch" (Judg.7.19), till about 2 a.m.; "the morning watch" (Ex.14.24; 1Sam.11.11), till sunrise. See also Ps.63.6, 90.4,119.148. In the Greek and Roman periods there were four watches, and this was the division of the night in our Lord's time. They are some obscure names, and in order: the 2nd and 3rd (Lu.12.38); the 4th, (Mt.14.25; Mk.6.48). The four are mentioned in order (Mk.13.35): (1) Even, 6-9 p.m. (cf. 11.11; Jn.20.19). (2) Midnight, 9-12 o'clock. (3) Cockcrow, 3-6 a.m. (4) Morning, 3-6 a.m.; cf. Jn.18.27. [R.H.]

Water of Bitterness. The term refers to the trial by ordeal of the woman suspected of unfaithfulness to her husband (Num.5.17-24). If a man suspected his wife but could not prove her guilt, he took her to the priest, carrying with him an offering of memorial (ver. 15). The trial took place in public, in later times at the Gate Nicamar (Sotah 1, 5, 6). The priest poured holy water into an earthen vessel and mixed it with dust from the sanctuary floor (5:17). He then loosened the woman's hair, put the offering into her hands, and adjured her, she answering "Amen, Amen." The words of adjuration were then written on a little scroll, which was soaked in the water to dissolve the ink. She drank the water, and her guilt or innocence at once became apparent. According to the Mishna, the ordeal only took effect if the husband also was innocent of the same offence (v. 1 and Gemara). Adulterers became so numerous that the ordeal lost its power, and it was suspended by Johanan ben Zakai (60-70 A.D.) (ib. ix. 9; Jn.8.7-9; Mk.8.30; Mt.8.38). [Ordeal of JEALOUSY; ADULTERY.] [R.H.]

Water of Jealousy. [WATER OF BITTENESS; ORDEAL OF JEALOUSY; ADULTERY.]

Water of Separation (Num.19.1-10). [Purification.]

Water-carriers. Usually women (Gen.24.13; Ex.2.16; 1Sam.9.11; Jn.4.7), though, as at the present day, children most likely were also so employed; as were also men who were captives (Deut.29.11; Jos.9.21ff.). In Mk.14.13, Lu.22.10 we read of a man carrying water; but this is exceptional. Water was carried in "bottles," i.e. skins (nabbel, nödök; "mounts" or "banks" were thrown out in the direction of the city (2Sam.20.15; 2K.19.32; Is.37.33], and gradually increased in height until about half as high as the city wall. On this occasion of the conquest of Jericho (2K.25.1; Ezk.4.3,17,17,21,22), whence the slingers and archers might attack with effect. Battering-rams (Ezk.4.2,21.22) were brought up to the walls by means of the siege and capture of Lachish by Nebuchadnezzar illustrate what has been said (see Brit. Mus. Assyrian Room, Nos. 21-32); but sieges are described and represented on monuments occurring in Palestine as early as 1600 and 1500 b.C. (Conder). The treatment of the conquered was extremely severe in ancient times. The bodies of the soldiers killed in action were plundered (2Sam.13.18; 2Mac.8.27); the survivors were either killed in some savage manner (2Sam.12.31; 2Chr.25.12), mutilated (Judg.1.6), or carried into captivity (Deut.20.14). Sometimes the bulk of the population of the conquered country was removed to a distant locality. The Mesopotamian law mitigated somewhat the necessity of this ancient usage. The conquerors celebrated their success by the erection of monumental stones (1Sam.7.12), by hanging up trophies in their public buildings (1Sam.21.9,31.10), and by triumphal songs and dances in which the whole population took part (Ex.15.1-21; Judg.5.18; 1Sam.18.6-7; 1K.1.3-9).

WARS OF THE LORD, Book of. There is no information afforded concerning the book cited once under this name in Num.21.13-15. All that can be said rests purely on conjecture. It may have contained, as Dillmann has conjectured, the Song of Moses sung on the occasion of the overthrow of the Egyptians at the Red Sea, and even the narrative related in Num.22-24 concerning Balaam, or the expeditions against Sihon king of the Amorites and Og the king of Bashan, which are briefly recorded at the end of the 21st chapter of Ezk. and Delitzsch has collected some interesting articles on the subject of those poetical extracts entitled "Urmosasches im Pent." in Luthardt's Zeitschrift (1882). Fürst's conjecture that the book contains pre-Mosaic elements seems extravagant; while the attempts of Knobel, Stade, and others to make out that the book was composed in post-Solomonic days or even later may be dismissed as pure fancy. The LXX. reading is interesting—"Therefore it is said in a book; the war of the Lord burned up Zoah" (Heb. saphh), etc. [C.H.L.W.]

WATER-CARRIERS

\[941\]

The scaling-ladders in this case were called "battering rams" (Ezk.4.2,21.22). The Battering-rams were brought up to the walls by means of the siege and capture of Lachish by Nebuchadnezzar. Illustrate what has been said (see Brit. Mus. Assyrian Room, Nos. 21-32); but sieges are described and represented on monuments occurring in Palestine as early as 1600 and 1500 b.C. (Conder). The treatment of the conquered was extremely severe in ancient times. The bodies of the soldiers killed in action were plundered (2Sam.13.18; 2Mac.8.27); the survivors were either killed in some savage manner (2Sam.12.31; 2Chr.25.12), mutilated (Judg.1.6), or carried into captivity (Deut.20.14). Sometimes the bulk of the population of the conquered country was removed to a distant locality. The Mesopotamian law mitigated somewhat the necessity of this ancient usage. The conquerors celebrated their success by the erection of monumental stones (1Sam.7.12), by hanging up trophies in their public buildings (1Sam.21.9,31.10), and by triumphal songs and dances in which the whole population took part (Ex.15.1-21; Judg.5.18; 1Sam.18.6-7; 1K.1.3-9).
WATER-POTS

Gk. ἀγάπτος or earthenware vessels (καθά; Gk. κεραμίων).

Water-pots. Equivalent to the Heb. kadh, a large vessel of earthenware or stone, used for drawing water from the well (Jn.4:28) and borne on the shoulder. These were placed in houses for washing the hands, according to Jewish usage, before and after meals. The water-pots mentioned in Jn.2:6,7, are stated to have contained “two or three firkins apiece.” A “firkin” (= approximately the Heb. bath) was about 72 pints. [w.o.e.o.]

Water-spouts (Ps. 42:7; see 2Sam.5:8). Although the Mediterranean is often troubled by water-spouts, the Heb. Connor (balgah) means “water-channel,” and it is used of the ditch crossed by Joab (A.V. gutter) as well. The psalm refers to the noise of torrents. [G.R.C.]

Wave-offering. [Sacrifice, 3. v. c.]

Weapons. [Arms.]

Weasel (ḥoledh) occurs only in Lev.11:20 in the list of unclean animals. According to the old versions and the Talmud, the Heb. ḥoledh denotes a “weasel”; but in the A.V. it is identified with the Arab. khull and the Syr. ḫûlû, a truly burrowing animal, such as one of the rodent mole-rats akin to Spalax typhlus (for there are no true moles, Talpina, in Palestine), must be intended. [Mole.] [K.V.]

 Weaver, Weaving. [Handicrafts, 6.]

Wedding. [Marriage.]

Week. In the Heb. Scriptures the institution of the sabbath accounts for the week or cycle of seven days. God’s creative acts extended over six defined periods; the seventh was sabbath, cessation or rest. Hence His people must observe the seventh day likewise as a day of cessation from all work (Ex.20:11). But in Deut 5:13 the reason given is a national one: the seventh day is to be observed as a rest-day in commemoration of the deliverance from slavery. This distribution of the work of creation over six days is peculiar to the Heb. text; there is no trace of it in the Assyro-Babylonian literature. There may be traces of a ten-days’ cycle in Gen.24:55, Ex.12:3, Lev.16:29, etc., and in the story of the Flood the seven days’ intervals occur together with multiples of ten, viz. 40 and 150. The ancient Egyptians had a cycle of ten days. The number seven was sacred in Babylonia, and the seven-day week was an old institution connected with the new moon and the lunar month. The Assyrians perhaps had a week of five days. It has been suggested that the Heb. week was originally a division of the lunar month, the first day of the first week coinciding with the New Moon. This could not have been the case when a seven-day sabbath was observed, since there would be an interval of a day and a half between the fourth week and the next new moon. The week was used as a convenient measurement of time—e.g. one (Gen.29:27), two (Lev.12:5), three (Deut.2:12), seven (Deut.16:9; Dan.9:25; cf. Lev.23:15,25,28). [Sabbath; Seven.] [n.t.]

Weeks, Feast of. [Pentecost.]

Weights and measures. The Bible references are explained by the discovery of actual inscribed weights, and of standard measures of length and capacity; and the statements of Josephus, Herodotus, Polybius, and Plutarch, and Epiphanius are also explicable from the same evidence. The standard measures must be taken as somewhat in excess of the specimens, on account of wear; and there was some deterioration, in later times, from the old standard. Imperfect specimens must also be discarded.—1. Weights. A standard of weight (“the king’s standard”) existed in Babylon as early as the time of Abraham, or 2100 B.C. (Hamnuniad’s laws, No. 51), and silver and gold were weighed (Gen.23:16; Je.32:9). The Balance was used (Heb. מזון, Arab. mizan, “scales”), and had apparently also a running weight, like a steel yard (Is.44:16; Rev.8:3, 21); and the testimony of brass scales (Jer.17:4; Mt.23:31, 39). An Egyptian picture (Lepsius, Denkmäler, iii. 39, No. 3) shows a man adjusting this weight to a pair of scales (see Rev.6:5), in one of which are weights in the form of a cylinder and a bull’s head, and in the other rings—of metal—which formed the oldest substratum for coins. Other weights (a bull’s head and a lion) he-ready; and both Egyptians and Babylonians cast bronze weights in these forms and in those of antelopes and geese. This explains the Heb. עסות, or “lamb” (A.V. piece of money; Gen.33:19; Jos.24:32; Jos. 42:11). The specimens whence we may obtain actual weights include a hemiattic weight from Nippur in Babylonia (perhaps 1500 B.C. or earlier), inscribed “ten shekels of gold of the merchant,” and weighing 1,120 gr.; weights in the British Museum (880 to 700 B.C.), from Nineveh and Babylonia, giving a mine (A.V. pound) of 7692 gr., and a talent (lkkār) of 9700 gr. Actual weights include a hemiattic weight of 235 gr. and 120 gr.; a Heb. weight from Samaria (perhaps as old as 800 B.C.) marked “quarter shekel” on one side, and “quarter half” on the other; another from Tell Zakariya marked “half”—the first

Maimonides (Sheqalim, v. 6) gives the weight of the old Heb. shekel (heavy system) as 320 gr. of barley, and of the shekel in use after the Captivity, adopted by the Persians, 192 gr., and the latter shekel thus agreed to be the oldest known Gk. Tetradrachm—of the Aegina coins—which was of Semitic origin. Little is known of Egyptian weights (see Proc. Bib. Arch. Soc., Dec. 1901, p. 394); but the gold unit of 120 gr. is apparently the Phoenician light shekel, and the bronze unit the shekel. The Kat of 144 gr. was also three-fifths of the Phoenician heavy unit. In O.T. the shekel (or "weight") consists of 20 Gerahs, or "beans" (16 gr. each; Ex. 30:13; Num. 3:47; Lev. 27:25; Ezek. 45:12), this being the "Shekel of the Sanctuary," half of which was the Behah (Heb. beq'a), Gen. 24:22; Ex. 38:26. The Hebrews were forbidden to keep shekels of the two systems in the same bag (Deut. 25:14), and bidden to use standard weights, "asayed for the merchant" (as the LXX. translates in Gen. 37:16). We find notice also of a "tongue of gold" (Jos. 7:21) weighing a Maneh; of racim, or "pieces of silver" (Ps. 88:50); and of an "asham" (piece of silver) (Ex. 38:26). Of the "linga," or "tul" (Assyr. igi, "tile"). The statement in Ezek. 45:12 that the maneh is to consist of 20, 25, and 15 shekels is explicable as referring to the older and later shekel, and to the Phoenician unit. Thus, 15 shekels of 320 gr. = 20 of 240 gr. = 25 of 192 gr. = 4 880 gr. for the maneh. The kikkar, or talent, is noticed as weighing gold and silver (Ex. 29:39; 1 K. 9:14, 28, 10, 10; 2 K. 5:22). The "talent" and the "maneh" are also mentioned in N.T. (Mt. 25:14-30; Lu. 19:12-27), the latter being rendered pound in A.V.—II. Coins. The oldest known coins—those of Aegina and Lydia—are supposed to date as early as 700 B.C. The Persians introduced a currency in which the gold was even purer than that of our currency: and the silver bore to it a proportion of 13 1/2 to 1, being purer than the old silver, which included a sixth part of copper, and may have had a proportion of 16 to 1 of gold and silver; the silver was thus of a new and greater value, and its present value is about 51 15. But we must remember that the purchasing value in ancient times was considerably greater than now. Double Darics also occur, and this coin appears in O.T. as the dark'môn, rendered "dram" in A.V. (Ezra 2:69; Ne. 7:70-72). The Persian silver unit was called Sikkos, and was of 48 2 gr.; 20 of these, or one quarter of the drachma, was the value of this coin has probably no connexion with Darius, but comes from the Aryan root Darch (whence also Dram), as meaning a "fixed" value. The Greeks took their measures from the Babylonians and Phoenicians, and the drachma of the three systems (Hussey, Ancient Weights and Measures), as found in Attica, Tyre, and Aegina, 96 gr. in Euboea, and 66 gr. in Attica. Hence, and from Herodotus (iii. 89), we may deduce:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

The present value of the silver Drachma of 96 gr. is a shilling, and the Jews, after the Captivity, used the Daric as the standard of value, adopted by the Persians, as 320 gr., and finally, (in later times at least) weighed silver. The results deducible are as follows for the light system:

<table>

Note: The text contains various table-like structures and is interspersed with explanatory notes. The document appears to be a historical account of weights and measures, comparing systems from ancient to biblical times, and explaining the evolution and usage of different units.
in this age by the Jews were early square Heb., and these coins appear to be forgeries, imitating those of Simon and of later Hasmoneans. The Alexandrian speaks of "false" and "dangerous" coins, and of "rebel coins" (Tal. Jer. Ma'aser Sheni i. 2): but this only after 300 A.D., the "rebel coins" being perhaps those of pagan insurgents. The coins noticed in N.T. are both Gk. and Roman. [MOSLEY.]—III. MEASURES. Our information as to measures is less complete than as to weights, but is also checked by actual discoveries.—Length. The words for the various measures of length—such as "finger," "handbreadth," "span," and "forearm"—show that the measurements were all first roughly made with hand and arm, and with the "foot." These would have been smaller than among Europeans; for the ancient Semitic races—like the Arabs—were not tall, and had small hands and feet. The average height of European Jews is only 5 ft. 4 in., and the height of the oldest Semitic race at Gezer (c. 2000 B.C.) appears to have been the same. The unit of weight was the barley-corn (since—according to Me. T. Ch. 15:16, 28, to the Old Hebr. shkel weighed 320 gr. of barley, and actually weighs 320 Troy gr.;) and the unit of length was also the barley-corn (Maimonides, Sefer Torah ix. 9)—the "finger-breadth" being equal to two barley-corns laid end to end, or to seven laid side by side. This would not apply to the smaller end of 20 in. of seven palms of 2 ft. 9 in.; but a later cubit (of about 2 ft. 7½ in.) in Egypt is very close to 2 Heb. ft. An ancient scale discovered at Tell Lob, in Babylonia, measures 10½ in.: and the statue of Gudea, on whose lap it is carved, may be as old as 2800 B.C. This scale is divided into 16 parts, each of which is thus very nearly 0.66 in. long. This (as we shall see) was the Heb. "finger-breadth," which gave a foot of 10½ in. This scale is Akkadian, and we do not know if the Babylonians and Assyrians used the same standard, though they very probably did, and had thus a cubit of nearly 16 in. A table of measurements, dealing with fractions, has been thought to refer to cubits and reeds; but this is very doubtful, as the cuneiform states that it refers to the noun, or unit of 60, and to its fractions. Dr. Finner, however (Fl. R. Asiat. Soc. October, 1907), considers that a cubit of 30 fingers is noticed in this tablet. This would measure about 20 in. The Siloam tunnel [Siloam] is 1,200 cubits long, and measures 1,707 ft.; which would give a cubit of 17 in. But this record gives only a round number, and the result can only be regarded as an approximation to the unit. barley differs in weight from 50 to 50½ lb. to the bushel; and the following results of actual measurement and weight compare with the Heb. barley, of which a grain weighed a Troy grain.

**Barley**

Thus as Maimonides says—two corns end to end are equal to seven corns laid on edge side by side. Hence we obtain—

This agrees not only with Gudea's scale, and the statement of Maimonides, but also with the standard Dhrd'ha, or "arm," of Arabs, measuring 26½ in., or 2 small cubits. The word *amāna* signifies the "forearm," or half the arm. To deduce units from the measurements of ancient buildings is an inconclusive method, as the lengths may be variously divided, but the 16-in. cubit seems to have been used in the Jerusalem temple enclosure, and in the Galilean synagogues. Thus the S. gates of the Haran at Jerusalem are 30 cubits wide, the "master course" of the wall is 4 cubits high, the piers along the wall appear to have been at measured distances, and the pillars of the Temple of Unam el Amal (Sure. W. Pal. i. p. 406), the building is 40 cubits long, its pillars are 1 cubit wide, and the stylebore 1 cubit—coincidences almost conclusive. The Finger-breadth (Ex.52:21), Hand-breadth (Ex.25:25; 37:12; Ex.40:5; 13, 43:13) or Palm, Span (Ex.28:16, 39:25; 1 Sam.17:4) or Hand-breadth, with the Cubit, are noticed in N.T. Thus Goliath (1 Sam.17:4) was 6 ft. 9 in. tall (Heb. 5'6") and the Arab. Qasab (recon) is now 9 ft. The term "cubit of a man" (Dent. 3:11) apparently means no more than a "man's forearm." In 2 Chr.3:3, "first measure," may mean the larger cubit, but in Ezek.41:8 "great cubits" is better rendered (R.V. marg.) "cubits to the joining." The cubit is noticed in N.T. (Mt.6:33; Lk.12:25) with longer measures—the Stadium (A.V. Jn.6:19), or 202' 25" yds., and the Mile (Mt.5:43), or 8 furlongs. The Jewish measures were equal to a large mile 2000 paces; but the length of the pace is indefinite.—Square Measure. As to this, we have only the statement of Maimonides, in 12th cent. A.D. (as in Ex.27:9-12), that a Sēd was a square of 50 cubits side, and that 30 Seds (75,000 sq. cubits) was a Kōr of land. This amounts to 330 acres, which is very close to 3 Arab Feddans of 1'4 acres each. The Aro (1 Sam.14:14, marg. "furrow," as in Ps. 129:3; Heb. ma'ātah) appears to be the same as the Yoke used to define it (gemel), and probably was the Feddīn, or yoke. See Is.5:10, where "ten acres" yield over 8 gallons of wine. Measures of Capacity. We depend as to these also on literary statements, which indicate two systems—perhaps for dry and liquid measures—one being to the other in the proportion of nearly 3 to 4. The Mishna (Peah, 4:6) gives the Log as equal to 6 bushels' eggs (or about 21 cubic inches); and Rabbi David, in the Midrashes, makes this to contain 6,000 gr. of water, which is correct. It also results in the Log holding 1,000 gr.—or half a man's of barley; and hence we are able to compare the Hebrew and Egyptian measures. Thus the cube of the Egyptian cubit (Rhind

WEIGHTS AND MEASURES

Papryri, plate 16) contained 11 Khar, each Khar 20 Hekat, and each Hekat 10 Henu, making the Henu about 0.8 pint. The Hebrew measures also thus coincide closely with the modern Arab measures of capacity, according to the ordinary standard. The details of this system are as below.

We have, on the other hand, statements by Josephus which give the larger system, in which the Log is exactly the size of the Egyptian Henu, and holds a Maneh weight (8,000 gr.) of water, while the Bath, or Ephah, is the cube of the smaller cubit of 13.4 in.

These measures occur in O.T.—the Cab (2 K. 6. 25); the Omer (Ex. 16.16), or 10th of the Ephah (16. 36); the Hin (Ex. 29. 40, etc.); the Sh (A.V. measure, 2 K. 7.1); the Bath, or 10th of the Homer (Ezk. 45.11), which is the same as the Cor (45.14). In N.T. the Xònes (A.V. measure), or 1 gal.l, for a Denarius (Rev. 6.6) is almost double a Sh (2 K. 7.1) or a heavy shekel. The Bushel (A.V. Mt. 5.15; Mk. 4.21; Lu. 11.33) is the Modius, which—like the Arab. Midd—was no doubt a cylindrical wooden box. The Firkin (A.V. Jn. 2.6) is the Merratès. In conclusion, it may be noted that European measures and weights all appear to originate in Babylon, the standard of the barley and corn, and of the finger-breadth remaining unchanged. W. Europe got its weights from the Romans (who divided the talent of 400,000 gr. into 80 lb.) and from the Phoenicians. E. Europe, on the other hand, at different times took its standards from the Gr. traders; but their weights ultimately trace back (at Troy) to the Babylonian Talent of 480,000 gr. Among books founded on actual discoveries of recent times are: De Saulcy’s Numismatique Judaique, 1844, and Madden’s Jewish Coinage, 1861 (with the enlarged ed. called Coins of the Jews). The weights at Nippur are given in Hilprecht’s Babylonian Expedition, 1860, vol. i, pt. 1. The scale of Gudea is given in Dr. Sarzeau’s Découvertes en Chaldé, 1887. The whole subject is treated in Sir C. Warren’s Ancient Cubit, 1903, and the measures of length in Dr. Flinders Petrie’s Inductive Metrology, 1877. The later Byzantine Talent at Jerusalem, well is again noticed. They were also tribal property (Num. 20.17.21.22). They usually had parapet walls (Jn. 4.6). The method of raising water by a pivoted pole (shadaf) might be used with a sallow wheel, at the water wheel with earthen pots on its rim (ságia, or n’aiàrakh) only with a stream. [C.R.C.]

**Well.** In 9 cases A.V. thus renders Heb. 'ayin (spring) [Ain]: Gen. 24.13, 16, 29, 30, 42, 43, 45; Ex. 15.27; Ne. 2.13. The common word is bér, a well sunk in rock; it is so rendered in 28 cases, but as ‘pit’ in A.V. in Gen. 14.10, Ps. 55.23, 69.15, Pr. 23.27. Private property in dug wells is noticed early (Gen. 21.30). In Deut. 6.11 “cisterns” (Heb. bôr) are rendered “wells” in A.V.; but in Pr. 5.15 a private

**WHALE.**

The Heb. words tan and tannim are translated in the A.V. indifferently as dragon, sea-monster, serpent, or whale. **Leviathan**
WHEAT

seems also in one passage to indicate a whale. [DRAGON:] As to the sea-monster which swallowed Jonah, nothing really definite can be said, because, under ordinary circumstances, no human being or other vertebrate animal could survive in the interior of a whale or other fish. In Mt 12:40 the creature is called κῆρος, translated in L.EV. “whale,” which is a “late” limitation of the meaning of the Gk. word (Liddell and Scott), while the book of Jonah merely says “fish.” There is no scientific necessity, however, to prove that the creature must have been a shark or other fish, or the idea that all whales have small throats, or that they necessarily feed on animals, is true only with regard to the right whales, such as the Greenland Balena mysticetus. Rorquals, or finner whales (Balaeocéphala), and hump-backed whales (Megaptera) have large throats and feed on species intended the sperm-whale, or cachalot (Phystex macrocephalus), subsists on gigantic cuttle-fish and squids, swallowing, it is affirmed, masses several feet in cube. All these whales, except the first, occur in the Red Sea, and one of them may be the species intended. The much smaller grampus, or killer (Orca gladiator), would also be quite capable of swallowing a man. So also are certain kinds of sharks; but nothing would be gained by the substitution of “shark” for “whale,” seeing that one of the latter (which are apparently primarily indicated by the Gk. word) would suit the context as well in every way, and the real difficulties of the passage with them. Paul Haupt (Proc. Amer. Phil. Soc. xlvi. 154-164, 1907) states that sperm-whales (nāḡīm = Gk. φασικόρ) are mentioned in Assyrian cuneiform inscriptions of 885-880 B.C. The Ethiopic Bible has ābār = Arab. ābars (sperm-whale), for Jonah’s whale. The writer considers the sperm whale to be a distant relative, and that Jonah was swallowed near Joppa and cast ashore near Alexandria. Amblergias, a product of the sperm-whale, is derived from the Arab. ābars. [R.L.]

Wheat. In A.V. the Heb. words bar, dāghin, riphōth, are occasionally translated “wheat” in a figurative sense, as distinguished from “barley” and “spelt,” אָבָר. [Corn.] The first mention of wheat occurs in Gen.30:14, in the account of Jacob’s sojourn in Mesopotamia. Egypt in ancient times was celebrated for the growth of its wheat; the best quality, according to Pliny (Hist. Nat. xiii. 7), was grown in the Thebaid; it was all bearded, and the same varieties, Sir G. Wilkinson writes (Anc. Egypt. ii. 39, ed. 1854), “existed in ancient as in modern times, among which may be mentioned the seven-eared quality described in Pharaoth’s dream” (Gen.41:22). Babyloonia was also noted for the excellence of its wheat and other cereals. Syria and Palestine produced wheat of fine quality and in large quantities (Ps.81:16,147:14, etc.). There are three kinds of wheat at present grown in Palestine, the Triticum vulgare (var. hybernum), the T. spelta, and another variety of bearded wheat, said by some to be the same as the Egyptian kind, the T. compositum. In the parable of the sower our Lord alludes to grains of wheat which in good ground produce a hundred fold (Mt.13:8). The common Triticum vulgare will sometimes produce one hundred grains in the car in Palestine. Wheat was reaped towards the end of April, in May, and on one occasion to the beginning of July, an ample supply of hay being available for the winter. In the Egyptian plague of hail, consequently, the barley suffered, but the wheat, not having appeared, escaped injury. (See Tristram, Nat. Hist. Bible, p. 485.) [C.R.C.]

Whirlwind. The A.V. thus renders (i) Heb. סֵפּוֹת (Job 37:9) for a tempestuous storm. The word occurs 15 times in O.T. and the expression “like a galgal in front of a storm” (Is.17:13) refers to the dust whirlwind which commonly precedes the storm in Palestine; as also in 5:28 (A.V. wheels), where the whirl of chariots is compared. (2) Heb. סֵפּוֹת and כָּפִיר, a tempest (see Deut.28:27), is also rendered "wind" (see 1K.23:13, where סֵפּוֹת is rendered "dust") are noticed. Solomon’s train, coming from the wilderness to fetch his bride from Lebanon (Can.3:6,4:8), was heralded by clouds of dust, compared to the columns of the summer whirlwinds. [C.R.C.]

Whore. [Harlot.] Under the Mosaic dispensation no legal provision was made for the maintenance of widows. They were left dependent on the affection of relations, more especially of the eldest son, whose birthright, or extra share of the property, imposed such a duty upon him, and partly on the privileges accorded to him, and the name of “whore,” and the participation in the triennial third tithe (Deut.14:29,26:11). In gleaning (24:19-21), and in religious feasts (16:11,14). The only restriction [LEVITATE LAW] imposed by the Mosaic law upon the remarriage of widows had reference to the case of one left childless (25:5,6; Mt.22:24-30,37-39; [Criminal Family] of the Apostolic Church the widows were sustained at the public expense, the relief being daily administered in kind, under the supervision of specially appointed officers (Ac.6:1-6). Particular directions are given by St. Paul as to those entitled to such public maintenance (1Tim.5:3-16). Out of the body of such widows a certain number were to be enrolled, who (1) were not under sixty years of age; (2) had been "the wife of one man, probably meaning but once married; and (3) had led useful and charitable lives (v. 9,10). The object of the enrolment is not obvious. It is possible that the same idea is to be seen in the ecclesiastical order, having duties identical or analogous to those of the deaconesses
WIFE

of the early Church. [Deaconess.] But more probably the enrolment was for an ecleemos-
"ary purpose, and the main condition poorness, though it is easy to understand how such
widows obtained a quasi-official position in the Church and became in later times a dis-
tinct order. [H. W.] The term “widow” used by early writers in an extended sense, to
signify the adoption of the conditions by which widows, enrolled as such, were bound for the
future.

Wife. [Marriage; Family.]

Wild beasts. [Beasts.]

Wilderness of the Wanderings. [Exodus, The.]

Willows, undoubtedly the correct rendering
of the Heb. ‘ārāhkim, as is proved by the old
versions and the kindred Arab. gharab. Wil-
loons are mentioned in Lev.23.40, Job 40.22,
Is.44.1, Ps.137.2. In the last passage the
weeping willow (Salix babylonica) is undoubt-
edly intended. This tree grows abundantly on
the banks of the Euphrates and in other parts
of Asia, including Palestine. Sprengel
seems to restrict ‘ārāhkim to the Salix babyl-
onica; but the term is almost certainly generic,
and includes other species of the large family
of Salixes, which is sparingly represented in
Palestine and in the countries of the S.
assyriaca (cf. Arab. salsāfl, “a willow”, is
perhaps the same as the ʾapkhāphā of Ezekiel
(17.5). [Withs.]

Willows, Brook of the, mentioned by
Isaiah (15.7) in his dirge over Moab. His lan-
guage implies that it was one of the boundaries
of the country—probably, as Gesenius allows,
the southern one. The name Widy Salsāfl
(Willow Valley) is still attached to a part of
the main branch of the ravine which descends
from Kerak to the Dead Sea.

Wills. [Testament; Family, Inheritance.]

Wimple, an Old Eng. word for “hood,” or
“veil”; representing the Heb. milpḥahath in
Is.54.12; R.V. pinnacle.

Window. The A.V. so renders five Heb.
words. (1) shemesh, “sun” (Is.54.12; R.V.
pinnacle). (2) kāvin (Dan.6.10; Aram. plur.),
“windows” or “apertures” in a wall (as in
Syr. and Arab.). (3) sīqeqh, rendered win-
dows in A.V. (1K7.5), R.V. in prospect. (4)
škrōfaphim, a cognate word (Heb. plur.) for
windows giving light (7.4), apparently narrow
outside and with skew walls giving breadth
inside (6.4). [Lattice; Palace.] (5) Glass
was not used and is still unusual in the East,
the wooden lattice taking its place (Heb.
ṭurūbāh), this word applying also to dove-cots
(Prov.7.5, 9, 12), or any small recess or
chimney (Ho.13.3). [Street.] [C.R.C.]

Winds. The “four winds” (Ezk.37.9)
Dan.8.8; Zech.2.6; Mt.24.31) represent the
four quarters of heaven. The N. wind gives
ice in winter (Ecclus.43.26), but refreshes
in summer (Can.4.16), and is followed by rain
(Pr.25.23 marg.). The E. wind from the desert
(Job 1.19; Je.15.24) is intensely hot and dry
without ozone. It blows usually for two or
two days at a time in May, and is sometimes
violent (Job 27.21). The khmsin, or E. wind
of “fifty” days (April-May) in Egypt, dried
up the corn (Gen.41.6); but the word qidāhkim
often means only a “contrary” wind (Ex.14.
21; Ps.48.7; Ezek.27.26). The S. wind is also
a hot wind (Job 37.17; Lu.12.53). The W.
wind brings rain, and rises as a refreshing
breeze about 10 a.m. in summer. [Rain.]
The sea of Galilee is subject to sudden squalls
from W. in spring (Mt.8.24; Lu.8.23). In
the account of St. Paul’s shipwreck (Ac.27.12-14)
are noticed the S.W. (Nīf), N.W. (χωρός), and
S. (φόροι) winds, with the stormy E.N.E. wind (εφορακεσω). [C.R.C.]

Wine. In Palestine the vintage takes place
in September, and is celebrated with great
joicings. The ripe fruit was gathered in baskets
(Ex.6.9), as represented in Egyptian paintings
and carried to the wine-press by female slaves.
(Fr.11.7) It was put in the upper of the two vats or reci-
tacles which formed the wine-press, and was
“trodden,” as in all ages in Oriental and S.
European countries (Ne.13.15; Job 24.11
Is.16.10; Je.25.30,48.33; Am.9.13; Rev.19.
15). Some juice exuded from the ripe fruit
and its own pressure before the treading was
completed. This juice was to have been kept
separate from the rest, and to have formed
the gleukos, or “sweet wine,” noticed in
Ac.2.13. The treading was effected by one
or more men according to the size of the vat.
They encouraged one another by shouts and
cries (Is.16.9,10; Je.25.30,48.33). Their
legs and garments were dried red with the juice
(Gen.49.11; Is.63.2,3). The expressed juice
escaped by an aperture into the lower vat, or
was at once collected in vessels. A hand-press
was occasionally used in Egypt, but not noticed
in the Bible. Sometimes the wine was pre-
served in its unfermented state, and drunk as
must; but more generally it was put into skins
and, if intended to be kept for some time,
a certain amount of lees was added to give it
body (Is.25.6). It consequently required to be
“refined” or strained previously to being
brought to table (Lib). There are various Heb.
words for wine. For the most general term is
yayin; tirōs, “new wine; wine which, after being
referred to the root yārash, “to get possession
of”; but its etymology is not certain; ʾāṣīs,
“pressed-out” wine (i.e. new wine), is always
referred to as “sweet” (Can.8.2; Is.49.26;
JL.15.3,18; Am.9.13); henem (Deut.32.14),
in Aram. ḥamār (Ezr.6.5,7,22), and ḥamār
(Dan.5.7f.) convey the notion of fermenting or
chabulation, and thus refer to fermentation
(cf. “leaven,” which the cognate word in Arab.
means; mezēkh (Ps.75.8), mezēz (Can.7.2),
and mīmāṣāḥ (Pr.9.2,23,30; Is.65.11) imply
a mixture of wine with some other substance.
For šēkhār, see Drink, Strong. We find
also kīnār, a word for a wine or cider, which
was termed “vinegar”; ʾashishā, rendered “dagon
[bottle in 2Sam.16.1] of wine” in A.V. (1Chr.
16.3; Can.2.5; Ho.3.1); but really meaning
a “cake of pressed raisins”; and shēmarəm,
properly meaning the “lees” or dregs of wine,
but in Is.25.6 transferred to wine kept
on the lees to increase its body. In N.T. we
find several wines, yayin, as the general
designation of wine; gleukos, properly sweet
wine (Ac.2.13); sikera, a Grecized form of the Heb.
šēkhār; and oxos, vinegar. yayin and tirōs,
in their ordinary and popular acceptation,
referred to fermented, intoxicating wine; and
some notices of ʾāṣīs imply that it was the
occasion of excess (Is. 49:26; Jl. 1:5; cf. Ac. 2:13). The mingling implied in the term mesekh may have been designed either to increase or to diminish the strength of the wine, according as spices or water formed the added ingredient. The notices chiefly favour the former view; for mingled liquor was prepared for high festivities (Pr. 9:2, 5), and occasions of excess (Pr. 23:30; Is. 5:22). At the same time, strength was not the sole object sought: the wine “mingled with myrrh” given to Jesus, was designed to deaden pain (Mk. 15:23), and the spiced pomegranate wine prepared by the bride (Can. 8:2) may well have been of a mild character.

The only wines of which we have special notice belonged to Syria: these were the wine of Helbon (Ezk. 27:18), and of Lebanon, famed for its aroma (Ho. 4:7). Wine was produced on occasions of ordinary hospitality (Gen. 14:18), and at festivals, such as marriages (Jn. 2:3). The monuments furnish abundant evidence that the people of ancient Egypt, both male and female, indulged liberally in wine. Under the Mosaic law wine formed the usual drink-offering at the daily sacrifice (Ex. 29:40), the presentation of the first-fruits (Lev. 23:13), and other offerings (Num. 16:5). The priest was also to receive first-fruits, and rithes were to be paid, of wine as of other products (Deut. 18:4; cf. Ex. 22:29).

Wine-press. From the scanty notices in the Bible we gather that the wine-presses of the Hebrews consisted of two receptacles or vats placed at different elevations, in the upper one of which the grapes were trodden (Is. 63:2, 3), while the lower one received the expressed juice. The two vats are mentioned together only in Jl. 3:13:—“The press (gath) is full: the fats (qabbim) overflow”—the upper vat being full of fruit, the lower one overflowing with the must. gath is also strictly applied to the upper vat in Ne. 13:15, Lam. 1:15, and Is. 63:2, with parah in a parallel sense in ver. 3. The term parah, as used in Hag. 2:16, probably refers to the contents of a wine-vat, rather than to the vat itself. The two vats were usually hewn out of the solid rock (Is. 5:2, marg.; Mt. 21:33).

Ancient wine-presses, so constructed, are still to be seen in Palestine. [Shelah.]
eous,” self-blinded to the immortal destiny of man. Ch. 3. The blessedness of the righteous in spite of trouble and death, in contrast to the misery of the ungodly, in spite of their apparent prosperity. (The exquisite passage 3.1-10 forms the first morning, and 5.1-17 the first evening, lesson for All Saints’ Day; and no other passages in O.T. or Apos. could be more suitable.) Ch. 4. Contrast continued. Childlessness and premature death not a sign of impiety, except in the case of the ungodly. The righteous shall triumph over their enemies even in death. Ch. 5. The wicked shall be astonished at the glory of the righteous, and confess the vanity of the life evil. The hope and the fear of God shall destroy them. (b) Ch. 6—9. The Praises of Wisdom. Ch. 6. The author implores the rulers to seek Wisdom, remembering their responsibility if they exercise rule without it; for Wisdom is the secret of true power, and is easily accessible. Ch. 7 and 8. Solomon describes his prayer for Wisdom, and the reason of his choice; and in elaborate language exalts the glory and nature of Wisdom, and the blessings that come from her possession. The section ends with (ch. 9) Solomon’s prayer in full. (2) Ch. 10—19 exemplify the power of Wisdom in history, and offer a fine Jewish philosophy of the Jewish life-stories. Ch. 10. The period from Adam to Moses. Ch. 11 and 12. The period of the wanderings in the wilderness, offering a justification of the punishment administered to the Egyptians and Canaanites. Ch. 13—15. General observations on the folly of idolatry, and its mischievous results. (This contemptuous polemic should be compared with that of ch. 11 and 12. The Hebrews, like the Greeks, were averse to all foreign deities and gods; ch. 16; the plague of darkness with the light of Goshen (ch. 17). Ch. 18. The passage of the Red Sea (ch. 19). The somewhat abrupt conclusion praises God for His love and mercy to His people. The most famous passages, apart from 3.1-10 and 5.1-17, are the description of “the righteous man” (4.7—8), and of Wisdom (7—9). Early Christian interpretation loved to see in the former a prophecy of the death of Christ, and in the latter an illustration of the doctrine of the Logos. The language of the book, whilst abounding in Heb. expressions —e.g. with Egyptian names of the author was a Jew, and made use of O.T. language and conceptions, many of which are derived from the LXX., with which he was familiar (see e.g., 15.10; and cf. ls.44.20 with Heb. and LXX.)—shows a considerable mastery of the Gk. language, and points conclusively to a Gk. and not a Heb. original. He writes with singular style and command of language, using classical phrases with great freedom and originality (some of his own expressions have become current in the religious language of the world—e.g. 3.4, “a hope full of immortality”); and he shows a varied acquaintance with Gk. culture, poetry, science, and art; whilst he has evidently studied Gk. philosophy, especially that of Plato and the Stoics (Farrar). In spite of the artificiality and exaggeration of the style here and there, the book may be said to be “the most beautiful and important work” —and (in many respects) the most valuable—of the apocryphal writings. The influence of Gk. civilization upon the Jews—especially those who resided outside the Holy Land—is one of the most interesting features in the development of the Jewish race previous to the birth of Christ. Many men (e.g. Aristobulus, Philo, and in later times Josephus) sought to present Judaism in an acceptable form to the Gk. world, and attempted to give a rational fire for their adherence to a religion which the Greek appeared to be unphilosophical and irrational. Aristobulus allegorized the O.T. Philo made Moses the forerunner of Plato. But the writer of the book of Wisdom represents an uncompromising Conservatism. So far from shewing any anxiety to smooth over anything that would offend Gk. susceptibilities, he rejects the views and practices of the heathen world with unmeasured scorn and indignation. As a worshipper of Jehovah, he felt that he was above meeting idolaters on their own ground; and had nothing but contempt and loathing for those of his nation who had become Grecianized at the expense of their faith. It may be this which influences him in the outward form which he gives to his work: its Biblical colouring, and his attachment to the LXX. and its Hebraisms. Much of his language finds echoes in N.T.—e.g. with 1Tim.1.12 cf. Wis.3.9, 4.15; with Jas.1.5 cf. Wis.8.21. In particular, the author of the epistle to the Hebrews shows indubitable acquaintance with Wisdom. Cf. Wis.7.22,26 with Heb.1.1—3, etc. The writer in fact “had an honourable share in moulding the religious phraseology in which the gospel was ultimately to be preached” (Farrar). Other important points to be noted are the following: “rendering” (ch. 13) the grave is more than suggested—e.g. 2.23, etc. The nature of God is expressed as “love,” 11.26, etc. In one respect only is there a seeming loss. The doctrine of the Messiah has become very vague; indeed, in this book (as in Ecclesiasticus) there is no suffering or personal Messiah. The hope of Israel has come to be but the hope of an earthly domination over the Gentile world, coupled with the universal worship of Jehovah. There can be little doubt that the author was an Alexandrian Jew—of considerable education and culture—familiar with Gk. modes of life. The special familiarity with Egyptian names and imagery (15.10) shows the manufacture of idols coloured and gilded to represent metal (15.9), points to a writer whose home was in Egypt. Some of the fathers (Clem. Alex., Didymus, Origen, Tertullian) speak of the author as Solomon; though this is no more than a popular reference. Jerome (and later Luther) attributed the book to Philo; but style unlike his. Noack, followed by Dean Plumptre, suggested Apollo, on the ground of the many parallels between the book of Wisdom and the epistle to the Hebrews, which they assumed that Apollo wrote. There is little doubt as to the unity and integrity of the book; though
Houbigant (1750) suggested that the first nine chapters were by Solomon, and the remainder by an editor. Eichhorn fixed the end of the original book at 11.1. Bretschneider suggested four different authors, whilst Nachtagal (1790) suggested that it was a hymn in praise of Wisdom, to be chanted antiphonally, and composed by 79 authors! That it is a complete whole may be taken for granted, although the conclusion is rather abrupt. If the traditional text is at all defective, it may well be between vv. 21 and 22 of the last chapter, where the theme started in ver. 18 appears to require fuller treatment. With regard to the ideal of Wisdom here presented, see Philosophy. The writer has to face the old problem of the book of Job, under new circumstances. In view of the persecutions which his fellow-countrymen had borne (especially in Alexandria), he asks himself how the faithfulness of the chosen people is rewarded?—He solves the problem in eulogizing Wisdom, as being the supreme treasure. He who possesses her, possesses everything worth having, and need not be dismayed by earthly and transitory troubles. Israel might suffer, under the fatherly chastisement of God; but the问答 of the chosen people would be compensated beyond the grave. The writer's conception of Wisdom is complex and many-sided. It is repeatedly personified, but obviously as a figure of speech. Sometimes it is used of God, sometimes of man. "We may sum up by saying, that on the divine side it represents the Spirit of God, regarded by man under the forms of Providence: and on the human side, as a knowledge of divine and human things, and of their causes." Wisdom is a word which sums up the result of the power of reconciling the teaching of divine revelation with the experience of life. The object of the book may now be seen. It is, first, harangue, to console and encourage the Jewish people in a period of depression; second, apologistic, to offer a solution to the old problem touching the sufferings of the righteous: third, polemical, to expose the folly and wickedness of renegade Jews who had succumbed to the heathen life around them, and had in consequence cast aside the duty of idealism. When it is remembered that the Judaism of the author's time was sorely pressed by the indifference and apostasy of the wealthier classes, as well as by the influence of Greek Philosopny and culture, the importance of the book (with its brilliant and eloquent defence of the Jewish position) will be recognized. As to the date, it is impossible to fix any approximate period. The publication of the LXX. on one side, and the date of the apocryphical writings, form the terminus; but they include a period of 250 years. The most recent opinions fluctuate between 150 B.C. and 40 A.D. Ch. 14, 16-20 has been taken to indicate the days of Caligula, on the supposition that a reference is here made to his attempt to place a statue of himself in the temple. But there is nothing sufficiently definite to justify this conclusion. Outside the pages of the N.T., the earliest quotation is found in Clem. Rom. (on 16.27). Irenaeus also (Adv. haer. 6.14) and Origen (in the commentary) refer to the frequent allusions found in later fathers. The Muratorian Fragment, after mentioning the epistle of Jude and 3 and 4 John, adds "Et Sapientia Salomonis ab amicis Salomonis in homonem ipsius scripta." The text is preserved in Cod. B, A, N, C, and Ven.; the chief versions being the Itala, Syr., Arab., and Armen. Hastings, D.B. (5 vols. 1904); Speaker's Com. (London); G. Houbigant, Die Buch der Weisheit, Deane, The Book of Wisdom, etc. [S.N.S.]

Withest (Judg. 16.7-9). "Green cords" in Coverdale and "snenewy cords" in Wyclif. Withest are willows, and the words "not yet dried" seem better applicable to them than to cord. Speaking of "withies," Pliny says (after dealing with the pretensions of poplars, vines, hazel wands, etc. for tying with), "All these (I say) are good for bands, and yet the willow hath a gift therein beyond the rest." (vi. 37). (Willows.) [I.N.C.]

Witness. (1) In O.T. (a) In judicial proceedings. (i) Strict truthfulness was a religious duty (Ex. 20.16, 23.1, etc.; cf. Lk. 24.28, etc.). (ii) In Crimes, etc., at least two witnesses were required (Deut. 19.15; cf. 17.61; Num. 35.30; 1K. 21). It has been thought that this did not apply to the case of the rebellious son (Deut. 21.18-21); but the law contemplates a statement by both parents. (iii) A false witness was liable to the penalties of the crime (Deut. 19.16-19). Josephus (4 Ant. viii. 15), men and slaves were not competent witnesses; but this did not apply to a mother testifying against a rebellious son. (b) In extra-judicial proceedings. In archaic societies—before the use of written documents, authenticated by signatures or seals, and duly attested—public ceremonies are usual for conveyances of land and similar transactions. Accordingly, we find such ceremonies before witnesses in Abraham's purchase of Machpelah, and the acquisition by Boaz of the nearest kinsman's rights of property and marriage. In Is. 8.2, 16,20 and Je. 32 we read of the sale of land, and witnesses are present, as in modern times. Some covenants could be witnessed by seven lambs (Gen. 21.28), or a heap of stones (Gen. 31.46 and a Pillar (Gen. 31.52; cf. Is. 19.16); and in Joshua an Altar of a particular type is erected to witness the legitimacy of the trans-Jordanian tribes (22.26-29), and a stone is invoked to witness against the Israelites because "it hath heard all God's words" (24.27). [HOMILIC: TESTIMONY.] Wiener, Studies in Biblical Law, 66, 67; Post, Grundriss der eth. Jurisprudenz, ii. 402, 534, 549. [H.M.W.]

(2) In N.T. ἡ δικαιοσύνη (δικαιοσύνη). (a) Judicial. Evidence of two or three witnesses necessary for a case (Mat. 18.16; 20.16) (Tit. 5.19; Heb. 10.28; cf. 1Jn. 8.27). Instances of false witnesses (i) against Christ (Mat. 26.60); (ii) against St. Stephen (Acts 6.13). Witnesses to take active part in carrying out sentence (Acts 7.58). (b) In the general sense, one who can witness to the truth of what he knows, has seen or heard of (Gen. [OATHS] DNTST. Paul (Ro. 1.9; Ph. 1.8; 1Th. 2.5; 2Cor. 1.23; cf. Gal. 1.20). In allusion to spectators at public games, Heb. 12.1 refers probably to O.T. saints. Used esp.
of those who could testify to the truth of the death and resurrection of Jesus (Lk.24.48; Ac.1.8, etc.). Term applied to Jesus, Rev.1.5; 3.14; e.g. "Vineyard, tree." The Tabernacle, and its use described by Moses (Ex.25.20; Rev.2.13,17,6). [H.I.]"}

WIZARD. [MAGIC ; DIVINATION.]

Wolf (Heb. צ'א'ד). The wolf of Palestine is Canis lupus, a species ranging in former times all over Europe, Western, Central, and Northern Asia, and North-western India. Its Arab. name is ả'k; and its habits are too well known to require special mention. [R.L.]

Women. The position of women in Israel contrasts favourably with the place assigned to them in other Oriental nations. Although influenced to some degree by the Eastern conception of the inferiority of woman to man, the Hebrew nation allowed much greater liberty of action than was customary elsewhere outside the Semitic races. Traces, however, of the Eastern conception may be found in the Mosaic law, e.g. the enactment that every male that openeth the womb shall be called holy unto the Lord. In N.T. we find a number of passages, under the epistles, which emphasized this idea so greatly that it was considered improper for a Rabbi to speak to a woman in public, and, if obliged to do so, he was to confine his speech to the fewest possible words. Hence the disciples' surprise in Jn.4.27, and the contempt of the Pharisees at Christ's relation with women (cf. Mt.15.20). Apart from this, women in Biblical history were less secluded, more honoured, and had a higher place in domestic, public, and religious life than in any other kindred race. They mingled freely and openly with the other sex in the duties and amusements of ordinary life. They held public offices, e.g. the high priest, or were elevated to religious work—e.g. Miriam, Deborah, Huldah. The queen-mother was looked upon as a person of great influence (cf. the frequent repetition in Kings and Chron. of the mother's name, e.g. 2Chr.13.2). [QUEEN.] The management of household affairs devolved mainly upon women, and the public offices were taken by women (cf. Ps.31.10, etc.). In N.T. women are prominent in our Lord's life, especially in the Third Gospel, and it is in keeping with our Lord's teaching and example that in the early Church two offices (Deaconess; Widow) were held by them. [MARRIAGE ; SLAVE; WOOD; WOOL; WOOLLEN AND LINEN.]

Wood. [FOREST.]

Wool. [DRESS.]

Woollen and Linen. Lev.19.19 prohibits the wearing of a garment of "two kinds of stuff mingled together," which is defined in Deut.22.11 as "a mingled stuff, woof and linen together." The mixture is called aš'atâ, a foreign word, perhaps Coiptac sahit ("woven"), pous ("false"). The LXX renders the word by κιβδηλος ("adulterated, false"). The law of sha'atâ, z is given in connection with two prohibitions against violations of the law of nature, the intermingling of animals of diverse kinds, and the mingling of different seed. Josephus (Ant. vi.11.1) gives as the reason for the prohibition that this mixture was to be worn by the priests only—e.g. probably the girdle (Ex.39.29). Maimonides (Mach. iii. 37) regards the prohibition as an instance of the general law against imitating the customs of the heathen (Lev.20.23), whose priests wore garments made of a mixture of animal and vegetable matter. [H.I.]

Word. [JOHN, GOSPEL ACC. TO; PHILOSOPHY; SCRIPTURE, HOLY.]

Works. [JUSTIFICATION; FAITH.]

Worm. This translation in A.V. of the Heb. words iscrimination, and 70l677, 703, or 7037, occurs, where it is not found in the K.T. The former is found only in Is.51.8, and evidently denotes the larva of the clothes-moth (Tinen), the association of the moth itself in the same sentence being only what might be expected in an early writer. rimmâh (Ex.16.20) and 70l677 are used indiscriminately to denote caterpillars and grubs of various insects, and less commonly earth-worms. Job (25.6) compares the estate of man to a rimmâh, and the son of man to a 7037. This latter word, in one or other of its forms, is applied in Deut.28.39 to larvae harmful to vines, amongst the most destructive being the caterpillar with which eat off the inner parts of the blossoms, and spins a web round the remnant. The death of Herod Agrippa I. was caused by worms (râšânā; Ac.12.23): according to Josephus (Ant. xii. 8), his death took place five days after his departure from the theatre. Whether the worms, or maggots, were the cause or result of the disease is not stated, although it would seem probable that they were the result. [R.I.]

Wormwood. (Heb. 11vánâ) occurs frequently in the Bible, generally in a metaphorical sense. Tristram enumerates seven sorts of wormwood, of which Artemisia herbâla may be held the most conspicuous in S. Palestine. The Heb. 11vánâ is a curious generic, and denotes several species of Artemisia. [H.C.H.]

Worship. Worship is the outward expression of the life of the Church and its members devoted to the will of God (Ps.45.11,12). Allike in the old and new covenants worship is ever a religious act, representative of surrendered wills, and by liturgical forms, as the Psalms, setting forth the glory of God, to Whom the wills of the worshippers are yielded (Ps.50.23,98.8). The moral ideal of worship corresponds to the perfect ideal of sacrifice expressed in the offering, eternal in its value, of the surrendered will of the Incarnate Son (Heb.10.10) to the Father. Adoration is paid to the Lamb (Rev. 5.12) "standing as though it had been slain" (5.6), "in the midst of the throne." The "amen" (5.14) of "the four living creatures" and the worship of the Elders is their assent to that ideal. O.T. As the ceremonial law was developed by the scribes, which emphasized the idea of offering rather than of communicating the divine life, though the latter was preserved by the meal of the common offering. With the sacrificial offering a liturgical service was connected (2Chr.7.1-4,29.27,28; Exod.50.11-20; Lk.1.10). The temple became Jehovah's eye of the day-time and the night-time (Ps.119.164). A share in the worship conducted by the priesthood and the levitical choirs (1Chr.25) was allotted to the people (16.36).—N.T.
In the synagogues the lections, chants, homilies, and prayers influenced the growth of Christian worship (Col.4:16; 1 Th.5:27; Col.3:16; 1 Th.5:20,21; 1 Tim.2:1), to which was added, permanently, the Holy Communion (Acts.2:42), including the sacrificial root-ideas of communion and offering (1 Cor. 10:16,11:23-27), and, temporarily, the "spiritual exercises," regulated by St. Paul (1 Cor. 14). Our Lord, while forbidding personal ostentation (Mt.6:6), assumes the duty of public worship which He scrupulously practised (Lk.4:16; Jn.2:13,7,10,10.22). In the apostolic Church, besides its private assemblies (Acts.2.40,4:23-31,12:12,20:7), the hours of the temple prayers (Acts.3:1,10.30) and, apparently, the hours (Acts.2.15,10.9) were collected. Observations connected with the Lord's day (1 Cor. 16:1) had a sacrificial character ( Heb.13:16), and are linked (13:15) with a reference to "a sacrifice of praise." The worship directed to the Father through His Son (Rom.1.8, etc.) was also equalled to that of our Lord (10:12,13; Rev.5:8,14). In the apocryphal scene of heavenly worship the adoration offered to the Lamb indicates the devotional attitude of churches founded by apostles. Entrance "into the holy place" was realized through the Mediator (Heb.10:19-25) and (12:22-23) that worship was united with the heavenly. Of such worship the conduct demands a right Christian taste and deportment, and strict Christian method (1 Cor.14:40). Arts, "Church" by Gayford, and "Worship in N.T." by Adeney in Hastings, D.B. (3 vols. 1904); Duchesne, "Christian Worship," E.T. (1903); Willis, Worship of the Old Covenant (1886); Oesterley and Box, Religion and Worship of Synagogue (1897); J. Wordsworth, The Ministry of Grace, ch. 6 (1901); Milligan, Ascension and Heavenly Priesthood of our Lord, lect. vii. (1891); Swete, "Apo. of St. John," Commentary, (1906). [A.J.W.]

Curiously, 'worship' (Acts 19:28), the A.V. rendering of ἔρωςπρέπει, translated more accurately in R.V. (and A.V. marg.) " temple-keeper." The town-clerk of Ephesus describes his city as a temple-keeper, or sacristan, of the goddess Diana. At a later date the term was applied to cities connected with the worship of particular emperors. [A.C.B.]

Worshipper, [GAMES.]

Writing. Though writing is not directly mentioned in Genesis, its use by scribes employed by the Canaanite chief is implied (23:17,18) when the field of Ephron was "made sure" to Abraham. For in their time a tablet, signed by witnesses, was the only evidence of property held legal, at least by the Babylonians. The word sēpher, "writing" (Arab. sfr, whence English "ev'ry"), first occurs in the time of Moses (Ex.17:14), as though already usual. The term is of Hebrew origin, and is used both in A.V. and otherwise (Heb. 24:1; Is.50:1, scroll (Is.34:1), evidence (Jer. 32:10,14), roll (Ezk.2:9), and learning (Dan.4:17)). The "house of rolls" (Ezek.6:1), or better (as A.V. marg.) of "books," was a royal library. In the time of Moses the Babylonian cuneiform characters were used by the Canaanites, and were known to scribes in Egypt, who wrote in this character to Asiatic princes. It appears probable that this was the kind of writing first used by the Hebrews, and there is no evidence that the alphabet had come into use before the time of David at earliest. Four early psalms (Ps.9.25,34,37) are written with verses beginning with letters of the alphabet, in the ordinary sequence, except in the first of them, where only 14 letters are given, some being out of the usual order. It is also remarkable that, in two cases (Ps.25 and 34), there are 23 letters—a final P being given after the 22 Hebrew letters, in the position of the Etruscan F or the Greek phi. This may be an indication of early date, when the alphabet had not been finally reduced to 22 letters. Later psalms (Ps.111.112.119.145) are also alphabetic, as is a passage in Proverbs (31:10-31); while Lamentations (1:6) repeats the alphabet four times, with the peculiarity (in 2 and 4) that P precedes ayin. In N.T. the Gk. alphabet included the letters then in use (omitting Bau, San, and Koppa), and the first last were "Alpha and Omega." (Rev.1:8).—Materialis. The "token tablets," on which the Ten Commandments were written, were of stone (Ex.21:26,32; 34:24), and are written like Babylonian tablets—on both sides. The Heb. לוע (Arab. līb) indicates a "tablet" like those which, in Babylonia, were of stone, or of baked clay: and these continued in use among Hebrews [Gezer] down to 600 B.C. at least (Hab.2:2). In N.T. the writing-tablet (Lk.1:13), or "tablet," may, however, have been a wooden tablet covered with wax, as among Romans (see 2 Esd.14:24). Tablets are often mentioned (Pr.3:3,7,7; Is.30:8; Je.17:1), and the term Mīhtam (titles of Ps.16 and 56-60), according to J.N.K., means "for tablet-writing," indicating that these psalms were also originally on tablets, but for other views, see Psalms, Titles of. Two other terms more clearly indicate clay tablets as in use, namely Heb. פסוקים, "brick" (Ezk.4:1), rendered tile in A.V., and Heb. יגשר, rendered letter (2 Chr. 30:1; Ezr.4:8.5:6; N.2:7.o,6.19; Esth.9:26-29) the Babylonian 9igm for a "tile." The letters which Hezekiah received from Sennacherib, and from Merodach-baladan (2 K.19:14,20:12), were no doubt in cuneiform; and he was able to read them, and "laid down" (A.V. spread)
PLATE XXXIV

PUGILLARIA, OR WAX TABLETS, WITH A SCHOOL EXERCISE IN GREEK. (Brit. Mus.)

TESSERA; *temp. Ptolemy Philadelphus.*
the tablet before the Lord. The expression "open letter" (Ne.6.5), applying to such a tile or brick, signifies that it was not enclosed in a pottery case. It was a common Babylonian custom to place important documents in such cases, which were closed, and had an abstract of contents on the outer cover. This is clearly described in Jeremiah in connexion with a legal agreement (Je.32.9-12), when money was weighed in balances, and the "writing" (A.V. evidence) signed and sealed before witnesses, and "sealed up" according to lawful custom, with "open" writing on the cover. These sealed-up tablets are perhaps intended elsewhere (Job 14.17): "My fault is sealed up in a case, and Thou dost daub over my iniquity" (see also Is.29.11; Dan.12.4). But writing was not only on clay, or on stones covered with PLAISTER (Deut.27.4); it was also on stone so hard as to require an iron graver with a diamond "claw" (Je.17.1) to cut the tablet. Isaiah's hidden "wee great ten in columns (A.V. leaves; Je.36.23), and attached to a roller—or to two rollers—as among Jews and Samaritans to the present day. They may have been rolls of papyrus, which the Egyptians used very early, writing in black and red ink. The writing "wiped out" (Num.5.23) by the priest, with the "bitter water," may have been in ink; but lines were often so effaced on clay tablets (damped with water) before they were baked. Ezekiel, however, refers to a "scribe's bottle" (Heb. qeseth Ezk.9.2,3,11) worn in the waist-cloth (LXX., however, renders this a "blue girdle"); but the pen (Heb. 'et) is rather to be rendered a "stilus" for engraving on clay, which the Babylonians made of wood or of metal (Job 19.24; Ps.45.1; Je.8.8,17.1); and it was not the "reed" (3jn.13) used with the black ink, in later times (2Cor.3.3; 2Jn.12), when "paper" (papyrus) was used. Herodotus says that foreigners, in his time, used skins when papyrus was scarce (v.58); and in the time of Josephus slug" (A.V. roll, Is.8.1, Heb. gillayon; see Is.3.23, A.V. glasses) to write on with "the graver of a man," or in "common characters" (R.V. marg.), by which alphabetic letters may be intended, as contrasted with cuneiform script. Job refers (19.24) to monumental writing "carved" (A.V. printed). Is.23, on rock, hewn with an iron pen (see Je.17.1), or graver, and "with lead"—the latter expression being explained by the fact that Phoenician texts exist in Palestine, with letters engraved on stone, and then painted with red lead to make them conspicuous. The art of engraving characters on hard gems, for signets, and other purposes (Ex.29.9,11,21), was already ancient in W. Asia in the time of Moses; and we have a gem so engraved, with the name of Kurigalzu I. of Babylon, who was contemporary with Moses. Rolls of papyrus were equally ancient in Egypt; but such rolls are not mentioned in O.T. till the time of David at earliest. The Psalmist (Ps.40.7) says, "I come to the scroll written about me" (cf. Deut.17.18). Such scrolls were in use in Jeremiah's time, and the scribe used ink (d'yd). The scrolls could also be cut with a "scribe's knife" (A.V. pen-knife), and burned in the fire (Je.36.14,18,23). They were sometimes written on both sides (Ezk.2.9; Rev.5.1), but are not often noticed, with the exception (Is.34.1; Zech.5.1; Ezr.8.2). These sealed rolls (Rev.5.1) were opened for reading (No.8.3). They were written skins were used for sacred rolls of the law (12 Ant. II. 11), said to have been inscribed with letters of gold. Such "membranes," or PARCHMENTS (2Tim.4.13), were used by St. Paul. The art of writing in early times was confined to Scribes (Is.33.18; Je.8.8; Ezr.7.6; Mt.5.20, etc.); but Heb. kings apparently could read and write (Deut.17.18; ZK.19.14), though this was not a general accomplishment (2Sam.11.14), since Uriah apparently could not read; and Isaiah speaks of those who had not learned to read (Is.29.12). In the time of our Lord the debtors could write a "document" (A.V. bill, Lu.16.6); but it may be doubted if every Israelite could write a bill of divorce himself (Deut.24.1); and such a document was probably drawn up by a scribe, and attested by witnesses, after the Babylonian fashion.—HIEROGlyphics. The four great systems of hieroglyphs seem to have sprung from one ancient picture-writing, but to have developed separately. About 700 emblems are found in two or more systems with the same meaning, and about 20 are common to the Egyptian, the Syrian (usually called "Hittite"), the Akkadian, and the Chinese. The latter may be of Akkadian origin; but when first known (not earlier than c. 800 B.C.) it has become quite distinct. The Egyptian, Syrian, and Akkadian denote numerals by the same signs—strokes for units, and an arch for "ten," which becomes a crook in the later Phoenician numerals. The signs

**Egyptian Reed Pens.** (Brit. Mus.)

**Writing**

**scribes Palette; temp. Ramses II.** (Brit. Mus.)
commonly used include figures of men, and of the bull, ram, sheep, goat, stag, ass, hare, lion, and dog. Lions, leopards, and snakes. Actions are represented by the hand, foot, legs, eye, and mouth. The signs also represent the sun, moon, star, fire, water, mountains, tree, herb, flower, corn, and reed, with the throne, crown, sceptre, crook, axe, bow, and arrow; the house, altar, yoke, vase, bowl, bucket, plough, sail, boat, pyramid, tablet, web, chain, and key. In each case the signs came to be used merely as syllables to spell words, to which certain "keys" or "determinatives" were prefixed or suffixed, to mark certain classes of nouns, and to make the reading certain. In each case also the rapid sketching of the signs, by practised scribes, gradually produced a conventional outline, which (in time) became hardly recognizable as connected with the hieroglyphic whence it originated; and each of the three old systems finally produced an alphabet of from 25 to 37 letters. But, as the languages differed, the sounds applying to the down to 600 B.C., preserve the original vertical arrangement, and the original outline of the signs of the Babylonian on a clay tablet, a conventional outline was produced by the strokes, which is now known as "cuneiform," or "wedge-shaped"; and not only did this become gradually different in time—by omission of strokes—but the tablets were read sideways, so that all the emblems fell on their backs, and the horizontal line then read from the left. The Babylonian and Assyrian emblems differed slightly by 9th cent. B.C. The Assyrians—adopting the Babylonian script—never used the old monumental forms; and, even on monuments, they employed the conventional "cuneiform" outlines, written in horizontal lines from the left. The original Akkadian system had only some 150 emblems; but compounds of these raised the total to 300 very early, and further compounds in Semitic texts produced a total of about 550 signs. Out of these, 115 were used for syllables, such as ab, ib, ub, ba, be, bi, bu, and so on, for all the 22

**THE SILIGAM INSRIPTION.** (The oldest known Hebrew text. From Col. Conder's original source, taken July 15, 188.)

signs differed also, in the cases of Egyptian and Chinese. The Akkadian and the Syrian systems, on the other hand (wherever the sounds of the latter system are known), seem to have been more closely connected, and to have been used for a single language. Thus both give the sound le for the bull's head, In for the yoke, me for the tree, an for the star, bu for the flower-bud, and vi for the eye. (1) The Egyptian System included about 400 signs, and out of these 45 are used as letters, to express 25 sounds. The "hieratic," or conventional hand, produced by sketching the signs with ink on papyrus, is at least as old as 2000 B.C., and was finally developed into the "demotic" running hand of the Ptolemaic age. (2) The Akkadian System is traceable probably as early as 3000 B.C. It was applied to an agglutinative tongue full of monosyllabic words (of which at least 200 remain almost unchanged in pure Turkish), and these sounds were adopted by the Semitic Babylonians, who also applied to the signs the corresponding Semitic words. Thus ad, "father," was used by them for the syllable ad, but also stood for the Semitic abu; "father;" and an, "god," stood for the syllable an, and also for the Semitic tin, "god." On the Akkadian texts the signs stand above one another (as in Chinese), two or three in the line, all facing to the right—that is, to the beginning of the line. The Babylonian monumental forms, Semitic sounds. The cuneiform was also used by the non-Semitic race of Susiana, and for the Mede language at Lake Van. The Persians finally reduced it to a rough alphabet of 34 letters, with 9 "determinatives" for the original signs of the Babylonian system; this was used on clay tablets as an inscription, nearly as old as the Akkadian monuments, and it appears to have been used by the Hittites, and other cognate tribes, while one of these monuments has been found in situ in Babylon (Koldewey, *Die Heiligtumsd Inschriften, 1909*), and others in Asia Minor. There were about 160 emblems, and these are arranged vertically in the line—two or three under each other—and face the beginning of the line, as in the Akkadian, but with the difference that (in each line) the emblems are all reversed, and the lines read alternately from right to left and from left to right. The sign boustrophedon writing—as resembling the return furrow in ploughing. The Syrian system (as Dr. Isaac Taylor remarked) also produced a later hieratic script—a syllabary of at least 600 emblems, and this had a very wide diffusion in Asia Minor, Syria, Cyprus, Crete, Palestine, Egypt, and even as far W. as Spain. This syllabary was used by Greeks in Cyprus; but was evidently borrowed, as it is very insufficient to express Gk. sounds. It was

ORIGIN OF ALPHABET.
deciphered by George Smith, from a Phoenician bilingual dating 375 n.c., and presents syllables like ba, be, bi, bo, bn, but not the syllables ab, eb, ib, ob, ab (found in Akkadian), which accounts for its only presence in Carian going out of 160 Syrian hieroglyphic emblems. Its signs occur at Gezer and Lachish, and on foreign pottery at Kahn in Egypt (18th dynasty); also in Cappadocia and Cilicia. It is recognized that the extra Gk. letters (v, ϕ, χ, ψ, ο) are derived from this script, which also furnished 11 extra letters to the Phoenician alphabet, found in ten cent. n.c. The Cretan texts (probably in Gk., as in Cyprus) give at least 27 signs similar to those used in Cyprus, and some are found in Carian texts, while this system also accounts for at least five extra letters of the so-called "Celt- 
Iranian" alphabet (evidently of Gk. origin) found on coins in E. and N.E. of Iran. (4) The Alphabet. The oldest alphabetic text that can be dated is the Moabite Stone [Moah], and there is no evidence that letters of the Phoenician alphabet were in use much before 1000 B.C. It must have originated in a syllabary, as in the other cases, but the ancients knew little about its origin. They generally agree with Herodotus on this point, who believed the Phoenicians to have taken their letters from the Phoenicians. Yet the old Aryan alphabets of the W. distinguished about 37 sounds, whereas the Phoenicians distinguished only 22; and the Gk. names of letters (alpha, beta, etc.) are Aramaic rather than Phoenician. Diodorus Siculus (v. 4) speaks of the Egyptians as being the first to develop the alphabet, when he says: "The Egyptians were not the first that found out letters, but only changed the form and shape of them into other characters, which many afterwards using, the name of Phoenician grew to be common." Tacitus (Ann. xi. 14) found that the Phoenicians borrowed Egyptian signs, and this theory was revived by De Rougé (Mémoire sur l'origine Égyptienne de l'alphabet Phénicien, 1874), who derived 21 signs from Egyptian hieratic characters of c. 1500 n.c. There are objections to this view, because the Phoenicians were then using cuneiform; because the resemblances of form in the hieratic and the Phoenician are slight; because only 21 out of 37 letters are thus compared (and the Egyptians had only 25 sounds); and finally because the Egyptian signs are not those which are indicated by the names of the Phoenician letters—such as aleph, "bull"; bet, "house," etc. Attempts to derive the alphabet from the cuneiform also fail, because there is no resemblance between the scripts; but it is notable that (in many cases) the proper sound applies to the emblem in Akkadian (such as aw, "bull"; ab, "house," etc.), indicating that Syrians and Greeks took the signs from a people who spoke Akkadian. The solution is that the Phoenicians adopted the syllabary springing from the Syrian system of hieroglyphics, which thus formed the original source not only of Gk. or Lycian extra letters, but of the whole alphabet. This may be worked out in detail as follows, and Plate XXXV. shows that, while the emblems were akin to the Akkadian and Syrian systems, the later forms were of Syrian origin, and have no direct connexion with the later cunei-

form signs. 1. Heb. 'aleph, "ox." Gk. alpha; Bab. alpu; Akkad. aw, aum, "ox": the head of an ox. 2. Heb. beth, "house"; Gk. beta; Bab. bitu; Akkad. ab, "house"; a h. 3. Heb. gimmel, "turtle"; Gk. cim, "turtle"; "bend"; Akkad. gau, "bend"; Gk. gamma; Akkad. gam, "bend": a crook, having the sound ga in Cypriote. 4. Heb. dalet, "swinging"; Gk. delta; Bab. daltu; Akkad. du. Neither the Akkadian sign nor the Phoenician letter resembles a "door," but more probably a "bucket" (Akkadian, wi; Gk. uis; "house"; an oblong palace: Bab. shakantu, "abode." The sign has the sound e also in Cypriote. 5. Heb. tav (or vaw); Gk. bau; Akkad. bu, "young": a bud, which has the sound bu in Cypriote. 7. Heb. zayin, "weapon"; Gk. zeta; Akkad. uz, "sceptre." 15. Heb. sin, "water." The Gk. form suggests "waves," and the Bab. me, "water," is a representation of waves. Cypriote mi is nearest the Gk. form. 14. Heb. nun; Gk. mu. Probably the Bab. nunu, "lord." Akkad. mu: represented by a hand holding an ornamental "hilt." 19. Heb. samekh, "prop," or "pole." Probably the Akkadian san, a "log." Gk. xsi. 16. Heb. vayin, "eye." Gk. o-mikron, "little o." Bab. 'enu; Akkad. ig, or iŋ, "eye": an eye sign. 17. Heb. pe; Gk. pi. The sign is not like a "mouth," but more like an "ear" (Akkadian, pi, "ear.") The Cypriote pe has the required form. 18. Heb. qoph, of unknown meaning; Gk. kopfa. Perhaps Akkad. gu, "face," "mouth," "speech." Rendered qau, "to speak," in Bab. Arab. qaun, "cry out." 20. Heb. resh, "head." Gk. rho (Aram. ra, "appearance," "appearance"); 21. Heb. shin, supposed to mean "tooth" (šên); Gk. sigma (Arab. shag, "crush"); Akkad. shi, "tooth." The emblem resembles a tooth. The Cypriote sa has the required form exactly. 22. Heb. tau, "mark." Gk. tau. The word in Arab. means "to brand." Probably the Cypriote ta, which has the required form. In Akkadian la appears to mean "to strike." This system of explanation applies also to the extra signs of Gk. and other alphabets, which are not cuneiform. The Syrian syllabary seems to be the parent of all letters, and traces back to the Ilitite, not
to the Babylonian hieroglyphics. The subsequent history is important for Biblical study, and is very fully known from monuments. The script gradually divided into four families of alphabets, the Phoenician, the Punic, and the Greek, which were used at Carthage and Marseilles, and in Spain. To this family the alphabet of Israel (as found on the Siloam text c. 725 B.C.) belonged, and continued in use (on the Jewish coins) down to c. 100 B.C. The Samaritan, which is traced to 500 A.D., is only a later form of this Hebrew alphabet, which in some cases preserves more archaic forms than the Phoenician, is however known less early—since the Meabite Stone goes back nearly to 900 B.C. while the earliest Ionian texts (that can be approximately dated) are those at Abu Simbel in Egypt, where they occur in the hieratic and Karian texts, c. 600 B.C. All the European alphabets come from the Gk.—the "rimes" directly so, and most of the others through the Latin. The Etruscans (who were not Aryans) brought letters from Lydia, and it is remarkable that they do not seem to have used the Gk. or Phoenician names for their alphabet. The Hebrew alphabet is nearly the same as the Gk. and Phrygian.

3. The Sabean differs considerably from the Phoenician. It is known as early as 264 B.C., from a dated text in Egypt; and it appears to have early developed seven signs, not used by Phoenicians, for seven modified sounds in the Arab tongue (Semitic). The origin of these signs is rather to be sought in the original syllabary. Dr. Isaac Taylor regarded the texts of the Safa region, S.E. of Damascus, as representing a link between the Sabean and the Phoenician. Mr. Cyril Graham, and others, found 700 of these texts, which Halevy deciphered in 1877 (Journal Asiatique, vol. x. pp. 293-450), but they are not supposed to be older than 250 A.D. They present the same peculiarity as Sabean—viz., that they read from the left as well as from the right. Mr. E. J. Pilcher (Proc. Bib. Arch. Soc. March 1907) regards the Sabean as being derived from the Greeks in Egypt, c. 600 B.C.; and this suggestion is strengthened by the fact that the Semitic alphabet (c. 1000 B.C.) does not appear to descend from the Punic, but shows remarkable resemblance to the Sabean. It too may have been derived from the early Greeks in N. Africa, at a time when the standard Ionian alphabet was not generally used, and when old signs of the Syriac syllabary were still employed. The Sabean coins (Schluumberger, Le Trésor de San'ā', 1880) are not older than 2nd c. B.C., and bear the Athenian emblem of the owl. Some have the head of Augustus with Sabean inscriptions. This Arab script is thought to have reached S. India before 250 A.D., as represented in the southern edicts of Asoka; but it was not used in N. Arabia, where the Aram. alphabet prevailed.

4. The Aramaic alphabet spread with the language, in the Persian age, all over W. Asia. At Sam'ād, c. 800 B.C., Aram. is written in characters closely similar to those of the Meabite Stone; but the distinction of the Aram., which leaves open the loops originally closed, already begins to appear (in the gutt) at the same site in 730 B.C. (Syr.). The oldest weight at Nineveh (c. 880 B.C.), inscribed in alphabetic letters, presents the original Phoenician forms; but by 500 B.C. the Syriac traders in Babylonia and Assyria were using the open loops to the letters with the Aram. language (Semitic dialects). Aram. alphabets were used, after 521 B.C. in N. India (the Kharoshthi), being the first script known beyond the Indus. The Phelavi language, in Persia, was full of Aram. words, and the characters were of Aram. origin, like those of the Parthians in 3rd cent. B.C. The Naba-thenians (Northern Assyrians) used the Aram. alphabet by 500 B.C.; and it thus developed the Neskhi, or modern Arab., and is found hammered on the rocks of Sinai down to c. 400 A.D. The Nestorian Christians used these characters, and introduced them among the Uigur Turks, from whom the Manchus took them. In the W. the Aram. alphabet became the script of the Palmyra traders, as early as 9 A.D., at least, and from the Palmyrene came the Syr. of the 4th cent. A.D., and the Cufic, which was used near Damascus before the Moslem invasion, as witnessed by a Christian text, dating 568 A.D., at Harran (Waddington, No. 2464). The modern Greek, the Latin, and the Syriac were developed from Aram. in origin, with additions from the Gk. alphabet—Square Hebrew. It is clear that in the time of our Lord the script in use resembled the Gk. (Gk. rol., A.V. rol.;) was the smallest letter; and the reference to "horns" (A.V. little, or two strokes), as used by the Phoenician, is in the Am. (Mt. 5:18). The square Heb. occurs in the oldest known fragment of O.T., including the Ten Commandments, found in Egypt (Mr. S. A. Cooke, Proc. Bib. Arch. Soc. Jan. 1903, pp. 39-56), attributed to 2nd cent. A.D. It is found earlier at Jerusalem, over the Greco-Jewish porch of the tomb of the Beni Hur priests. (Kingon.) It is impossible to suppose that such a monument could have been hewn for Jewish priests after 70 A.D., and it may be as old as 100 B.C. The letters have almost the present shapes; and ligatures and final letters appear not only here but in Aram. papyri as early as 200 B.C., and by the fact that, according to the Rabbis (Tal. Bab. Sanhedrin, 21 b, 22 a), the Aram. language, and the Lebanon (Libanon) characters were used by private persons—representing the Samaritan alphabet, which was of Phoenician origin; but the sacred Heb. was written in the Assyrian (Asshur) characters, which might mean the cuneiform, but more probably refers to the Aram. alphabet, since the Scriptures were written in alphabetic characters even before the Captivity. There is nothing improbable in Ezra having used the Aram. alphabet, which was the only one in use in Babylonia in his time, and in this having gradually developed into the square character by 100 B.C.—since the latter is certainly derived from the Aram., and is closely akin to the Palmyrene. The old alphabet of Israel was used (perhaps only for secular and monumental purposes) down to 100 B.C.; but forms similar to those in the Aram. occur in Gilead (Syr. F. P., p. 77) as early as 175 B.C., and this script may have been used with ink on scrolls, side by side with the old alphabet. It was fully established before the gospels were written.—Points. Vowel points, marking the

EARLY ALPHABETS.
length of vowels, are never found on ancient monuments in alphabetic writing. These monuments mark the ends of words in some cases with dots, as early as 900 B.C., but the notation of the shorter vowels seems to have been due to Gk. influence. The Latin vowels are represented actually by the Gk. letters α, ε, ο, υ, laid sideways above the Syr. letters. In Heb. an imperfect notation was in use as early as 370 A.D., and occurs in a MS. (No. 12,150 in Brit. Mus.) in 411 A.D.; but the Babylonian school (Odessa Codex) placed points under the letters, and there is evidence that the vowels were derived from those of the Palestinian school. The Massoretic points are not older than the end of the 7th cent. A.D. They served to express the traditional readings of that age, among the later Galilean Rabbis, and to define the exact sounds without adding a letter to the sacred text. It is evident, however, from the LXX. rendering of passages in which the Massoretic vowels are given, as by George Smith, for Nebuchadnezzar, that the old pronunciation in 250 B.C. was different, and also more correct; since the LXX. vowels in the case cited represent the Babylonian exactly.

In the time of Jerome (end of 4th cent. A.D.) the pronunciation of the Rabbis of Tiberias, whom Jerome consulted, may be given by one as shown by similar evidence in the Vulgate, such as Madian for Midian, which agrees with the LXX. (Madian); and this is probably more correct, representing the Babylonian Mad-yann, or "no man's land." Hence, when the translation of a passage in O.T. is rendered otherwise by the Massoretic masoret, it is probable titled to disregard the 7th cent. pronunciation of vowels, if a simple explanation is thereby rendered possible. With the tonal accents we are not here concerned, as they had no existence in early times.—Bibliography. For the Cuneiform, the most important works are: Amiaud and Mécineau, Tableau Comparé des Ecritures Babylonienne et Assyrienne (1857); Oppert, Le Peuple et la Langue des Mèdes (1879); De Sarzec, Découvertes en Chaldée (1887); Spiegel, Die Altperischen Keilschriften (1881). For the alphabet generally see Isaac Taylor, The Alphabet (2 vols. 1883), and Renan, Corpus Inscriptionum Semiticarum (1881-1889). The Cypriote syllabary is given by George Smith (Trans. Bib. Arch. Soc. vol. i.) and in later papers by Dr. Deecke. The Hittite characters are treated by the present writer in detail in The Hittites and their Language (1898). The Cretan signs are given by Mr. A. J. Evans in the Annual of British School of Athens (1900), and in earlier papers by the same discoverer of the Knossos clay tablets and signets. [C.R.C.]

X

Y

Yarn. The notice of yarn is contained only in 1 K.10.28 = 2Chr.1.16. The Heb. text is questionable. The word is a mistranslation in A.V. in any case. The context shows clearly that the reference is to "horses": so that the R.V. rendering, "droves," gives (at all events) sense. [Cassia.]

Year. The earliest application of the measurement of time by a year-cycle occurs in Gen.8.22: "Seedtime and harvest, and cold and heat, and summer and winter... shall not cease." There are traces in the Mosaic legislation of this natural and therefore primitive method of reckoning time by the solar year, a period deduced from the visible occurrence—the harvest. With agricultural peoples the harvest is the end of the year, and what follows is preparation for the ensuing year: cf. "The end of the year, when thou gatherest in thy labours out of the field" (Ex. 23.15,16); "The Feast of Ingathering at the year's end [R.V. marg. revolution]" (34.22). But in order to define time (such as it would be found necessary to divide this longer period into shorter ones. The moon, appointed "for seasons" (Ps.104.19), provides the standard of measurement. A fixed number of "moons" would not, however, coincide with the harvest. The astronomical lunar month is 29 days, 12 hours, and never divided into 1,080 parts. Twelve lunar months are 354 days, 8 hours, 876 parts, but the solar year is 10 days, 21 hours, 204 parts, i.e. approximately 11 days, longer than this. The discrepancy would, therefore, be serious in the course of a few years unless rectified by some mean. The Heb. year, however, is solosubly associated with the two harvests. (1) The 15th day of the 7th month (Ethanim, 1 K.8.2; the post-Exilic Tishri) was the Feast of Tabernacles, the thanksgiving for the completed harvest (Lev.23.34; Num.29.12), held at the autumnal equinox. (2) On Aabib 16 the firstfruits of the barley harvest were offered. This was also a harvest festival, at the spring equinox. These were constant, and the calendar had to be arranged so that the date and harvest synchronized. That the Heb. months were lunar is certain; the solemn observance of the New Moon would have had no meaning apart from its connexion with the cycle of festivals. It is not known how the difference of eleven days between the lunar and solar year was arranged in pre-Exilic times, but probably by the intercalation of a month every two or three years. In post-Exilic times a month was added when it was found necessary as the result of observation, or calculation. If it was decided that Nisan would arrive before the grain was ripe, or that the sun was so far distant from the vernal equinox that it could not reach it by Nisan 16, a month called the Second Adar was intercalated. This was done arbitrarily, notice being sent by letter from the Sanhedrin to the various communities (Rosh hash-Shanah iii. 1). This rule was fixed by Hillel ii. c. 361 a.d. The Jewish calendar is based on the Metonic Cycle of 19 years, 12 common and 7 leap years. It is a much-disputed question how far the Jews were indebted to the Babylonians for their method of computing time. Both had the lunar months 129 or 30 days, with an
intercalary Adar. In later times the Babylonian month seems to have consisted of 30 days, and there is some mention of a 28th day, or "week," and in the flood story in Genesis, where five months are equal to 150 days, giving a year of 360 days (Gen. 7:11, 8:4). This was the Akkadian and early Gk. year. The Egyptian year was 365 days, and some think the flood year was the same length. The Deluge began on the 17th day of the 2nd month, and lasted till the 27th day of the 2nd month of the following year. This would give 12 lunar months, or 354 days, plus the 11 days from the 17th to the 27th, or 365 days. The Babylonian year began in Nisan. The Heb. year originally commenced in Ethanim (Bab. Tishri), but at the Exodus Nisan was constituted the first month (Ex. 12:2, 13:4), all others being numbered from it. Tishri is known as the beginning of the civil year, and Nisan the first month of the sacred year. Some are of opinion that the ancient Heb. year always began on the 1st of Abib or Nisan, the civil year being of later institution; others that Tishri was considered the first of the civil year, and Nisan to have been added after the 1st of Abib, or 1st of Zawwa'ah, during the first of the series, since the Year of Jubilee commenced with it and not in Nisan (Lev. 25:9). [MONTGOM.]

Yoke. (1) In Heb. mol, möd, and ol, the two former words meaning a "bar" and the last the application (binding) of the yoke to the neck of the ox. The ordinary yoke for a pair of ploughing oxen is still a wooden bar, resting on their necks and bound round them. (2) A pair of oxen, so termed as being yoked together (1 Sam. 11:7; 1 K. 19:19, 21). The Heb. term cemeth is also applied to asses (Judg. 19:10) and mules (2 K. 5:17), and to a couple of horses in a chariot (1 Sam. 21:7). (3) The term cemeth is also applied to a certain area of land (1 Sam. 14:14), equivalent to that which a couple of oxen ploughed in a day (2 K. 22:20), corresponding to the modern Arab. faddan. As early as the 17th cent. B.C. (Amarna letters) we find the word "yoke" used to mean "rule" or "government," as in O.T. and in the words of Christ, "My yoke is easy." Probably our Lord had Himself made yokes in the carpenter's shop at Nazareth. [C.R.C.]

Yoke of land. [Weights and Measures.]

Z

Zaananim, Plain of (Judg. 4:11); Zaunananim (Jos. 19:31). The Heb. (see R.V. marg.) reads "ałon (or edon) bevrnamim, and "a'llon bevr'namim. The root bāa means "to cut up," and, in Aram. be 'a is a "marsh," or "swamp." The Jerusalem Talmud (Megilla i. 1) understands the "swamps of Kuphor" in Jos. 19:11. The place was in Naphtali, and Heber the Kenite is thus supposed to have camped near the Huleh swamps, 30 miles N. of the scene of battle whence Sisera fled on foot, the country between being impassable for a chariot. [C.R.C.]

Zacchaeus, a place named by Micah (1:11) in his address to the towns of the Negeb, near Hezibhla (Zedib), a town in the Jebel Sheba near MEDELEH. The site is unknown. [C.R.C.]

Zaananim. [Zaanaim.]

Zaan'ah, a Horite chief, son of Ezer the son of Seir (Gen. 36:27).

Zabad.—1. Son of Nathan, son of Attai, son of Ahli, Sheshan's daughter (1 Chr. 2:31-37), and hence called son of Ahai (11:11); one of David's mighty men.—2. An Ephraimite (7:21). [ELEAD.].—3. Son of Shimeath, an Ammonite; an assassin who (with Jehozabad) slew King Joash (2 Chr. 24:26). In 2 K. 12:21 his name is written, probably more correctly, Jozachar.—4. 5, 6. Three laymen who divorced their foreign wives at Ezra's command (Ezr. 10:27, 33, 43).

Zabadalas (1 Esd. 9:35) = Zabad 6.

Zabedans, an Arab tribe who were attacked and spoiled by Jonathan, on his way back to Damascus from his fruitless pursuit of the army of Demetrius (1 Mac. 12:31). Josue'us, on their attachment (13:14, 15, 10), but perhaps in error. Nothing certain is known of them. Jonathan had pursued the enemy's army as far as the river Eleutherus (Nahr et Kebir). We must look for them, therefore, somewhere N.W. of Damascus. On the road from Damascus to Baalbek, at a distance of about 20 miles from the former, is the village Zeb'da, standing at the upper end of a plain of the same name, in the very centre of Anti-libanus. This name is possibly connected with the Zabedans.

Zabbai.—1. A descendant of Bebai, who had married a foreign wife (Ezr. 16:28).—2. Father of Baruch (Ne. 3:20).

Zabbud, in Ezr. 8:14 given as one of the sons of Bigvai who returned in the second caravan with Ezra. [ISTALCURIUS.]

Zabe'dus (1 Esd. 9:21) = Zabadian, 6.

Zabad.—1. Son of Zerah ben-Judah, and ancestor of Achan (Jos. 7:17; 17:8). Perhaps the son of Zabad (9:21) mentioned in Ezr. 10:27, the sons of Shimhi (8:19).—3. The "Shipnirite," David's officer over the wine-bearing grapes (27:27).—4. Son of Asaph the minstrel (Ne. 11:17); = Zechar (12:35) and Zicri (1 Chr. 9:15).

Zabdiel.—1. Father of Jashobeam (1 Chr. 27:2).—2. A priest; "son of the great men" (1 K. 4:14; Hagg. 1:14).—3. An Arab chief who put Alexander Balas to death (1 Mac. 11:17; Josephus, 13:13, iv. 8).

Zabud, son of Nathan (1 K. 4:5). He is described as a PRIEST (A.D. principal officer), and as holding at the court of Solomon the position of "king's friend," held by HUSIA the archivist at David's.

Zab'ulon, the Gk. form of ZEBULON (Mt. 4:13, 15; Rev. 7:8).

Zacca'i. Of the sons of Zacca'i, 760 returned with Zerubbabel (Ezr. 2:29; Ne. 7:14).

Zaccheaus, the Gk. form of Zacca'i (pure), which is found in Ezr. 2:9 and Ne. 7:14; the chief taxgatherer at Jericho at the time of our Lord's last visit, on His way up to Jerusalem (Lk. 19:1) our only source of information. Zaccheaus was doubtless a Jew ("son of Abraham," ver. 9), and well-to-do; Jericho being the centre of a district which brought in large
ZACHARIAS. 1. Father of Shamma the Reubenite spy (Num.13:4).—2. A Merarite Levite, son of Jazaniah (1 Chr.24:27).—3. (25:10; 11:17; 15:38) = Zabdi, 4. = Son of Imri; he assisted Nehemiah in rebuilding the city wall (Ne.3:2).—5. A Levite, or family of Levites, who signed the covenant (10:12).—6. A Levite, father or ancestor of HANAN, 8. 12:1.—7. (R.V. Zechariah).—1. Son of Jerobom II, 14th king of Israel, and the last of the house of Jehu. There is a difficulty about the date of his reign. Jeroboam died in the 27th year of Uzziah and it is stated that Zachariah came to the throne in Uzziah's 38th year (2 K.15:59), and accordingly Ussher asserted an interregnum of 13 years between Jeroboam's death and Zachariah's accession, during which the kingdom was suffering from the anarchy of a disputed succession; but this is doubtful. [Chronology.] Zachariah's reign lasted six months. He was killed in a conspiracy, of which Shallum was the head, and by which the last year of Uzziah was accomplished.—2. The father of Abijah, or Abijah, Hezekiah's mother (2 K.18:2).

Zacharias's. 1. (1 Esd.1:8) = Zechiah, 27.—2. In 1 Esd. 1.15 Zacharias occupies the place of Heman in 2 Chr.35:15.—3. (1 Esd.5:8) = Azariah, 20.—4. (6:1,3,7) = Zechiah, 1. of interest. (8:30) = Zechiah, 2. (8:37) = Zechiah, 9.—7. (8:4) = Zechiah, 10.—8. (9:27) = Zechiah, 11.—9. Father of Joseph, a leader in the war under Judas Maccabaeus (1 Mac.5:18,36).—10. Father of John the Baptist (Lk.1:5).—11. Son of Barciah, who, as our Lord says, was slain between the sanctuary and the altar (Mt.23:25; Lk.11:51). The reference here is to the murder of Zachariah, 6. Some difficulty is caused by the designation "son of Barciah" in St. Matthew. The Zachariah of 2 Chr.24:20 was son of Jehohada. Zachariah the son of Barciah is the prophet. There may be a confusion between the two on the part of Matthew or of a later writer. The</p>
ZALMONAH

Zalmonah (Num.33:11), an unknown site S. of Mount Hor. [c.r.c.]

Zalmunna, one of the two "kings" of Midian slain by Gideon (Judg.8:22-21; Ps.83:11). [Zalmuh, Deut.]

Zam bis (1 Esd.9.31) = Ammah, 5.

Zam bari (1 Mac.2.26) = Zimki, 1.

Zam'oth (1 Esd.9.28) = Zattu.

Zammunims (properly Zamzummim). The inhabitants of the land subsequently occupied by the Ammonites were Rephaim, a giant race called by the Ammonites Zammumim (Deut.2:20). An Arab word zamzamah means a distant noise, and zizim is used in that language for the noise the spirits or jinni make at night in the desert. Perhaps therefore the word was employed to indicate the ghosts of the old giant inhabitants which still haunted their ancient homes. This is, however, only a conjecture. [E.F.J.-J.]

Zanoah — I. In the skēphēla (Jos.15:34; Ne.11:30), named in the same group with Zareah and Jarmuth. Now Zanū’a, a ruin 2½ miles W. of S. of Hebron. [Zamna, 2.] A town in the mountains (Jos.15:66). Now Zānūta, a ruin 12 miles S.W. of Hebron. In 1 Chr.4:48 Jeeluthiel is said to have been the "father" or founder of Zanoah. [c.r.c.]

Zaphnath-panaaeh (R.V. correctly Zaphnath-paaneah; Gen.41:43). A name given by Pharaoh to Joseph after he had explained the meaning of the king's dreams. It is the last of the dignitaries bestowed upon him. This Egyptian name has been variously interpreted, the interpreters seeking to find an absolute correspondence between the Egyptian and the Heb. letters. The transcription which is most satisfactory in that respect is zat ⟨p⟩aanaeh, "the god speaks and he lives." To this form, from which conclusions have been drawn as to the age of the text of Genesis, there seem serious objections: it is absolutely unmeaning here, quite out of place in the text, and has no connexion whatever with what precedes. Another explanation later on is, "the nourisher of the land, who gives life," but this description seems rather premature, as Joseph had not yet done anything for the country. The present writer believes that these words are not a proper name, but a title—viz., Thgs n paankh, the head of the Paankh, the sacred college of the learned men and hierogrammatists to whom Joseph had just proved superior. This head priest is sometimes seen holding a roll and marching at the head of a procession of the magicians. [t.en.]

Zaphon (northand: Jos.13:27), a town of Gad, in the Arabah, or Jordan Valley. The Jerusalem Talmud (Shabath iv. 2) renders the name Jeftath, in accordance with the Aramaic of Josephus. Giblad, which Josephus mentions, with Gaba-ka, as the strongest fortress near the Jordan (1 Wars iv. 2; see 13 Ant. xiii. 6, 14 Ant. v. 4). This site is on the Yarmuk River, 2 miles N. of Gadara, and thus on N. border of Gad. The name Hamah here applies to a "lost spring" or spring of salt water. On the N. is a run on a basaltic precipice, it is called el Mukhah (the little hiding-place); and the Heb. caphon also means "hidden" as well as "north." See Schumacher, Northern Arabia, p. 91. [c.r.c.]

Za ra (Mt.1.3) = Zerah, 2.

Zar'aces, brother of Josueh, or Jehoahim, according to the old Targum, accord. to the LXX, he was the son of Gadah. [Zaraa, Deut.]

Zara'ah (Gen.38.30:46.12) = Zerahiah, 2.

Zareath, Zareathites, The (Ne.11:29; 1 Chr.2:53). [Zorah.]

Zarephath, a town which was the residence of the prophet Elijah during the latter part of the drought (1 K.17:9, 10). Beyond stating that it belonged to Zidon, the Bible gives no clue to its position. Josephus (8 Ant. xiii. 2) says that it was "not far from Tyre. He, in fact, lived between them." Jerome says (Onomasticon, "Sarepta") that it "lay on the public road"—that is, the coast road. Both these conditions are implied in the mention of it in the itinerary of Paula by Jerome, and both are fulfilled in the situation of the modern village of Surafend, with ruins that extend for a mile or more, and fragments of columns, pillars, and other architectural features. In N.T. Zarephath appears under the Gk. form Sarepta. This place is noticed in an Egyptian papyrus of 14th cent. B.C. It was taken by Sennacherib in 702 B.C. [c.r.c.]

Zaretan (Jos.3:10). Zarta'nah (1 K.4.12). Zarthan (1 K.7.49), all rendered Zaribh or Zoribh, for Zorathan. The place was "beside" the city Adom, and Solomon's fifth district included the district of Beth-shean "to Zorathan," below Jezreel. There were clay lands in the Jordan Valley between Succoth and Zorathan. It may be suggested that the name means "the great or lofty rock," and thus applies to the conspicuous peak of Qarin Jaribah—a landmark in the Jordan Valley W. of the Dammiet ruin. [Adam, C.vt.]

Zareth-shahar (Jos.13:10). A place in Moab described as being "in the mouth of the valley" (hār khā‘emey). [Moab.] The name means "a place perhaps to be rendered "black." There is a very remarkable black basalt rock, rising between white limestone and red sandstone cliffs, on S. side of the Zerga-Main Valley. [Nahaliel.] [c.r.c.]

Zarbites, The, a branch of the tribe of Judah, descended from Zerah the son of Judah (Num.26:11, 20; Jos.7.17, 13; 1 Chr.27.11, 13).

Zartanah, Zarthan. [Zaretan.]

Zath'oe (R.V. Zatho'ees). The children of Zatho'ees (1 Esd.8.32), i.e., Zattu (Ezr.2.8; Ne.7.13), returned with Zerubbabel. The name Zattu has been omitted from the Heb. of Ezr. 8.5. [Zathu.]

Zath'hi (1 Esd.5.12). Zathhu (Ne.10.14), or Zattu, a family of laymen who returned with Zerubbabel (Ezr.2.8; Ne.7.13). Some of them married foreign wives (Ezr.10.27), and the head of the family joined in scaling the covenant (Ne.10.14).

Zavan (1 Chr.1.42) = Zavan.

Zath'hu (1 Esd.5.12). Zathhu (Ne.10.14), or Zattu, a family of laymen who returned with Zerubbabel (Ezr.2.8; Ne.7.13). Some of them married foreign wives (Ezr.10.27), and the head of the family joined in scaling the covenant (Ne.10.14).

Zavan (1 Chr.1.42) = Zavan.

Zealots, a Jewish sect very prominent in the pages of Josephus, who says that their
opinions agreed in all points with the Pharisees', but they maintained their views with fanatical zeal. In the Talmud they appear as the followers of Abba Sira; the latter part of the narrative being an obvious attempt to adapt the term siceris to Heb. usage. They are represented as eager for war with the Romans. The Talmud credits them with destroying the stores of wheat in Jerusalem, to force their fellow citizens to join in resisting the enemy—in order to force resistance, destroying the means of living. Josephus attributes their rise to Judah of Gamala. They may have assumed the name in his time, but the party (with all its fanaticism) existed long before the "days of taxation." The "robbers" against whom Herod made his early expedition (Josephus, 14. Ant. ix. 2, 1 Wars x. 5) were really "Zealots." The "Sicarii" seem to have been the extreme wing of the "Zealots." The history of Italy and Ireland show how readily (among an excitable people) patriotism develops assassination. How far the "Zealots" deserved the designation "robbers," which Josephus applies to them, may be doubted. One of the apostles was supposed to be a member of that party, called by him "the Canaanite." If so (A. V.; but R. V. "Canaanite"), from gând, "to be jealous." This must have represented an earlier phase of his spiritual development. The followers of the Egyptian referred to in Ac. 21.38 were probably "Zealots"; so also (not improbably) Barabbas and the "Thieves" that were crucified with our Lord. The statement of Luke (11.12), that "the kingdom of heaven suffereth violence, and the violent take it by force," may refer to the means by which the "Zealots" endeavoured to realize the kingdom of heaven as they imagined it. [R.E.B.T.]

Zebadiah.—1. 2. Benjamites of the sons of Zebah (1 Chr. 8.17) and of Elpaaz (8.17). One of two sons of Jeroham of Gedor who joined David at Ziklag (12.7).—4. Son of Asahel the brother of Joab (27.7).—5. Son of Michael of the sons of Shephatiah (Ezr. 8.8).—6. A priest of the sons of Immer who had married a foreign wife (10.20).—7. Third son of Meshelemiah the Keverite (1 Chr. 27.15).—8. Son of Jehoshaphat to teach the law (2 Chr. 17.3).—9. Son of Ishmael and ruler of the house of Judah in the reign of Jehoshaphat (19.11).

Zebah, one of the two "kings" of Midian who appear to have commanded the great invasion of Palestine, and who finally fell by the hand of Gideon himself. He is always coupled with Zalmonn, and is mentioned in Judg. 8.5-21, Ps. 83.11. While Oreb and Zeeb, two of the inferior leaders of the incursion, had been slain, with a vast number of their people, by the Ephraimites, W. of the Jordan, the two kings had succeeded in making their escape through Gilead, to Kadesh-barnea (8.21), but the "Gibeonites" (hyenas) lay doubless high up on the Hauran. Here Gideon overtook them with the 15,000 left of their army, who, entirely unprepared for his attack, fled in dismay, and the two kings were taken. Gideon took them back down the long defiles leading to the Jordan. They returned by way of Gibeon to Edom, but on the way lay Ophrah, his own native village—Gideon asked, "What manner of men were they which ye slew at Tabor?" Up to this time the kings may have believed that they were reserved for ransom; but these words once spoken, they can have had no doubt as to their fate. They met it without fear or surprise, making one request alone—that they may die by the hand of the hero himself—"and Gideon arose and slew them."

Zebaim'. The sons of Pochereth of ha'ebhidyim are mentioned in the catalogue of the families of Solomon's slaves, who returned from the Captivity (Ezr. 2.57; Ne. 7.59). Zebaim means "gazelles" [RoE], and stands (with other points) for Zeborim in Gen. 10.19. [C.R.C.]

Zebedeo, the father of the apostles James and John (Mk. 1.19), and the husband of Salome (Mk. 15.40, compared with Mt. 27.56). He had a fishing-boat and servants, and used to work as a disciple of the Baptist, as they were; though there is no actual evidence that he became a Christian. The name (which is of Heb. origin, and means "the gift of Jehovah") is found in slightly different forms elsewhere in the Bible (e.g. Zebediah and Zabdiel).

Zebina', one of the sons of Nebo, who put away his foreign wife (Ezr. 10.43).

Zeboim, Zeboim (Gen. 14.2, 8). Zeboim represents in A. V. two different Heb. words. (1) chôthim (Ho. 11.8), cbhâyim (Gen. 10.19, Deut. 29.23), one of the Cities of the Plain, always mentioned next to Admah. The site is unknown. (2) chôthim (rSAm. 13.18; Ne. 11.34), the name apparently of two distinct places, and meaning "hyenas." In the first-cited passage the Philistine bands are said to have turned "the way of the border that looks on the ravine (ge) of the chôthim." This may refer to the old road from Ophrah to the Jordan Valley, which descends E., opposite a ravine called Shukh ed chôth, "the ravine of the hyenas." Zeboim noticed with towns N. of Lydda, in Nehemiah, has apparently no connexion with this, and the site is unknown. [C.R.C.]

Zebudah, daughter of Pedaiah of Rimmon and mother of king Jehoiakim (2K. 23.36).

Zebul, the chief man (A. V. ruler) of the city of Shechem who aided himself and hired servants with Abimelech against Gaal (Judg. 9.22-41).

Zebulonite, this form of the ethnic name is applied only to E'lon, the one judge produced by the tribe of Zebulun (Judg. 12.11, 12).

Zebulun', the tenth son of Jacob, and the sixth (and last) son of Leah (Gen. 30.20). The name is (in A. V.) explained to mean "dweller in tents," but the Gr. version renders it "lay doubtless high on the Hauran." Here Gideon overtook them with the 15,000 left of their army, who, entirely unprepared for his attack, fled in dismay, and the two kings were taken. Gideon took them back down the long defiles leading to the Jordan. They returned by way of Ophrah to Edom, but on the way lay Ophrah, his own native village—Gideon asked, "What manner of men were they which ye dwelt at Tabor?" Up to this time the kings may have believed that they were reserved for ransom; but these words once spoken, they can have had no doubt as to their fate. They met it without fear or surprise, making one request alone—that they may die by the hand of the hero himself—"and Gideon arose and slew them."

Zebulon, Zebulon is said to dwell at the "haven [toph] of the sea" (Gen. 49.13); perhaps referring to Haifa, the seat of Ptolemy Philadelphus of Egypt when he expressed, "his border unto Zidon," may be explained by the fact that, in early times, Zidon claimed all the shore
lands even S. of Carmel; and the shore of the bay of Acre seems to have been disputed with Israel in later times also. In the desert, Zebulun is the fourth largest tribe, under its chief Eliah (Num.1:31,2:7,7:24,10:16), the spy chosen from it being Gadriel (13:10). There were three clans from Zebulun's three sons (Gen.46:14; Num.26:26,27). In the blessing of Moses the tribe is coupled with Issachar, as assembling either on Tarok or some other "mountain" (Deut.33:18,19), and as possessing the "abundance of the seas, and treasures hid in the sands." Though Zebulun did not expel all the Canaanites (Judg.1:30), the tribe is praised for its warlike prowess (Judg.4:6,10, 5:18; cf. 1Chr.12:33), and the expression "pen of the writer" (Judg.5:14), in the song of Deborah, is better rendered "the marshal's staff" (R.V.). The ancient assembling of Zebulun, with other tribes, at Jerusalem (1Sa.6:27) was followed by alienation from Judah, lasting after the fall of Samaria (2 Chr.30:6,10,11). In 9.1 refers to the Assyrian attack on the tribe in 734 B.C. The latest reference is in Rev.7:8, 14.

The Tribal Lot. This included about 300 square miles of hill and plain, with fine corn lands, in Lower Galilee. The N.E. and E. borders (Jos.19:19-24) adjoined Naphtali (see also Danasheth), and the S. border ran along the foot of the Nazareth hills from the Kison, E. of Jorkem. On the W. the shore plain was apparently disputed between Zebulun, Asher, and Sidon (Gen.49:13; Jos.19:26), Beth-Dagon being on the border of Asher and Zebulun (ver. 27). [C.R.C.]

Zebulunites, The (Num.26:27 only) members of the tribe of Zebulun.

Zechariah. I. (= Jehovah remembers.)

Biographical. The writer of the 11th book of the Minor Prophets makes his first appearance in the 8th month of the 2nd year of Darius (520 B.C.; see 1:1), and his last dated prophecy (7:1) brings us down to the 4th day of the 9th month of the 4th year of this king (518 B.C.). It ch. 9:14 are genuine, he prophesied still later, since 9:8,13,11,13,14,20 presuppose that the temple is in existence, and 9:13 very possibly refers to the great battles of the Greeks with the Persians. As the first part (1-8) shows his interest in the building of the temple (1:6,3,7,4,6,8,11,3,9), doubtless the Zechariah who, side by side with Iddo, urged on the building of the temple (Ezr.5:1, 6:14) was the prophet. Zechariah is called the son of Iddo in Ezra, and in Zech.1:17 the son of Berechiah and grandson of Iddo (but there may be a confusion with 18:2, cf. an actual one in Mt.23:35 with 2 Chr.24:20); but in the genealogies, individuals are often passed over [Genealogies], and Berechiah may have been left out in Ezra as of small importance, or as having died early. If the grandfather came back with Zerubbabel in 536 B.C., and if the grandson in the next generation took his place without any break as the head of a priestly family (Ne.12:4,16), Zechariah must have been still a young man (Zech.2:4) in 520 B.C.; but ecclesiastical writers make him return from Chaldea a long time earlier, ascribe a great age to him at the time of his death, and say he was buried close to the grave of Haggai. We are not, however, in a position to verify this, and the statement in a codex of Epiphanius that in the time of the Judaean king Joash he was killed between the temple and the altar is another instance of confusion with 2 Chr.24:20 ff.—The Book. As there is at present uncertainty in the critical judgment with regard to the last six chapters, and as the first part refers only from the second, it will be well to treat them separately. I. Three dated sections stand out from the rest of the first section (1-8). (1) 1.1-6 contains an admonition to the people, based upon the history of their fathers, whose contempt for the word of the earlier prophets did not go unpunished. (2) 1.7-6.15, eight successive visions closely connected in their symbolism. In the construction of these visions, which are specially interpreted by an angel, (a) there is a break after the fourth, indicated in 4:1; (b) the 2nd and 3rd, 6th and 7th visions are nearly related to one another; (c) the 4th vision is distinct first; (d) the 4th and 5th visions are not without reference to one another, and together form a point of departure for the symbolism of 6.9ff. The visions are, 1st, the horsemen before Jehovah (1.8-17), 2nd, four horns and four smiths (1.18-21, R.V.); 3rd, the man with the measuring line (2.1-5); 4th, the grace bestowed upon the high-priest before Jehovah (3.1f); 5th, the golden candlesticks between the two olive-trees (4.1ff); 6th, the flying roll (5.1-4); 7th, the woman in the ephah (5.5-11); 8th, the departure of the chariots (6.1ff). All are favourable to Israel (1.13). In the symbolic action of 6.8ff. the prophet is hidden behind the head of the high-priest Joshua with crowns (plur., as in Jos.31,60) constructed from the gifts of the exiles, and Joshua (as in the 4th vision, 3.8ff.) is set forth as a type of the Messiah, and the Messiah's work itself is indicated with a clear reference to Deut.6.1ff. Probably the 7th's symbolical building of the temple in a spiritual sense. But (as already in the 5th vision) Joshua
and Zerbabel symbolize the uniting of the high-priestly and the kingly authority, it follows that both are combined in the Messiah, whose kingdom thus gains a universal significance. The same idea occurs in Je.33:17ff., 22,30.21, where "I will cause him to draw near" is the expression for Levitical or priestly service, see Num.16.5, and in Ezk.21.25ff.[30 ff., 45.22 ; see Messianische Erscheinungen, pp. 320ff., 354 ff., and art. EZEKIEL in this Dict.] The explanation just given that Joshua alone is crowned is justified both by the text and by the clear reference to Zech.3.8ff. The Messiah is called the "scion" (3.8,6.12 ; A. V. branch), which expression is taken from Is.4.2 ; Je.23.5ff.,33.15ff. (3) In 7,8 Zech.2ff. makes an answer in the spirit of the earlier prophets to the question asked of the priests and prophets, whose offices he united in his own person, as to whether in the fifth month, on the anniversary of the burning of the temple, there should be a general fast and lamentation. He says that location of Jehovah does not lie in what disregards of His graciousness led to the Captivity. But now He is become once more favourable to His people; He dwells again in Zion, works wonders for and blesses them, and encourages them to rebuild His temple. Israel must accordingly keep His commanding word and bring the day of the fast, the feast-days, and even the heathen, if they will resort to Jerusalem to seek Jehovah.—Characteristics. This part of the book is conspicuously dependent upon the "earlier prophets" (see Zech.1.4,7.7,12). Cf., e.g., 2.8ff. with Is.49.19ff.; 3.8 and 6.12 with Is.4.2, Je.23.5f.,33.15ff.; 8.1-3 with Ezk.2.9f.; 6.13 with Ps.110.3,4; 8.4 with Is.65.20; 8.10f. with Is.65.22ff.; 8.20-23 with Mi.4.2, Is.2.3, Je.31.6ff. But, speaking generally, the manner in which he works up the ideas of earlier prophecies is quite independent. It is usually inferred, from his strong tendency to introduce the ministry of angels, that his idea of the divine nature is more profound than that of his predecessor. He himself takes up His residence in Zion, and speaks directly with Zechariah (e.g. 1.1ff., 7ff.), and that frequently even in the midst of the visions. The fact that an interpreting angel gives the meaning of the visions by no means implies that these visions were simply mediated by the angel and not actual, any more than do the relatively large number of the visions (cf. Am.7ff., where are five visions). The apocalyptic significance of Satan (Zech.3.1ff.) has not yet passed out of mind. The kingdom of God is conspicuously distinct from the kingdoms of this world, and yet in such a way that the universal bearing of the historical plan of salvation has its place (2.1ff.[1ff.],6.15,8.20 ff.). All attempts to make political disturbances the occasions of the visions are discredited by the first, according to which the world is at rest. The chief purpose of these chapters, as it was the chief mission of Zechariah himself, lies in the stimulation of a dispirited generation to their task of building the temple, and in keeping away doubts by promises, and so preserving national stability during the days of small beginnings. II. In ch. 9-14 the Syrians, Phoenicians, and Philistines are threatened, while in Israel the King of Peace makes His entry riding upon an ass. The people of God have to wage a long war against (Javan, Green), a they overcome. Israel returns from exile; the power of the world is overthrown. The prophet tends the flock with two shepherd's crooks ("grace" and "union"), dismisses three shepherds in a month; on account of the behaviour of the people, breaks the crook of grace, which signifies the covenant of God with the people and also the crook "union" (i.e. the brotherly relation of Judah and Israel), and he himself is paid off with 30 pieces of silver. Over the foolish shepherd, whom the people now support, rings out a wele. Attracted by enemies, Jerusalem is delivered. The house of David and the dwellers in Jerusalem lament that they pierced God, as it is left to us to understand, in the person of Him Whom He sent. The guilt of the people is taken away, the worship of idols and prophecy are rooted out (12-15.6). The shepherd of Jehovah (15.7ff. in which he is spoken of, and the failure of any reasoning on the verse, render the view, frequently held since Ewald, that he is the foolish shepherd of 11.15ff., impossible) is smitten; the sheep are scattered (13.7); only the last third, chosen out from the rest, remains God's people. By a Parthian assault on Jerusalem, the city is taken; then, however, promises of deliverance, Jerusalem is raised up on high; the land becomes a plain; a living fountain issues from Jerusalem; a plague smites the hostile peoples; those saved are converted and build festal tabernacles. In Jerusalem the difference between profane and holy disappears (13.7-14).—History of the Criticism of 9-14. In this section we find no mention of the author or the time of the several prophecies, no visions and no allusion to the circumstances of the temple building. Angels retire into the background, yet see 14.5. Ch. 9 introduces the most elevated poetry, whereas the first part of the section is more prosaic. It seems, however, that Zechariah took over the symbolic manner of the first part recus. The first objection, however, does not come from such internal evidences, but from the fact that 11.13 is cited by Mt.27.51 as a prophecy of Jeremiah (so Mede). Since the time of Archibp. Newcome it has been usual to ascribe 9-11 to the time before the war with Syria and Ephraim (c. 755 B.C.), and since the time of Berthold, following Mede's hypothesis the Zechariah, son of Jeberechiah, mentioned by Is.8.2 has been frequently supposed to be their author; and 12-14 have been assigned to the beginning of the 6th or the end of the 7th cent. B.C. So, even now, König, Strack, and von Orelli. Kuenen assigns an origin before the Exile for 9-11, with post-Exilic redaction, and supposes 12-14 to have arisen c. 400 B.C. Baudissin and Driver take a similar view. On the whole, however, there is at present an increasing disposition to refer all these chapters to later times. Eichhorn a long time ago had considered that a part of these chapters belonged to the time of Alexander the Great. Stade (Zeitschrift für A. T. Wissenschaft, i. and ii.) relegated 9-14 to the times of Alexander's successors; Cornill
followed him, whereas Marti holds that they originated in 160 n.c. Again, in opposition to Stade, Cornell, and Marti, who allow one author to have composed these chapters, Nowack finds four, and, following Flügge, breaks up the prophecy into nine parts, though he dates them differently from Flügge. On the other hand, Hävernick, Keil, Kohler (in his commentary and in Hertzog's Real-encyc.), "Zechariah"), Lange, Bredenkamp, Hengstenberg (in his Christology and Beitragte i.), hold very definitely that these chapters form a unity and that Zechariah himself wrote them, which is also the opinion of the writer of this article.—A Critical Estimate of these Opinions. The fact that criticism starts from Mt.27.6.f. and results in hypotheses the most widely different and inconsistent with each other should give us pause. Although the subject-matter offers difficulties enough in itself, so that long ago the Fathers deplored the obscurity of this book, the decisive points of the context are in more general region. The question is, do such verses as 11.4.f. to 215.8.f. or to Lysimachus, Jason, or Menelaus; 11.15.f. to Pekah, Menahem, Menelaus, or Alcimus; 12.10 to Urijah, Jechonias, or Me'obher (9.13) or are we to explain them as Messianic? Is it possible for a Zechariah to prophesy the war with Javan (Greece) (9.13)? This supposed impossibility is the principal argument for bringing these chapters down to the Gk. period. But at a time when Assyria was the ally of Judah, Isaiah (7) foresaw severe conflicts with them; and when the ascendency of Babylon was just beginning, it is forthwith brought into the horizon of prophecy in Mt.4.10 and Is.39.6. We may similarly regard this prophecy, especially if we may suppose that Zechariah outlived the battles of Marathon (490 n.c.) and Salamis (480 n.c.), may do so in a more general region. The following passages in the two parts of Zechariah may also well be compared: 2.10—14 with 9.9; 2.9—11(3.15), 4.6, 15 with 11.11; 3.9, 4.10 with 9.1—8, 12.4; 4.7 with 14.10. The northern kingdom is alluded to not only in the second part, but also in 8.13. The late date of 9—14 is further excluded by the closing of the prophetic canon, which we have reason to assume took place earlier. [CAXON of O.T.] In the first part naturally, as in Haggai, encouraging prophecies occupy the foreground, and in the last, the further fortunes of the kingdom of God follow with observer delineation. As an instance of many characteristics in common with the earlier prophets, we may especially compare Ezk.38.—Quotations in N.T. The following passages are taken as Messianic: Zech.9.9 (Mt.21.4, Jn.12.15); 11.12.f. (Mt.27.9f.); 12.10 (Jn.19.37; Rev.1.7); 13.7 (Mt.26.31; Mk.14.27; Jn.10.30,16.32). With 13.1 compare the baptism of John and of Christ. The reading of Jeremiah for Zechariah in Mt.27.9f. is either an error of memory, similar to that in the Sinaic MS, and some cursives of Mt.13.35, where Isaiah should be read Asaph, or, since this is improbable in a place where an exact Messianic reference is given, it may be a combination of two passages, e.g. Jc.18.21f. and the allied message of ch.19 may be set side by side in memory with Zech.11.12f. (cf. Mk.1.2f., in which Mal.3.1 and Is.40.3 are similarly conjoined). [Potter's Field; Zacharias, 11.] Other persons of the same name are of frequent occurrence, especially in the tribe of Levi. With regard to the confusion of these names (touching also the question of the tribe of Judah of this time), see Zahn, Geschichte des neuest. Kanons, ii. 695, 711f., 776 f., also Berendt's Studien über Zacharias-apokryphen und Zacharias-legenden (1895).—2. Son of Meshelemiah, a Korhite, and keeper of the N. gate of the tabernacle of the congregation (1 Chr.9.19).—3. (9.37) = ZACHER.—4. A Levite who ranked in the second order in the temple band as arranged by David, appointed to play "with psalteries on Alamoth" (15.18,20).—5. A prince of Judah in the reign of Jehoshaphat (2 Chr.17.7).—6. Son of the high-priest Jehoiada, in the reign of Josiah (2 Chr.34.12).—8. The leader of the sons of Phares and—9. of the sons of Bebai, who returned with Ezra (Ezr.8.5,11).—10. One of the Levites who was in council at the river Ahava (8.16). He stood at Ezra's left hand when he expounded the law to the people (Ne.8.4).—11. One of the family of Elam, who had married a foreign wife (1 Ezr.10.26).—12. Ancestor of Athaiah, or Uthai (Ne.11.4).—13. A Shilonite, descendant of Perez (11.5).—14. Son of Pashur (11.12).—15. The representative of the priestly family of Iddo in the days of Joiakim (12.16).—16. One of the priests, son of Jonathan, who blew with the trumpets at the dedication of the wall (12.35,41).—17. A chief of the Reubenites at the time of the captivity by Tiglath-pileser (1 Chr.5.7).—18. One of the priests who accompanied the ark from the house of Obed-edom (15.24).—19. Son of Isshiah, a Kohathite Levite (24.25).—20. Fourth son of Hosah of the children of Merari (26.11).—21. A Manassite (27.21).—22. Father of Jabez (2 Chr.20.4).—23. Son of Obed-eshophat (21.2).—24. A prophet in the reign of
Uzziah, who appears to have acted as the king's counsellor (28.5).—25. The father of Abijah, or Abi. Hezekiah's mother (29.1).—26. One of the family of Asaph in the reign of David (29.15).—27. One of the number of the singers in the reign of Josiah (35.8).—28. The son of Jeherechiah, who was taken by the prophet Isaiah as one of the "faithful witnesses to record," when he wrote concerning Maher-shalal-hash-baz (Is.8.2). Possibly the same as 25 or 26. [ZACHARIAH.] [W.M.]

Ezek.15.1-7) [w.m.] in the land of Israel (Num.34.8). In Ezek.17.15 this border seems to follow the trade route to Tadmor E., passing N. of Riblah, "as men go to Zedadd." The site is no doubt the present Sūdād, on this route, E. of the Anti-Lebanon. The N.E. corner of the boundary lay W. of this place, but on that side the mountain is a precipice. [HAEZER; 2; AN.] [C.R.C.]

---

Zedekiah's (1Esdr.1.46) = king ZEDAD. Zedekiah.—I. Son of Chenanaah (1K.22; 2Chr.18). Benhadad II. had not fulfilled his obligation, three years old, to restore Ramoth-gilead (1K.20.34). Ahab resolved to recover the city by force, and summoned Jehoshaphat to share in the enterprise. Jehoshaphat went to the Lord; and Ahab summoned the prophets, 400 men, who foretold success. Jehoshaphat was still dissatisfied; and Micaiah, son of Imlah, was summoned. In the interval Zedekiah, apparently the leader of the 400, using the prophetic method of symbol (cf. 1K.11.30; Is.20.2; Je.13.19-27; Joel.4.5), foretold that the horns of iron (horns being also the emblem of Ephraim, Deut.33.17), and declared: "Thus saith the Lord, With these shalt thou push the Syrians." The other prophets supported this prediction. Micaiah arrived, and, after an ironical promise of victory, plainly foretold disaster, and declared that God had sent a lying spirit into the prophets to lure Ahab to ruin. [MICAIH.] The incident is the first instance of a cleavage in the prophetic ranks. Despite Jezabel's Baal-worship, Ahab would seem still to have regarded himself as a worshipper of Jehovah. He summoned the prophets in response to Jehoshaphat's appeal (cf. 1K.20.14). He determined to have had Micaiah in disfavour not as a prophet of the Lord, but as a foreteller of evil; and Micaiah himself seems to have had no doubt but that Zedekiah was really inspired by God, inspired to lead Ahab to deserved punishment. The Biblical narrative scarcely makes quite clear why Jehovah's prophets were so completely satisfied. According to Josephus (8 Ant. xv. 4), Zedekiah discredited Micaiah, first by showing his seeming discrepancy with Elijah's prediction (1K.21.19), that the dogs should lick Ahab's blood in Naboth's field, and then by the challenge: "You shall soon know why he is a true prophet; for I will smite him, and then let him hurt my hand, as Jaden (8 Ant. viii. 5) caused the hand of Jeroboam to wither " (cf. 13.4); and, by the symbol of the horns, he completed the impression made on the two kings.—2. Son of Hananiah, one of the princes of Judah in the reign of Josiah (2K.21.19).—3. Son of Maaseiah; had apparently been carried with Jehoiachin to Babylon by Nebuchadnezzar. Jeremiah (29.21-23) in his letter from Jerusalem to the captives in Babylon, denounced him, with Ahab, son of Kolaiah, for vile conduct and for prophesying lies; and declared that their name and fate should become a byword and proverb. Since the death of the king of Judah (2K.21.17-25.7; 2Chr.36.10-20; Je.52.1-11, also Je.21, 24, 27-29, 32-34, 37, 38; Ezk.3-4; Josephus, 10 Ant. vii. 2-22. 2). Nebuchadnezzar had carried away Jehoiachin, the temple treasures, and 10,000 of the people. But, in view of Egyptian hostility, he could not leave Jerusalem.—4. Son of Hiah, and three forefathers. Jehoiachin's uncle on the throne, changing his name from Mattaniah to Zedekiah, and binding him by a most solemn oath (Ezk.17.13-18) "to keep the kingdom for him, and to have no league of friendship with Egypt (Josephus). The crisis demanded a ruler strong enough to sit still. Zedekiah rightly gauged the situation, insisting that Judah's sole hope lay in loyalty to Babylon. But Jeremiah was unable to dominate Zedekiah; and Zedekiah, a weak man of 21, could not cope with that strong national party in Jerusalem, which, despite recent defences, seemed to have no hope of Jehoiachin's restoration (Je.23.4). The fall of Nineveh had shaken the Syrian states. They could not see that Babylon's power was already firm, and Egypt impotent in face of it. They were eager for a coalition which, backed by Egypt, should break the Chaldean yoke. Judah also had reason to desire to end the national humiliation. Moreover, Josiah's death had been followed by an idolatrous reaction in Jerusalem (Ezk.8.11). Zedekiah was helpless. He is severely censured (2K.24.9,20; 2Chr.36.13; Ezk.17.13-18). But he repeatedly turned to Jeremiah for divine guidance, and tried to protect and obey him (Je.21.1,17; 37.1f; 38.10ff); only he was too weak, a mere puppet in the hands of his princes. For a time he kept his oath to Nebuchadnezzar. But both in Jerusalem and among the Babylonian captives, Judah's speedy deliverance was predicted (27.16,28.3). In his fourth year, Zedekiah, summoned by Tyre and Sidon were in Jerusalem to concert revolt (27.3). Zedekiah was summoned to Babylon to offer explanations and renew his oath (29.3,51.59). But his princes were confident of Judah's impregnability; within a year they forced him to send ambassadors to Egypt (Ezk.17.15); and in his 8th year an alliance was concluded with Egypt, Ammon and Tyre. It was equivalent to a declaration of revolt. In a year Nebuchadnezzar was established at Riblah; his generals quickly reduced the lesser fortresses of Judah, except Lachish and Azekah (Je.34.7); and on the 10th day of the 10th month of Azekah's 8th year, Jerusalem was invested (2K.25.7; Je.39.1; Ezk.21.2). The inhabitants now realized that only a miracle could save them (Je.21.2); they returned to the neglected covenant, and released their slaves (34.8,18). Then the siege was raised, while the besiegers turned against Egypt (37.7). The city seemed to be delivered; and the released slaves were reenslaved. But the Egyptians were forced to retire, and the siege was resumed. Zedekiah
was now powerless, able only to see Jeremiah by stealth; for the prophet's constant predictions of doom and exhortations to surrender were regarded as traitorous (38:4) and responsible for the many deserters (38:10). Every engine of assault was employed against the walls (Josephus), to repair which even the palace was demolished (Je.33:4). The princes offered a brave defence. But famine and pestilence raged in the city (52:6); the inhabitants were even reduced to cannibalism (19:6); and after 18 months the end came (Je.52:8). The Chaldean generals entered through a breach (39:3). Zedekiah with his family and a few attendants cut their way out. But they were seized near Jericho and brought to Nebuchadnezzar at Riblah. Zedekiah saw his children cut down. Then his own eyes were put out and he was taken to Babylon (52:8-11). The seeming discrepancy between Jeremiah (34:3) and Ezekiel (12:13) was explained. He was taken to Babylon; yet he saw it not. No more is known of him. [c.r.c.]

Zeeb. [O.R.E.B.]

Zel'lah (Heb., 'êlah'; Jos.18:28; 2Sam.21:25; 1Ch.27:26) son of Jerahim, where was the family tomb of Kish. The word means a "rock." It is notable that S. of Gibeah, by a cliff in a valley, there are five rude structures called Qubir el Beni Isra'il, explained to mean "graves of the children of Israel," which might be connected with the commerce in which Kimhi, Jonathan, and five others of the family were buried. See Sury. W. Pal. in. p. 101, for details. [c.r.c.]

Zelek, an Ammonite, one of David's guard (2Sam.23:37; 1Ch.11:39).

Zelophehad; son of Hezher, and a descendant of Manasseh (Jos.17:3; cf. 1Ch.7:11). Zelophehad came out of Egypt with Moses, and died in the wilderness without male heirs. His 5 daughters, just after the 2nd numbering, came before Moses and Eleazar to claim the inheritance of their father in the tribe of Manasseh. The claim was admitted by divine direction, and was expressly given as a general precedent in such cases in which, like Kimhi, Jonathan, and others, added that such heiresses should not marry out of their own tribe (Num.27:1-11,36; Jos.17:3-6). [Family; Tribe; Juree.]

Zeloto. [Canaanite; Zelomites.]

Zelzah (1Sam.10:2). Gesenius explained this word to mean "shade from the sun," as though the men bound by Saul were sitting in the shade near Rachel's tomb. The LXX. renders it "bounding along greatly." No place of the name is known. [c.r.c.]

Zemara'im (Jos.18:22), a town of Benjamin, possibly in the Jordan Valley, and perhaps represented by the ruins of Numrah, 4 miles N.E. of Jericho, near N.E. border of the tribe. Mount Zemaraim (2Ch.13:4) was in mount Ephraim. The site is unknown. [c.r.c.]

Zemarite, a Canaanite tribe (Gen.10:18) living at Zemar, in Phoenicia (cf. 1Ch.1:16). It is no doubt the Zamar mentioned in the records of Thothmes III. [Priv.etc.]. Strabo (Geog.16:2.23) speaks of him as "inhabitant of Numrah," at present called as N. of the Elath the Red Sea (see Rek-land, Pal. Illustr. p. 318), now represented by the ruin, Numrah, about 1/4 miles N. of the Nahr el Kebir in the plain. In the Amarna letters this city appears as an important place called Sumur, often mentioned as besieged and captured by the Amorites. [c.r.c.]

Zemira', one of the sons of Becher son of Benjamin (Gen.46:21).

Zen'an (Jos.15:37), an unknown town near Migdal-Gad (Zaanan) (Mi.1:11). [c.r.c.]

Ze'nas, a Christian, whom, with Apollos, Titus is hidden by St. Paul to set forward diligently on their journey (Tit.3:13). Zenas is described as "the lawyer," This may mean either (i) a secular lawyer, or more probably (ii) a doctor of the Jewish law. [A.C.D.]

Zephaniah.—1. The ninth in order of the Minor Prophets. All that is known of the personality of this prophet is contained in the first verse of his book. The fact that his genealogy is there, contrary to custom (cf. Is.1:1; Je.1:1; Ezk.1:3), carried back four generations, has led to the belief that the Hezekiah there mentioned as his ancestor is the king of that name, especially as the latter is not a common Heb. appellation. If this be true, it adds to the interest of 1.8. The writer's familiarity with the topography of Jerusalem and the name Jericho (6:1) indicates with sufficient clearness that he was a dweller in that city. (a) Analysis of the Book. This falls into three divisions. MINA-TORY (1:1-18). A terrible judgment is about to visit the whole earth, but especially the Jews—and more particularly still their rulers, Zedekiah and his family, and those indifferent to religion among them. Adm. (2:1-3). Let them repent while there is yet time to escape the doom which overhangs Philistia, Moab, Ammon, Cush, and Assyria. The Promise (3:8-20). The faithful must wait patiently till the judgment is consummated, when all the survivors shall serve Jehovah and rejoice. (b) Date. The title states that the prophecies of Zephaniah date from "the days of Josiah, king of Judah," and this is generally accepted, at least for ch. 1. Parts of the following chapters, however, have been disputed as being later additions. Thus Kuenen rejects chs. 2:8-11 and 3:20-24; and Wellhausen would cut out 2:8-11, and thinks ch. 3 was added later in two successive stages of vv. 1-7 and 8-20. Marti is still more drastic. Driver ascribes to Zephaniah, all except 2:7b, 11,5,9,10,13-20. It is generally agreed also that the book falls on the earlier side of the great dividing line of Josiah's reign, i.e., it dates from before the reading of Deuteronomy in 621. The references to idolatry, and the social and religious conditions of the people implied throughout the book indicate that Josiah's great reformation is still in the future. (c) Value. Zephaniah is important as giving us an insight into the social, moral, and religious conditions of his countrymen during this period, and as reflecting the effects of the religious syncretism which Manasseh fostered and Josiah swept away. Like Isaiah, Zephaniah lays stress upon the impending judgment, though he conceives of it as more universal and terrible than does the former; and in this connexion it is significant that the Messiah does not appear throughout the prophecy. The book is marked by a profound
moral tone and deep sense of sin. But apart from 2.1ff. he makes no call to repentance; the opportunity for that is past, and only judgment remains. [Bibliography same as for Haggai.—2. A Kohathite (1 Chr.6.36).—3. Son of Masseiah; succeeded Jehoiada as second priest in the reign of Zedekiah (2 Chr.21.1). He was opposed to the policy of Jeremiah, between whom and the king he acted as intermediary during the siege of Jerusalem by Nebuchadnezzar (2 Chr.21.1).—4. (Zech.6.10,14.) Father of one Josiah (=? 3.) [P.C.S.] Zepath' (Judg.1.17), a Canaanite town, otherwise called Hornah. S. of Arad. The name probably survives at the pass Nogah es Sīţâ (the hollow way of the white place), where the road from Arad descends towards Petra, 30 miles S.E. of Beer-sheba. [C.R.C.] Zephat'hah,' Valley of (2 Chr.14.10), a valley "at Mares̄hah." This seems clearly to be the great valley called Migdolah (valley of the Franks), which runs E. and S. from the vicinity of Mer'ash, and of Beit Ḥb̄rin, towards Hebron, being a highway from Philistia to the mountains. On N. side of this valley is the ruin Sīţah, which preserves the old name. [Mizpah, 31.] Zeph'i (Sept. [Zephi] or Zeph'o (2 Chr.38.11,15), a son of Eliaphaz son of Esau; an Edomite, "duke," or phylarch. Zeph'on', son of Gad and ancestor of the Zephonites (Num.36.15). Zer (Jos.19.33), a fenced city of Naph-tali, noticed with Ziddim, and other places W. of the sea of Galilee. The Jerusalem edition (Megilla 1.1) places it near Ziddim; but the site is unknown. [C.R.C.] Ze'rah or Za'rah.—1. A son of Reuel son of Esau; one of the Edomite "dukes" or phylarchs (Gen.36.13,17; 1 Chr.1.37).—2. Twin son with his elder brother Pharez of Judah and Tamar (Gen.38.30; 1 Chr.2.6; Mt.1.3). His descendants were called Zarhites, Ezrahites, and Izrahites (Num.26.20; 1 K.4.31; 1 Chr.27.8,11).—3. Son of Simeon (1 Chr.4.24), called Zohar in Gen.46.10; Ex.6.15.—4. A Ger-shonite Levite, son of Iddo or Adahia (1 Chr.6.21,11).—5. The Ethiopian or Cushite, an inscription discovered by Prof. Naville at Bubastis calls himself the conquerer of Palestine (cf. Higher Crit. and Mon. p. 362 f.). The composition of the army of Zerah (Cushim and Lubim; 2 Chr.16.8) closely resembles that of Shishak (Lubim, Sukkim, and Cushim; 12.9) and an inscription discovered by Prof. Naville at Bubastis himself the conquerer of Palestine (cf. Higher Crit. and Mon. p. 362 f.). The composition of the army of Zerah (Cushim and Lubim; 2 Chr.16.8) closely resembles that of Shishak (Lubim, Sukkim, and Cushim; 12.9) and an inscription discovered by Prof. Naville at Bubastis himself the conquerer of Palestine (cf. Higher Crit. and Mon. p. 362 f.). The composition of the army of Zerah (Cushim and Lubim; 2 Chr.16.8) closely resembles that of Shishak (Lubim, Sukkim, and Cushim; 12.9) and an inscription discovered by Prof. Naville at Bubastis himself the conquerer of Palestine (cf. Higher Crit. and Mon. p. 362 f.). —6. Of the Canaanites the writer of the book of Judges says (Judg.12.3,16,31). The Lubim or Libyans then formed the main part of the Egyptian army, the kings of the 22nd dynasty having been themselves of Libyan origin. [A.H.S.] Zerah'iah, a priest, son of Uzzi, and ancestor of Ezra (1 Chr.6.6,51; 15.32,36, Heb.); Ezra (2 Chr.31.1). Zer'ed, Brook (Deut.2.13,14; A.V. Zared in Num.21.12), the border torrent between Moab and Edom. It is apparently the present Wādy el Hāse, which flows into the Dead Sea from S.E. The modern name means "pebbly valley." [C.R.C.] Zereda' (1 K.11.26), a place apparently in mount Edrom, where Jeroboam I. was born. A probable site would be Șūrādah, a village 2 miles N.W. of Bethel. The LXX., in the passages added to the Heb. in ch. 11 and 12, reads Sarira both for Zereda and also for Tirzah (14.17). If correct, this would point to Sarra, a ruin 14 miles E. of Shiloh, which would suit the account of the visit of Jeroboam's wife to Ahijah at Shiloh. [C.R.C.] Zered'a'nah (2 Chr.4.17). [Zaretan-] Zererath' (Judg.7.22). The word apparently means "pebbles" (Arab. sarār). Some manuscripts read Zeredath; but the situation, between Abel-meholah and Beth-shittah, does not appear to fit with that of Zaretan (otherwise Zeredathah); and Zeredathah have been in the Jordan Valley near Beth-shean. The valley just N. of Abel-meholah ("Ain Helweh) is called Shērār, but this does not exactly represent the Hebrew. [C.R.C.] Ze'resh, the wife of Haman, who advised him to erect a gallows for Mordecai (Esth.5.10,14,6.13). Ze'reth, son of Ashur the founder of Tekoa, by his wife Helah (1 Chr.4.7). Zeni', one of the "sons of Jeduthun." in the reign of David (1 Chr.25.3). [Izr.-] Zeror', a Benjamite, ancestor of Kish the father of Saul (1 Sam.9.1). Zeruah', the mother of Jeroboam the son of Nebat (1 K.11.26); said in LXX. to have been a harlot (cf. A.V. a widow woman). Zerubbab'el (begotten of or in Babylon, or, better, seed of Babylon), the head of a tribe of Judah at the return from the Babylonish Captivity in the first year of Cyrus. His exact parentage is a little obscure, as he is called the son of Shealtiel (Ezr.3.2,8,5,2, etc.; Hag.1.11,12,14, etc.), and appears as such in the genealogies (Mt.1.12; Lü.3.27); whereas, perhaps by an error in the Mass. text of 1 Chr.3.19, he is represented as the son of Pedaiah, of the tribe of Simeon. If, however, he was heir to Shealtiel, or if Pedaiah had contracted a levirate marriage with Shealtiel's widow, the double ascription of parentage would be explained. Salathiel and Pedaiah were sons of Jehochain (Jeconiah; see 1 Chr.3.17), and thus descended from David through Solomon, according to Mt.1.12, St. Luke, however (3.27,31), makes the descent to be through Neri and Nathan. The history of Zerubbabel in Scripture is as follows: In the first year of Cyrus he was living at Babylon, and received from the king the office of governor of Judaea. In the Return he was the leader of either the first or second contingent of Jews, i.e. associated with the high-priest Jeshua in the subsequent administration (Ezr.3.2,8, etc.). He is probably to be identified with Shesh-bazzar. On arriving at Jerusalem, Zerubbabel's first care was to build the altar on its site, and to restore the daily sacrifice. Then he immediately set to work on the re-building of the temple. In the second month
of the second year of their return, the foundation was laid with all the pomp which they could command (Ezr.3). Opposition from the Samaritans impeded the work for sixteen years, besides a further two years' halt, because of an apathy of Zerubbabel and the rest of the people, who had been busy building costly houses for themselves. But in the second year of Darius Hystaspis (521 B.C.) the spirit of prophecy suddenly blazed up. The words of Haggai and Zechariah, like sparks upon tinder. Zerubbabel, zealously seconded by Jeshua and all the people, then threw his whole strength into the work. Further hindrances from the Samaritans were met by a successful appeal to Darius, who (on the authority of the decree of Cyrus, found at Ecbatana) enjoined Tahani and Shethar-boznai to assist the Jews with whatsoever they had need of at the king's expense. The work advanced so rapidly, that on the third day of the month Adar, in the sixth year of Darius, the temple was finished, and was forthwith dedicated with much pomp and rejoicing (Ezr.6.15ff.). The only other works which are apparently connected with Zerubbabel in canonical Scripture are the restoration of the temple of the Levites, and of the provision for their maintenance, according to the instruction of David (Ezr.6.18; Ne.12.7); the registering the return captives according to their genealogies (Ne.7.5); and the keeping of a passover in the seventh year of Darius. The apocryphal historian, which (as usual) Josephus (Ant.iii.2-8) follows, may be summed up in a few words, presuming (as an illustration of its apocryphal character) that it assumes (Esd.4.43ff.) that it was Darius (not Cyrus) who gave permission for the Return, and who restored the sacred vessels; and this, although the true account had been given in the previous chapter. The story told in 1 Esd.3.7 is, that on the occasion of a great feast made by Darius on his accession, three young men of his body-guard had a contest who should write the wisest sentence. That one of the three (Zerubbabel) writing, "Women are strongest, but above all things Truth is a victory," and afterwards defending his sentence with much eloquence, was declared by acclamation to be the wisest, and claimed for his reward, at the king's hand, that the king should perform his vow to rebuild the city and the holy house. Upon which the king gave him letters to all his treasurers and governors on the other side the river, with grants of money and exemption from taxes, and sent him to rebuild Jerusalem and the temple, accompanied by the families of which the list is given in Ezr.2 and Ne.7; and then follows, in utter confusion, the history of Zerubbabel as before given. Josephus has also another story (Ant.iv.49), not found in 1 Esd., of "Zerobabel" going on an embassy to Darius. [Gенеalogy о f J. C. [A.W.S.]

Zeruiah', the mother of the three leading heroes of David's army—Abishai, Joab, and Asahel—the sons of Zeruiah.' She and Abigail are specified in 1 Chr.2:16 as "sisters of the sons of Jesse"; an expression which seems to imply that they were not the daughters of Jesse (cf. 2 Sam.17.24, where Abigail is called the "daughter of Nahash"). Of Zeruiah's husband there is no mention in the Bible. [N.C.N.

Zetham', son, or grandson, of Laadan, a Gershonite Levite (1 Chr.23.8; cf. 26.22).

Zethan', a Benjamite, son of Bilhan (1 Chr.7.10).

Zethar', one of the seven eunuchs of Ahaseurus sent to summon Vashti (Esth.1.10).

Zia', a Gadite (1 Chr.5.13).

Ziba', a servant of the house of Saul (2 Sam.9.2-12,16.1-14,19.17-24,30-31). [МЕФИСОТЕРИ]

Zibeon', father of Anah, whose daughter Aholibamah was Esau's wife (Gen.36.1). Although called a Hivite, he is probably the same as Zibeon, the son of Seir, the Horite, (Gen.20.24,29; 1 Chr.1.38,40).

Zib'im, a Benjamite, son of Shaharaim by his wife Hodesh (1 Chr.8.9).

Zibiah', a native of Beer-sheba, and father of Joash king of Judah (2 K.12.1; 2 Chr.24.1).

Zichri', (Ex.6.21.) Thus A. V. 1611. R.V., and some modern editions of A.V., but some wrongly read "Zithri," probably through a confusion with the Zithri of the following verse. Son of Izhar, the son of Kohath.—2. 3. Benjamites of the sons of Shobal, who accompanied Jehoram (27).—5. (Ch.9.15.). [ZANDI, 4.]—6. A descendant of Eliezer, the son of Moses (1 Chr.26.25.)—7. The father of Eliezer, the chief of the Reubenites in the reign of David (1 Chr.27.16).—8. Of the tribe of Judah, father of Amasa (1 Chr.17.16).—9. Father of Elisha-phiath (2 Chr.31.10). An Ephraimitic hero in the invading army of Pekah, king of Israel (28.7).—11. Father or ancestor of Job, 14 (Ne.14.9).—12. A priest of the family of Abijah, in the days of Joiakim, the son of Jeshua (12.17).

Ziddim' (Jos.19.35), a fenced city of Naphtali, W. of the sea of Galilee. The Jerusalem Talmud (Megilla l.1) identifies it with Kaphar Haṭṭa, apparently Ḥattin, on the plateau W. of Tiberias, a place famous for Saladin's defeat of the Franks in 1187 A.D. [C.E.C.]

Zildijah', a priest, or family of priests, who signed the covenant (Ne.10.1).

Zidon', Sidon, the ancient Sidonians. [SIDON.]

Zil'da, a father of Sidonians. [SIDON.]

Zif' (1 K.6.37). [MONTHS.]

Ziba', a family of Nethinim who returned with Zerubbabel (Ezr.2.13; Ne.7.16,11.21).

Ziklag.' This name seems to signify "the narrow place of the deep hollow." It was a town of Simeon, noticed by Horaeus (Jos.15.31. 19.5; Ne.4.30); but it seems doubtful if this site could have belonged to the king of Gath in Philistia, unless it was towards the W. of the territory of Simeon. The Ziklag which he gave to David as a dwelling-place must, however, have been at some distance from Gath, since the king did not know in what direction David's raid had been made (1 Sam.27.6-12), whether against the negeb of Judah, or towards Shear. When David left the Philistines near Jezerel (29.11,11), to "return to the land of the Philistines," he reached Ziklag "on the third day (30.1)." The distance must have been more than thirty miles, but David's force—travelling by the plains—was probably mounted on riding camels, which would easily traverse this distance in the time. The spoil of the Amalekites was sent from Ziklag to David's friends (30.26-31) in places where he and his
men were "wont to haunt"; and the cities noticed were all in the far S. of Judah, and of Simeon, including Horamah. The name of Zikklag has not been recovered. [C.R.C.]  

3. [Zipporah], mother of Tubah. She and Naamah; one of the two wives of Lamech the Cainite addressed in his song (Gen.4.19, 22,23).  

Zilpah', a handmaid given by Laban to his daughter Leah (Gen.29.24), who gave her to Jacob as a concubine; mother of Gad and Asahel (Gen.30.8, 12).  

Ziltha'(-i).—1. A Benjaminite, of the sons of Shimhi (1Chr.8.20).—2. One of the captains of thousands of Manasseh, which deserted to David at Zikklag (12.26).  

Zimmah'.—1. The name of a family of Gershonite Levites (1Chr.6.20-42).—3. Father (or ancestor) of Jeah, a Gershonite in the reign of Hezekiah (2Chr.29.12).  

Zimran', the eldest son of Keeturah (Gen.25.2; 1Chr.1.32). The Gk. form of the name, Ζημράμ, has suggested a comparison with ZZφάμ, the chief city of the Chinecodolpita, which dwelt on the Red Sea, W. of Mecca. Grotius finds a trace of it in the Zend word Zamt, a tribe of the intermont of Ararat.  

Zimri'.—1. Son of Saul, a Simeonite chief, slain by Phinehas with the Midianite princess Cozbi (Num.25.14).—2. King of Israel for seven days; originally the commander of half the chariots in the royal army. He gained the crown by the murder of king Elah, son of Baasha. But when a war, then engaged in the E. against Philistine region of Gibeoneth, heard of Elah's murder, it proclaimed its general Omri king, who immediately marched against Tirzah, and took the city. Zimri retreated into the royal palace, set it on fire, and perished in the ruins (1K.16.19). A son of Zerah, son of Judah (1Chr.2.6); perhaps = Zabdi, 1. A son of Jehoshaphat and descendant of Saul (8.36, 9.12).—5. In Je.25.25 "all the kings of Zimri" are mentioned with those of Elam and the Medes as those destined to drink of the cup of the fury of the Lord. It has been suggested that this Zimri may be identical with Zimran, which, however, is in W. of Judah, and engaged in a struggle with the E. of the Tigris, between Babylonia and Media, was called Zimri (otherwise read Namri), according to Assyrian texts. [H.C.B.]  

Zin, the desert close to Kadesh-Barnea. The name recalls the Akkadik Zinna, "desert" (Num.13.21, 20, 21.14, 33, 35, 34, 1; Deut.32.5). The ancient of Judah ran from S. end of the Dead Sea, by Zin to Kadesh, along the W. border of Edom. The most definite statement is in Num.33.36: "Zin which is Kadesh"; and Meribah-kadesh was "in the desert of Zin." (27.14). [C.R.C.]  

Zina'.—[Ziain.]  

Zin', [JERUSALEM]  

Zior', a town in the mountains of Judah (Jos.15.54 only). It belongs to the same group as Hebron. It is probably Si'air, a village 4½ miles N. of Hebron. [C.R.C.]  

Ziph, son of Jehaleel (1Chr.4.16).  

Ziph, the name of two towns of Judah.—1. In Judah, 2 miles E. of Hebron and 4 miles S. of Hebron. The site is unknown.—2. Named between Carmel and Juttah (Jos.15.55: 1Sam.23.1, 15, 24, 26.2; 2Chr.11.8). These passages show that it had near it a wilderness and perhaps a wood. In the Onomasticon it is placed 5 miles E. of Hebron. "The village," adds Jerome, "in which David bid is still shown." It is now Tell ez Zi'il, a ruin 4 miles S.E. of Hebron; and, 1½ miles to its S., the ruin Horaira may retain the name of the kores (or copse) of Ziph. The site looks down E. on the desert. [C.R.C.]  

Ziphah', son of Jecahleel (1Chr.4.16).  

Ziphims' ([Ps.54] title) or Ziphites' (1Sam.23.19, 26.1); inhabitants of Ziph, 2, who twice betrayed the whereabouts of David to Saul.  

Ziphion' (Gen.46.16) = Zephion.  

Ziphrites, The. [Ziphims.]  

Zizah', a point in the N. boundary of the Promised Land (Num.34.9). It occurs between Zedad and Hazar-enan. The site is unknown. [C.R.C.]  

Zippor', father of Balak, king of Moab (Num.22.2, 4, 10, 23.18; Jos.24.9; Judg.11.25).  

Zipporah', daughter of Reuel (or Jethro) the priest of Midian, wife of Moses, and mother of Gershom and Eliezer (Ex.2.21, 4.18-26). The only incident recorded of her was her circumcission of Gershom (4.24, 26). There seems no reason for identifying Zipporah, a Midianitess, with the Cushite (A.V. Ethiopian) woman alluded to in Num.12.11. [H.C.B.]  

Zithri' (R.V. Sethri), a grandson of Kohath (Ex.6.22). In the previous verse Zithri should properly be Zichri. [Zichri, 1.] [H.C.B.]  

Ziza', the place of rest by which the border of Moabites, Ammonites, and Meunim made their way up from the shores of the Dead Sea to the wilderness of Judah (2Chr.20.16 only; cf. 20). The Heb. ma'ádél hazzir (ascent of Ziz; see R.V.) suggests a connexion with HAZEON-TAMAR (Hasaseh), near ENOEIL, and thus with the Nogah, or hewn ascent from the shore of the Dead Sea, at the latter place. [C.R.C.]  

Ziza',—1. Son of Shiphi: a Simeonite chief in the reign of Hezekiah (1Chr.4.37).—2. Son of Rehoobam by Maachah (2Chr.11.20).  

Zizah', a Gershonite Levite, second son of Shimei (1Chr.23.11); called Zina in ver. 12.  

Zo'an, or Tanis, an ancient city situated in Lower Egypt. These two names are identified in all the seven references made to the city by the LXX. and Vulg. in O.T. (see Vulg. of Ps.78.12, 43; Is.19.11-13, 30.4; Ezek.30.14; and A.V.). In what some think the most important allusion of all (Num.13.22), the journey of the spies through the land of Canaan is described. The writer makes a note: "Now Hebron was built seven years before Zoan in Egypt." (Vulg. Ante Tanim urbem Aegypti condita est). Some Gk. writers speak of the greatness of Tanis, and of this fact there can be no doubt. It may have risen to the height of the city to which it lay, the Tanaitic mouth. Clearly the Hebrews looked upon Zoan as a very old city, nearly as old as Hebron, which existed before Abraham's time. Josephus states that Hebron was the oldest city in Canaan, older even than Memphis in Egypt. It was occupied by the Hittites or Egyptians, and the sons of Anak, which come of the giants." Joshua took it, and afterwards gave the city
for an inheritance unto Caleb (Josh. 14:13). It afterwards became one of the six cities of refuge. But it is not clear, from the simple fact of the juxtaposition of the names of Hebron and Zoan in Num. 13:22, that there was any community of opinion between them or any historical link at the period of Israel’s migration into Egypt. The name Zoan, signifying “migration,” or “place of departure,” is not found in the book of Exodus. It is, however, much more to the point to note the poetic references to Zoan in Ps. 78. Reference is there made to the going out of the people, and to what Jehovah did for them. “Marvellous things did he in the sight of their fathers, in the land of Egypt, in the field of Zoan.” Also (Ps. 105:43), “They remembered not His hand, nor the day when he delivered them from the enemy: how he had wrought signs in Egypt, and his wonders in the field of Zoan.” Here, obviously, is a clear connexion between the scene of the mercies of the deliverance from Egypt and a district known to the Psalmist as the field of Zoan. Now, in Ex. 12:37 it is stated that it was from Rameses that the Israelites started on their great journey; hence, before their first halt, they travelled to Succoth. But before they set out the terrible drama of the plagues was enacted—those “signs” and “wonderous things” which Israel never forgot, and the story of which passed for ever into their poetry and their literature. The Egyptians were clamorous for Israel to depart; within thirty days Israel could escape from their memories the horror of the tragedy of the death of the firstborn (Ex. 12:31,33). The scene of these events was called the field of Zoan, and this locality, it is here suggested, must have been near to Rameses. Brugsch and Budge go so far as to identify Rameses with Zoan. “The treasure city Rameses is, then,” the latter writes, “almost beyond doubt, none other than Tanis, or Pa-Ramesnu.” He says that the state of misery to which the Israelites were reduced, so vividly described in O.T., is exactly that which must have been in the Delta would be brought when turned into gangs for the corvée of that day. “Thus there seems to be no doubt that the period of greatest oppression fell in the reign of Rameses II., and that the works wherein the Israelites toiled were in connexion with the rebuilding of the city of Tanis, and the founding of the frontier fortress of Pa-Tennu, or Pi-Thom.” Egyptologists are, however, not yet quite at one in their interpretation, and some do not admit that Zoan and Rameses are one and the same. Prof. Sayce writes that an unedited papyrus (in the possession of a gentleman whose name he gives) distinguishes Rameses from Zoan, placing the former in a different, though adjacent, locality. The position of Zoan upon the great river, or rather upon the branch of it which once was a splendid waterway, and its admitted connexion with the Exodus of the people of Israel, and the position of Jericho stood (Deut. 34:3), and consequently could not have been S. of the Dead Sea, which would mean out of sight, though Josephus speaks of Zoar (J.Wars viii. 4) as a place in Arabia, near the end of the Dead Sea—which referring to Zuzeriah, on S.W. shore, though this name does not represent that of Heb. would mean exactly the same. Is. 15:5 and 16:48—31 place Zoar in Moab, noticing it with Nimmim, and as below Luvith and Horonaim. Apparently also Eduth-Shelishiyah
was near Zoor. [Moab.] There can thus be no doubt as to the approximate position of this town, which would have lain opposite Jericho, at the foot of the Moab mountains. Zidoni also places Zoara in Moab, a little S. of Livyas [Beth-Aram], and the site appears to have been known in 19th c. a.d. to Eusebius and Jerome (Onomasticon), who called it Seger—following the LXX. They follow O.T. in placing it not far S. of Nimrim. A bishop of Zoar was present at the Council of Chalcedon in 451 a.d., and the place then belonged to Palestine Ter- tia, which included Moab. The site (as suggested by Rev. W. F. Birch) is no doubt the present Tell esh Shagh'ārūt, though this name is nearer to the Christian Segor than to the original Zoar. It is a white rocky mound, about an acre in area, with ruins of a small hamlet below, and springs on N.W. and E. It stands at the foot of the Moab mountains, about 65 miles S.E. of Numeira (Tell Nimiri), and a mile E. of Beth-Aram (or Livyas, now Tell er Rā- meh), the locality being remarkable for the number of rude stone monuments, including dolmens, menhirs, and circles, which exist close by, and which prove the place to have been an ancient centre of worship (Surv. E. Pal. pp. 230-31). In the same position are described monuments to E. of the Tell (pp. 220, 230). The position of Zoar seems to show that Sodom was near the Jordan (perhaps E. of the river, which is not mentioned as having been crossed by Lot), in the lower part of the Jordan Valley. It is notable that the S. end of the Dead Sea is invisible to the north. Zoar, Beth-Bel, Beth-Noe, or the mountains E. of Hebron—the three places from which Lot, Moses, and Abraham are described (Gen.13.10,19.27; Dent.34.3) as looking towards Zoar, and towards the cities of the plain, or of the kikār, of Jordan [C.R.C.].

Zoba', Zobab, the region near Damascus [Arab], while Hamath-Zobab (2Chr.8.3) lay farther N., near Tadmor. The word appears to mean "straight," and (like mish'ār, see Plains) to indicate flat country. It includes more than one petty kingdom (1Sam. 14.47) conquered by Saul and (2Sam.8.3,5,12; 1Chr.18.5,10) by David. Beth Nebo, or the mountains E. of Hebron—the three places from which Lot, Moses, and Abraham are described (Gen.13.10,19.27; Dent.34.3) as looking towards Zoar, and towards the cities of the plain, or of the kikār, of Jordan [C.R.C.].

Zobah', Zobah, a man of Judah; son of Coz (1Chr.4.8).

Zobah,—1. Father of Ephron the Hittite (Gen.23.8,25.9).—2. [Zerah, 3.]

Zoheleth, Stone of (1K.1.9), a stone, or rock, "by En-Rogel," where Adonijah made a feast. The word means "slippery," and the name zal'weleh, with the same meaning (Clermont-Ganneau), still applies to the cliff and against which the boulders of the village of Silwān are built. E. of the Kidoron range. Thus Solomon, at Gihon (or En-Rogel) was anointed in full view of Adonijah's party on the opposite side of the valley. [C.R.C.]

Zoheth', a man of Judah; son of Ishi (1Chr.4.20).

Zophah' (1Chr.7.35,36), son of Helam, or Horan (ver. 32), an Asherite.

Zophai' (1Chr.6.26). [Zuph.]

Zophar', the Naamatite (LXX. Minaean); one of the three friends of Job (Job 2.11,11.1,20.4,42.9).

Zophim', Field of (Num.23.14). The sāṭe 'ophālim, or "plain of views," was at the "top of Pisgah." The view did not include the whole of the Heb camps in the valley of Shittim, which would have been better seen 2 miles farther W. along the Pisgah ridge. [Nebo.] The name survives at Ta'al'et es Si'īla, or "ascent of Zuph," on S. side of Nebo (Surv. E. Pal. p. 198).—[C.R.C.]

Zorah' (Jos.19.41; Judg.13.2,25; 16.11,18.2,11; 2Chr.11.10). Zorathites (1Chr.4.2), Zoreah (Jos.15.33, Zareah (Ne.11.29).

Zareathites (1Chr.2.53). The R.V. reads Zorah in each case. A town of Dan, near Eshto'ael, on the border of Judah; the burial-place of Samson. Perhaps the Zerzah of the list of Thothmes III. (No. 108), mentioned in the 14th c. B.C. Elisha visits Zareah (2Kgs.4.40), and the town of Zareah is mentioned in the story of Samson's tomb was shown here to Isaac Khelou (LXX. Zophath) in 1333 a.d., being the present tomb of Nebi Samat, S. of the village. Legends of Samson are related on the spot, but appear to have been learned quite recently from Jerusalem Christians. [C.R.C.]

Zorites, The, named in the genealogies of Judah (1Chr.2.54) as descendants of Samuel.

Zorobabel (Esdr.4.13,5.6; passim; Ecclus. 49.11; Mt.1.12.13; Lu.3.27=Zerubbabel.

Zuur', father of Nethaneel, 1 (Num.1.8, 2.5.7.16,23.10.15).

Zuph, Land of (1Sam.9.5). Zuph was an Ephrahite (1.4; 1Chr.8.35 = Zaphai, 6.26), and an ancestor of Samuel [Zaphai, Zophim]; the land of Zuph lay S. of Benjamin, beyond Rachel's tomb. Saul made consecutive journeys for "three days" (1Sam.9.20) from Gib'eah, searching for the lost asses. The first two days were occupied by a round of 40 miles from Cave of N. [Shalisha] and N.E. [Shalish], and the journey continued, through the land of y'minī [Benjamin], to a city where Samuel assembled the people at a hāinō, or "high place," and blessed the sacrifice (9.12.13). Saul and his servant were going up the "ascent of the city" when they met young women going to draw water (ver. 11). The name of the town is not given, but the first point on the return journey was Rachel's tomb (10.2), which suggests Bethlehem—a city which Samuel visited, at least on one occasion (16.5), to offer sacrifice. In this case the term Ephrahite, applied to Zuph, seems to mean an inhabitant of Ephrah, or Bethlehem; and the "land of Zuph" would be understood, when the passage was written, to mean that near Bethlehem. Josephus understands Ramah, which is, however, impossible, as that city—Samuel's home—lay in Benjamin, which Saul had "passed through" (9.4.16) before reaching the land of Zuph. Bethlehem is approached, from S., by a line leading upwards. Canaanite E. the old water-supply was from the well called.
ZUR

Bir Isleh. On the return journey from the "end of the city" (ver. 27) no hill is noticed; for the road here runs flat along the ridge, to Rachel's tomb. According to this explanation, Saul and David were both anointed by Samuel in the same city, where he had a house, which he visited at times.

Zur.—1. Father of Cozbi (Num.25.15), and one of the five princes of Midian ("dukes of Sihon," Jos.13.21) slain with Balaam (Num.31.8).—2. Son of Jehiel the founder of Gibeon (1Chr.8.30,9.36).

Zuriel', son of Abihail, and chief of the Merarite Levites at the Exodus (Num.3.35).

ZUZIMS

Zurlshaddai, father of Shelumiel the Simeonite chief at the Exodus (Num.1.6, etc.).

Zuzims' (properly Zuzim), a nation smitten by Chedorlaomer in his invasion of Palestine (Gen.14.5). They are mentioned between the Emim and Rephaim, and the scene of their defeat is said to have been Ham. The LXX. translates the words ἑβην ἱσχύα, strong nation. They have been identified with the Zamzummim (in which case Zuzim is an easily explicable misreading of a cuneiform document for Zamzummim; Sayce's Higher Crit. and Mon., p. 161), and with a place called Ziza, 10 miles S.E. of Heshbon. [F.J.F.-J.]
